The Retreat is also a summer and winter resort to all who desire to spend a few weeks or months in recreation, and receive the benefit from rest and breathing this mountain air, whose healthfulness and purity is unsurpassed. For such, a liberal table is especially provided. While the chief object of this institution is to afford a sanitarium for those in need of hygienic and surgical treatment, ample means are afforded for recreation, and entertainment is

provided for all board-ers and pleasure-seekers who love decency and good order. Winding and picturesque roads, walls of blasted rock terracing the side-hills about the main building, cottages and driveways, a fine campus, spacious woods, shady groves, arched seats, swings, swinging rings, swinging chairs, will be furnished; dumb-bell and Indian club exercises given to such as may desire them. Calisthenic exercises will also be led by a competent leader. To accommodate their increasing patronage the proprietors have been enlarging and building quite extensively, and in many ways improving their facilities for making the Retreat yet more comfortable for their guests.

It is certainly one of the best sanitariums, all things considered, in the United States. We feel an especial interest in the Rural Health Retreat, because one of the proprietors of this paper, with his family, has greatly enjoyed a recreation season there. They assure us that they are exceedingly well pleased with the Retreat for its natural and added beauties and comforts, and for the pure moral tone, the kindness and cordiality which prevail in the management. The accessibility of the Retreat should also contribute to its desirability, both to the invalid and the pleasure-seeker. We advise health and pleasure-seekers to send for printed reports and further information.

Cypress, Gum and Pepper Trees in boxes. Flowers and Shrubs.

All trees grown on new, rich soil, without irrigation, and are positively free from insect pests.

G. TOSETTI,

San Leandro, Alameda Co., Cal.

## Sonoma County at the Mechanics' Fair.

The admirable exhibit of the Sonoma County Pomona Grange, at the Mechanics' pavilion, has been mentioned by us repeatedly, but not hitherto described in the RURAL PRESS.

The center of the display is a terraced pyramid, 12 feet square at the base, on the lower steps of which are arranged hundreds of clear glass jars, holding samples of soils, grain, pulse, seeds, nuts, preserved fruits, etc.; while on the upper shelves stand bottles of native wines and brandies. The structure is crowned with tufts of pampas plumes, dyed in divers colors. A broad shelf skirting the base of the pyramid is set with plates of choice and beautiful fruits in vast variety.

Inclosing all this, but parted from it by a narrow passageway, is a hollow square of tables, covering a space of 35x30 feet, and closely freighted with plates of grapes in multitudinous diversity, 200 varieties, Mr. Drummond avers, being shown from the Glen Ellen vineyards. In order to gain room for all these plates, the tables on the shorter sides of the rectangle had to be made two stories high. A number of bearing vines, planted in large pots and hung with grapes in crowding clusters, are placed at intervals—a striking sight—and here and there bouquets are set.

Over either gateway to the inclosure are graceful arches, lightly reared of slender sheaves of grains and grasses.

Outside the square are still other tables, both before and behind it. Some of the latter sustain cases of curios from foreign lands—very interesting, although not agricultural exhibits.

Fifteen or twenty kinds of native wood are shown in the rough, besides the huge cross-section of redwood that stood in front of the Lick house during Encampment week. Very handsome are the "bird's-eye" redwood boards sawed from the root of the tree by Meeker Bros., of Occidental. These are about 15 inches wide by 5 or 6 feet high, and are shown both plain and varnished.

The minerals of the county are not unrepresented. There are specimens of various deposits from the Geysers, including a red "Indian paint," of cinnabar and quicksilver, of coal and peat, of tinted lime and the rock it is made from.

The front table is loaded with boxes of dried fruit, canned goods in tin and glass, cheeses and vegetables in variety, among which the enormous squashes are pre-eminent.

Along the middle of this table stand in fair array many sheaves of grain and forage plants. It is claimed that the collection includes over 80 varieties of native grasses.

Champion fleeces of Spanish merino wool from E. W. Woolsey & Son, of Fulton, hang on high against a pillar.

The canned goods in the patent "Petaluma jar" show to great advantage; and a 10-story tower of these transparent cylinders, in which each story shows but one variety of fruit (as black cherries, Bartlett pears, or Golden Drop plums), is peculiarly handsome. One quart jar was filled with 3½ peeled peaches.

The display of sun-dried and evaporated fruit is highly creditable, embracing plums and prunes, both with and without the pits, of several varieties, apples, pears, peaches, apricots, cherries, raspberries, Lawton blackberries and cherry currants, all beautifully prepared.

The appended list of contributors and articles contributed will aid those who have not enjoyed a sight of this wonderful exhibit in forming a better idea of its varied scope; while those who have seen it may like to have such a record and reminder.

Pat McChristie, Sonoma County Pioneers: Bear flag of 1846.

Sonoma county exhibit of grains and grasses in sheaf, comprising barley, oats, wheat, rye, corn, sugar-cane and 82 varieties of grasses.

Otis Allen, of Sebastopol, shows bale of hops, also hops on the vine, sheaves of oats and 15 varieties of native grasses.

J. K. Luttrell, of Glen Ellen: Corn on the stalk, timothy, rye and alfalfa in the sheaf.

Mrs. N. E. Boyce, of Glen Ellen: Fine exhibit of Sonoma county wild-flowers dried.

J. H. Drummond & H. E. Boyce, of Glen Ellen: Extensive collection of rare and handsome East Indian curios, very attractive.

J. H. Drummond, Dunfillan vineyard, Glen Ellen: Gutedel, Charbono, Blanche Noir and Zinfandel wine.

J. Cnopius, Sebastopol: White Mission, Zinfandel and claret wine.

J. L. Watson, Glen Ellen: Zinfandel and Gutedel wine.

George Hood, Knight's Valley: Grape brandy, Zinfandel and Riesling wine.

Kate F. Warfield, Ten Oaks, Glen Ellen: Zinfandel and Riesling wine.

M. K. Cady, Agua Caliente Vineyard: Zinfandel, Hock and sweet Muscatel wine; also, apple and grape brandy.

I. De Turk, Santa Rosa: Six varieties wines, viz.: Angelica, Riesling, Sherry, Zinfandel, Port and sweet Muscat; also, grape brandy.

Lay, Clark & Co., Fountain Grove Farm: Golden Chasselas, Zinfandel and Riesling wine.

George F. Hooper, Sonoma: Red Mission, Zinfandel, Malvoise and blend of vintage of 1881.

Mrs. Hood, Los Guilicos: Zinfandel, Berger and Riesling wine; also, grape brandy of vintages of 1880, '84 and '86, oranges, lemons.

Martin Feusier & Co., Sebastopol: red Zinfandel wine.

P. and J. G. Gobi, Healdsburg: Mission and Zinfandel wine.

McPherson Hill, Sonoma: Cherry cordial.

Mrs. Young, Sonoma: Peaches, pears, plums.

W. A. Thompson, Bennett Valley: Chasselas, Zinfandel and claret wine.

G. and P. Simi: Angelica wine.

Eli T. Shepard, Sonoma Valley: Mataro, Zinfandel and Mission wine.

T. Chevet, Glen Ellen: Riesling, Sherry, Zinfandel and Mataro wine.

B. Hoen, Windsor Winery: Zinfandel, Mission and Berger wine, and grape brandy.

Gifford & Scoggins, Santa Rosa: Soda water, sarsaparilla, ginger ale, etc.

Litton Springs: Natural seltzer water, Geyser soda water.

Geyser Springs: Various minerals and mineral waters.

A. H. Ingram, Sonoma Co. Lime Works: Twelve shades of lime.

S. T. Fulkerson, Rincon Valley: Nine varieties grapes, viz.: Golden Chasselas, Sweetwater, Zinfandel, Berger, Black Prince, Fehr Zagors, Muscat Black St. Peter, Barbarossa.

L. A. Murdock, Santa Rosa Valley: Twelve varieties grapes, viz.: Cornuchon, Zinfandel, Tokays, Red Traminer, Barbarossa, Rose Peru, Hamburg, Malvoise, White Nice, Berger, Grey Riesling, Black Morocco.

Jake Harris, Santa Rosa Valley: Twelve varieties grapes, viz.: Muscat, Catawba, Muscatel, Rose Peru, Black Prince, Golden Chasselas, Tokay, Sweetwater, Fehr Zagors, Barbaroux, Mission, Grey Riesling.

Mrs. A. Moore, Glen Clare Farm, Santa Rosa Valley: Three varieties grapes, viz.: Berger, Zinfandel, Golden Chasselas.

Mrs. Ruth Barnes, Santa Rosa Valley: Grapes, almonds, quinces, garden seeds, sea-shells, pebbles, dried grasses, cut flowers, etc.

W. D. Sink, Cloverdale: Three varieties grapes, viz.: Mission, Tokay, Rose Peru.

Morris Bros., Sonoma: Six varieties grapes, viz.: Tokay, Hamburg, Berger, Malvoise, Rose Peru, Malaga.

Richard Fulkerson: Grapes, apples, pears and pomegranates. He claims to have the largest pear on exhibition in the pavilion.

Mrs. D. Litchfield, Sebastopol: Gooseberries, cherries, blackberries and currants in glass.

Mrs. A. Gamble, Santa Rosa: Beans, sunflowers, blackberries, gooseberries, plums, radish, holly-hock seed, carrots, lettuce seed.

Charles Range, Santa Rosa: Silver maple seed.

Joaquin Corilla, Santa Rosa: Tobacco.

T. Kersedge, Glen Ellen: Wheat, barley.

J. C. Forbes: Plums, citron.

E. Light, Santa Rosa: Canteloupe, watermelon, corn.

N. G. Finley, Santa Rosa: Carrots, gunbo.

Prof. Finley, Santa Rosa: Photographs.

Mrs. Janson, Sebastopol: Seeds, Dutch flowery beans.

Mr. Stiger, Sonoma: Rye, tomatoes, cucumbers, pumpkins, squash, grapes.

Decker & Jewett, Glen Ellen: Wheat, oats, barley and rye.

Mr. Derbin, Glen Ellen: Beets, carrots, squashes.

C. W. Lewis, Santa Rosa: Barley.

E. High: Barley.

A. M. Jennings, Santa Rosa: Wheat, corn, squash, prunes and plums.

O. Calderwood, Santa Rosa: California nutmegs.

E. A. Rogers, Santa Rosa: Beets, carrots, sweet corn, sorghum, four kinds squash, pumpkins.

Mrs. E. A. Rogers: Canned peaches, pears, quince, currants and cherries; currant, quince and apple jellies; spiced currants.

John Adams, Santa Rosa: Six varieties tomatoes, string beans, buckeye, canned cherries, Egyptian corn, native cloverseed; wheat, barley, oats; garden and field beans; specimen soil; potatoes; apples, pears and peaches.

Willie Rogers, Santa Rosa: Peanuts on vine; French prune.

Geo. Rogers: Petrified wood; sugarcane.

Geo. Davis, Santa Rosa: Plums and prunes.

J. Dont, Santa Rosa: Field corn.

I. H. Nealy, Dry Creek: Barley.

J. W. Ridgeway, Santa Rosa: Wheat, beans, corn.

C. C. Chapman, Santa Rosa: Wheat, corn, pears, apples.

Mr. Fletcher, Green Valley: Rye and corn.

John Wiley, Green Valley: Peaches and corn.

A. L. Clark, Mark West: Wheat.

John Grant, Healdsburg: Wheat, hops.

Ioman Kyle, Mark West: Wheat.

Santa Rosa Cannery: Canned peaches, plums, pears, tomatoes, blackberries.

Santa Rosa Woolen Mills: Sample of cloth.

Santa Rosa Tannery: Five samples dressed leather.

Woolsey & Son, Fulton: Wool, three squashes.

L. Chinn, Rinconi: Sweet potatoes, squash, plums, prunes.

P. Mullally, Freestone: Eight varieties potatoes, oats, wheat, wild and tame timothy in sheaf.

James Shaw, Glen Ellen: Six varieties gourd, cucumber, citrons, pomegranates, pumpkins, oranges.

J. R. Jewell, Petaluma: Cheese.

H. W. Williams, Santa Rosa: Four varieties apples, sun-dried prunes.

W. Wood, Mark West: Wheat, oats, corn.

J. Strong, Bennett Valley: Wheat, apples, peaches, pears, plums, grapes.

Luther Burbank, Santa Rosa: Oregon ash-seed, *photina arbutifolia*.

W. W. Galden, Santa Rosa: Wheat, oats, barley, corn, cheat.

Henry Adams, Santa Rosa: French prunes, millet, native peas, sorrel or pepper seed.

J. Peterson, Santa Rosa: Hops.

C. Wightman, Sebastopol: Peaches, pears, plums, apples, canned goods, jelly, prunes.

E. A. Peny, Santa Rosa: Seven varieties pears.

C. H. Smyth, Santa Rosa: Nineteen varieties pears.

L. Litchfield, Sebastopol: Peaches, pears, apples, quinces, plums, prunes.

John Merrett, Petaluma: Eight varieties apples.

Mrs. Cropley, Santa Rosa: Yankee pumpkin.

Meeker Bros.: Two samples curly redwood, ferns.

Great Western Quicksilver mine: Quicksilver and cinnabar.

I. J. Heald, Guerneville: Fern, tan-bark, samples of wood.

Chair Factory, Forestville: Sample of chair, ball bat.

John Taylor, Santa Rosa: Stone coal.

Mrs. R. Coulter: Five kinds jellies, canned peach-plums.

Mrs. E. E. Whitaker, Bennett Valley: Forty-six jars canned fruits, jams, pickles, etc.; 20 glasses jellies.

Mrs. D. Litchfield, Sebastopol: Jellies, jams, canned fruit, sea-mosses.

Mrs. M. Litchfield, Sebastopol: Canned plums, plum jelly.

Mrs. E. A. Rogers: Canned peaches, currant jelly.

Mrs. Mattie Ward, Santa Rosa: Plums, straw-berries, Siberian crab, apples in glass.

John Bailor, Santa Rosa: Saur kraut.

J. P. Whitaker, Santa Rosa: Dried cherries and prunes, canned plums.

C. Woodward, Santa Rosa: Candy.

Mrs. Lowell, Santa Rosa: Gooseberries and carrots.

Mrs. A. J. Mills, Santa Rosa: Petite prunes.

G. N. Whitaker, Santa Rosa: California walnut, English walnut, Shropshire wool.

J. B. Whitaker: Black oats, green beans, carrot.

Walter L. Whitaker: Red rice popcorn.

G. N. Whitaker: White imperial sugar beet, 14 kinds pears, 52 varieties apples, plums, prunes, wheat, corn, barley, oats, grasses of many kinds.

Richard Crane: Toscana oats.

J. M. Hudspeth: Raspberries.

L. Peterson: White oak.

C. D. Carpenter, Blucher Valley: Black rust-proof oats.

G. T. Miller, Dry Creek: Bay wheat.

Mrs. Edla Adams: Beans.

A. L. Wainer, Russian River: Corn, apples, plums, and peaches.

Isaac Parker, Sebastopol: Hubbard squash.

Jonathan Roberts, Santa Rosa: Beets, black-berries, pumpkins.

Henry Rainey, Santa Rosa: Pears, apples, prunes.

L. J. Hawkins, Santa Rosa: Paper-shell and Langue-doe almonds.

Mrs. Pepper, Petaluma: Oranges and lemons.

N. Carriger, Sonoma: Oranges, lemons, peaches.

Geo. F. Hooper, Sonoma: Wine, olive oil, olives, walnuts, honey, cherry-bounce.

W. Mock, Santa Rosa: Squashes and carrots.

## Vacaville Notes.

EDITORS PRESS:—The weather has been very warm, with north wind for a week past. The air is so full of smoke from fires in the mountains that one cannot see half a mile.

The Pioneers' celebration, in Vacaville, was a grand success. Between 3000 and 4000 people were present. A fine dinner was given, and there was plenty for all to eat. There was no fighting and no drunkenness. The town was tastefully decorated, and there was a fine display of fruit at the Blum's store. Mr. Cernon had two figures fixed up—one to represent a miner of '49, and the other a tramp of '86. They were good imitations of the men they were made to represent, and were much admired. The exercises consisted of marching by the band, the Pioneers and Odd Fellows, after which there were speaking and singing.

J. M. Pleasant, of Pleasant Valley, is putting up about 2000 boxes of Petit prunes, for which he receives seven and a half cents per pound, dried and boxed. He will also put up about 500 boxes of raisins. Brink Brothers are picking the last of this year's crop of peaches, which are Salways. They have sold them to E. T. Earl to ship East. The first crop of grapes in the upper part of Vaca and Pleasant valleys is pretty well picked. H. Bassford has just sold four tons of Muscat and eight tons of Tokay grapes to Allegretti, of Berkeley, at four cents per pound. Mr. Allegretti intends to preserve them by his process, by which he says he can keep them six months as fresh as when he gets them. The grapes are put into a room just as they are packed at the vineyard, and kept there for six days; just what the process consists in no one but himself knows.

He has cherries and other fruits which he has kept since the first of the season. He says that next year he will send East 1000 carloads. Should his process prove to be what he thinks, it will work a great change in the shipping of green fruit East.

I hear much inquiry how to kill morning glory. Two years ago the Brink Brothers had a patch of it in a young orchard, on sandy made land, near the bank of the creek. They dug it up from two to three feet deep, taking care to collect all pieces of roots and carry them off. Around the main root that was left in the ground a little hole was made, a handful of salt put on, and the ditch filled up. Since then no morning glory has appeared. Several here have tried to kill it by stacking straw on it, but it will come up, only give it time. G.

Vacaville, Cal., Sept. 12, 1886.

## Agricultural Drain Tile.

Gladding, McBean & Co., of Lincoln, Placer Co., are manufacturing an agricultural drain tile that can be used where there is light pressure at comparatively low cost. At the factory this pipe can be bought at less than five cents a foot, six inches in diameter. It is made of stoneware body thoroughly vitrified. It is thin, and will bear transportation any distance. Mr. Gladden has just returned from a visit East. He took occasion to examine a large number of tile factories, and gathered the information that best results are gained by under-drainage. Throughout the great Mississippi valley there is a large demand for a cheap tile pipe. Anticipating a similar demand in California, he has made preparations to manufacture a class of tile-pipe that is suited for under-drainage at a heavy reduction from the class now used. We learned from several fruit-growers that their orchards and vines had suf-

fered irreparable damage by the soil being saturated for a long time with water during the rainy season, and lands that had been irrigated had suffered from overmoisture and percolation from adjacent water ditches. There is no doubt that drainage must be generally taken up in this State, especially for orchard and vineyard lands.

## Acme Evaporators.

Messrs. Batchelor & Wylie, of S. F., exhibited a large and small-sized Acme Evaporator in the machinery department. During the last week of the fair the large-sized machine was put into practical operation, and the capabilities and efficiency of steam in evaporating fruit was fully demonstrated. Fruit-growers became much interested in the tests given. Figs were dried in five hours, and grapes were made into raisins in from 6 to 8 hours, depending on steam furnished by the engine in this department. Mr. Batchelor, who was in charge of this exhibit, demonstrated the merits of this evaporator by the use of a regulator, with which he could maintain any degree of heat required. Among the features claimed for this evaporator are: Absolute safety from fire; a steady heat, that can be increased or diminished at will; quality of fruit that brings the highest price; durability of machine, decreased cost and greatest capacity, with the least labor and fuel. In addition to their evaporator they exhibited the "Flying Ditchman" sulky plow, spring-tooth harrow, roll drill and clod smasher combined, Gale spring-tooth seeder and Hollingsworth self-dump rake. Farmers and fruit-growers seemed much interested in this exhibit, and bestowed flattering comments on the work of the Acme evaporator.

## Rural Health Retreat.

We take pleasure in again calling the attention of our readers to this popular resort and sanitarium. The original building ing has recently been thoroughly refitted, and the extensive additions are now complete. The rooms are well furnished, ample and sunny, the gymnasium abundantly supplied with the most approved modern appliances for calisthenic exercises, and the bath-rooms are commodious, convenient and under competent management. The elegant and cozy cottages are admirably adapted to family use. Two thoroughly studded and well-experienced physicians, with two lady assistants, have charge of the medical and surgical departments. This retreat is kept open the year round, and its pure water, salubrious mountain air, fine walks and campus and picturesque surroundings will ever make it a pleasant and inviting home, not only for invalids but for all who are in need of a few weeks' rest and recreation and surcease from toil.

The autumn season is one rare beauty and enjoyment to the visitor and sojourner in the foothills of Napa valley. Its fine fruits, genial atmosphere and changing foliage add to its usual charms. There is no better season to induce the health and pleasure seeker to tarry at this desirable resort.

## Miller's Lightning Hay Press.

During the fair Miller's Lightning Hay Press was exhibited at the park and put in practical operation to make a test of its qualities. In the pavilion a miniature press was operated each evening by Mrs. Miller and daughter. This small press is a fine model of the large press, and makes a small bale about five inches long and otherwise in proportion to a large bale. It proved one of the great attractions of the fair, as the visitors sought the bales as trophies. The history and workings of this press has been given in the RURAL, and with improvements that have been made it is considered by those who have used it this year one of the most efficient hay presses in the world. Mr. Miller, while at the fair, received several orders.

## The Prize Windmill.

The Cyclone Windmill, which is advertised on another page, has been exhibited in the machinery department of the Mechanics' Fair, and has been awarded the silver medal for excellence of design, and lightness and simplicity of construction. This windmill, as its name implies, is constructed with a special view to safety in very high winds; the mill being designed with the center of pressure offset from the center of the spindle, so that when the wind exceeds a certain pressure, it will be forced to revolve on the spindle until the edge of the wheel is presented to the wind, where it will remain until the force of the wind is reduced, when it will be automatically brought around to face the wind by the action of a weight.

When necessary to stop pumping, the weight may be taken off the chain, which passes through the hollow spindle, when the wheel will automatically turn out of the wind and be secured in that position by a catch; the wheel will also turn out of the wind when the water reaches a certain height in the tank.

In construction the mill is light and strong, and the iron-work has been designed with a view to durability. The crank-shaft is one and three-fourths inches in diameter and runs in babbitted boxes, which will not cut the bearings when run at the highest speed.

## Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$50,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. \*\*

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

### POULTRY.

O. J. ALBEE, Santa Clara. Thoroughbred poultry.  
E. C. CLAPP, South Pasadena, Cal. Light Brahmas and Plymouth Rocks. No fowls for sale. Eggs from first-class k, after Nov. 1st.

E. H. FREEMAN, Santa Clara, Cal., importer and breeder of Wyandottes, Langshans, L. Brahmas, P. Cochins, B. and W. Leghorns, Bl. Br. R. G. Bantams.

AXFORD INCUBATOR—Best in the world; never beaten in competition; from \$37.50 to \$85.00. Pekin and Rouen Ducks; best in the State; \$7.50 per trio, or \$2.00 each per doz. Eggs, \$3.00 per doz. For particulars address L. P. Clark, Mayfield, Cal.

CALIFORNIA POULTRY FARM, Stockton, Cal. Send 2-cent stamp for Illustrated Catalogue.

W. O. DAMON, Napa, Wyandottes, W. and B. Leghorns, P. Rocks, L. Brahmas, Pekin Ducks.

### SHEEP AND SHEEPWASH.

LITTLE'S CHEMICAL SHEEP DIP.

Price Reduced to \$1.25 PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Scabs in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO.,

San Francisco, Cal.

Recommended by Professors Hilgard, Cooke, etc.

Powdered Potash & Caustic Soda

KILLS GOPHERS, INSECTS, ETC.

## THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

## NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms offer the best inducements to those seeking homes on any part of the Pacific Coast.

The field work of the subdivision of the famous

## PASO ROBLES RANCH

Has been completed. The maps and catalogues are now being prepared, and will be sent free on application. This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

## TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,  
West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map.

# GRANGERS' BUSINESS ASSOCIATION, SHIPPING AND COMMISSION HOUSE.

EVERY ONE GUARANTEED, or money refunded, I am in every way responsible. Refer you to the Editor of this paper.

Circular mailed free to any address.

State, County and Shop Rights for Sale.

F. E. BROWNE,

Los Angeles, Cal.

Patented March 23, 1886.

# FRESNO COUNTY. BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

## THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being 2½ times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

For further particulars call on or address

O. J. WOODWARD, FRESNO, CAL.

L. SHARPE, SELMA, CAL.

## S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Sept. 22, 1886.

The past week has shown marked activity in barley and oats, with a deadlock toward the close in wheat. The general market in other lines of produce has been fairly active, with some sharp advances in some and declines in others which are noted under appropriate headings elsewhere. The English wheat market has for several days been reported by semi-public cables depressed, with a decline of 6d per quarter for cargoes given on Monday last, but private cables do not give any decline but on the contrary report that 35s per quarter for cargoes for prompt shipment is still obtainable. The latest semi-public cables received to-day are as follows:

LONDON, Sept. 22.—Cargoes on passage and for shipment—Steadily held; few bids in market. Mark Lane—Small attendance. California wheat off coast—34s. Cargoes just shipped—34s 6d. Cargoes nearly due—34s. English country markets—Quiet, and perhaps rather low. French country markets—Inactive. Wheat and flour in Paris—Quiet. Quantity wheat and flour on passage to Continent—780,000 qrs. Quantity wheat and flour on passage to U. K.—1,925,000 qrs. Liverpool spot market—Firmly held. California wheat—6s 7½d @ 6s 10½d.

## Foreign Review.

LONDON, Sept. 20.—The *Mark Lane Express* in its review of the British grain trade for the past week says: Bright weather during the past week has been of immense service to late crops. Trade is without feature. Small deliveries have kept prices unaltered. Sales of English wheat during the past week were 42,620 quarters at 31s 3d, against 70,244 quarters at 30s 10d during the corresponding period of last year. Flour was dull and prices favored buyers. The market was depressed by large arrivals of low-priced foreign. Barley is arriving slowly. Sellers are asking an advance of 5s per quarter. Foreign wheats are depressed. Corn is somewhat cheaper, but the scarcity of American flat mixed has helped sustain values on spot. Three wheat cargoes were sold and six were withdrawn; there were no arrivals off coast. The market is bare. Trade forward is weaker. At today's market wheat was steady; market slow; continued fine weather prevents activity. Flour was very quiet. Prices of foreign corn were in buyers' favor. American mixed was very scarce. Oats were in large supply, and trade was dragging.

## London Wool Market.

LONDON, Sept. 18.—Following is a detailed statement of the wool sales to-day; Victoria—2200 bales, scoured, 10d @ 1s 10½d; do locks and pieces, 8d @ 1s 4d; greasy, 8d @ 1s 3½d; do locks and pieces, 6½ @ 9½d. New South Wales—2300 bales, scoured, 11½d @ 1s 10½d; do locks and pieces, 11d @ 1s 8d; greasy, 7d @ 1s; do locks and pieces, 7 @ 9½d. South Australia—500 bales, scoured, 15 @ 1s 9d; do locks and pieces, 11d @ 1s 11½d; greasy, 7½ @ 11d; do locks and pieces, 4 @ 7d. Queensland—500 bales, scoured, 11d @ 1s 5½d; do locks and pieces, 9d @ 1s 6½d; greasy, 8½ @ 10d. Tasmanian—200 bales, scoured, 1s 2d @ 1s 8d; greasy, 9d @ 1s 2d; do locks and pieces, 6 @ 8d. New Zealand—4200 bales, scoured, 9½d @ 1s 1½d; do locks and pieces, 9d @ 1s 7d; greasy, 7½d @ 1s 1½d; do locks and pieces, 4½d @ 9½d. Cape of Good Hope and Natal—2800 bales, scoured, 10½d @ 1s 7d; greasy, 7 @ 10½d; fleece, 11d @ 1s 1½d; snow-white, 1s @ 1s 10d. There was spirited bidding at the wool sales to-day, and prices were maintained. The present series will close on October 2d.

## Eastern Wool Markets.

NEW YORK, Sept. 19.—Reports in a majority of cases tend to create an impression of steadily gaining strength in the general market. Much of the confidence is based on cheerful accounts received from abroad since the London sales commenced, and the belief that many mills are scantily supplied with stock. In prices it is difficult to locate any general decided change, though some business has taken place in fleeces at a slightly higher figure and Australians show somewhat better in a few cases. Among the sales were 100 bales of spring California at 22 @ 23 cents; 80 bales spring California at 21 @ 23 cents; 5000 pounds Montana at 30 cents. In the Philadelphia market there has been no excitement and no quotable advance in prices, but holders have stood out for asking rates with more confidence, and buyers finding themselves unable to cover their wants in any better terms have submitted reluctantly to the views of sellers. Among the sales were 55,000 pounds scoured California at 60 cents; 2000 pounds scoured California at 61 cents; 1000 pounds Eastern Oregon fine at 24 cents; 50,000 pounds Territory improved at 23 cents, and 135,000 pounds California grease at 19½ cents.

PHILADELPHIA, Sept. 21.—Wool is firm and in good demand for most grades. New York, Michigan, Indiana and Western, medium, 36½ @ 37½c per lb; coarse, 36½ @ 37½c; medium washed combing and delaine, 39 @ 40c.

BOSTON, Sept. 21.—Wool is active and firm. Ohio XX, 35½ @ 36c per lb; Ohio X, 33½c; fine unwashed wool, 19 @ 25c; medium do, 25 @ 30c; Michigan X, 32 @ 33½c.

## New York Hop Market.

NEW YORK, Sept. 18.—Dealers who have a fair stock manifest no anxiety to sell any line of goods that possess merit at the price now bid, and aside from occasional small sales of medium grade to brewers, there is little if any business, except in more or less faulty stock that may be let go at almost any figure. The new crop of Pacific remains stationary at 30 @ 31 cents on the coast, and is not offered with any urgency now that reports of a smaller yield than was expected in some quarters are confirmed. The best State hops, crop 1885, are quoted at 26 @ 27c;

good and prime, 22 @ 24c; inferior to common, 15 @ 18c; Pacific Coast, 15 @ 22c.

## New York Wheat Market.

NEW YORK, Sept. 18.—Wheat—Owing to free selling and unfavorable reports from foreign markets, prices have declined steadily since Monday's opening. There has been only a moderate demand for export and milling. The market ended heavy, with losses of three-eighths of a cent for all months except January, which is down one quarter of a cent. September 83, October 85½, November 86½, December 88½, January 90, May 95½ cents.

## California Fruit at the East.

(Telegram to the Fruit Union.)

CHICAGO, Sept. 21.—The rain this morning interfered a good deal with trade, but there has been quite a brisk trade of late. Fruit arriving in good order rules steady, but there is considerable soft stock arriving, especially grapes, which must be sold low. Crawford peaches, 2 to 2.25; plums, 20 lbs, 90c to \$1; Bartlett's, 40 lbs green \$3 to 3.50; Beurre Hardy, 2 to 2.25; Burre Clairgeau, 2 to 2.25; Winter Nels, 2.50 to 2.75; Glout Moreau, 2.25 to 2.50; Duchess, 2; White Doyenne, 2 to 2.25; Muscats when good, 40 lbs, 2.75 to 3; Tokay when good, 40 lbs, 2.50 to 3; grapes in poor order, 75c to \$1.75.

## California Products at the East.

NEW YORK, Sept. 18.—Raisins—The new crop of California raisins is offering here for October shipment at 7½ cents for off-stalk Valencia's, at 8 cents for Sultana, \$1.70 per box for two-crown loose Muscatel, \$1.80 for three-crown and \$2 for London layers.

Seeds—Sales reported of 450 bags California yellow mustard, September shipment, on private terms; 100 bags to arrive, now due, at 4½c; 525 bags spot, 6c.

Canned Goods—Peaches are exceedingly dull, and the absence of any important demand exerts an easier feeling, though prices are not quotably lower. Vegetables are generally quiet, though corn is in fair demand, with prospects of a light pick in all sections, and consequently a firm market. California canned peaches, 2.25; pears, 2.25 @ 2.50; plums, 2; grapes, 2; apricots, 2.10 @ 2.25; Columbia River salmon, \$1.55 @ 1.60.

## Honey—Extracted, 5c.

## Local Markets.

BAGS—There is nothing new to report, for the season's demand is virtually over. Standard Calcutta wheat bags are quoted at 6 @ 6½ cts.

BARLEY—The market has ruled exceedingly strong, notwithstanding heavy receipts each day. Choice bright feed is wanted, and for which good figures are obtainable. The bulk of receipts are off color, but even this defect does not prevent it from going into consumption. Call sales to-day were, at morning session: Buyer season—800 tons, \$1.05; 200, \$1.04½. Buyer 1886—700 tons, 99½c; 100, 99½c. Seller season—200 tons, 92½c. Seller 1886—700 tons, 93½c. No. 1 Brewing, buyer season—100 tons, \$1.26½ cts. Buyer season—1100 tons, \$1.04½; 100, \$1.04½. Seller season—100 tons, 92½c. No. 1 Brewing, buyer season—100 tons, \$1.27 cts.

BEANS—All varieties of new are coming to hand, but they meet a ready sale, as yet, at unchanged prices. Old are dull and neglected, with buyers asking concessions.

CORN—The market is steady, with a strong undertone for both Californian and Western.

DAIRY PRODUCE—Cheese is very strong, with an advance obtainable. Gilt-edged butter in rolls is in demand, with some well-known brands fetching an advance; the general tone is stronger. Eggs are higher for all kinds, under light receipts.

FEED—Ground feed is unchanged; but hay is stronger under lighter receipts and a good consumptive demand. The following is the range for hay: Barley, \$6 @ 9; oats, \$8 @ 11; wheat, \$9 @ 13, with something extra selling slightly higher.

## FRUIT—Full particulars elsewhere.

DRIED FRUITS—Receipts continue light, not enough received so far as to allow of correct quotations being given. The quality of that received is unusually good.

HOPS—The market is quiet, but buyers are anxious to secure all desirable parcels. We note the sale of a round parcel to-day for shipping to the East at 32½; the quality was choice, not gilt-edged.

HONEY—The market is lightly stocked, causing a strong market to obtain. Buyers, though anxious for stock, do not advance bids, preferring sellers to name the price at which they will sell.

OATS—The market has a steadier tone, with choice scarce and in request, but buyers are slow in bidding up.

WHEAT—In the sample market there is a deadlock between buyers and sellers, with a difference of fully five cents between them, consequently few sales are reported, and they are said to have been made on a split. The market to-day closed stronger, with sellers of actual wheat out of the market. Transactions on call to-day were as follows: Morning session: Buyer season—100 tons, \$1.41; 100, \$1.41½; 600, \$1.41½; 1300, \$1.41½. Buyer 1886—900 tons, \$1.37; 1700, \$1.37½; 300, \$1.37½. Seller 1886—800 tons, \$1.33½ cts. Afternoon session: Buyer season—300 tons, \$1.41½; 100, \$1.41½; 100, \$1.41½; 200, \$1.41½; 200, \$1.41½; 1300, \$1.41½. Buyer 1886—300 tons, \$1.37½; 100, \$1.37½; 1300, \$1.37; 200, \$1.37½. Seller 1886—100 tons, \$1.33½; 100, \$1.33½; 400, \$1.33 cts.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

[COMMUNICATED.]

## Market Information.

## Cereals.

On Thursday, Friday and Saturday several thousand tons of shipping wheat were sold on the basis of \$1.37½ to \$1.38½ for good to choice, while two large, straight parcels fetched \$1.40 alongside of the vessel. Some of the sales made were of wheat that had been delivered on seller's contracts. On Monday buyers began to bid lower, which was followed by still lower bids on Tuesday, not bidding above \$1.33½ for good. Holders who had been offering on the market withdrew, and no sales were made at the lower bids made either on Monday or Tuesday, but some sales are reported to have been made on a split, or at \$1.35 to \$1.36½ from fair to good. Buyers appear to have the daily press, excepting the *Daily Report* in this city, and also those in Sacramento, at their mercy, or at least their quotations are below what could be bought at on the day quoted.

The No. 1 standard of the Produce Exchange for this season's wheat is very poor and does not give satisfaction, consequently the Farmers' Co-operative Union and others have standards of their own, and do not sell by any other.

To show how the daily press, excepting the *Daily Report*, help the buyers, it is only necessary to state that although the English wheat market for California wheat for prompt shipment has only fallen 6d per quarter, about 2½ cts per cental, buyers in this market succeeded in getting the papers to quote lower each day, until yesterday and to-day they are from 5 to 7½ cts per cental lower than on Tuesday of last week, and this, too, in the face of a decline in which charters of fully 2½ cts per cental, equal to the drop in the price of wheat cargoes abroad; so that if wheat was worth \$1.37½ to \$1.40 last week, it is worth the same now, owing to the decline in ship charters.

The exports of flour from this port from July 1st to date are over 10 per cent more than the like time last year, while the export of wheat is three times or 200 per cent more. At this rate there will be very little wheat in the State that will be available for shipping by the end of the present year.

Barley has held to strong prices throughout the week, with the bulk of the feed grades, dark coast. Good to choice feed is scarce and wanted. A cargo of over 2000 short tons of Chevalier barley destined for Liverpool is in the vessel, which will sail soon. Brewing barley is strongly held.

Oats have been easy and in buyers' favor throughout the week. The demand is good, but receipts have been and are still quite heavy.

In rye a fair business is reported to have been done the past week on the basis of current quotations.

There is more inquiry for buckwheat, but as yet sales are light.

Corn has ruled fairly steady with a stronger undertone, but at no higher prices.

## Dairy Product.

Butter if gilt-edged, good color and hard, sells readily at from 32½ @ 35 cts, but poor grades are still hard to place, as the trade is running largely on pickled, owing to its relative cheapness and good quality.

Eggs have worked into better shape with another advance established. The stock of Eastern is lighter, with receipts light.

Cheese holds to strong prices, under a good demand and only moderate receipts, together with an improved market at the East.

## Feedstuff.

Early in the season the press took the position that the crop of choice to gilt-edged hay was light and consequently would fetch high prices; this was generally denied by dealers, but now they admit it is correct. Sales of these qualities sold the past week at from \$12.25 to \$13.50 per ton afloat. All other qualities are stronger under lighter receipts and a good demand.

Bran and middlings are in good demand, but owing to heavy receipts they are weak and favor buyers. Oatmeal, feed meal, rolled and ground barley, etc., are steady.

Straw is selling fairly well at from 30 to 50 cts per bale.

## Live-stock.

Beef cattle weakened off slightly, but recovered again. The consumption is in such an unsettled condition that retail dealers do not carry heavy stocks; some days they do not sell within 50 per cent of the sales of other days. Mutton sheep are offering in excess of the demand, yet prices are fairly well maintained. Lambs and calves are scarcer and if choice will fetch an advance on quotations. In hogs there is nothing doing, except for the block, and the demand for this is light. Packers are not in the market yet, but are expected to enter soon. In horses there is nothing new to report. The demand for all kinds is slacker, with more difficulty reported to effect sales. There is some inquiry for milk cows, but not of pronounced character yet, owing to the scarcity of feed.

## Vegetables.

The potato crop, taken as a whole, of this State this year is not up to an average, for the large proportion received here are more or less wormy and otherwise defective. The inferior quality of so large a proportion creates a strong and active demand for what is called gilt-edged, consequently the latter fetch very high prices. The market the past week has ruled exceedingly strong, with gradual advances up to Monday, since when it has ruled steady and strong at the higher prices.

Sweet potatoes have barely held their own, with only gilt-edged fetching 1 ct in boxes. Receipts have been excessive, necessitating concessions to close up consignments.

Onions have ruled steady with a general strong tone, which allowed at times of a slight advance on current quotations to be obtained.

Tomatoes have been coming in very freely, causing prices to drop to canners' views, who cleaned up the market from day to day, at 20 to 30 cts—average about 25 cts per box, but the trade paid an advance.

Cucumbers, green peppers, egg plants, cabbages and root vegetables have shown, the past week, only slight fluctuations.

Green okra is scarce and choice will fetch full prices. Dry okra is in heavier stock, causing lower prices to rule.

## Fruits.

General demoralization has ruled supreme the past week in the table-grape market, owing to very heavy receipts and no increased demand. Even wine grapes have been depressed under heavier receipts, which have averaged fully 6000 boxes per day. Canners paid from \$20 to \$30 a ton for Muscats and other canning grapes. Two or three days prices were exceedingly difficult to report correctly. As soon as signs of decay or rot were seen, buyers would offer almost nothing, getting some consignments at 15 cts per box and even 8 cts for something about one-quarter rotten. Wine grapes came in so freely that many who had cleaned up table grapes for making into wine would not buy them, which aided in the general demoralization.

Peaches have ruled weak throughout the week, with very choice sold to canners at 75 cts, although the trade took the same kind in a small way at \$1. The demand is light.

Figs have ruled steady, with choice moved off quite freely.

Common pears have been well cleaned up at the best prices obtainable. A consignment which began to rot was sold at 9 cts, but the same variety that was sound sold at from 20 cts to 50 cts per box. Choice pears continue scarce and fetch good prices. Sales were made up to \$2 a box for something extra, with even a higher figure for choice Bartlett's.

Plums and prunes are in lighter receipt, yet prices are no better, but if anything, a shade weaker.

Apples are in better demand, with something extra wanted at full prices. The stock of poorer qualities has been greatly reduced by sales to cider-men and also to peddlers, which admits of better prices being obtained for all kinds. Receipts of Oregon are, as yet, light.

Raspberries are about out of the market. Strawberries and also blackberries have ruled very strong throughout the week under lighter receipts and a good demand.

Cantaloupes have ruled weak throughout the week, as have watermelons, owing to cool weather, with only a moderate demand and free receipts.

## Wool.

The market continues excited, with buyers competing for all desirable clips received. Some Northern fall sold at over 23 cts per lb, but the wool was free from burrs or seeds and was fairly long. It is said that one clip fetched 25 cts per lb. The market is strong and active for all grades, with an advance established over last week. The higher prices here are due to higher prices at the East and also abroad.

The following are to-day's meat prices: Beef—Stall-fed, 7 @ 7½c per lb; grass-fed, extra, 6 @ 6½c; first quality, 5½ @ 6c; second, 5 @ 5½c; third, 4 @ 4½c. Calves, small, 9 @ 10c; larger, 7 @ 8c per lb. Mutton—Ewes, 4½c; wethers 5c. Lamb—Spring, 6½ @ 7c per lb. Pork—Live hogs on foot, 3½ @ 4c for grain and dairy feed; 2½ @ 2¾c for soft; dressed, 6c for hard, and 5c for soft. Grass-fed stock sold on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	284,321	228,806
In port, disengaged.....	80,603	99,618
In port, engaged.....	54,137	24,602
Totals.....	429,061	353,026

The above gives a carrying capacity as follows: 1886, 686,497 short tons; 1885, 564,941 short tons; increase over last year, 121,556.

Tonnage on the way to Portland, Oregon, 49,012 tons; same time in 1885, 36,223.

The differences between wholesale and retail dealers in poultry have been arranged, and the market moves smoothly. Good fowls continue scarce and in demand at high figures, something extra fetching an advance on top quotations, but poor stock is in oversupply. Turkeys are in excess of the demand.

Charters to Great Britain are falling. The latest wheat charter to Liverpool was at 26s per long ton for wooden vessel, and 3½ for iron vessel to U. K. for orders.

Walnuts and almonds of this season's crop are expected to hand, but not in sufficient quantity to establish prices.

San Francisco, Sept. 22, 1886.

## Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

The** **American Well** **Works, Aurora,** **Ill., U. S. A.**

## PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

### DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufactures), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 25-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished. We ask you to give our mills a trial. We guarantee that you will find them precisely as represented.

For full particulars, apply to

**DANIEL BEST,**  
**513 Fifth Street, Oakland, Cal.**

**AGENTS WANTED**  
to sell the  
**MISSOURI STEAM WASHER**

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]

MARY J. TAPPAN, Reynolds, Neb.: They excel all other washers I ever saw. JOHN R. DODGE, JR., Normal, Ill.: The best machine ever invented by man. H. H. DUCANT, Corvallis, S. O.: Everybody likes them and everybody wants them.

S. B. ADAMS, Ashton, D. T.: My wife would not take a quarter section (80 acres) of land for her machine, if she could not get another. MRS. JOSEPH SWIFT, State Center, Iowa: The most useful article about the kitchen. ANNA RAMSEY, Milford, Tex.: Have thoroughly tested it on articles from lace collars to bed quilts; gives entire satisfaction. ST. CLAIR DYKSTER, JR., Boise, Washington Terr.: Self and can not be spoken of too highly. JOHN DETTON, Brigham City, Utah: Have given it several severe tests and it came out triumphant every time. JNO. H. WHEELER, Kansas City, Mo.: They have proved treasures to the families who secured them. A. P. SHIPLEY, Toano, Nev.: Gives entire satisfaction. Rather handle the Washer than anything I have seen. E. M. MASSEY, Lockport, Tenn.: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, Stoughton, Mo.: If you will get up any instrument that will take as much labor off of men as this Washer takes off the women, and cost no more, I could sell one at every house. MRS. M. C. DOBBINS, Calumet, N. J.: Gives perfect satisfaction. I do my washing alone in same time I used to with hired help. MRS. M. MOORE, Nevada, Ky.: Will do more than I say, especially washing flannels. MRS. F. G. SINDEN, Sullivan, N. Y.: Would not take \$50 for mine if I could not get another. Washer quicker and better than it can be done by hand. MRS. FRED. H. HARKIN, Bechtelstown, Va.: Is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. POND, Norristown, Conn.: Have used it nearly four months. Am perfectly satisfied. I freely recommend it to all housekeepers. MRS. MARY E. VAIL, Patoka, Ill.: Saved me \$25.00 per year for 18 months I've had it. MRS. C. W. TALCOTT, Northfield, Conn.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, Stratton, Mich.: I had rather give up my Jersey cow than part with my Washer.

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand percent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo., or Box 1968, San Francisco, Cal.

### WOOD BEAM SLIP SHARE STUBBLE PLOWS.

Hardened Moldboards, Shares and Landsides.

No. 22, Single Shin Steel Tapering Landside, 10-inch cut.....\$14 25  
No. 26, Single Shin Steel Tapering Landside, 11-inch cut..... 15 50  
No. 31, Single Shin Steel Tapering Landside, 12-inch cut..... 16 00

### STUBBLE and SOD PLOW.

Sizes, 13 & 14 Inches.

These Plows, as the name indicates, are intended to do old ground plowing. They are a medium between the more ho'd or abrupt old ground plow and the long, slow turning breaker. They work nicely in old ground, being preferred by some to the regular Stubble Plow, and turn tame sod, such as Blue Grass, Timothy, or Clover, admirably. They are numbered 19 and 21. We make with them steel beam, also. The numbers of the steel beam plows of this style are 519 and 521.

## LA DOW JOINTED PULVERIZING HARROW.

SUPERIOR TO ALL OTHERS, BECAUSE IT IS

**Simple, Durable and Flexible.**

THOUSANDS IN USE GIVING ENTIRE SATISFACTION.

### POINTS OF SUPERIORITY:

It will do better work.  
It is much easier for the team.  
It is easier to manage.  
It has a lever to change the angle.  
It is not heavy on the horses' necks.  
It has no side-draft.  
It leaves no ridge at the center.  
It has a wrought iron frame.  
Its chilled bearings cause it to wear longer and work easier.  
It is easy to ride.  
It conforms to uneven surfaces perfectly.  
It can be made rigid if desired. It has self-feeding oil cups. Best Disc Harrow in the world.

WE HAVE THE FINEST CARRIAGE REPOSITORY ON THE PACIFIC COAST.

Agents for David Bradley Manufacturing Co. A full stock of Plows, Harrows and Cultivators on hand; also a full line of extras. Agents for the celebrated Milburn Hollow Iron Axle Wagon, McCormick Mowers, Reapers and Twine Binders, and Randolph Headers.

If you have not our Catalogue, send for it. Mailed free to any address.

ADDRESS, **TRUMAN, ISHAM & HOOKER, 421-427 Market St., San Francisco.**

3 Gang, 10 Inch..... 85 00	4 Gang, 10 Inch..... 90 00

All with Extra Points.

## KEYSTONE 2-LEVER DISC HARROW.

THE KEYSTONE DISC HARROW has met with wonderful favor since its introduction. It is made with two levers to set the cutters at different angles while the machine is in motion, and to relieve it from clogging by throwing either gang back. It is the only Harrow made with flexible frame so the cutters can adapt themselves to the uneven surface of the ground. The discs are made of steel. The boxes are chilled-hardened to prevent cutting on the axle. It has revolving scrapers, which not only keep themselves clean, but clean the discs.

We have had a Special Size made for Orchard and Vineyard Work (viz., 5 feet), which suits the purpose for which it is intended better than any implement of its kind in the market.

### PRICES:

SINGLE COPIES, 10 CTS.

## The Discovery of the Pacific.

The RURAL goes to press on the anniversary of the discovery of the Pacific ocean. On September 29, 1513, Vasco de Nunez de Balboa was the first European to cast eye upon the vast expanse of the Pacific, and in his fervor to take possession rushed with uplifted sword quite into the water and claimed the new ocean in the name of his sovereign, Ferdinand of Spain. In the engraving on this page the artist well portrays the incident which is of especial importance to us, as it marks the beginning of the modern history of the Pacific Coast. Balboa should receive a mead of honor, especially from those whose lives are cast upon the shore of the ocean which he discovered.

Balboa was by birth a hidalgo, or gentleman, but in extremely reduced circumstances. He seems to have been an idle, dissolute youth, but great ideas were in the air. It was an age of romance, adventure and discovery. He drifted with a company of adventurers on a voyage to the western seas, and appears to have settled in San Domingo as a cultivator of the soil. Fortune failed to smile on him, and to escape his creditors he concluded to join an expedition to Darien in 1510, commanded by Francisco de Enciso. To escape their vigilance he was smuggled on board ship, concealed in a cask. Bitter quarrels soon broke out among the adventurers; Enciso was finally deposed and the command was given to Balboa. For taking part in this insurrection he was summoned by the King to Spain. Ruin, and perhaps death, awaited him, and he resolved to placate the King by the brilliancy of his exploits. He had heard that a great ocean lay on the other side of the mountains, and of a wondrous land of gold, called Peru. On the 1st of September, 1513, with 190 men, he started on his perilous journey across the isthmus, and on the 25th of September, 1513, reached the foot of a mountain which had for ages gazed on the mysterious western sea. Behind him was ignominy—perhaps chains and death; before him, immortality and fame. Vasco Nunez was early astir in the morning preparing for the ascent. When near the summit he ordered a halt and ad-

BALBOA TAKING POSSESSION OF THE PACIFIC OCEAN FOR THE KING OF SPAIN.

vanced alone. In the language of H. H. Bancroft, "His should be the first European eye to behold what there was to behold, and that without peradventure. With throbbing heart he mounted the topmost eminence which crowned these sea-dividing hills. Then, as in the lifting of a veil, a scene of primeval splendor burst on his enraptured gaze, such as might fill with joy an archangel sent to explore a new creation. There it lay—that boundless, unknown sea—spread out before him, as far as the eye could reach, in calm, majestic beauty, glittering like crystal in the morning sun." It was three days after that vision before he and his companions reached the border of the sea. Vasco Nunez, armed and armored cap-a-pie, drew his sword and taking from the hand of an attendant a banner, on one side of which were pictured the virgin and child and on the other the arms of Castile and Leon, marched into the water and with loud voice took possession of the ocean in the name of Don Fernando and Dona Juana, Sovereigns of Castile, Leon and Aragon. The next we hear of him he is floating with two brigantines on the sea he had found in search of the Pearl Islands. Visions of a Montezuma empire or of an Inca palace of gold danced before him, but he was not long to enjoy his glory and bright dreams. The cruel, jealous eyes of Pedrarias, Governor of Panama, were upon him, and on the pretended suspicion that Vasco Nunez meditated treason, had him arrested by craft, led away to prison at Acla, and without even the forms of law tried and condemned to be beheaded. Four of his friends were to suffer with him. It was a dismal day at Acla, the chroniclers tell us, when these five brave men were led out to die as victims of a ferocious, savage-hearted old man. Heavily chained, and surrounded by a strong guard, first came Vasco Nunez. Before the prisoner walked the town-crier, who, as he approached the scaffold, exclaimed in a loud voice, "Behold a man disloyal to his king; let death be the doom of traitors." "Tis false," cried Vasco Nunez; "never have I been disloyal or untrue. To infamous treachery and wrong I yield my life, and not to justice."

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Salt River Valley, Arizona.

EDITORS PRESS:—Not having seen, for some time, any mention of our desert country, I beg leave to make a few remarks on the fertile Salt River valley.

The Salt River valley is an immense body of land about 25 miles long, and the settled part averages about 10 miles wide. At the lower end it continues till it is merged into the Gila valley, so-called. The Salt river runs along the east and south sides till its waters commingle with the Gila river, which there flows on to its connection with the Colorado, near Yuma.

On the south side of the Salt river is bench land, called the Tempe, with a flour mill and quite a settlement at the crossing of the river. About three years ago, a Mormon colony also settled here, but the people are mostly "Gentiles" of a go-ahead class.

This Tempe country is a fine, level country, dotted with farms and spread out east and south until the edge of the desert is reached, or as far as their present water facilities are extended. On the easterly part of this Tempe country the land rises higher and higher until on the mesa proper, and on the road to Florence, is the settlement of Mormons called Mesa City. This settlement is composed of small orchards, gardens and alfalfa patches, and demonstrates what can be done on the desert lands with water. There is a small winery here, and the making of Mission wine is a profitable industry. On one place called Stringtown are some very pretty ranches, sloping off to the west.

On the river bottom, about eight miles north-east, is another Mormon settlement called Lehigh, but the name has been changed lately. This colony is similar to the others—made up of a thrifty class of people, but very poor; always ready for a trade, but no money. This Tempe, altogether, is a splendid country, and with more improved methods of handling water will make homes for a great many people.

Phoenix is the county seat of Maricopa county, and is situated toward the upper end of Salt River valley, and on the north side of the river. It has a population of about 4000, and is making rapid progress as one of the most promising towns in the Southwest. It has a fine brick courthouse, also brick schoolhouse, and also two business blocks of brick, with another one commencing to rebuild, which was recently destroyed by fire. Bricks are sold from \$8 to \$10 per thousand, and are being used largely in preference to lumber, which is \$40 per M. There are a number of fine buildings in the town, principally composed of brick, that are a credit to the county, and will bear comparison with many larger towns.

There has been great improvement in Phoenix during the last three years, and the good work is still going on; and with the promised rail road at our doors, Phoenix is destined to be the most prominent city of Arizona.

## The Weather.

The weather is very warm during the months of June, July and August, and sometimes part of September, but the extreme heat lasts about eight weeks, and is really too hot to be comfortable, although it is more sultry and oppressive in the town, with so many cottonwood trees to break the breeze, when there is any, than it is outside of the suburbs. But it is all nonsense about being so very hot in Salt River valley as people are led to believe. It is as pleasant here 9 months out of 12 as any part of California that is above the fog belt. When a hot wave strikes California it is felt here, and when a cold wave sweeps over the country it will freeze here; but we have no fogs and we never have "northerners." Another good thing is, we have no squirrels to eat up the farmer's grain.

## Soil.

The soil of the Salt River valley is diversified toward the river and the lower end of the valley, and on the west and east of the town the soil is an adobe and is principally planted to grain and alfalfa, of which it will produce immense crops. The southeasterly part of the valley is composed of a sediment overlying adobe, and is the finest kind of soil for sweet potatoes, melons and other garden truck. On the north part of the valley the soil is of a reddish clay, mixed with gravel, and the further north it becomes more gravelly and sandy until the low mountains are reached on the boundary of the valley. From these low mountains, toward town, is an extent of country about 5 miles wide and about 25 miles long, running east and west and widening out to a greater distance on the western end, which is about to be watered by a new canal built by the

## Arizona Canal Company.

It is 30 miles long, 56 feet wide on top, and about 5 feet deep. All the soil under this canal is of a gravelly and loamy nature and well adapted for grapes, deciduous fruit and alfalfa, and no doubt but oranges can be grown there also.

Most of this country lies at an elevation of 100 to 150 feet above Phoenix, and is covered with grease wood and small mesquite. About eight miles northeast from Phoenix the ditch drops over a rock barrier and a town is laid out here, and it is proposed to use the water-power for mechanical purposes.

The ditch has had a setback by receiving the

opposition of the old settlers of the valley, and last winter their dam washed out by the high water and could not be replaced in time to do any good last season. Active preparations will commence soon, and it is expected to have water in the ditch by Christmas, if not sooner.

This class of lands is what will make the Salt River valley the great fruit country of Arizona. There is room under this ditch for several colonies, and when these lands are settled up and planted to all kinds of fruits, it will be the most beautiful part of the Southwest, as all these lands sloping to the south are very uniform grade, giving opportunities to make avenues miles in length.

## Fruits.

Nearly every kind of fruit does well here as far as tested: Pomegranates, pears, peaches, apricots, grapes, figs, prunes, etc. Grapes are very productive here and very early coming in market, from beginning of July until October. But apricots seem to be at home. This last season the trees were loaded everywhere; even the Moorpark trees were full of fruit. It is said that Los Angeles county people are digging up their apricots. I say, "let them dig;" here is a county that can produce enough apricots to supply the United States, and they come in earlier than the California article and can be shipped East two weeks earlier than Southern California.

Figs also make a remarkable growth and bear well. Oranges do very well in the garden around Phoenix, but no orchards have been planted yet and it is difficult to make people believe they will succeed.

What this county needs is men of energy and enterprise, with capital, to take hold of the immense advantages here and show the settlers and "tenderfeet" what can be done. Let such men as made Pasadena, Riverside, Ontario and other colonies come here and take hold, and the possibilities of this soil will surprise even the natives.

## Water.

The water system is the greatest drawback at the present time to this valley. On the south side of the river in the Tempe country are but two ditches of any size; one is the Tempe ditch and the other is a ditch taken out by the Mormons a few years ago. On the north side of the river are three ditches called the Grand canal, Maricopa canal and the Salt River valley canal. The latter supplies the town of Phoenix.

The shareholders of these canals pay so much a year per inch for water, besides the assessments on the shares which may be called for to fix dams or other expenses. Each shareholder buys the amount he may need every fall, but cannot exceed 80 inches to one-fourth section of land, which is the amount one share calls for, although he can buy less or buy some for his neighbors who have no share in his water right.

The water is turned into every shareholder's ditch, and while the river has plenty of water, there is sufficient for everybody, and the gates are left open for each man to take what he needs. But when the rivers run down about June and July, the gates are locked down, and the man that can steal the best gets the most water. It makes no difference how much water the shareholder buys; he gets no more water when it is scarce than the man that buys a smaller amount. But there is always plenty of water for the grain men, and the alfalfa and fruit men are the sufferers in a dry season.

But there is also an immense waste of water in the way it is handled and used. More water is used for fruit trees than necessary, and no cultivation is practiced at all. Such a system speaks for itself; that of allowing half an inch of water to one acre of land, and only 18 to 25 feet to surface water.

In buying the water every fall each shareholder has to sign an agreement that he will not hold the ditch company responsible for more than \$10 if he should suffer loss by scarcity of water. In the grand canal and the Maricopa the water is bought twice a year, and is called winter and summer water (from September to first of June, and June to end of August). This is to let off the grain men who have no alfalfa or summer crop. The water is sold cheaper in the summer. This winter water costs about \$2.50 per inch of two inches pressure, and the summer water \$1.50 per inch. In the Salt River valley ditch the water is sold only once and costs \$2.25 per inch of two-inch pressure.

The new Arizona canal is about to take the water from the river, above all the other ditches, and runs about eight miles direct north of Phoenix. The head of the ditch is 30 miles from Phoenix, and although the settlers have tried to demonstrate that there is no water to spare, it is only a dog-in-the-manger policy and a case of sour grapes, as it is proved that there is enough seepage and waste in the river to give all the water necessary if properly managed.

The water system adopted by the Arizona canal is different from the other ditches. The water rights are sold separate from the stock of the company, and not liable to assessments of any kind. The water rights are issued to each 80 acres of land, and are so secured that they become part of the real estate, and cannot be sold again separate from the land. They are being offered at \$500 per share, or \$1000 for a quarter section of land. The water will be sold by the inch, or its equivalent, and it promises to be a great improvement on the system now in use lower down the river.

## Crops.

The crops mostly raised here at present in the

valley are wheat, barley and alfalfa. A large quantity of hogs and cattle are also raised, and some fruit. Sorghum has been tried by the Mormons, and makes a good article of syrup. Cotton was also raised at Mesa City, and almost anything will grow that is taken care of. Lands are selling by the quarter section from \$200 up to \$4000, according to location and soil. Lands under the new Arizona canal have been offered at \$12 an acre with water right. Lands joining Phoenix are held at \$200 per acre. There are five additions to Phoenix laid out in lots for sale.

Phoenix, Arizona.

TRAVELER.

## The Morning-Glory.

EDITORS PRESS:—This flowering vine has recently been alluded to in your paper, and I thought as I knew a little more about it than the writers it would be of service to give my experience for the benefit of your readers. To think of extirpating the morning-glory in one season, after it has established itself (i. e., left to run to seed one or more seasons), on ever so small a piece of land, is a thing not to be entertained for a moment. About eight years ago I saw it planted in the flower garden and thought at the time what a beautiful, fragile, lovely flower it had, and took delight in looking at it; but one day I passed by two vineyards where I saw the beautiful flowers twisting and twined around and through the grapes, leaves and long canes of the grapevines, and I at once perceived the impossibility of doing anything with it, in this case, for it had already covered large areas of the vineyards, and to hoe them out at that season was impossible.

I at once passed the sentence of death against the thing on my own place and offered inducements to the young ones to bring me all the little seedlings as fast as they came up in the garden, as I could not have it spread into the vineyard on any account; so they brought them to me, hundreds of them, not merely the first year after they had seeded, but every year thereafter, and it is but a few weeks since they brought me a lot more, after irrigation, the seed having lain in the ground and kept alive all these many years, and at the first favorable opportunity started into life with a tenacity unparalleled except perhaps by the grossest of weeds. Vineyardists, be careful about allowing this plant on your places, for irrigation will sometimes carry the seeds and scatter them far and wide and the mischief will be done.

Anaheim, Cal.

## From an Indiana Subscriber.

EDITORS PRESS:—The July numbers of the PRESS I received from your office in good order. I have read and reread them until the papers have become dim by so much handling. I thought possibly a few lines from this part of God's footstool might be of some interest to the many readers of your excellent sheet.

In this part of Indiana we have been blessed with good crops—wheat, oats; hay was beyond an average. Some fields of wheat thrashed 25, 30 and some as high as 40 bushels per acre; oats, 50 to 75 bushels per acre. Corn will be all right if the frost stays away three or four weeks. Owing to the excessive dry June, our potato crop will be short. Our fruit in this part is very light. No peaches are raised here. When we want a feast we buy the California plums. Strawberries were an average crop. Gooseberries and currants are not raised here any more on account of the insects.

JACOB HODGEN.

Frankfort, Clinton Co., Ind.

## POULTRY YARD.

## Notes on Experience.

EDITORS PRESS:—Perhaps some of your readers who are interested in the poultry business will be glad to read an item I found in a New York Weekly Tribune, entitled "Incubation by Irrigation."

A man had watched a setting of choice eggs with much solicitude till the 23d day of incubation, and still there was no sign of their hatching. Seeking advice at this stage, he was told to put them into a pan of warm water and leave them till they began to dance, and then return them to the nest. Five hours afterward he came with the joyful tidings that every egg had hatched. He said the moment they touched the water they danced like puppets. The lining of the shells had become so dry and tough that but for the wetting not one of the chicks would have been able to break the shell. Eggs in that condition absorb the necessary moisture almost instantaneously, though they will not suffer injury from remaining in the water several minutes. Care should be taken to return the hen to the nest with the eggs to prevent the too rapid cooling from atmospheric exposure and evaporation. Sprinkling eggs in the nest during incubation is often recommended, but it is immeasurably better to thoroughly wet them by dipping. My practice for several years has been to wet all the eggs about the nineteenth or twentieth day. If the hen be taken from the nest so that the eggs are in full heat, which is much better than to take the eggs after the hen has gone off and they have become partially cooled, the water should be at a temperature of 100° F. If they are cooled, the water should be tempered accordingly, so as not to suddenly heat up the shells.

I have tried this plan and am convinced it saved me many a setting of eggs. I am only

an amateur in the art of chicken raising, and I find it is indeed one of "fine arts," and not so easy as it looks, when going about a well-kept poultry establishment. For instance, when I found three little chicks dead beside an empty drinking pan, on a hot day, it is plain enough, that while I was away spending the day, they died for want of water; but when I found one unnaturally large on one side, caught it and found it was inflated, like a balloon, I realized that I was, indeed, a novice in the art, and was at a loss to know what to do. At last, for want of any other idea, I pricked the aforesaid inflated chick with a fine needle, when, "presto, change," it was no longer inflated, but like a toy balloon likewise treated, it suddenly collapsed. I put it down, and it ran away, much delighted to find it was no longer one-sided, but could go in and out of the fence with its companions. I went back to the house quite pleased that my "woman's wit" had so easily solved the problem. But alas! when feeding-time again came around, all the vanity was taken out of me, for there was that same white chick inflated again. I gave it another prick with a fine needle, apparently without any pain to it, as it was only the skin; it instantly collapsed, but only to puff up again. No matter or water came out, only air. In a day or two it suddenly fell over and died. Now, will some kind reader gratify my "woman's curiosity," and tell me what caused the inflation and what I should have done for it? G.

Kilfasset Ranch, Santa Cruz.

## THE STOCK YARD.

## Care and Management of Stock.

EDITORS PRESS:—Contributors to the RURAL "Stockyard" do not seem to be numerous, and perhaps a few lines from any one who will write may be admissible.

The season of fairs is about over, and one noticeable departure from the usual custom has been that some stock has been shown without previous preparation. Whether successful or not as a venture for prizes this year, it seems to me that it is a move in the right direction. It is a very common belief among those who view stock, as usually shown, that their superior appearance is in the main, if not wholly, due to the superior care they have received.

When shown in just good breeding condition, as every farmer likes to keep them, their superiority over cattle not purely bred will be plain to every one that takes interest enough to examine. The low price of beef and dairy products has a depressing effect upon all classes of cattle, the best as well as the poorer sorts; but a change in this respect is likely to take place at any time, and agencies may be now at work on overcrowded ranges that will cause a change for the better.

The number of cattle raised on the farms in California has but little influence on the markets, and in dull times we should not let any neglect creep in, in the management of our herds. The young stock should at all times have the best of care, never stinted in the quantity or quality of food, and every animal in the herd be well looked after and cared for. An animal that has at all times been generously fed and sheltered when needful may not always pay a profit to its owner, but it stands a much better show of so doing than if at any time or all its life it has been neglected. At this time of the year, young calves need special care. There is but little on pastures now that is fit food for them. They need liberal rations of hay, and a few sliced beets or carrots, if to be had, will help their growth greatly. Light feeds of bran mixed with ground grains, in proportion of three of bran to one of grain, will be a welcome addition and will be repaid in dollars by and by.

Calves that come in the summer and fall need good food provided for them until the following spring, when the grass gets to be good and the weather warm, when they can be turned out to shift for themselves. While going about among them attending to their wants, there is the best opportunity to make them gentle by handling, and this is more important than perhaps many would think. An animal that is gentle to the touch, that you can go up to and caress, feeds more contentedly, is less easily startled by unusual sights and sounds, and for these reasons will thrive better. Look among your cattle and note if it is not the gentlest ones that are, as a rule, in the best condition. If this be so, does it not pay to have them gentle, to say nothing of the ease with which they are managed, in case one from any cause needs particular attention?

Cattle a year old or more do not require so much care. They do well now on stubble-fields, with strawstacks that they can have access to; but enough of nutritious food to keep them in good condition is necessary at all times.

There is much in the rearing and management of stock that can only be gained by experience, and many theories are advanced by writers that will not stand the test of trial. Therefore, it is best to prove all things, holding fast that which is good.

Shorthorn breeders are cheerful and serene. They do not think that they are, or ever will be, out of fashion. Thoroughly believing in the excellence of their cattle, and strong in the determination to maintain their excellence and improve their herds by every means within their reach, they will pursue the even tenor of

their way, and reap the reward that always comes to persistent effort in the right direction.  
Centerville, Cal. J. A. BREWER.

[Mr. Brewer is right about the RURAL'S "Stockyard." We are very anxious that the growers of all sorts of live-stock should be more confidential with us, and more generous in expressing their views and experiences to each other. Mr. Brewer has given us a letter which is bristling with good points. If all the stock-growers who read the RURAL would write for us as the fruit men do, we should have a host of good things about our animal industries every week.—EDS. PRESS.]

## THE FIELD.

### Origin of the Combined Harvester.

EDITORS PRESS:—I am a subscriber to your valuable paper, and in its last issue, September 18th, I perceive an account of the "Origin of the Combined Harvester," written by W. W. Leland, which is not at all correct. He was too young to know much about it himself, and his memory may not be perfect on that subject.

I inclose to you a copy of the *Daily Evening News*, published at Modesto, April 21, 1886, in which is my letter to my son, S. B. Moore. At his request I have given a true statement of the origin and work of the combined harvester.

I would be gratified if your paper would give the true statement as to the original harvester. The other matters in my letter I do not ask you to mention. Yet I do feel proud of my agricultural life and character generally—never having used liquor or tobacco, and now in my 85th year I am in perfect health.

The law passed for the purchase of a tract of land for a model and experimental farm, for the State of Michigan, was that it should not be less than 500 acres, and situated within ten miles of Lansing, and that it should be selected by the State Agricultural Society, and an Agricultural College should be erected thereon. I was the President of the State Agricultural Society at that time, and called a meeting of the Executive Committee, and purchased 676 acres three miles east of Lansing. Mr. Samuel Bartlett was appointed to superintend the erection of the college. It was finished and accepted by the Governor and Legislature at the session of 1855. It was the first Agricultural College erected in the U. S., and I am informed that it remains the best to the present day.

Tulare, Cal. ANDREW Y. MOORE.  
Mr. Moore's Statement.

The following is the publication in the *Modesto News* to which Mr. Moore alludes: "About the year of 1820, at Utica, New York, John Morgan made an expose of Free Masonry, and in consequence he was removed, and the public never heard of him afterward. John Haskall and others were implicated in the expose, and thought it prudent to leave that country and go West. Mr. Haskall came to Kalamazoo, Mich., and settled there. He was a lawyer, but had no practice, and it was hard to make a living. On viewing Prairie Ronde, in Kalamazoo county, a prairie of some 20,000 acres, seeing that it was good for wheat and thousands of acres uncultivated, he thought if he had a team perhaps he could hold the plow and put in wheat. He knew he could not harvest it, and there were no men to hire. He spoke of it in the family, and in consequence it caused his wife to dream; so one morning thereafter she stated to her husband that she saw in her dream a large machine going over the prairie drawn by horses and harvesting wheat, and described its motion and appearance. Mr. Haskall related the dream to Hiram Moore, of Climax Prairie, knowing him to be of an inventive turn of mind. Hiram asked him how he would have it operate. Mr. Haskall replied, holding out his hand with fingers extended, he would run it through the grain, and with the other hand draw over and backward, he would cut it like that. Hiram did not intend to give it much thought, but it troubled his mind for six months, when he concluded he would put his mind seriously upon it and succeeded in the invention, perfect as he thought, and made a model and took it to Washington City, exhibited it at the patent office and obtained a patent. This was in the year of 1834. By the harvest of 1835, he, at Flowerfield, Mich., made a temporary machine, and went into a field for trial. It cut about two rods and broke something. The thrasher was not in; he merely wanted to try the cutting process. In the failure he said: 'I see the shore afar off and it will take me a long time to get there, but I will succeed in time.' The next season he intended to perfect a machine for further trial. My brother Abner did the carpenter work, and as I had sowed some wheat when I came to Prairie Ronde in October, 1835, he asked me to let three acres stand for trial. It being late in the harvest season, so that he could make a fair trial, I did so, and the harvester cut it and thrashed it in good order, but the cleaner was not yet attached. He asked me to take the time of its work and figure the cost per acre, at the going rate of prices for men's labor and hire of horses. Twelve horses were worked on the machine at that time, besides the team hauling to the barn. I took the exact time for cutting the three acres, and made the actual cost of 82

cents per acre. I inquired of my brothers, who were farmers, as to the cost of harvesting and thrashing in the ordinary way of cradling, raking and binding, shocking, staking, thrashing, cleaning, etc., and upon strict calculation, it cost in that old process \$3.12½ per acre. The contrast was so great that I took an active part in its future. By the harvest of 1837 it cut only about 20 acres, and he found that it wanted further perfection, although the thrashing and cleaning had been added. Before another harvest he said to me: 'Mr. Moore, I can invent, but I can't drive the horses.' I replied that I would drive the horses and would assist him, and I did so each year. In 1841 he invented the Angle Edge sickle, and it would work all through harvest without being ground when first in good order. The first sickle was straight, with teeth cut in sections each way. In the fall of 1841 Mr. Moore went to Rochester, N. Y., and procured good mechanics and he completed two machines. I used one for him and Ira Lyons for the harvest of 1842. In the spring of 1843 I bought the Bates farm, near Schoolcraft, and moved thereon the last of March. I operated his machine as usual, and in that season had the only complete machine built for myself. It was drawn by 16 horses, hitched two abreast, walking by the side of the grain cutting 10 feet wide, thrashing, cleaning and bagging the same, doing 25 acres in a day. I run it every season till the harvest of 1853, when I sold an interest in said machine to Geo. Leland. We shipped it to California the same year, and it cut over 600 acres for Henry Honer and Mr. Brifogle, in Alameda county, in 1854. The next year Mr. Leland was engaged in mining and did not run the harvester, but for the harvest of 1856, Mr. Leland's son put it in the field, and not being skilled in machinery neglected to oil it, and by friction it took fire and was burned in the field. Thus ended the machinery business with me. I will add that in the year 1844, I sowed 300 acres of wheat, which was the largest crop of wheat raised by one man in Michigan at that time. It might be interesting to you to know that in the summer of 1844, Mr. Edmund Baker, of Flowerfield, Mich., informed me that he contemplated making a gang plow, and explained it to me. I asked him what he would charge me for one, that it might be tried; he said \$30 and I told him to make it. He did so and it was a perfect success, and I assisted him in getting a patent for it. It was the first gang plow in the United States. It cut 12 inches each. Afterward he made me one with five small plows, six inches each. The foregoing is true in every respect."  
—A. Y. MOORE.

## THE APIARY.

### Raising Queens.

EDITORS PRESS:—The eggs in the ovaries of the queen-bee are all alike and will, if they are laid as they leave the ovary, produce drones only, no matter whether they are deposited in worker, drone, or queen-cells. If, however, an egg, in passing the seminal sack, through the voluntary act of the queen, receives any of its contents, it becomes fecundated, and this fecundation changes the sex of the egg, so that it in due time will hatch out a female. Virgin queens are therefore able to lay eggs which will hatch, but they only produce drones. If, then, a young queen, either from defective wings, or being by unpropitious weather prevented from flying out during the limited time (i. e., 21 days from hatching) allotted her for successful mating, fails to become impregnated, she will be a drone layer for life. In certain cases where a colony of bees loses its queen, one or more workers will lay eggs which produce dwarf-drones.

#### The Eggs Laid by a Perfect Queen

Are therefore either male or female, and not, as many think, worker, drone and queen-eggs. Any female egg may produce a queen, whether laid by the queen in a queen-cell or moved by the bees from a worker-cell to a queen-cell, or remaining in a worker-cell which is subsequently enlarged by the bees and changed into a queen-cell. On this latter act depends the process known as artificial queen-rearing. The position of the cell and the quality and supply of food determine the future development of the female bee after it is hatched from the egg. Laid in a nearly horizontal worker-cell and supplied only with the usual allowance of pabulum, prepared by the nurse-bees, it becomes a worker or undeveloped female; while if it is placed in a vertical or nearly vertical queen-cell, much larger than a worker-cell and of an entirely different construction, and supplied with an abundance of "royal jelly," it becomes a queen or perfect female bee. If any other factor enters into this process it is known only to the bees themselves, although it has been suggested that the nurse-bees perhaps use the contents of worker-eggs in the preparation of "royal jelly." There are a number of different ways of raising queens, but they may all be classed under two heads, generally called natural and artificial queen-rearing.

#### Natural Queens

Are produced under the swarming impulse, when the bees, anticipating an emigration from their old home, in which emigration (swarming) the old queen always accompanies the swarm, build one or more queen-cells and provide for a new mother of the parent colony after the swarm shall have left.

There are two other conditions under which bees will raise queens: first, when they wish to supersede an old, failing queen; secondly, when the queen gets killed or lost through an accident and they immediately raise another from her own brood to replace her. But these can hardly be classed under either of the above heads.

#### Artificial Queen-rearing

Is done when the owner purposely deprives a colony of its queen and thereby compels the bees to start queen-cells. By an experienced queen-raiser it is generally a strong, populous colony of inferior blood which is thus unqueen-ed and devoted to raising a supply of queen-cells. The colony is either allowed to raise queen-cells on their own brood, and when these cells have been destroyed on the fifth or sixth day after unqueening, it is supplied with eggs from a selected colony of superior blood from which to raise desirable queens for future use; or all the unsealed brood is removed at the time of unqueening and the colony immediately furnished with one or more cards of eggs and very young larvae from a selected queen. This is, of course, a gain in time.

#### Nuclei.

A nucleus is a small colony, formed by taking one or more combs of brood and honey from a hive and placing them with the adhering bees (but without a queen) in a new (to them) hive in another location. A nucleus-hive may be either an ordinary hive, contracted by means of a division-board, or a hive of smaller dimensions, say for three or four combs, which should, however, take the same size of frame used throughout the whole apiary. If the combs used for forming the nucleus do not have sufficient bees adhering to them, or if many bees leave for their old home, more must be added by shaking them from combs of the original hive, the combs being returned to their first place. It is, therefore, best to form nuclei in the middle of the day, when most of the old bees are at work in the field, and the young bees, remaining on the combs and having not yet located their home, will stay wherever they are placed. Nuclei should always be formed the day before you are ready to introduce queen-cells. If given the same day, the bees, not yet knowing that they are queenless, will most likely tear down the cell and destroy its occupant. But on the following day they will all be familiar with their loss, anxious for a new queen, have probably already made preparations for raising a new one from the brood on hand, and the queen-cell given to them will then be safe and well accepted.

#### Introducing Queen-cells.

If a colony is found preparing to swarm and having queen-cells capped, such cells may now be cut out and introduced, one to each nucleus (natural queen-rearing); or if a colony has been deprived of its queen for the purpose of raising queen-cells, on the ninth day after unqueening, or rather after giving them selected brood, the cells will usually be capped and ready to be cut out (artificial queen-rearing). In either case none but the largest and finest cells should be used and the balance destroyed. In removing the queen-cell from its original place, a good-sized piece of the comb, to which it is attached, should be cut out with it—if possible, somewhat wedge-shaped; and where the cell is going to be placed in the nucleus, a hole of the same shape must be cut among the brood in one of the central combs, to receive the cell and to prevent it from falling down before the bees get it fastened. In very warm weather the cell may be placed where the bees have left a hole or passage-way between the edge of the comb and the side of the frame, or it may be pushed down between the tops of two central combs, moved temporarily a little apart. This avoids mutilation of the comb. In either case there should be sufficient room under the point of the cell to allow the queen to emerge without hindrance. In handling queen-cells great care should be taken not to jar or dent them, nor to leave them lying in the hot sun or where the wind may chill them. Combs having queen-cells on them should, therefore, never be shaken to remove the bees, but the bees must be gently brushed off, if necessary, as any jar or dent is liable to maim or kill the embryo queens.

Some bee-keepers prefer queens reared under the swarming impulse, while others contend that artificial queen-rearing is just as good if properly done.

If hives of colonies or of nuclei in which queens are reared stand close together and look much alike, they should be marked by a stone, a board, or some other object, that the young queen, on going out on her wedding-trip, may note her location. Otherwise, she is liable on returning to enter an adjoining hive through mistake and get killed by the inmates, to whom she is a stranger.

As soon as the young queen commences laying regularly, she may be disposed of as the owner sees fit, and, if removed from the place of her birth, the nucleus may be set to rearing another queen in her place and kept at this business throughout the summer. It is, however, incumbent on the bee-keeper to see that the nucleus is occasionally supplied with brood from other hives, in order to keep up the numerical strength of the bees; and also to remove the honey which may accumulate and cramp the bees for room, causing them to idle away their time or to build combs on the outside of the hive.

WM. MUTH-RASMUSSEN.

Independence, Cal.

## THE DAIRY.

### The Holstein and the Jersey.

EDITORS PRESS:—What science is doing for agriculture is shown by comparing the amount of milk given by some of the better dairy breeds with that given by the average cow in this country. The average cow yields not more than 3000 pounds of milk during the milking season, which lasts as long as grass is abundant, and this milk produces not more than 100 pounds of butter.

Compare these amounts with the 26,000 pounds of milk given by a Holstein cow and with 1000 pounds of butter produced by a Jersey in the space of one year, and the comparison is painful.

It is true that the milking season of either of these breeds often extends from one calving time until the next, but this adds to the evidence in favor of scientific dairying, and should convince dairymen that the cow is simply a machine for changing hay and grain into milk, butter and cheese.

The average farmer seems unable to grasp this fact—he goes on, generation after generation, treating the cow as a machine, capable of evolving milk and butter at will, from her inwardness. The element of food is overlooked, and like Diogenes searching for an honest man, the farmer roams the country seeking for the breed of dairy cows that will yield much milk and butter from nothing.

But the breed is of secondary importance. The yield of any breed depends on the care and the food that it receives. The cow that produced 26,000 pounds of milk had other food than pasture in summer and straw and corn-stalks in winter; as did also the one that made a record of 1000 pounds of butter.

A pound of grain changed into butter is of more value than when it was a pound of grain, and the value is sufficiently increased to leave a wide margin of profit after deducting the expenses of making the butter.

To become in the highest degree profitable, the cow must be fed as much as she can digest, just as the steam engine must be fed all the fuel it can consume before its full power can be reached. Not only is the quantity of milk influenced by the food of the cow, but the quality also. The largest milkers are not necessarily the greatest butter-producers.

A German chemist found that it required as high as 56 pounds of milk to make one pound of butter, while a breeder of Jerseys claims for a cow of this breed that 35 pounds of her milk made a pound of butter, and names 30 cows that have yielded one pound of butter from 10 or less pounds of milk.

When it is considered that on an average throughout the country 30 pounds of milk are required to make one pound of butter, and two and one-fourth pounds of cream for a like amount, it will be seen that the milk of the Jersey cow referred to is two-thirds cream. Like the speed of the trotting horse, where is the limit to the possibilities of milk and butter production?

When it is understood that the yield of the cow depends upon the amount of food digested, the question of breed finds a place. In the course of time the milk and butter capacity of most cows can be developed; but there are already breeds in which this capacity has reached a high state of development, just as there are breeds of trotting horses in which speed seems to be almost an instinct.

Which breed is the best for the general-purpose cow is a hard question for the farmer, without experience of thoroughbreds, to decide. If he turn to agricultural papers, he finds little help, for specialists usually praise the breed in which they are interested, and condemn all competitors.

Granting the assertions of the various breeders, a comparison can still be made that will be entirely mathematical.

It is generally admitted that the first place among the dairy breeds belongs to either the Holstein or the Jersey, and by obtaining from the reports of the milk and butter records made by these two breeds the average quantity of milk and butter produced by cows of each breed on the same amount of food, the result gives a fair means of comparing the relative merits of the two.

Taking the tests of a number of Jersey cows published during the current year, the records show that each cow averaged per day 32 pounds of milk, from which 2½ pounds of butter were made; this, on an average grain feed of 26 pounds daily, or one pound of grain fed to a Jersey cow, yields 1.2 pounds of milk and 1.5 ounces of butter.

Taking an average of the tests on a number of Holsteins—many of them two-year-old heifers—the records show that each cow averaged 40 pounds of milk daily, from which 1½ pounds of butter were made, on a daily average feed of 13 pounds of grain, or one pound of grain, fed to a Holstein cow, produces 3 pounds of milk and 1.8 ounces of butter.

This shows the Holstein cow capable of yielding 2½ times as much milk, and 1.2 times as much butter as the Jersey, on the same amount of food, and stamps her as the better general-purpose cow for the farmer.

## A Lay Sermon.

## Mack Descants on the Beauty of a Farmer's Life, and Gives Some Good Advice.

In one of the early chapters of that dear old but sadly-neglected book, the Bible, we read: "And the Lord God took the man and put him in the Garden of Eden to keep it and to dress it." This is very suggestive. The first man, fresh from the hand of God, and his blushing young wife, just fashioned from one of his ribs, to indicate that she should always keep near his side, were placed in a garden. With what love-glancings and hand-squeezings they must have walked into their fair, bright garden that bridal morning. God must have laughed out loud when He hit upon the idea of making woman, the consummate flower of His works. Indeed, it is said that the morning stars sung together, and all the sons of God shouted for joy. From that hour the culture of the earth and the ownership of a cozy home in the country has come the nearest of realizing Eden. But let us not forget the next lesson: Cain got angry one day and threw a club at the head of Abel and killed him, and was out off from the culture of the earth as a punishment. "When thou tillest the ground it shall not yield thee her strength." "And Cain went out from the presence of the Lord and built a city." He is not the only young man who has given up the tillage of the soil and a quiet country life, and found he had gone out from the presence of his health, purity and manhood. Who can gather up all the blighted hopes, shattered consciences, wasted lives and broken hearts, scattered over these dazzling social breakers?

The tillage of the soil lies at the foundation of social order and stability. The chief distinction between civilized and savage men is the relation they sustain to the soil. The

## Savage has no Fixed Abode.

He makes no claim to a spot of earth. He knows nothing of deeds and leases. All he asks is a place to pitch his tent for a night or during the hunting season. There can be no social organization, no law, no order, so long as men are nomadic, unsettled or lead pastoral lives. Agriculture attaches man to the soil, and this lays the corner-stone of the social fabric. It fixes him to some chosen spot he calls home, and clothes it with sweet and tender memories and associations. There the stars sparkle more brightly, the flowers bloom more fragrant, the fruit tastes more deliciously. Every tree, hill, field and stream is photographed imper-

ishably upon his soul. It is the fairest, loveliest spot on earth to him. It is his Eden. The garden, the orchard and field represent more to him than the annual yield of fruit and grain. It is the home of his wife, the place where he has unfolded his most secret heart-history, and written upon the cradle, play-ground, school-house and rural groves, the evangel of his love. The tillers of the soil

## Ought to be the Best

And most contented people in the world, as they have so little to worry and irritate them. They have no city taxes to pay; they are not pestered and tormented by butchers' bills, gas bills, water bills, rent bills and coal bills every day. There is no water in their milk, and their butter and cheese are not strong enough to walk. The hateful oleomargarine does not trouble them. They are not waked up at all hours of the night by the clang of fire-bells, the rush and rattle of engines, the stir and bustle of a whole town on the alert. A dry winter, the North wind in the spring, the scale bug or codlin moth, a neighbor's dog among the sheep, or breechy cattle may cause some anxiety; but in the main the farmer's life is serene and tranquil, conducive to health and good old age.

We know that it is easier to preach than practice, but we cannot close this homily without dropping into exhortation as

## Silas Wegg Dropped Into Poetry.

And so we say to the farmer: Do not labor so long and hard as to have no time for reading and mental improvement. Soul-wealth will outlast all your farms. Remember that shrouds have no pockets, but the mind will carry away all that is packed into it. Do not go hunting or fishing on Sundays, but get into a clean shirt and go to church and keep awake during the service. Do not fall into gusts of temper at every ill-wind that blows, and rush at your wife and scold your hired man. Never swear at your horses and mules and whip them unmercifully, for, if the

## Darwinian Theory is True,

You may possibly be abusing one of your ancestors; and if the Swedenborgian theory be true, long files of ghosts of dead horses may meet you in the judgment day. Have a place for everything and keep everything in its place. Do not allow wood, lumber, rails and wagon-boxes to accumulate in the lane that passes before your house. People passing along in dark nights may stumble over them, excooriate their shins and be provoked to say bad words. Do not allow the barnyard in rainy weather to accumulate mud and filth, so that you will be compelled to wade over your boot-tops. Never permit any sloven, helter-skelter disorder about the farm. It takes but little time to keep everything in good order, and then one feels so much better. Never borrow only enough to show that you are willing to lend. Loan all the money you can spare, but never hire any; and, above all things, never allow the home-stead to be plastered over with a mortgage. If not married, get a wife as soon as you can, and build a neat, social-looking cottage on your ranch to put her in. And when you get one do not compel her to cook for the hired men, slave over a wash-tub, make cheese and butter, hunt eggs and raise chickens and turkeys till her beauty fades and the sweetness of her disposition sours. Any prudent, economical man, who owns a farm, can easily make enough to keep a servant and make his wife a queen in his Eden. Get her a piano, music, and elegant books to read, and try and make the loneliness of the country as cheerful and pleasant to her as possible. Never grumble at milliners' bills. If your wife knows how to dress in good taste, loves a fashionable dress, a charming hat trimmed in dainty ribbons and pretty ostrich plumes, you ought to be all the more proud of her. What are you for, you great big strapping burly fellow, but to make some woman happy and your home a little heaven to go to heaven in? When you go to town, never go where you would be ashamed to take your wife and daughter. Never stay long in town unless you are a good temperance man. Be honest, independent; keep out of debt; never go security for any one; avoid lawsuits, lotteries and speculation, and your children and children's children will rise up and call you blest.

MACK.

FOR THE ASSEMBLY.—We notice that the Republicans of the 63d District, Santa Clara county, have nominated I. A. Wilcox for election to the Assembly. Mr. Wilcox is well known to readers of the RURAL through the valuable articles he has written on horticultural and other subjects. He is prominent in the horticultural and agricultural interests of his section, being one of the originators and directors of the Horticultural Hall Association, also of the company owning the Santa Clara cheese factory. He is also a leading member of San Jose Grange. We are all glad to see men thoroughly identified with the producing interests receiving attention at the nominating conventions.

PERSONAL.—The last issue of the *Patron* announces the retirement of Sister Flora M. Kimball as editress of the Matron's Department. Sister Kimball has served long and very acceptably in her chair on the *Patron*, and all will hope that her literary labors may be only temporarily suspended. Mrs. M. A. Sheldon, who has long been a contributor to the paper, will assume the charge of the Matron's Department.

## DIRECTORY OF SUBORDINATE GRANGES IN CALIFORNIA.

NAME OF GRANGE.	PLACE, DATE AND HOUR OF MEET'G.	MASTER.	SEC'Y AND ADDRESS.
Alhambra	Martinez, 1st and 3d Sat, 2 P.	Dr. J. Strentzel.	Maria B. Lander, Martinez.
American River	Routiers, 2d and 4th S., *	J. E. Beach.	Jas. E. Cornell, Routiers.
Antelope	Antel. S.H., 1st and 3d S., 10 A.	H. A. Logan.	P. Peterson, Maxwell.
Bennett Valley	Bennett Val'y, 1st and 3d S., 2 P.	J. B. Whitaker.	Don Mills, Santa Rosa.
Carpinteria	Carpinteria, every other W., 2 P.	H. D. Woods.	Miss J. M. Higgins, Carpinteria.
Ceres	Modesto, 4th F., 1 P.	V. E. Bangs.	E. H. Whitmore, Ceres.
Clarksville	Clarksville, 1st S., 1 P.	C. M. Chapman.	Samuel Kyburg, Clarksville.
Danville	Danville, 1st and 3d S., 2 P.	D. M. Sberburne.	Millie S. Howard, Danville.
Eden	Haywards, 2d and 4th S., 1 P.	L. Perham.	Josie Shari, Haywards.
Elk Grove	Elk Grove, 1st and 3d S.	Gillis Doty.	Delos Gage, Elk Grove.
Elliott	Elliott, 2d and 4th S., 2 P.	J. M. Hoyt.	H. H. West, Elliott.
Elmira	Elmira, 2d and 4th S., 2 P.	G. W. Tillotson.	Mrs. Jas. McCrory, Elmira.
Enterprise	Brighton, 1st and 3d S.	A. A. Krull.	Minnie L. Plummer, Brighton.

## Securing the Reduced Rates Home.

The following blank forms have been issued by the S. P. Co. for the use and benefit of Patrons going to Marysville by rail:

SOUTHERN PACIFIC COMPANY.—Received of the attendant, whose signature appears below, \$.... in payment for one unlimited first-class ticket, No. .... to Marysville, en route to attend the annual session of the California State Grange, to be held at that place, commencing Tuesday, October 6, 1886.

....., Attendant at session.  
....., Agent.

MARYSVILLE, Oct. .... 1886.

This certifies that....., whose signature is given above, has been in attendance at the above session. Fifty or more persons, holding certificates of this form, properly executed, have attended this session.

....., Secretary.

The above are indorsed with an order from Gen'l. P. and T. Agent Goodman to the ticket agent at Marysville, as follows:

Upon presentation and surrender hereof by the party named in the receipt and certificate on reverse side, sell to and for the use of such person, one special book ticket, inter-division, outward, to the station named in the receipt, as selling the ticket used in going to Marysville, at one-third (1/3) your unlimited first-class single trip rate to that point, provided the certificate and receipt are properly filled out and signed and presented to you within forty-eight (48) hours after close of session.

P. S.—Owing to the difficulty of seasonably providing the above blanks at all railroad stations, the company will depend upon the secretaries of the State Grange to give certificates for the purchase of return tickets from Marysville at one-third rate to all attendants at the State Grange who pay full fare in going.

## The Order in Oregon.

During the fair of the Oregon State Agricultural Society, at Salem, week before last, there was an open evening meeting of Patrons and their friends. It was held pursuant to call, in hope it might result in their sending lecturers into the field to encourage, build up and open Granges wherever an opportunity should offer. The Willamette Farmer says that Master R. P. Boise called the meeting to order and tried to enforce the old argument that the farmers could be a power in the land if they would only work together with determination. Lecturer Hayes also spoke, and Mr. Shipley made some remarks on temperance, to which all listened with interest. Mr. Minto had something to the

point. He is always able to interest his listeners. Mr. Vorhees talked of drainage. A. F. Miller thought it would be a good thing for the Grange at large to have a sort of home of its own on the fair grounds—a room where the Grangers and their friends might find each other, and rest and converse. It seemed to us a timely suggestion. We would be pleased to see such a place comfortably fitted up for the fair, if a suitable room could be found. The success of the gathering shows that if the Grange had a home there might be a meeting held every evening, partly of a social character. We hope some action will be taken in the Granges before another fair.

## Pomona Granges of California.

SONOMA CO., No. 1.—Meets third Wednesday of January, April, July and October, at 10 A. M. M. G. N. Whitaker; Sec., Don Mills, Santa Rosa.  
SACRAMENTO CO., No. 2.—Meets fifth Saturday of mos. having a fifth Saturday, at 1 P. M. M. C. A. Hull; Sec., J. E. Beach, Routiers.  
SAN JOAQUIN CO., No. 3.—M., Ezra Friske; Sec., J. D. Huffman.

## State Grange.

The Fourteenth Annual Session of the State Grange opens at Marysville at 10 A. M. on Tuesday, October 5th. All Patrons who can should attend for a season of rest, literary enjoyment and good fellowship.

SAN DIEGO HORTICULTURAL FAIR.—We acknowledge with thanks an invitation to attend the Horticultural Fair in San Diego, Oct. 6th to 8th. The invitation includes our "family." We take it that it includes the whole RURAL family. We hope all will attend and pay their way with pleasure to aid in the support of the excellent institution. The president, J. M. Asher, is one of our most enthusiastic and progressive horticulturists, and the society is composed of many others like him.

BOYS AND GIRLS may be had—particularly boys—for service at wages, for indenture, or for legal adoption, by applying with recommendations to E. T. Dooley, Supt. Boys and Girls' Aid Society, Baker street, corner of Grove street, San Francisco.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Contra Costa.

**SQUIRREL PEST.**—Antioch Ledger: Squirrels are getting to be more troublesome. Farmers generally are diligent in keeping these pests out of their grain fields, but rocky points and odd corners are allowed to become colonized to an extent that passes credence unless seen upon these small areas at times in the day when they are all out foraging for food. They may not be very troublesome as yet, but if allowed to bring forth their *pro rata* of young this winter, the grain fields must of necessity be raided for food next summer. Farmers, it stands you in hand to see that they are killed before the time of reaping next summer, or the click of the header will not be heard so long in the harvest.

## Los Angeles.

**VINEYARD JOTTINGS.**—Anaheim Gazette, Sept. 25: Mr. Langenberger has some vines of the Grenache variety, two and a half years from the cutting, which this season bore two and a half tons of grapes to the acre. The vineyards of Anaheim and vicinity, with the exception of those bearing Mission grapes, are yielding much more than an average crop this year. The Zinfandel and Malvoisie varieties are "panning out" especially well, many vineyards yielding from five to eight tons to the acre. The much-abused Malvoisie almost invariably bears well, and it is a question whether it is not more profitable to raise this grape and sell it at a low price than raise better varieties that yield less.

**WITHOUT IRRIGATION.**—Mr. Chilson exhibited some fine specimens of corn planted in May after the rains and grown with no irrigation and but little cultivation. Many of the stalks bore three large ears, while the bulk of the stalks in the field bore two. Mr. Chilson had some peaches, also grown without irrigation, which were extraordinarily large. The last 30 peaches picked from one of his trees weighed 20 pounds. His land is in Orangethorpe district, and is a fair sample of all in that vicinity.

## Napa.

**HOP YIELD.**—St. Helena Star, Sept. 24: All the hops raised in Napa county are grown in or near St. Helena, and within the limits of five yards. The yield this year was light, not averaging much over half a crop. The figures as given us are as follows: James Dowdell, 15 acres, 13 tons; D. Cole & E. Simpson, 12 acres, 10 tons; R. F. Lane, 16 acres, 8 tons; P. Elting, 12 acres, 8 tons; Storey Bros., 30 acres, 8 acres; St. Helena, and 22 at Rutherford, 10 tons. Total yield from 85 acres, 49 tons. The yield last year from the same acreage was only 36 tons and 1700 lbs., so this year has proven materially better than last in point of production, and our growers have every reason to expect a good price for their hops. A ton of green hops makes about 650 pounds dried and pressed. Chinamen are paid at the rate of \$1.02½ per lb. for picking green hops, which makes the cost of picking alone average about \$65 per ton for dry hops.

**COLORADO CORN.**—Register, Sept. 24: Mr. A. K. Frost, a gentleman who for some months has been visiting in this valley, sent back to his home in Colorado for some seed corn of the "Colorado dent" variety. It was planted the last of May, and harvested the 5th of September, on Mr. Stagg's place above town. The ears are long and well filled with large, plump kernels, and Mr. Frost thinks it far ahead of any corn yet grown in California.

## Sacramento.

**WHITE LABOR.**—Record-Union, Sept. 24: John Rooney, of Brighton, hired white men exclusively to pick his hop crop this year. Some of the men were worthless tramps, but 42 remained until the end of the job, their earnings averaging \$1.50 per day. Mr. Rooney is well satisfied by the experiment that Chinese are not a necessity. Hon. J. Routier has a force of 35 white men picking grapes, and they are doing the work well.

## NEVADA.

**MOUNTAIN FRUIT.**—Record-Union, Sept. 23: A sample box of peaches and pears grown at Nevada City, and sent to Sacramento by the Nevada County Land and Improvement Association, was yesterday inspected with most gratifying results. The peaches measured about 12 inches in circumference, were of the late Bilyean variety, very highly and beautifully colored, and of most delicate and melting flavor. Certainly nothing finer has been seen in Sacramento this season, and they would be exceedingly hard to equal. This shows that Nevada City is in "a most favored peach belt," and in late fruits will come speedily to the front. The pears were Bartlett's, and extremely choice in flavor, and large and attractive in appearance.

**WILD CHERRIES.**—Reno Gazette, Sept. 22: The Truckee river is full of wild cherry trees and they are loaded with the finest kind of fruit this year. It would be a good crop to gather and would make a fine change for rich people's tables.

**THE Red Bluff Flour Mill,** which has just been renewed in every part except the motive power, has started up. The mill is an all-roller mill. Three grades of flour will be produced.

## FRUIT MARKETING.

## When to Ship Fruit for Eastern Markets and What to Ship.

[Special Correspondence RURAL PRESS.]

**EDITORS PRESS:**—For the past few days your correspondent has been making a tour through the fruit belt of Michigan. Through the courtesy of Hixson & Co., formerly Hixson, Justi & Co., of San Francisco, and who, by the way, are establishing a large and highly successful commission business in Chicago, the writer was accompanied by one of their staff who is thoroughly familiar with the entire Michigan fruit country and its growers. An excellent opportunity was thus afforded to see all points of interest and to obtain reliable and valuable information.

Before entering Michigan the writer was filled with the traditional California conceit, and honestly believed in common with thousands of fellow-Californians that there is no other spot in the land so highly favored for fruit, and especially peach culture, as California.

Less than 48 hours' observation in the fruit regions of Michigan, has, however, largely modified his views, and to-day he is ready to confess that Providence did not intend giving California exclusive control of all fruits, but that our Eastern brethren have been permitted to share some of our privileges.

The present and future possibilities of fruit culture in Michigan is a complete revelation. Until within recent years it was believed that the land now devoted to fruit-raising in Michigan had little or no value; and for a time it looked as if the numerous thrifty towns and cities around Lake Michigan, and which for years had been supported by the lumbering interests that had now become exhausted, would meet the fate of so many California mining towns that have lived and died with mining. But experiments in fruit-growing soon demonstrated the fact that a large belt of land, containing about 50,000 acres, around Lake Michigan, is peculiarly adapted to the culture of the peach, quince, plum, pear and vine; and, as a result, it is now estimated by reliable authority, including such well-informed and highly-intelligent growers as Mr. Dykeman, of South Haven, Michigan, that this acreage, if fully developed, might, in a favorable year, yield 25,000,000 10-pound baskets of peaches—enough to almost supply the whole country. The yield may never reach these figures on account of the various drawbacks incident to peach culture; but, undoubtedly, the increase in production will be very large. The Michigan peach crop for the present year is estimated at 5,000,000 10-pound baskets, or but one-fifth of the possible yield of peaches that may, in the near future, be produced in this vicinity. Then other States have a supply of peaches—Ohio, Delaware, Western New York, Indiana, Kentucky, Missouri, Kansas, all of the Southern States and the Maryland regions. This last region already raises immense quantities, and ships largely to the West; but when the peaches from Michigan come in (the latter part of August) these Eastern peaches cannot compete in the market, neither can the Southern.

From the above facts the growers of California must see how delusive is the idea that the East can use all the fruit California may raise. The sooner the California fruit-grower understands that his fruit is from five to seven days' transit from the Eastern market and that it has a restrictive tariff against it of from one and a half to three cents a pound for freight, the sooner will he begin to accommodate his products to these unalterable circumstances. California's products have had a vast market before them, but its growers must learn

## What to Raise, When to Ship, and How to Ship.

California's strongest point in peaches will be to raise for export the earliest good shipping varieties, which can be marketed East in competition with the South and Southeast. She cannot hope to compete with Michigan in the later market, which begins about August 15th. After that date it is unwise to ship any but a very limited quantity of the finest and largest peaches. The writer has seen choice, selected Michigan peaches sold at 70 cents a 10-pound basket by the side of Vacaville peaches one-third less in size for which \$1.75 was demanded for a 20-pound box. Michigan is also destined to be a strong competitor in late pears.

It is evident that for several years past the Michigan peach-grower has made by far more money than his fellow-grower in California. The Michigan grower's returns for peaches have averaged four cents a pound, or \$80 per ton, and with an average yield of three tons to the acre, his income has been \$240 per acre. Deducting 25 per cent for cost of baskets, picking and packing, there remains a net return for peaches on the tree of \$180 per acre. No wonder that choice peach land in the Michigan belt is not in the market, and no wonder that with Chicago, which is one of the best markets in the world, right at their doors, the Michigan peach-grower will entertain no reasonable offer for his land. As many as 40,000 10-pound baskets of peaches have been received in Chicago, and disposed of at fair prices within 24 hours. The holdings of orchard lands in Michigan are principally in small parcels, the largest

being about 80 acres, and the average from 30 to 40 acres.

## The Canning and Drying of Peaches

For market has thus far not been attempted by Michigan growers, and is not likely to be so long, as their peaches will bring anywhere near present prices in their green state. This field is therefore likely to continue in the hands of California growers and deserves much attention. The present Eastern market for dried fruits is in excellent condition. Dried apricots especially are very scarce and in good demand.

## Grapes.

Vast quantities of Concord, Catawba and Isabella grapes are also raised in Michigan and vicinity, which can be retailed at five cents a pound with profit to the grower. The lowest living price that California grapes can be retailed East is 10 cents a pound. Should they be sold here at a less retail price, then it must be done at a loss either to the grower, shipper or retailer. Hence may be seen the folly of shipping to the Eastern market such grapes as must come into competition with their home products—such varieties as the Black Hamburg, Black St. Peter, Black Pinot, Malvoise and kindred small black grapes which can be sent east of the Rockies only at a loss to grower or shipper. It will be the height of wisdom on the part of California growers who now have more of the above varieties planted than the home market can use to promptly graft them either into wine grapes or Muscats or Tokays.

Southern California sent several carloads of irrigated grapes this season to the Chicago market, which proved almost total losses. Such experiences have thoroughly demonstrated the fact that Southern California is entirely out of the grape market for Eastern shipment, and in that branch of industry can never hope to compete with the northern part of the State. The only salvation for growers who have more irrigated grapes than the local California markets can use is to graft them into varieties suitable for raisin-making. Persistent shipping of such products East can only result in a direct loss to the shipper, a depression on the price of good grapes, and a serious injury to the hitherto fair fame of California fruit.

The grower who thinks he can push anything he pleases on the Eastern market and get a profitable return makes a sad mistake. He can only hope to realize fair prices by putting brains and conscience into his fruit boxes. If he fails to do this, he not alone does his more intelligent and conscientious neighbor (whose fruit is sold alongside of his) a serious injustice, but he also suffers a severe penalty in the way of highly ruinous returns. It pays better to let poor fruit rot in California than to let it rot here and pay from one and a half to three cents a pound freight for the privilege.

Your correspondent is now on his way farther East, and in the next letter hopes to give your readers some idea of the prospects for California green fruits east of Chicago.

H. WEINSTOCK.

Saugatuck, Mich., Sept. 19th.

## Thinks a Great Deal of the "Rural."

Inclosed with an original article, which we elsewhere print, there came one day last week a personal note, saying: "We have taken your paper a number of years and think a great deal of it."

It is pleasant and encouraging to those engaged in the conduct of such a journal as we mean the RURAL to be, to receive words of approval and esteem from sincere habitual readers. We are seeking ever to keep our patrons informed of the best ways and means discovered of treating soils, plants, crops and live-stock, and thus to make the rancher's toil at once lighter and more telling. We afford in our columns opportunities of exchanging views and experiences, which are well improved by our supporters and helpers on many scattered farms, and we also try in our "Home Circle" and editorials to foster such feelings and maintain such principles as purify and ennoble character, and strengthen and sweeten human lives. Meanwhile, we thank every friend who both values the RURAL PRESS and cheers us with outspoken assurances that our labors are doing good.

**ALFALFA AS A FERTILIZER.**—A. Ft. Collins correspondent of the Nevada State Journal gives, in proof of the value of alfalfa as a reviver of the soil, facts furnished on the farm of James Culbertson. After nearly exhausting the soil by annual grain-cropping, he put a portion of his farm into alfalfa four years ago. The other day the wheat from five and one-half acres was thrashed, and the yield found to be 48 bushels per acre, besides 12 bushels of alfalfa seed from plants which sprung up again after plowing.

**YIELD OF YOUNG PRUNE TREES.**—Some weeks ago we had an item about the early bearing of peach trees on the place of J. W. Briggs, of Visalia, and now we have a letter from Mr. Briggs giving figures of the yield of his three-year-old prune trees. He states that he picked a row of 17 trees and obtained 3600 pounds of prunes. One of the trees, which was weighed separately, yielded 366 pounds.

## Shasta and Contra Costa at the Mechanics' Fair.

It will be remembered that a neat display of Shasta county products was made in this city at the time of the G. A. R. encampment, and described by us the week ensuing. The less perishable of the articles comprised in this exhibit were soon afterward removed from the Immigration Association's rooms to the Mechanics' pavilion and put in place there with a fresh supply of fruits.

The fossils, quartz and ores were disposed along the base of a terraced stand, with specimens of the vegetables raised in the county. Above them stood glass jars holding samples of the soils and waters, of grain, pulse and nuts; while numerous tall sheaves of grass and cereals crowned the structure.

On an adjacent table were displayed a dozen plates of apples, among which were Ballflowers, R. I. Greenings, Baldwins and Roxbury russets; as many more of pears, Bartlett and Vicars being most prominent; and of grapes, Mission, Tokay, Muscat, Black Prince and Isabella. Peaches, plums, nectarines and blue figs also were represented.

A showy feature was the cotton plant, set in its box of earth, with the bolls burst open and the clean white fiber foaming forth abundantly.

As a county exhibit, this ranked next to those of Sonoma and Placer, winning a silver medal and a cash prize of \$100.

Although the display from Contra Costa was an afterthought, having been brought in by Mr. C. C. Swain subsequent to that county's fair, it proved fine and beautiful. The grapes included superb bunches of the more common sorts, with Sultana, Golden Chasselas, Johannisberger and Syrian; and Martinez showed clusters of the Palestine variety, which, as they lay extended across two plates, measured nearly two feet in length.

From Martinez, also, came green oranges, lemons and limes, borne on boughs set in jars of water. With the fruit on these citrus twigs, some few blossoms were intermingled.

The pears and apples, the peaches and plums, were, of course, like the grapes, subject to more or less change, according to their keeping qualities; but the places of those that fell out of service, as the days drew on, were filled with handsome reinforcements. A few Japanese persimmons were shown, though it was not yet the time of their ripening. There were almonds, and bearing branches of preparturiens walnut and French chestnut, and Florida sugarcane. One sacked cutting of a Tokay vine, planted last March, and dug in September, had grown meanwhile to be 10 feet long. The chief contributors to this exhibit were L. I. Fish, Theo. Wagner, H. Raap, B. J. Merle, H. McBride, Edwards Bros., W. Dukes, R. Hastie, A. A. Bailey, A. E. Austin, and M. R. Barber. R. E. Rowland, of Oak Grove Farm, showed a dozen plates of apples, half as many of pears, two of quinces, and about 20 jars of exceedingly fine fruit in glass.

This county display aroused special interest and admiration, as revealing what can be accomplished horticulturally, without irrigation, within 35 miles of S. F., and must have enhanced in many observers their respect for the capacities of this section of California.

**SETTING FIRES IN THE BRUSH.**—A citizen, writing the Oroville Register about the numerous fires raging through the foothills to the north and east of that town, which are causing great destruction of timber and grass, as well as other property, says: "Many of these fires are the result of carelessness, while not a few of them, we have reason to believe, have been deliberately set. Now section 384 of the Penal Code of this State provides a fine not to exceed \$1000 or one year's imprisonment, or both fine and imprisonment, for setting a fire on State or Government lands, with the intention to burn off timber, brush or feed. We hope that any person knowing of any fires being set carelessly or otherwise will go before some Justice of the Peace, get out a complaint and have the party or parties dealt with according to law. If the people were to take this matter in hand, and vigorously prosecute some of these parties, we would have but few fires hereafter."

**SANTA BARBARA COUNTY FAIR.**—We acknowledge with thanks the receipt of complimentary tickets to the Santa Barbara County Fair, which will be held at Agricultural Park, October 5th to 8th. The catalogue and premium list are also received and indicate that preparation has been made for a creditable display, which we have no doubt will be made.

**HOLSTEINS FOR EXPORT.**—Mr. J. H. White, of Lakeville, sold two Holstein heifers to be shipped to the Sandwich Islands. Mr. White reports a growing demand for Holsteins. We expect to give a full account of a Holstein sale made at the State Fair as soon as we can get time to write out our notes.

**SETTLERS COMING.**—A Swedish colony, organized in Michigan, has just sent an agent into this State, fully authorized to locate Government land or buy for 30 families of settlers. Another man is here from Germany, looking for land for from 8 to 15 parties. Both these are bound northward.

James Russell Lowell.

[A lecture delivered by EDWARD BERWICK before the Chautauqua L. & S. C. in Pacific Grove, and furnished for publication in PACIFIC RURAL PRESS.]

I can give you no more concise epitome of the career of J. R. Lowell than that furnished by your motto, "For God and Home and Native Land." Prouder record than that of the Roman Caesar, whose "Feni, vidi, vici," represented the victory of brute force and personal ambition; always necessarily accompanied by a correlative of cruel suffering and personal degradation. Lowell's three-score years and ten spent for God and Home and Country represent the triumph of spirituality and self-sacrifice, and justify the universal record of that highest title in earth's hierarchy—the title of poet-patriot. A nobility that implies, not the vassalage and degradation of others, but their co-exaltation; the truly Christian nobility, not of being ministered unto, but of ministering.

You will perceive that I am not here to-day to make an apology on behalf of poets and poetry, or even on behalf of lovers of poetry. With the last I am proud to rank myself, and am bold to claim that the apology is due from those whose ignorance, obtuseness, or audacity permits them to sneer at poetry as "namby-pamby nonsense," or "sentimental rot." What professor of Christianity dares condemn poetry, when one-half of the book he holds most sacred is a collection of Hebrew verse? What student of history can afford to despise the poets, when to them alone he is indebted for the earliest annals of our race? What philanthropist can refuse to acknowledge the debt that humanitarianism owes to the poets, when the noblest aspirations for the race—aye, the noblest achievements of the race—have been, and are, due to the inspirations of the poets?

"Like strains of martial music  
Their mighty thoughts suggest  
Life's endless toil and endeavor."

Further, of the two phases of life, the poetic or the prosaic, which interests us the more? Is it Cinderella the prosaic drudge, scouring pans and sweeping cobwebs, that enchants us all, or the poetic Cinderella transfigured by the fairy godmother into the all-radiant princess? The drudgery of life is ever prosaic, the sunshine of life is poetry. And there is no health, bodily, mental or spiritual, without sunshine. Now, of all the health-giving, sunny poets, I find Jas. R. Lowell the freshest, the most inspiring, the sunniest. With Longfellow, he believes that they alone can please who follow nature, and he thus expresses his views in good old-fashioned Yankee. In his assumed character of Hosea Biglow, he says:

Mister Wilbur, sez he to me onct, sez he, "Hosea," sez he, "in litteryoor the only good thing is Natur. It's amazin' hard to come at," sez he, "but onct git it an' you've got everythin'." Wut's the sweetest small on airth?" sez he, "Noomone hay," sez I poety bresk, for he wuz allus hankerin' round in hayin'." "Nawthin' of the kind," sez he, "My leetle Huldy's breath?" sez I agin. "You're a good lad," sez he, his eyes sort of ripplin'-like, for he lost a babe onct nigh about her age—"you're a good lad, but 'tain't thet nuther," sez he, "Ef you want to know," sez he, "open your winder of a mornin' et any season, an' you'll larn that the best of perfooms is jest fresh air, fresh air," sez he, emphy-sizin', "athout no mixtur. Thet's wut I call natur in writin', an' it bathes my lungs an' washes 'em sweet whenever I git a whiff on't," sez he.

I intend to-day, as far as possible, to let Mr. Lowell lecture to you. There is an axiom in geometry and logic that the less cannot by any possibility comprehend the greater. Would that this axiom were more entirely received as a prime canon of criticism! Acting on this canon, Mr. Lowell shall to-day be his own critic, I proudly taking the office of exponent and paregryist.

I shall offer you no personal details of his private life. There is a morbid craving for such details that is not only useless but mischievous. Ever since Carlyle's death the mean, flaw-seeking things, that delight to honeycomb a noble reputation, have been busily striving to belittle one of the grandest prophets of the century. As though a divine message to mankind were less in worth because the human mouth-piece was that of a being tortured by the demon of dyspepsia, or because the toiler for humanity sacrificed his wife's energies as freely as he sacrificed his own. Living or dead, a man's heart should not be set "upon his sleeve for daws to peck at." So the proffered message be a veritable gospel, it matters little be the messenger fisherman or tent maker, carpenter's son or minister plenipotentiary. So the poets' thought assist to ennoble your life; it imports not to you whether the poet sink in self-seeking below, or soar in self-sacrifice above his ideal.

But those who know Mr. Lowell best tell us that he is, as he should be, "something better than his verse." One circumstance only hinders our due appreciation of his worth. He has the misfortune to be still alive. Would he but die, we should at once spring to a consciousness of how sublime a genius America had lost.

But "be he live or be he dead," I make no apology for preferring such a modern poet to one of the "grand old masters." With all due reverence to those "bands sublime," I regard Jas. R. Lowell as their equal—and something more. The rising generation will find in him the American Shakespeare, Burns, Milton, Butler and Hood. To him belong the human in sight of Shakespeare, Burns' sympathy with the poor, the pathos and humor of Hood, the causticity of Butler, and the sublimity of Milton.

And who shall deny to him a sublimity deeper than that of Milton? Between Milton and the miracle and mystery play-mongers, his predecessors, there is truly a gulf unfathomable. But is there not one equally unfathomable between the most realistic and magnificent anthropomorphism and the conception of a Deity who is spirit and truth—a God

"Who is in all that liberates and lifts,  
In all that humbles, sweetens and consoles?"

I trust to convince you to-day that in Mr. Lowell—

"The world has not lacked a poet  
Such as it had  
In the ages glad  
Long ago."

But let us distinguish at once between poets and poetasters or rhymsters. In a criticism on one of these latter, a master of irreproachable verbiage, and meter and rhyme, our poet writes:

"There comes Poe with his raven, like Barnaby Rudge,  
Three-fifths of him glories and two-fifths sheer fudge,  
Who talks like a book of iambs and pentameters  
In a way to make people of common sense damn meters.  
Who has written some things quite the best of their kind,  
But the heart somehow seems squeezed out by the mind."

Now if the heart of a man be squeezed out, you can generally afford to throw away the rest of him. Capacity to compose verse, however "light and jinglish," titillation of the ear with the sweetest of tinkling tintinnabulations, are the smallest of the real poet's functions. Of old the true poet—

"In his heart was ever meek and humble,  
And yet with kingly pomp his numbers ran  
As he foresaw how all things false should crumble  
Before the free uplifted soul of man:  
And when he was made full to overflowing  
With all the loveliness of heaven and earth,  
Out rushed his song, like molten iron glowing,  
To show God sitting by the humble hearth.  
With calmest courage he was ever ready  
To teach that action was the truth of thought,  
And, with strong arm and purpose firm and steady,  
An anchor for the drifting world he wrought.  
So did he make the meanest man partaker  
Of all his brother gods unto him gave;  
All souls did reverence him and call him Maker,  
And when he died heaped temples on his grave.  
And still his deathless words of light are swimming  
Serene throughout the great deep infinite  
Of human soul, unwaning and undimmed,  
To cheer and guide the mariner at night."

How far Mr. Lowell fulfills this, his ideal of the "grand old masters," let his own auto-criticism tell you:

"There is Lowell, who's striving Parnassus to climb  
With a whole bale of isms tied together with rhyme;  
He might get on alone, spite of brambles and boulders,  
But he can't with the bundle he has on his shoulders.  
The top of the hill he will ne'er come nigh reaching  
Till he learns the distinction 'twixt singing and preaching;  
His lyre has some chords that would ring pretty well,  
But he'd rather by half make a drum of the shell,  
And rattle away till he's old as Methusalem  
At the head of a march to the last New Jerusalem."

Now that's the poet you are all looking for. You want a leader to the New Jerusalem; you want the benefit of the last peep within the gates; you want a poet who can render light-some and glad some your march to Beulah land with his martial music, his "verse that clanks like armor in the charge." Not that Lowell presumes to solve the secrets of that bourne from whence no traveler returns. The kingdom of God within you is what he strives to develop and unfold.

"Rabbi Jehosha had the skill  
To know that Heaven is in God's will."  
"Tis Heaven must come, not we must go."

With Mr. Lowell, as with Christ, eternal life is the knowledge of God, and that knowledge it is his life's object to spread. With him the bard's true lyre is the nation's heart, and to reach that heart he is not ashamed to use the nation's everyday tongue to make their vernacular his verses' vehicle, to spio his speech with the relish of their homely humor. Says he:

"I ken write long-tailed if I please,  
But w'en I'm jokin', no, I thankee;  
Then, 'fore I know it, my idees  
Run helter-skelter into Yankee."

And, let me tell you, there is no writer living who can pack more fun in a line than he. Scholar though he be, he is no pedant. His is no nature mummy-wrapt in learning. Hood himself must give place even in the mechanical

trick of punning. Here is a sample on a grim subject:

WHAT AN AVERAGE GRAVEYARD CONTAINS.

"There lie levelers levelled, duns done up themselves,  
There are booksellers finally laid on their shelves;  
Horizontally there lie upright politicians,  
Dose-a-dose with their patients sleep faultless physicians;  
There are slave-drivers quietly whipped underground,  
There bookbinders, done up in boards, are fast bound;  
There card-players wait till the last trump be played,  
There all the choice spirits get finally laid;  
There the babe that's unborn is supplied with a berth,  
There men without legs get their six feet of earth;  
There lawyers repose, each wrapped up in his case,  
There seekers of office are sure of a place;  
There brokers at length become silent as stocks,  
There stage-drivers sleep without quitting their box."

Some may object to any jesting over the dead, but we jest over births; and if Solomon be right, a man's deathday is better than his birthday. Even the heathen proverb tells us that Death calls early those whom the gods love. Our false views of death constantly belie our creed. If we so will it, there is—

"Death, the divider, the unmerciful,  
That digs his pitfalls under Love and Youth,  
And covers Beauty up in the cold ground:  
Horrible Death, bringer of endless dark!"

But that's sheer heathenism, ancient or modern! Surely a truer aspect gives us—

"The reconciler, he who lifts the veil,  
The reuniter, the rest-bringer—Death."

In Mr. Lowell's creed the "conqueror worm" is not the hero of the "tragedy Man." With him, "the grave's real chill is feelin' life wuz wasted." And his idea of a wasted life is expressed in the soliloquy of an octogenarian, visited on his death-bed by two ghosts, not unfamiliar to some of us—the ghost of his dead youth and lost ideal:

"God bends from out the deep and says,  
I gave thee the great gift of life;  
Wast thou not called in many ways?  
Are not my earth and heaven at strife?  
I gave thee of my seed to sow,  
Bringest thou me my hundred-fold?  
Can I look up with face aglow,  
And answer, Father, here is gold?  
Yes, I, who now with angry tears  
Am exiled back to brutish clod,  
Have borne unquenched for four-score years  
A spark of the eternal God,  
And to what end? How yield I back  
The trust for such high uses given?  
Heaven's light hath but revealed a track  
Whereby to crawl away from heaven."

Not such has been our poet's garnering. The poet's career in its amplest sense has been his. Scholar, bard, humorist, satirist, patriot—all these, if you please; but philanthropist, will you, will you? The isms that he pleads guilty to may all be summed up in that grandest of isms—humanitarianism. His life's object has been to—

"Light in muddiest souls quick seeds of fire,  
And strain life's chords to the old heroic mood."

And this not for any purpose of self-aggrandizement: he asks

"no payment  
Of fame or gold, but just to wear  
Unspotted raiment."

Surely, the methods, the aims, the works of such a man are pre-eminently worthy of study. Did time permit, I should like to tell you something of his village school education. As usual, with the first small accession of knowledge came a large accession of conceit.

"Nothin' from Adam's fall to Huldy's bonnet  
That I warn't full-cocked with my judgment on it."

But his education by no means ended with his school days. Other things than "book-froth, which only seems to whet your hunger," have been his teachers.

"Since I began to scribble rhyme  
I tell ye wut, I hain't been foolin':  
The parson's books, life, death, and time  
Hev took some trouble with my schoolin'."

Distinctly American by birth and schooling, Mr. Lowell disdains to pour his native talent into old-world molds. He has no sympathy with Anglo-maniacs or devotees of Paris fashions.

"Though you brag of your new world, you don't half believe in it,  
And as much of the old as is possible, weave in it.  
You steal Englishmen's books, and think Englishmen's thought,  
With their salt on her tail your wild eagle is caught;  
Your literature suits its each whisper and motion  
To what will be thought of it over the ocean;  
The cast clothes of Europe your statesmanship tries  
And mumbles again the old blarney and lies:  
Forget Europe wholly, your veins throb with blood  
To which the dull current in hers is but mud:  
Let her sneer, let her say your experiment fails—  
In her voice there's a tremble, e'en now while she rails,  
O my friends, thank your God, if you have one,  
that He

"Twixt the old world and you set the gulf of a sea:  
Be strong-backed, brown-handed, upright as your pines;  
By the scale of a hemisphere shape your designs;  
Be true to yourselves and this new nineteenth age,  
As a statue by Powers or a picture by Page,  
Plough, sail, forge, build, carve, paint, all things make new;

To your own new-world instincts contrive to be true;  
Keep your ears open wide to the future's first call  
Be whatever you will, but yourselves first of all."

As Mr. Lowell here preaches so he practices;

but his motto is not "Our country, right or wrong." It is the right first—our country second.

"Before man made us citizens, great Nature made us men."

And his love of right and country inspires his soul and compels his utterance. Lacking such inspiration, his harp is silent.

"When I can't, I can't, that's all,  
For Natur' won't put up with gullin';  
Idees you hev to shove an' haul  
Like a druv pig ain't wuth a mullin';  
Live thoughts ain't sent for: thru all rifts  
O' sense they pour, and resh ye onwards  
Like rivers when south-lyin' dr' fit  
Feel thet th' old earth's awheelin' sunwards."

But the poet must not only be in sympathy with Nature. From off the "starry mountain peak of song," his clearer eye should see "in all earth's seeming woe the seed of heaven's flowers." It is his office, likening to the "inner flow of things, to speak to the age out of eternity." And to this Mr. Lowell has aspired—aye, has attained.

Probably there were no two literary men who did more to procure the abolition of slavery than Theodore Parker and Jas. R. Lowell. Of course, now abolition is an accomplished fact, to laud and admire it is no great virtue. But if we recall that just one short half century ago W. L. Garrison was dragged, with a halter to hang him with, through the streets of Boston by an infuriated mob, we shall realize that there was then need both of physical and moral courage to advocates of the cause. How fearless Lowell's advocacy was you shall hear. The capture of certain fugitive slaves near Washington thus fires his breast:

"Look on who will in apathy, and 'stifle, they who can,  
The sympathies, the hopes, the words, that make man truly man.  
Let those whose hearts are dungeoned up with interest or with ease  
Consent to hear with quiet pulse of loathsome deeds like these."

"Shame on the costly mockery of piling stone on stone  
To those who won our liberty, the heroes dead and gone;  
While we look coldly on, and see law-shielded ruffians slay  
The men who fain would win their own, the heroes of to-day!"

"Are we pledged to craven silence? O, fling it to the wind,  
The parchment wall that bars us from the least of human kind,  
That makes us cringe and temporize, and dumbly stand at rest,  
While pity's burning flood of words is red-hot in the breast."

"Tho' we break our Father's promise, we have nobler duties first;  
The traitor to humanity is the traitor most accursed.  
Man is more than constitutions; better rot beneath the sod  
Than be true to Church and State while we are doubly false to God."

"We owe allegiance to the State, but deeper, truer, more,  
To the sympathies that God hath set within our spirit's core;  
Our country claims our fealty; we grant it so, but then  
Before man made us citizens, great Nature made us men."

"He's true to God who's true to man. Wherever wrong is done  
To the humblest and the weakest, 'neath the all-beholding sun,  
That wrong is also done to us; and they are slaves most base  
Whose love of right is for themselves and not for all the race."

Such words are inspired words, full of the spirit—the holy spirit—of truth and love, and as such they are living words to-day and for all time. Shakespeare knew no truer inspiration, Burns no livelier sympathy with his fellow-men. But although I should wish to detain you further with samples of Mr. Lowell's slavery-abolition work, I wish yet more urgently to set forth his views on another abolition work—the abolition of war. You know there is no such effective weapon in the world as the tongue. "The word is quick and powerful, and sharper than any two-edged sword." And in the use of such effective weapons as satire, irony, humor and ridicule, Lowell is in no way inferior to the author of "Hudibras." In the world-known "Biglow Papers" he deals such unsparring, trenchant blows with these weapons as to leave no doubt of his earnestness of purpose. He realizes how the war trump's brawling clangor "fools the poor to hate the poor," and it is not his fault if the war trump does not get too cracked and battered to emit the feeblest sound in the future.

"Ez for war, I call it murder—  
There you hev it plain an' flat—  
I don't want to go no furder  
Than my testament for that.  
God hez sed so plump and fairly,  
It's ez long ez it is broad;  
An' you've got to git up airly  
Ef you want to take in God."

"Taint your eppylets and feathers  
Make the thing a grain more right;  
'Taint a follerin' your bell-wethers  
Will excuse you in His sight,  
Ef you take a sword an' dror it,  
An' go stick a feller thru,  
Guvment aint to answer for it—  
God'll send the bill to you."

"Wut's the use of meetin'-goin'  
Every Sabbath, wet or dry,  
Ef it's right to go a mowin'  
Fellow-men like oats and rye?  
I dunno but wut it's pooty  
Trainin' round in bobtail coats;  
But it's curus Christian dooty,  
This 'ere cuttin' folks' throats."

Lowell sees clearly how wars originate; how "the sore points on both sides are skillfully exasperated by interested and unscrupulous persons, who see in war the hope of personal profit or advancement." He hears the "always supercilious, often insulting, and sometimes even brutal" tones of certain journals and public men which incite nations to strife and sprinkle pepper on the raw wounds of peoples. He finds the British especial sinners in such matters, and he has at John Bull thus:

"Of all the sarse that I can call to mind,  
England doos make the most onpleasant kind.  
It's you're the sinner ollers, she's the saint—  
Wut's good is all English, all that isn't ain't.  
Wut profits her is ollers right and just,  
An' ef you don't read scriptur so you must,  
She's praised herself until she fairly thinks  
There ain't no light in Natur when she winks.  
Hain't she the ten commandments in her pus?  
Could the world stir 'thout she went, too, ez nus?  
She's all thet's honest, honorable and fair,  
An' when the vartoots died they made her heir!"

I should much have liked to have related to you the adventures of a full private in the Mexican War—Mr. Birdofreedom Sawin. You will recall the late Gen. Gordon's opinion of military glory: "I am persuaded," writes he, "that nine-tenths of military glory is mere twaddle—yes, ninety-nine-hundredths of it is mere twaddle." Mr. Sawin's experiences were vastly similar. The Mexican climate was not exactly to his taste.

"One day a reg'lar shiver-de-freeze, an' next as good ez bakin';  
One day a brilin' in the sand, then smoth'rin' in the mashes—  
Git up all sound, be put to bed a heap of hacks and smashes.  
But then, thinks I, at any rate there's glory to be hed,  
Thet's an investment, arter all, thet mayn't turn out so bad.  
But somehow wen we'd fit an' licked, I ollers found the thanks  
Gut kin' o' lodged afore they com as low down ez the ranks;  
The gin'als gut the biggest sheer, the cunnles next, and so on—  
We never gut a blasted mite o' glory ez I know on; An' s'pose we hed, I wonder how you're goin' to contrive its  
Division so's to give a piece to twenty thousand privits;  
Ef you should multiply by ten the portion of the bravest one,  
You wouldnt git more'n half enough to speak of on a gravestun;  
We fit an' licked, we're jest the grist that goes into war's hoppers,  
Leftenants are the lowest grade that help pick up the coppers."

Such being his estimate of military glory, you will not be surprised to hear that Mr. Lowell, in conjunction with all the poets and prophets, foresees—

"That down the happy future runs a flood  
Of prophesying light.  
It shows an earth no longer stained with blood,  
Blossom and fruit where now we see the bud  
Of Brotherhood and Right."

This must be the last extract I can give you, but you have yet a most inadequate idea of the riches awaiting you in this small volume—treasures of wisdom and knowledge, inspired lessons on a thousand subjects, burning words that should stir to action any man "whose faith in God hez arroy root that goes down deeper than his dinner."

I am sure that those to whom Mr. Lowell was already known will not have regretted this short renewal of their acquaintance; and those to whom I have had the honor of introducing Mr. Lowell, if they pursue his friendship, will have ample cause to be thankful for this introduction. Few other friends will prove so amusing, so instructive, so inspiring—never intrusive, never wearisome—always sympathetic, always elevating: the highest type of American manhood.

KITCHEN UTENSILS.—A "domestic note" in the New York Commercial Advertiser says: "When we are in our kitchens, surrounded by all the conveniences that the present day affords, we little think that many of the cooking utensils have remained the same for 1800 years. We fry, bake and stew in pans formed precisely like those used in Pompeii and Herculaneum. We even use the same shaped pans for eggs sur le plat as were used in those cities long before the fateful eruption of Vesuvius buried them in ashes and lava. Many of the ordinary utensils of the ancients are well worth the attention of our potters and tinsmiths. The jelly and pastry molds even of two centuries ago were of delicate classic form, quite different from the designs with which we are familiar, and far more tasteful. We have, to be sure, preserved in our syrup-jugs many of the fine models of the covered jugs of that epoch, but it is a little singular that the beautiful forms of the Pompeian buckets and jars have not been imitated for household use at the present time. Every detail of each article was always accurately carried out, even the strainers being remarkable for the beauty of their perforations. Geometrical combinations, frets and arabesques appear to have been the favorite designs."

## YOUNG FOLKS' COLUMN.

### About "Dickie."

Dickie was Stuart's pet, a gift from Aunt Mary—a tame squirrel with a fine soft, gray coat, and such a lovely tail, so broad and bushy! Stuart kept him in a revolving cage, and Dickie whirled and whirled so much that he wore this long, bushy tail all away. I do not suppose he cared for that; it is not likely he knew anything about it, but Stuart did and felt badly enough, for Dickie's beauty was quite gone.

Just about that time Stuart's mother made up her mind to go into the country to stay a few weeks, and planned to take Stuart and his sister Maria with her.

"And how would you like to take Dickie? The change may be good for his health," she said, smiling.

"For his tail, mamma? Would it grow, do you think?"

"If we could find a place where he could be taken out of his cage, I think it would."

"Oh! oh!" cried happy Stuart.

They went to board at Mrs. Green's, in a large, old-fashioned house on top of a high hill. On the ground was a little schoolhouse that had been built for the children of the family who once owned the place, but now it was not used at all.

"That's just the place for Dickie," said Mrs. Green. So there he was put, and what a good time he had there! Stuart and Maria went in to see him every morning. They had to open the door just a little way and throw some nuts 'way across the room, and while Dickie ran for the nuts they opened the door and went in. Then what a frolic they had! Dickie ran all over them, perched on Stuart's shoulder and on Maria's head, and ate nuts from their hands. You would laugh to see him take a nut even out of Stuart's mouth. Maria never encouraged any such liberties with herself, but there was one little trick Dickie would perform with her without asking leave: he would hide his nuts in her pockets and in the ruffle of her dress, and once he stowed one away in the braid of her hair.

After a few days his tail began to grow. The hair came out soft and bushy, prettier than ever. When mother looked out of her window across to the schoolhouse, she often saw Dickie sitting on the window-frame or whisking across it, and she could scarcely believe he was the same Dickie.

When Aunt Mary came to see them, she was so pleased with Dickie's improvement that she said he ought to have a companion; and pretty soon another beautiful gray squirrel was sent to the children.

"Her name is Nan," wrote Aunt Mary, "and I hope she and Dickie will live very lovingly together."

But alas! they did not. Dickie proved very selfish. His naughty behavior quite offset the beauty of his plume-like tail. He would snatch Nan's nuts right out of her paws, and chase her around the room and chatter, chatter most unamiably. Poor Nan had a hard time.

"Mamma, what shall we do?" exclaimed Stuart one day; "the squirrels do quarrel so."

"Reason with them," said mamma.

"Mamma!" laughed Stuart.

"Lay your commands on them."

"How can they understand? We shall have to punish them."

"How? You mustn't be cruel."

"Oh, no, mamma."

Then he and Maria had a consultation. They had been to see the educated canaries, and concluded if canaries could be taught, squirrels could be. They decided to get a cage and put it in the schoolhouse, and whenever they saw Dickie behave selfishly they would shut him up.

Mamma approved this plan, and they carried it out. When Dickie was unkind, they put him in the cage, telling him as well as they could, by voice and motions, that he was a naughty squirrel, and then they would pet Nan right before his eyes. They let her run up on their heads and over their arms and eat nuts from their hands.

Do you think this did any good? Well, it did. Dickie's heart was not changed, for he, only a little squirrel, had no heart to change; but he learned that he was to let Nan alone when she was eating her dinner, and that he must not chase her excepting in play. After that they lived in peace, and their broad, plume-like tails flourished.

Soon Stuart began to worry about the going home. "How shall we fix it, mamma?"

But it was already "fixed" very nicely. Mamma had already ordered a large cage made for them at home, with a tree instead of a run-around in the middle of it. The squirrels made the journey home in a box, and when they were put in their new house seemed very happy. They had not as much room as they had had all summer, but they ran about and up and down the tree and ate their nuts very contentedly.

"I think the squirrels must feel as Maria and I do," said Stuart one day, with a gloomy air.

"How is that?" asked mamma.

"Like prisoners, all crowded in. They've been running about in that large room all sum-

mer, and we've been having all outdoors for our playground, and now we feel shut up."

"They seem content and happy," said mamma, with a curious little smile around her lips.

"That means that we ought to be, too, I suppose," said Maria.

"And they do their duty every day without a complaint, I see."

"Their duty!" exclaimed Stuart. "What duties do squirrels have, I wonder?"

"They eat, drink, play and sleep."

"Ha, ha, if we had only that to do!" and Stuart laughed.

"Then you would be no better than they—no better than squirrels."

Stuart took in mamma's meaning and sobered down. "I am better than a squirrel," said he.

"We'll have to put one thing more in our list."

"Just so!" said mamma.

"Eat, drink, play, sleep and study."

"Exactly!"

"All right! You'll see that we will be as good in our way as the squirrels are in theirs," said Stuart resolutely.

And Maria chimed in, as she usually did, with all that her brother said, with her cheerful "That's so!"

## GOOD HEALTH.

### Pure Air and Pure Water.

EDITORS PRESS:—For the last 8 or 10 years I have given the subject that heads this article a great deal of thought and study. I have read and studied with a great deal of interest every article that I have observed in such journals as the *Scientific American* and other valuable papers. I have often wondered why our leading papers do not publish more sanitary articles—more to enlighten the people on the subject of health, more in regard to the cause and cure of diseases. Comparatively how few of the people fully realize the importance of pure air to breathe and pure water to drink. The recent powerful microscopic lenses, in the hands of eminent scientists, both in this country and Europe, have led to some wonderful discoveries in regard to the causes of certain diseases. They have proven beyond a doubt that a certain order of bacilli does exist in certain diseases, for these same diseases have, by inoculation of the diseased blood into the blood of the lower order of animals, been produced. It is said, also, that these bacilli are found in the dust upon our walls, and that they exist most abundantly in filthy soils, foul air and bad water.

Years ago the prevailing theory was that the atmosphere became loaded with the miasmatic exhalations from some stagnant pool of water or the upturning of some hitherto uncultivated soil, and thus produced fever and ague. No doubt the air does become contaminated in this way, and persons in locating a residence should see that the prevailing winds do not lift this bad air into their dwellings. But equally important is to find out whether their well is furnishing pure, healthy water. How often is the well dug too near the privy vault or the cesspool, located in close proximity to the well, to save the expense of a few feet of sewer-pipe. Water to be good and wholesome should be thoroughly aerated. Hence, I should discard all bored or tubular wells. McAlpin, the greatest living water engineer, and perhaps the best authority in the world, says: "The smooth casing affords a most excellent conduit for surface water." I should prefer the old-fashioned dug well, walled up with brick or stone, imbedded in cement, and top open to admit the air, with a good tight curb resting on ground, well rounded up to prevent all surface water from running in.

Just here permit me to quote from the report of the New Hampshire Board of Health, "The History of a Rural Well."

"Let us examine one (or a thousand) of our grand old farm establishments of a hundred years' standing. Clustered on a few square rods of land are the farm buildings, the dwellings, the wood-shed, wash-house, horse-stable, cow-barn, sheep-yard, swine-house, hen-house, corn-house, compost-heap, cesspool and privy. All these are arranged in a hollow square and in the midst is the farmer's well, with its curb, sweep and bucket, or its cover, pipe and pump. Around this center are concentrated all the activities of life upon a New England farm. Birth, life and death, bloom, fruit and decay of men and animals, of shrubs and trees, have transpired here for a century. All the waste has been dropped upon the surface, there to accumulate, decay and putrify. Then again, the bottom of the well, the very center of all these activities, must be at or below the level of the natural water basin in the immediate vicinity, and must rest upon or in clay, marl or rock impervious to water. The well is excavated through sand, gravel, drift or other earth pervious to water. All these conditions must exist or there can be no well. Let us picture the life upon these few square rods for 100 years.

"In and about these buildings live 300 creatures—men, beasts and birds. They are stabled here during winter, and yarded here during summer; here they take their daily food and drink, and discharge their daily waste. During 100 years there have been nearly 11,000,000 days of animal existence,

all within draining and leaching distance of the source of water supply of the whole establishment. The amount of waste that cannot be removed by evaporation, drainage or absorption is enormous. The fact must be apparent to the most skeptical that the earth beneath farm buildings, stables, cesspools and privy vaults, and about wells near the same, is surcharged with animal and vegetable waste. This point must be conceded by all. It needs but a moment's attention to convince the dullest mind that every establishment with only the usual sanitary precautions is resting on and above a mass of most dangerous filth, and that this filth is being daily leached into the bottom of the well."

I quote again from the *Sanitary Era*. The typhoid fever epidemic at Waterford is attributed to the pollution of the water supplied to a public well, by the careless washing of the utensils of a sick-room near it. From this well 40 school children and others drank water, and soon showed symptoms of the dread disease. Physicians were called from Chicago, Milwaukee and other cities, but still the progress of the epidemic was not stayed. A genuine panic existed, and business was partially suspended. The State Board of Health has been investigating the situation.

The whole village of Plymouth, Penn., was poisoned, and many deaths occurred by drinking impure water.

The writer, when a young man, was living in Springfield, Ky., when the cholera suddenly made its appearance and many deaths occurred. The inhabitants fled to other localities. I well remember the bad quality of the water. The wells and springs were totally dried up in the daytime, and enough water would accumulate in the night to furnish a scanty supply during the day. No other town in the vicinity that had a good supply of wholesome water suffered from the epidemic. I have always attributed that scourge to bad water.

I have written the above that the readers of your valuable paper may have their attention directed to these two important factors that contribute to good health. One of our best physicians says when he is called to visit a case of typhoid fever or diphtheria he at once proceeds to investigate the surroundings, and he can generally trace the cause of the attack to a broken sewer-pipe underneath the house that vitiates the air, or to the cesspool too near the well that poisons the water.

PRO BONO PUBLICO.

Santa Rosa, Sept. 20, 1886.

## DOMESTIC ECONOMY.

ASPIC OF LAMB.—Have two lambs' heads thoroughly cleansed and boil them. When done, cut them in neat, square pieces. Arrange these pieces neatly in a pie-dish, alternating with slices of hard-boiled egg, ham and beef, with some minced parsley, taking care not to place them too closely. Make a rich gravy of some of the water in which the lambs' heads were boiled, seasoning with pepper, salt, sweet herbs and a tablespoonful of mushroom catsup, adding half an ounce of gelatine which has been dissolved in a little of the gravy. Pour this gravy over the meat until the dish is full. When cold, set it in the ice chest and serve the next day, turning it out on a dish.

BEEF AU GRATIN.—Put two ounces of butter in a saucepan upon the fire; when melted, sprinkle into it one teaspoonful of minced onions, one teaspoonful of chopped parsley, three mushrooms finely minced, a pinch of salt, pepper and allspice, and two tablespoonfuls of fine bread-crumbs. Stir for two minutes and add enough broth to make the mixture liquid. Cut one pound of boiled beef in slices; lay these in a silver or tin dish; pour the mixture over them and cover with a thin layer of sifted bread-crumbs. Put small bits of butter here and there on the top, and bake in a good oven for 15 minutes. Serve hot.

FRUIT PUDDING.—Chop six apples fine, grate six ounces of stale bread, add six ounces of brown sugar, six ounces of currants washed carefully and floured; mix all well together with six ounces of butter, a cupful of milk and two cupfuls of flour in which two teaspoonfuls of baking powder have been thoroughly mixed. If too thick, add more milk in mixing. Spice to your taste. Put in a pudding bag, tie loosely and boil for three hours. To be eaten with cold sauce made of butter and sugar stirred together, a cupful of sugar to one-half cupful of butter.

CRAB-APPLES.—Select perfect ones; pour boiling water over them, which removes the skin; lay them in water enough to cover them; let them simmer slowly until soft; take them out and drain; make a clear syrup, pound for pound; boil them in it till clear, lay them on dishes to cool, and place them in jars; cook the syrup a little longer, and pour it over the apples when hot; seal.

TEA CAKE.—Mix for 15 minutes four eggs with half a pound of sugar, half a grated nutmeg and as much powdered cloves as will lie on the tip of a dinner knife. Then add half a pound of dry and sifted flour, and mix thoroughly; have a greased or waxed tin, drop a tablespoonful of the dough at intervals upon it, and bake a pale brown in a moderate oven.

## The Week.

The darkening days and the "feeling" in the  
air bespeak the coming of the rains. No doubt  
the advance guard of the winter rains will soon  
be upon us. It behooves all who have produce  
exposed to house it without delay. The first  
rain is often light, though sometimes it attains  
soaking dimensions. After it there comes the  
most delightful autumn days, with the air and  
face of Nature cleansed from the dust of the  
long summer.

The week has been a busy one in the grape  
districts. The vintage is well under way and  
the raisins are spread out. To the raisin and  
dried fruit men the postponement of the rain  
for awhile would be a blessing. It cannot,  
however, be counted upon for the completion of  
the grape harvest, for the vine clings to the  
dying season with tenacity, and contests the  
advance of winter until the invader uses his  
keenest weapons.

The political thermometer mounts higher.  
More conventions, more candidates, more con-  
fusion in the minds of the electors as to which  
peculiar way they will save their country.  
One thing is happily assured—the country will  
be saved!

## The Brotherhood of the Soil.

Ideas are organic. They are like the mys-  
terious life-principle hidden in a seed that seeks  
to build itself a home to live in when placed in  
a goodly condition. Love bourgeons into the  
rosebower of home, the religious sentiment ef-  
fulges into a church, the love of life, liberty and  
property takes on the shape of law and govern-  
ment, and industrial interests find expression in  
all sorts of guilds and associations. As the  
State Grange is on the eve of meeting, it may  
be well to refresh our minds with the growth  
and development of an idea that has no parallel  
in history—an idea that has surprised its  
friends and alarmed its enemies by its rapid  
growth; one that bursts upon the sky like a  
comet and remains shining there with the per-  
manent brilliancy of the sun.

The Patrons of Husbandry came among us  
like the rainbow, born on the bosom of a reed-  
ing storm-cloud. The Civil War, that had  
dashed fire and blood like storm-spray over  
nearly all the homes in the land, left a  
wounded, draped and mourning people, with a  
longing for brotherhood such as had never been  
felt before. A great variety of fraternal orders  
has come of this impulse. The tillers of the  
soil have especially felt the thrill of aspiration.  
In the South and portions of the North the  
hoof of war had trodden down the hope of the  
field and vineyard, destroyed houses, barns and  
fences, and swept away the horses and cattle,  
leaving the people poor, helpless and deeply  
conscious of the need of sympathy. And then  
the fact that the vast national debt must ulti-  
mately be paid by the bone and sinews of the  
producers, made the necessity of a social and  
industrial union and harmony of interests, by  
the close bonds of association, become more  
and more apparent. Then the feeling had long  
been germinating that something should be done  
to enhance the comfort and attraction of rural  
homes, keep young men from flocking to the  
cities, improve and diversify the quality of  
fruits, grains and the breed of cattle and horses,  
reduce the expense of production, and pro-  
tect the market from systematic rapacity,  
discourage credit and litigation, and, in  
short, secure and develop the spirit of  
good-will, fellowship and brotherhood among  
the farmers. The immediate cause that gave  
parturition to the idea of a brotherhood of the  
soil was the danger to be apprehended from the  
gigantic monopolies that had possession of all  
the lines of transportation and travel, and held  
Congress and Legislatures firmly by the  
throat. The feeling that two or three men  
could meet in the room of a hotel, wine and  
dine, and then, by the skip of a pen, levy a tax  
on all the productive industries of the land,  
that the Czar of Russia would not dare at-  
tempt, was becoming unbearable. The present  
form of the Order seems to have hovered for  
some years in the brain of one O. H. Kelly, of  
Minnesota, then in the Department of Agricul-  
ture, and on the evening of December 4, 1867,  
it finally took shape by the organization of the  
National Grange, at Washington, D. C. The  
first dispensation for a Subordinate Grange was  
granted to an application from Harrisburg,  
Penn.; the second one from Fredonia, N. Y.; the  
third to a Grange at Columbus, Ohio; and the  
fourth to one in Chicago. Only 10 Granges  
were organized the first year, and at the end of  
the second the movement only numbered 31.  
From that small center of beginning has come a  
power that is felt on every acre of land and  
wave of sea. The necessity of some kind of an  
organization to protect the grain market from  
being manipulated in the interest of wheat  
rings and speculators was early realized among  
the farmers of California, and led to the forma-  
tion of local clubs and the Farmers' Union. But  
it soon began to appear that greater privacy  
would be indispensable to carry on the business  
as contemplated. Hence the farmers were ripe  
for the Grange movement, and on the 15th of  
July, 1873, at Napa, the California State  
Grange was organized.

While the Order of the Patrons of Husbandry  
is not a political organization, and partisan  
politics are eschewed in all their meetings, still,  
as the New York Tribune says, it has "altered  
the political equilibrium of the most steadfast  
States." At first the monopolists and bread  
buccaneers jeered at the movement as a passing  
show, but in a few swift years they began to  
lay in a stock of umbrellas. And yet it is a  
mistake that many still seem to indulge in to sup-

pose the Grangers cherish any ill-will against  
transportation companies or any form of corpo-  
rate capital. It is only against extortionate  
freights and fares, the greed of middlemen and  
produce gamblers, they war. In what is popu-  
larly called the "Granger cases," they made  
their power felt and respected.

One of the most attractive features of the  
order is its non-sectional character. From the  
granite hills of New England to the wheat val-  
leys and orange groves of California, from Min-  
nesota wrapped in buffalo robes five months in  
the year to the rice and cotton fields of the  
South, this great brotherhood, like a giant  
banyan tree, has spread its boughs. An associa-  
tion so widely spread and so closely knit to-  
gether by kindred feelings and interests, con-  
stitutes one of the strongest bonds of national  
unity.

The settlement of personal disputes among  
members of the order by arbitration, instead of  
going to law, and wasting time and money in  
the courts where victory often hangs upon an  
absurd technicality of pleading or evidence, is  
a good example that might be followed in other  
forms of business with advantage. The admis-  
sion of woman to full membership has proved  
an incalculable good. The charm of her society  
not only enlivens the meetings, but her quick  
perceptions and intuitions often outrun man's  
slow-paced logic. Then home is made brighter  
and more cheerful when men take their wives  
and daughters into the fellowship of their busi-  
ness. Nowhere has the barrier to social inter-  
course caused by wealth, the despotism of fash-  
ion and freezing conventionalities, been so com-  
pletely cast down as in the Granger's hall. Here  
the rich and the poor, the large land-owner and  
his tenant, meet on the same level, sing the same  
odes, and eat at the same table. In short, the  
Grange is a household where the home feeling  
is cherished, and perhaps no Order has suc-  
ceeded in giving a more full and sincere ex-  
pression to the sentiment of fraternity, not  
merely on feast days and business meetings, but  
in all hours of adversity, in the fellowship of  
sorrow, when sad hearts are wrapped in silence  
and solitude in the presence of the ancient  
mystery.

## Fruits and Freights.

We publish in this issue another letter from  
Mr. Weinstock which treats of an aspect of the  
Eastern marketing of California fruit which has  
not been lost sight of by the thoughtful ones in  
the fruit industry, but which has not been gen-  
erally given the prominence it deserves. Mr.  
Weinstock's letter will serve to call general at-  
tention to the fact that the Eastern or Western  
States can really grow some fruits (strange as it  
may seem), and that it is important that Cali-  
fornia should give most attention to those kinds  
which do not come into direct competition with  
their home produce. The possibilities of the  
Michigan peach belt evidently impress Mr.  
Weinstock deeply. We suppose there is a  
chance for a wave of new climate there as well  
as in other parts of the East, where, within 25  
years, regions which produced fine peaches have  
become wholly unreliable as peach producers;  
but it is not, perhaps, wise to count too much  
upon such a wave coming at any set time. It is,  
however, wise to do just what Mr. Weinstock  
suggests—confer and counsel upon just which  
fruits can be profitably sent East, and which  
cannot. It was mainly this idea which led  
Prof. Hilgard to send the American Horticul-  
tural Society an invitation to hold a meeting in  
California, under the auspices of the State Hor-  
ticultural Society of California. Such a meet-  
ing would give a good opportunity to Eastern  
and California growers to discuss together what  
each should grow, that the markets could be  
well supplied, but ruinous competition avoided.  
This matter will, no doubt, have to be carefully  
scrutinized and action based upon conclusions  
thus to be reached.

There is another matter which is emphasized  
by the facts which Mr. Weinstock presents,  
and that is that the distance and cost of trans-  
portation cut a greater figure in the matter  
than has been lately claimed. When the trans-  
portation managers exhibited such a mellow  
disposition toward reducing freight rates, fos-  
tering the industry, etc., last fall, we have  
come to look upon the distance as not so great  
a matter and the freight rates as likely to ap-  
proach the vanishing point. This year's ex-  
perience does not warrant holding such views

any longer. The distance and time are great,  
and the task of paying freight charges when the  
cargo has hardly paid for packing and boxes be-  
comes a heavy one. It is very clear, indeed,  
now that it is worse than foolish to ship any-  
thing which will not stand the journey in good  
shape. It is also clear that the charge for  
freight remains one of the greatest factors in  
the handling of California fruit at the East.  
As we understand it, all the fruit which has  
gone on fast time, except on the contract fruit  
trains, has paid \$600 and upward per car. In  
view of this year's experience this charge must  
be pronounced exorbitant, and the contract  
trains have only been used to a limited extent  
by the growers. A number have been sent by  
the fruit shippers, but it does not appear how  
much they have gained by their enterprise.

The question returns, then, with renewed  
force upon what it actually costs to move  
freight, and how our fruit shippers can secure  
service at a fair advance on the actual cost.  
On this subject the San Jose Times of Sept. 23d  
says:

On July 6, 1883, the Central Pacific officials,  
in a letter to the Railroad Commissioners,  
stated that their average freight rates of 2.9  
cents per ton per mile were "reasonable and  
should not in any particular be disturbed." Soon  
afterward, on request of Commissioner  
Foote, Railroad Superintendent Townsend fur-  
nished data proving conclusively that for dis-  
tances of 200 miles and over one cent per ton  
per mile would afford an ample profit. Other  
authentic data indicate that about one-sixteenth  
of that sum is the actual cost, and they now  
carry wheat from San Francisco to New Or-  
leans, 2500 miles, for 35 cents per hundred  
pounds, or less than one-third of one cent per  
ton per mile. As in the case of school-books,  
the limit of cheapness will not be reached until  
the effort is made. The charge of \$600 per car  
for fruit to Chicago, New York, etc., is from  
two to two and a half cents per ton per mile,  
and could doubtless be reduced, with a liberal  
profit to the railroad companies, from half to  
two-thirds. But it is not likely that it will be  
unless by means of government railroads.

There is difference of opinion as to the wis-  
dom of government ownership of railroads, but  
if the data as to the cost of the service is cor-  
rect, we should not have to pay over \$200 per  
car for fruit from California to Chicago. With  
such a price there would be a better outlook for  
selling our fruit in the East, and growers owe  
it to themselves that they inquire diligently in-  
to this matter and discover by what means de-  
sirable results can be best and most speedily  
attained. We notice that according to the in-  
terviews in the daily papers, Mr. Huntington  
says that it is a great advantage to railroads to  
have freight rates very low. The Chronicle  
attributes these statements to him:

He says that he is carrying blue-grass hay  
from Kentucky to the racing stables at Sacra-  
mento and Palo Alto; ice by the trainload from  
Chicago to San Francisco; Hawaiian sugar in  
carload lots to the Mississippi valley; California  
vegetables, especially beans, to New York and  
other Eastern cities; and train after train of  
wheat at one-third of a cent per ton per mile  
from Port Costa to New Orleans. Of course,  
this new traffic generates local traffic; the move-  
ment of articles which were never moved before  
gives employment to men who must also be  
moved with their tackle, apparel and supplies.  
Hence a new source of revenue for the road,  
and new profits, which would never have been  
reaped if the old high tariff had continued to pre-  
vail.

Mr. Stanford made some such observations  
last year. It is Mr. Huntington's turn to say  
something kind. The only question which oc-  
curs to the grower is: "If it is so profitable to  
reduce freights, why is it not done?"

**STATE FAIR PREMIUM LIST.**—We print upon  
another page of this issue the awards made at  
the State Fair for agricultural exhibits. Owing  
to the length of the list, we have had to re-  
strict the mention to articles produced either  
directly by agriculture or directly for it. We  
have made due effort to secure correctness in  
the list as printed, but in a schedule covering  
so many entries there is a great chance for  
error. If our readers discover mistakes, we  
shall be obliged for information concerning  
them. This list of awards may be made very  
useful, especially in the line of live-stock, to  
point out who is breeding certain kinds of an-  
imals, etc., and it is certainly due to those who  
take the trouble to exhibit their goods that the  
list of awards be carefully looked over.

**FIRES in the woods and on the mountains are**  
frequently reported, especially in the northern  
half of the State.

## State Horticultural Society.

The regular September meeting was held on the 24th, in Irving hall parlor, S. F., Vice-President Hatch in the chair. W. H. Pepper, of Petaluma, G. M. Gray, of Chico, and D. H. Lennox, of Colusa, were elected members.

I. A. Wilcox, of Santa Clara, called the attention of the society to the announcement that the American Horticultural Society would hold its next meeting in February, 1888, in California, and stated that he, on behalf of the Horticultural Hall Association, of San Jose, of which he is a member of the Board of Directors, had extended the American Society the use of the hall, in San Jose, for their meetings. He suggested that the State Society recommend that the meeting be held in San Jose. The secretary stated, for the information of the members, that President Hilgard had tendered the American Society the invitation, on the part of the California State Horticultural Society, which led to the selection of California as a place of meeting. The availability of different places in the State for holding the meeting was discussed by several members, and finally, upon motion, further discussion of the matter was postponed until the next meeting of the society.

## Stocks for Budding and Grafting.

The discussion of the stated subject for the meeting, "Stocks for budding and grafting fruit trees," was opened by James Shinn, of Niles. He spoke first of the general importance of the subject and the fact that so far as possible it was best to observe natural relationship in the selection of stocks for scions. The apple is natural to the apple, the pear to the pear, and so on. If deviation is made from this rule there should be some good reason for it, and there are very important reasons for deviation in some cases. Sometimes reasons for deviation which are of force in other States do not exist in California. An example of this is the working of the pear on quince stock. In this State pears do well on pear stocks and there is no reason for recourse to the quince.

The importance of choosing a good stock is shown in the losses which result from a stock not suited to the conditions, or from inharmony between the scion and the stock. He saw recently, in Sacramento, a number of trees in nursery rows in which peaches had been budded upon myrobalan. They had made a growth of about three feet, but now most of them were dying. Many are now thinking of putting the peach upon myrobalan, so that peaches can be grown upon ground too wet for the stocks usually used for the peach; but will it succeed upon the myrobalan? That is a question which is of great importance to determine. There are many cases of inharmony between scion and stock. The Quackenbos plum used to be budded on the peach, and it grew nicely at first, but when first in bearing would die when the fruit was nearly full-grown. He had noticed this in other orchards than his own.

Mr. Rock, of San Jose, being asked for his observation on this point, said he remembered a row of Quackenbos plum on peach stock as far back as 1860. The trees bore six or eight crops, but one year, when they had an extra heavy crop on, the wind blew off the tops at the connection with the stock. As for the apricot on the myrobalan, he knew of trees six years old which were doing well.

Mr. Hatch, speaking of apricot on peach stock, said he had observed scale on the peach below where the apricot wood began, but there were no scales on the apricot wood. On the other hand, speaking of gophers, Mr. Hatch and Judge Blackwood said they had seen cases of the gopher avoiding the peach root, but gnawing off the apricot bark and girdling the tree above the peach wood.

Mr. Wilcox stated that on his low, moist land in Santa Clara the myrobalan stock was the best for any kind of plum or prune. It does not sucker. For heavy land, where there is much water, or where there is a little water, he prefers the myrobalan root, as it seems to be hardy and able to thrive in either situation. The peach stock he thought adapted to high, well-drained lands. He said with him prunes grew faster on apricot roots than on myrobalan, and he was prompted to think well of the apricot stock, even in his moist, low location.

Mr. Pepper and Judge Blackwood could not approve the apricot root for such soils, and Judge Blackwood spoke of the liking of the

gopher for apricot wood as a fatal objection to its use.

## Address of W. H. Pepper.

Mr. Pepper, of Petaluma, addressed the meeting as follows:

The subject of fruit-tree stocks, suitable and unsuitable, is one of very great importance to the fruit grower. Many thousands, I may say, hundreds of thousands of fruit trees have been planted on this coast in the past four or five years that were worthless from having been grown on unsuitable stocks. For instance, the apricot and plum on almond, the plum on apricot and peach, etc. The peach may do as a stock for the plum in some localities, but it does not answer in my section. I have lost two sets of plum trees on peach stocks, whereas, in the same grounds, I have plum trees in good health on the Canada plum stock that were planted 25 years ago. The peach root does not stand wet winters as well when the plum is worked on it as it does when used for the peach. The peach root water-logs and drowns out more readily when used as a stock for the plum than when used for peach or almond. The probable reason is because the plum does not commence to grow as soon and take the early flow of sap as readily as the peach and almond; hence the greater liability to water-kill. The apricot and almond are not suitable in this section as stocks for any kinds of fruit. Water kills the apricot and almond more readily than any other kinds of fruit-tree stocks that I have handled.

The peach makes the best stock for the almond. All of the old almond trees in this section (many of them 18 to 20 inches in diameter) are on peach roots.

The apricot takes readily to the myrobalan plum, and, all points considered, I believe makes the best stock for the apricot; the peach is the second best—possibly in a few localities preferable.

The peach, so far as my experience reaches, is not successfully grown on other stock than the peach. I have tested several kinds of plums as stocks for the peach, but have found none satisfactory. I have tried two of our native species, the Canada (*Prunus Americana*) and the Texas (*P. umbellata*); also St. Julian and other strains of the same species (*P. domestica*).

Seedlings from Bradshaw, Columbia—Pond's Seedling—make very good stocks for the plum, and the peach does better on this kind of plum stock than any I have tried.

The plum, until the past few years, has been propagated principally upon peach stocks and Damson plum suckers. The myrobalan plum stock is found to be the best one for this coast. It is not inclined to sucker from the root, is of rapid growth and attains a large size for a plum tree. Much has been said and long articles written about the "Franc myrobalan" or the genuine kind. The true kind is *Prunus Myrobalana* (the cherry plum). But what is the cherry plum? Downing says it is a very distinct species, growing rapidly, with slender shoots, small leaves, with a spreading head. Paxton, in his botanical dictionary, classifies it as a variety of *Prunus domestica*. I have no other works mentioning it. Its seedlings, like all other tree seedling, differ in size of leaf and habit of tree, and, like other species of plums, differ in size and color of fruit—some yellow, others almost black, while the prevailing color is a lively red. The strain from which I am growing my seedlings is the best that can be produced. I selected extra strong growing seedlings, and planted in orchard a few years ago. Some of the trees are 8 to 10 inches in diameter, 20 feet high, with heads covering 25 feet in diameter.

Plum stocks from cuttings is no new thing with me. I grew plum stocks from cuttings of the Imperial gage over 20 years ago and tried them. I found many of them would form a mass of fibrous roots at the lower end of the cutting, and when transplanted failed to send out strong supporting roots. I also find this to be the case with myrobalan stocks grown from cuttings. I see no need of any nurserymen using plum stocks grown from cuttings when first class seedlings can be procured for \$10 or \$12 per thousand.

Good, strong-growing seedling stock is the best to propagate on in all kinds of fruit-tree growing—apple seedlings for the apple and pear seedlings for the pear. Seeds should be saved from strong-growing, vigorous kinds only. Japan pear seedlings are being tested here for growing the pear on. They are more robust on the start, continue growing late in the season, and may be budded later in the season than common pear stocks. Whether they will continue their vigorous growth for years and prove superior as stocks for the common pear is yet to be tested.

The cherry: The Mazzard and Mahaleb are both used as stocks for propagating the cherry. In my experience, I find the former preferable. The Mahaleb is not so spreading in its roots as the Mazzard. Trees worked on it cease their annual growth earlier in the season and the wood becomes more thoroughly ripened before cold weather comes on, which makes it preferable as a stock for cold countries. The cherry with me ripens about 10 days earlier on the Mahaleb stock than on the Mazzard, and the fruit is usually smaller.

In the above remarks I have barely touched upon one of the most important points pertaining to fruit growing, namely, quality of stocks.

## Discussion.

Mr. Pepper illustrated his remarks with roots of the various plum stocks he alluded to. He

spoke of the too prevalent practice of nurserymen to use second and third-class seedling stocks and force them into large growth by the free use of water. This he strenuously objected to. He believed that a much smaller top growth upon a first-class selected stock and the growth made without irrigation would yield a much more vigorous tree. He condemned also the root cuttings upon which too many nursery trees are grown. He thought to get a good tree it was necessary to use the natural root crown of the seedling, and not a distant piece of the tap root or a lateral. A tree must have a good bottom if it is expected to be long-lived and vigorous. He makes his nursery rows six feet apart, and has the trees 10 inches apart in the rows. In this way you can get better trees than by having the rows four feet apart and then using irrigation to force them. Tree planters should be willing to pay the nurserymen a fair price for a first-class tree. It would be much more economical in the end than buying cheap trees.

Mr. Wilcox spoke of the difference between the myrobalan and the cherry plum as he understood it. The cherry plum makes a rank growth and has a large leaf; the imported myrobalan has a small leaf.

Mr. Hatch, speaking of plums from cuttings, remarked that he had good Columbia plum trees from cuttings.

Mr. Rock said it was hard to make the Columbia unite well with any stock. It does best on myrobalan.

L. W. Buck, of Vacaville, said the Columbia plum on peach stock was not satisfactory, though the peach stock was generally preferred in his locality.

Mr. Rock, being called upon for his views on stocks, said that the orchardists were the proper ones to discuss the question, because they are the ones who observe the aftergrowth of the trees when in orchard. The nurseryman has to use all stocks to suit the demand of his customers. He has to sell what is called for, and customers have their own ideas as to what they want. He would say, however, that his experience approved apricot and almond stocks on thoroughly-drained soils, or where it is deep to water; on low, moist land they will die. He considered the myrobalan best for general use. As for the peach on myrobalan, he would repeat what he said at the last meeting, that 10 to 15 per cent had been lost in the nursery in peach trees worked on myrobalan that had not well united. He had peach trees which had been growing six years on myrobalan roots on wet land, where peach stock had died from too much water in the winter. He considered the apricot root satisfactory on thoroughly well-drained soil, free from alkali. Plum roots will stand a certain amount of alkali in the soil.

Judge W. C. Blackwood, of Haywards, being called upon, stated that he had an orchard of various kinds of plums and prunes on myrobalan—a good orchard. He had also about the same varieties on peach stock, 13 years old. They are double-worked; first the Imperial gage was put upon the peach root, and then the varieties desired were worked upon the gage. These varieties are Washington, Jefferson, Columbia, Coe's Golden Drop, Yellow Egg, French and Italian, or Fellenberg prunes. All are now doing well. The land is a clay loam all the way down to water, which is reached at 45 feet below the surface. The apricot he considered good stock for the apricot, on dry but not on wet land. It is very sensitive to water and will not do well where water will stand even for a few weeks. As for the gopher and the apricot root, he had an old orchard, some trees on apricot but mainly on peach. There is not now a single tree remaining on apricot root—the gophers took them all.

## Stocks for the Cherry.

There was a general talk on stocks for the cherry. Judge Blackwood pronounced the Black Mazzard best; the Mahaleb stock gives a small tree, bearing early, but for a standard orchard the Mazzard is best. Mr. Hatch asked if a tree on Mahaleb would last as long, and Judge Blackwood thought not.

Mr. Rock remarked that the Mahaleb stands a northern climate best, but here it is not as good as the Mazzard.

Mr. Hatch said he had Black Tartarians on Mahaleb stock; nice trees, but some are dying every year.

Judge Blackwood described the dying of full-grown cherry trees here and there in the or-

chards of San Lorenzo and Haywards. They are in the habit of cutting back quite freely every year, but this could hardly be the cause, for the trees were all treated about alike, but the deaths were here and there.

Mr. Pepper thought the cause was alkali spots. He had had such experience. As for the effect of the Mahaleb stock on the cherry, he thought it did not dwarf the tree as much as other speakers described. He has trees on Mahaleb 25 years old, and some of them 25 inches in diameter. On the Mahaleb the growth starts earlier and the wood ripens earlier in the fall, and for this reason stands more cold. In his soil it seems just as hardy as the Mazzard, but the Mazzard stock he considers preferable.

## Nomination of Officers.

Nomination of officers to be elected at the annual meeting in October were made as follows: For President, E. W. Hilgard; Vice-President, A. T. Hatch; Secretary, E. J. Wickson; Treasurer, R. J. Turnbull. Directors—James Shinn, W. C. Blackwood, John Rock, I. A. Wilcox, L. Coates, F. C. De Long, D. Lubin, L. W. Buck, L. F. Moulton, W. H. Pepper, W. W. Smith. Of the members named, five are to be selected to constitute the Board of Directors.

## Exhibits at the Meeting.

Mr. Hatch showed fruit grown upon a tree which was purchased for the Silver prune, and asked members to examine it and give opinion as to its identity or difference when compared with Coe's Golden Drop. Mr. Hatch said the fruit ripened from two to four weeks earlier than Coe's. Mr. Rock thought it different from Coe's, noting especially its smooth skin as contrasted with that of the Golden Drop. Messrs. Pepper and Blackwood could see no difference in the two plums. Mr. Hatch thought a distinction would hold both on the skin and on the time of ripening.

Mr. Shinn showed the Persian walnut and the Eastern "butternut." He showed also the Salway peach and a seedling sent by I. H. Thomas, of Visalia, which he names the "Excelsior." It has a resemblance to the Salway, but is firmer and better flavored and has less red about the pit. He showed also the Ringold Mammoth peach, a variety he thought as good as the McKevitt, but it curls badly.

Mr. Hatch alluded to the Roseville cling, which is a favorite with canners, who consider it from one-fourth to one-half cent per pound better than any other peach. Mr. Hatch admitted that it curled, but still bears more fruit than any other variety.

The subject chosen for the next meeting was "Fruit Drying and Packing and the Appliances Therefor," and the meeting adjourned.

## Agricultural Machinery at the Mechanics' Fair.

A broad space of floor, next the north wall of the pavilion and stretching nearly its entire length, was given up to displays of agricultural implements and machinery.

Nearest the entrance was the exhibit of G. G. Wickson & Co., consisting of a horse-power in motion, driven by steam; Ross hay-cutters, both hand and power; Scientific feed-mills and ranch blacksmith outfit, and improved dairy apparatus. The last-named was remarkably varied and complete, embracing the Stoddard churn—an end-over-end revolving barrel—in five sizes, both hand and power; the American churn, made at Westfield, Mass., a horizontal cylinder with dasher turned by a crank; the De Laval separator, and a host of lesser conveniences, such as milk-pails, calf-feeders and the patent hydraulic-pressed salt-rolls for livestock, sheltered by wee galvanized roofs.

Beyond, Arthur W. Bull showed a portable engine and a separator in motion. These were from the great factory of the J. I. Case Co., Racine, Wis. The engine (which took a silver medal as the best for general use of the three on exhibition) is adapted for burning either coal, wood or straw. There were a number of plows from the same shops—walking, sulky and gang plows, of both chilled iron and steel—and a riding cultivator. Mr. Bull also had a walking "vineyard gang" plow of his own make, and the "Farmer's Friend" gang, manufactured by H. B. Millmine, of Toledo; Nash & Bros.' "Acme Pulverizing Harrow," long familiar to readers of the RURAL PRESS; the Lansing Spring-tooth seeder of E. Bement & Son, and Sieberling & Co.'s Empire mowers.

Baker & Hamilton marshaled an army of ma-

chines, larger and lesser, in whose foremost rank stood a score of walking plows, both wooden and steel beams, of various make, with Eureka and Granger gang plows and the "Perfect" gang, steel beam. Here, too, were the side-bill plows of Knapp and of Kilgore; and the mighty Fresno ditching and grading plow. (This last and the "Perfect" gang took silver medals.)

Then came the Tiger mower, its cutters in rapid motion; the Tiger rake; the "Hollingsworth Tiger," a combined rake and tedder—all from the Stoddard Manufacturing Co., of Dayton, O.—and the Benicia mower. The Boss barrel churn, from Rockford, Ill., was whirling end over end. Also shown in motion were the Bronson thrasher, with Jackson's self-feeder attached (silver medal); the Benicia barley crusher, and the portable engine, for coal, wood, straw or oil, with Laufenburg's patent boiler. Farther on were the Benicia iron harrow, Climax disk harrow, Young's combined harvester (which won another silver medal), Buckeye cider-mill, feed cutters, etc., with the Triumph seed drill, Bain wagon and Gorham broadcast seeder and cultivator. They (Baker & Hamilton) were awarded the gold medal for best display of agricultural implements, besides lesser medals and diplomas quite too many to be here recounted.

The great 14 foot Perkins' windmill, gaily painted, served as a "banner on the outer wall" of the Hawley Bros.' Hardware Co. Beneath it were arrayed Deere plows, both wooden and steel beamed, walking and sulky, and cultivators in variety. Here was a large listing plow, which throws the earth on both sides alike—used chiefly on sugar plantations; a potato-digger, to be driven along lifting and sifting the "spuds" as it passes; and, chief of all, the magnificent "New Deal" four-gang plow, with steel beam and no tongue. Other noticeable objects were the Illinois tree-digger—to be drawn through a nursery tree-fashion, cutting top roots and laterals, wholesale; Stearns' vineyard plow; Knapp's revolving plows; the Taylor rake, self-dumping; the Farmer's and the Veteran corn-shellers, made by the Sandwich (Ill.) Co.; the Rice portable engine—prize straw-burner; the Schuttler wagon; Pitt's separator, and "Improved Hoosier" grain-drill.

This company also displayed two Adriance Buckeye mowers, from Poughkeepsie, one of which, having the wooden frame elegantly finished and painted and the metallic portions handsomely plated, is said to be the identical machine that won the gold medal at Philadelphia in 1876. Besides these were a Buckeye self-rake reaper, a Blake-Beebe Champion fan-mill, and feed-cutters, cider-presses, coffee-mills, lawn-mowers, etc., innumerable.

In P. P. Mast & Company's output, the most striking features were the Iron Turbine wind engines, whose peculiarly-shaped wheel utilizes the force of the wind as, they claim, past any other device of the kind, while the material and its treatment insure great durability. This firm showed Buckeye sulky-rakes—light in construction, but practically self-dumping; three or four varieties of Buckeye grain-drills, with force feed, gauge for regulating the quantity of seed sown to the acre (changeable in a moment), and "surveyor," registering the number of acres traversed. They, too, had superior cultivators, a potato-digger and a large assortment of the New Buckeye force-pumps, with patent brass valve-seats, which are claimed to work with less friction and to be simpler and more lasting than any others in vogue. Among the smaller articles in their display, the McCoy "Perfection" single, double and triple trees were noteworthy.

Passing out of the main hall into the machinery annex, among the whizzing steam-engines and splashing pumps, we soon came upon the Cyclone windmills. A small model was spinning swiftly round in the blast blown upon it by a Blackman's Ventilator Wheel—the latter being run by steam-power. They are now building 18 and 20 foot mills for the S. P. Co., and are confident that the latter size will irrigate four acres an inch deep daily.

Near these the Buckeye Down Binder was busily at work, tying knots in the strong manila cord for whoever wished to see its dextrous fingering—which earned a silver medal for its exhibitors, More Bros., of Hayward; and close by were the fine McLean orchard and field cultivators, shown by the agents, Frank Bros.

A few other articles were shown in the line of agricultural implements and machinery, but we believe the foregoing notes cover all the important exhibits of that class, unless it be the ever-fascinating incubators, which were in brisk operation, and drew around them the usual throng of curious watchers.

## State Fair Premiums.

We give below the awards at the State Fair, last week, for products in the agricultural and related industries:

### Horses.

Thoroughbreds, stallions—Best four-year-old, H. S. Sargent's Joe Daniels; 2d, T. Jones' King Daniels; best three-year-old, L. H. Todhunter's Monte Cristo; best two-year-old, F. Depoister's Blackstone; best one-year-old, C. Halverson's Daily Dimple; 2d, W. M. Murry's Brother to Collier. Mares—Best three-year-old, C. Halverson's Louise D; 2d, C. Halverson's Nellie Fashion; best mare colt under one year, C. Halverson. Families—Best thoroughbred dam with two colts, all thoroughbreds, C. Halverson's Maggie S.

Horses for all work, stallions—Best four-year-old, J. Sovereign, Woodland, Grover Cleveland; 2d, C. L. Fox, San Jose, Edinburgh; best three-year-old, W. E. Comstock, Pleasant Grove, General; 2d, Wm. Bundeen, Sacramento, Silver Leaf; best two-year-old, W. F. Bryan, Routiers, Comet; 2d, Walter Mastin, Davisville, Yolo Chief; under one year, R. J. Merkle, Sacramento, Bay Tim; 2d, A. D. Miller, Walsh's Station, Bay DeForest. Mares—Best four-year-old and one with colt, M. Wick, Oroville, Fly and colt; 2d, P. Russell, Brighton, Kate and colt; best four-year-old, W. E. Comstock, Lena Leinster; 2d, J. T. McIntosh, Chico, Solitaire; best three-year-old, W. E. Comstock, Dolly Douglas; 2d, A. D. Miller, Buttercup; best two-year-old, Ben. E. Harris, San Francisco, Edna; 2d, W. A. Munion, Dixon, Minnie; best one-year-old, A. D. Miller, Luella; 2d, W. A. Munion, Susie; best sucking colt, R. J. Merkle, Nan; 2d, A. D. Miller, Rosebud.

Draft horses, Normans—Best stallion, other than thoroughbred, with five colts, Irvin Ayres' Mambrino Wilkes; best dam, not thoroughbred, with two colts, M. W. Hicks' Mary. Horses—Best under one year, F. B. Chandler, Elmira. Mares—Best four-year-old with colt, F. B. Chandler's Bisch; 2d, T. Whitney's Gypsy; best four-year-old, J. T. Whitney's Gypsy.

Draft horses, Percherons, stallions—Best four-year-old, C. E. Porter's Bertem; 2d, L. C. Ruble's Damala; best two-year-old, C. K. Bailey's Black.

Draft horses, Clydesdales, stallions—Best four-year-old, C. Halverson's Canadian King; best three-year-old, Jas. Roberts' Duke. Mares—Best four-year-old with colt, J. Roberts' Jule; best two-year-old, J. Roberts' Damsel; best one-year-old, J. Roberts' Dolly.

Draft horses other than Normans, Percherons or Clydesdales, stallions—Best four-year-old, H. S. Madison Young's Donald Dinnee; 2d, R. J. Merkle's St. Lawrence; best three-year-old, R. J. Merkle's St. Lawrence; 2d, F. Cox's Black Prince; best two-year-old, W. L. Overhiser's Granger; 2d, F. Cox's Charley; best one-year-old, R. J. Merkle's Vandee, Jr.; 2d, A. J. Ogden's Napoleon; best under one year old, C. K. Bailey; 2d, R. J. Merkle. Mares—Best four-year-old with colt, R. J. Merkle's Fanchon; 2d, J. T. Whitney's Catch; best four-year-old, R. J. Merkle; 2d, J. T. Whitney; best three-year-old, C. E. Porter; 2d, H. H. Wilson; best two-year-old, C. P. Berry; 2d, R. J. Merkle; best one-year-old, Mike Judge; 2d, J. T. Whitney; best sucking colt, J. T. Whitney.

Standard trotters, stallions—Best four-year-old, W. M. Billups, Colusa, Tilton Almont; 2d, H. S. Beals, Sacramento, Berlin; best three-year-old, J. W. Martin, Yolo, Clay Duke; 2d, L. Whitmore, Woodland, Caliph; best two-year-old, Irvin Ayres, Oakland, Romain; 2d, C. B. Abrams, Biggs, I. L.; best one-year-old, M. W. Hicks' Waverly; best sucking colt, M. W. Hicks' Majesty; 2d, G. W. Hancock's Specie. Mares—Best four-year-old and over, F. T. Underhill's Acme; 2d, J. H. Tennant's Arctena; best three-year-old, H. S. Beals' Miller's Maid; best two-year-old, Irvin Ayres' Veronica; 2d, G. W. Hancock's Daisy; best one-year-old, R. McEnespey's Bridget Mc.; 2d, J. A. McCloud's Carrie Vernon; best sucking colt, M. W. Hicks' Mollie.

Jacks, jennies and mules; jacks four years—Henry Klemp, Pleasant Grove, Jumbo; W. L. Ashe, Stockton, Mocking Bird. Jacks, sucklings—Levi Carter, Ceres, Washington Eclipse, Jr.; W. A. Munion, Black Jack. Jennies, four-year-olds—Levi Carter, Julia; W. A. Munion, Fanny. Mules, spin of any age—C. P. Berry, Done and Bummer; W. A. Munion, Susie and Beauty.

### Cattle.

Durhams, bulls—Best three-year-old, Col. Younger, San Jose, Forest King; 2d, Hyde & Moore, Visalia, Oxford Duke Third; best two-year-old, Peter Peterson, Maxwell, Maxwell Chief; 2d, Col. Younger, San Jose, Third Kirklevington of F. H.; best one-year-old, Peter Peterson, King Phillips; 2d, R. J. Merkle, Sacramento, Lafayette; best bull calf, R. J. Merkle, Sacramento, Pat Henry; 2d, Hyde & Moore, Kaweah Duke Third. Cows—Best three-year-old, Col. Younger, Red Dolly Fourteenth; 2d, Willford Page, Petaluma, Belle Medico; best two-year-old, Col. Younger, Amelia Eleventh; 2d, W. Page, Peerless; best one-year-old, Col. Younger, Oxford Rose Sixth; 2d, Peter Peterson, Rosalie K.; best heifer calf, Peter Peterson, Jennie McL.; 2d, W. Page, Belle of the Mead. Herd—Best herd of thoroughbred Durham cattle over two years old, one male and four females, Col. Younger.

Jerseys and Guernseys, bulls—Best three-year-old, Thos. Ward, Oakland, William; 2d, H. S. Sargent, Stockton, Earl of Mameluke; best two-year-old, E. W. Maslin, Loomis, Rino; 2d, Thomas Ward, Oakland Chief; best one-year-old, Thos. Ward, William; 2d, Robert Beck, San Francisco, Roderick Dhu; best bull calf, Robert Beck, Fitz-James; 2d, A. L. Nichols, Sacramento, Ben Nevis. Cows—Best three years, J. D. Smith, Livermore, Susan Titus; 2d, H. S. Sargent, Daisy W.; best two-year-old, H. S. Sargent, Queenie; 2d, Thomas Ward, Lady Maud; best one-year-old, A. L. Nichols, Bellaire; 2d, H. S. Sargent, May Day; best heifer calf, H. S. Sargent, calf by Earl Mameluke; 2d, fawn calf by Bay Knight of St. Louis. Herds—Best herd of thoroughbreds over two years, H. S. Sargent, Earl of Lockford and four cows.

Devons, bulls—Best one-year-old, R. McEnespey, Chico, Salute. Cows—Best three-year-old, R. McEnespey, Mayflower; 2d, R. McEnespey, Princess; best one-year-old, R. McEnespey, Helene.

Ayreshires, bulls—Best three-year-old, Tyler Beach, San Jose, Narragansett Chief; 2d, Bement & Son, Linda Second; best two-year-old, Tyler Beach, Burton; best one-year-old, Bement & Son,

Ethelbert; second, Bement & Son, Campbell; best bull calf, Bement & Son, Elecior; second, Tyler Beach, Quicksilver. Cows—Best three-year-old, Tyler Beach, Prissy; second, Bement & Son, Stella; best two-year-old, Bement & Son, Sybella; second, Tyler Beach, Dina; best one-year-old, Bement & Son, Mirella; second, Tyler Beach, Medea; best heifer calf, Bement & Son, Ethelbert; second, Tyler Beach, Mattie B. Herd—Best thoroughbreds of any age, one male and four females, owned by one person, Bement & Son, Archie, Stella, Lady Faxon, Mariana and Sybella.

Herefords, bulls—Best three-year-old, Williams & Saxe, San Francisco, Poverty; best two-year-old, Williams & Saxe, Rocket; best one-year-old, Williams & Saxe, Fairfax; second, Williams & Saxe, Pleasant Wilton.

Holstein or Friesian, bulls—Best three-year-old, J. H. White, Lakeville, Usurper; second, L. Stanford's Yount Kurt; best two-year-old, L. Stanford's Mahomet of Palo Alto; second, J. H. White's Prince of Harlem; best one-year-old, L. Stanford's Nodine Veeman; second, J. H. White's Leicester; best bull calf, J. H. White's Cochise; second, L. Stanford's Lecto. Cows—Best three-year-old, L. Stanford's Clara Hamilton; second, J. H. White's Anemie; best two-year-old, J. H. White's Wayward; second, F. T. Underhill, Santa Barbara, Dame Trot; best one-year-old, J. H. White's Ocala; second, L. Stanford's Barbara Maid; best heifer calf, L. Stanford's Infelice; J. H. White's Laquite. Herd—Best herd of any age, one male and four females, J. H. White's Usurper, Anemie, Wayward, Ocala and Sierra.

Angus or Galloways, bulls—Best three-year-old, Leonard Bros.' Sir Stafford; 2d, Leonard Bros.' Hopeful of Lyons; best two-year-old, Leonard Bros.' The Badger; second, Leonard Bros.' Lyman of Mt. Leonard; best one-year-old, Leonard Bros.' The Boss; second, Maryville Live-stock Co.'s Leander; best bull calf, Leonard Bros.' Bruce of Mt. Leonard; second, Leonard Bros.' Lux of Mt. Leonard. Cows—Best three-year-old, Leonard Bros.' Dolly Second of Tarbreoch; second, Leonard Bros.' Sally of the Hirs; best two-year-old, Maryville Live-stock Co.'s Forest Rose; second, Leonard Bros.' Cratich of Mt. Leonard; best one-year-old, Leonard Bros.' Nancy Lee of Mt. Leonard; second, Maryville Live-stock Co.'s Princess Isabel; best heifer calf, Leonard Bros.' Joy of Mt. Leonard; second, Leonard Bros.' Romola Second. Herd—Best herd of thoroughbred, Angus or Galloway cattle, of any age, one male and four females, Leonard Bros.

Graded cattle, cows—Best three-year-old, Robert Ashburner, Baden Station, Music; best two-year-old, P. H. Murphy, Brighton, Daisy; best one-year-old, P. Peterson, Maxwell, Rose.

Sweepstakes—Bull of any age or breed, Robert Ashburner, Baden; best cow of any age, Colonel Younger, San Jose, Red Dolly; best bull and three calves, Colonel Younger, Fifth Kirklevington.

Herd Sweepstakes, brief breeds—Best herd, one bull and five cows or heifers, Colonel Younger, Forest King and family. Milk breeds—Best herd, one bull and five cows or heifers, Leland Stanford, San Francisco, Mahomet of Palo Alto, and family.

### Sheep.

Merinos—Best ram, two-year-old, F. Bullard's Long Wool; second, James Roberts, Irvington, Squatter; best ram, one-year-old, F. Bullard's Golden Fleece; second, James Roberts' Bulger; best three ram lambs, F. Bullard; second, James Roberts; best pen of five ewes, two-year-old, F. Bullard; second, James Roberts; best pen of five ewes, one-year-old, F. Bullard; second, James Roberts; best pen of five ewe lambs, F. Bullard; second, James Roberts; best ram and five lambs, F. Bullard; second, James Roberts. Southdowns—Best ram, any age, R. H. Crane, Petaluma; second, George Bement, Redwood City; best pen ewes, any age, R. H. Crane; second, George Bement; best ram and five lambs, R. H. Crane; second, George Bement. Sweepstakes—Best ram of any age or any breed, and five of his lambs, Long Wool, F. Bullard, Woodland.

### Angora Goats.

Thoroughbreds—Best buck, two years old, T. H. Harlan, Williams; Governor Helm; best buck under two years old, M. Wick, Oroville, Lawrence; best pen of three does, two years old, J. Weyand, Colusa; best pen of three does, under two years, T. H. Harlan. Grad-d—Best pen of three does, two years old, J. Weyand; best pen of three does, under two years, T. H. Harlan. Herd—Best herd of ten of any age or breed, J. Weyand.

### Swine.

Berkshire—Best boar, two-year-old, A. Smith, Redwood City, Redwood Duke; second, J. Rider, Sacramento, Royal Bismarck; best boar, under two years, J. Rider, Mingo Chief; best boar, six months old and under one year, A. Smith, Redwood Duke 2d, second, A. Smith's Tyrant; best breeding sow, J. Rider's Princess Bismarck; second, A. Smith's Belle Roche Princess; best sow, six months old and under one year, A. Smith, Redwood Princess; second, A. Smith, Redwood Lass 2d; best pair of pigs, under six months old, and second ditto, A. Smith. Essex—Best pair of pigs, under six months old, G. Bement & Son, Redwood City. Poland China—All awards to J. Melvin, Davisville; except for second pair pigs under six months old, to P. H. Murphy, Brighton, Dick and Bess. Durocs or Jersey Reds—Best boar, under two years old, J. Kennedy, Sacramento, Dick; best breeding sow, J. Kennedy's Susie; second, T. Waite, Brighton, Shippee; best sow, six months old and under one year, J. Kennedy's Phoebe Jane. Sweepstakes—All taken by A. Smith.

### Poultry.

Light Brahms—Best cock and hen, M. W. Parker, Biggs; best cock and pullet, to same; best breeding pen, one male and four females, to same. Dark Brahms—Best cock and hen, Pacific Incubator Co., Oakland; best cock and pullet, T. Waite, Brighton; best breeding pen, one male and four females, same. Langshans—Best pair, to same; best cock and pullet, to same; best breeding pen, one male and four females, to same. Buff Cochins—Best pair, M. W. Parker; best cock and pullet, E. I. Robinson; best breeding pen, one male and four females, to same. Partridge Cochins—Best pair, Pacific Incubator Co.; best cock and pullet, T. Waite; best breeding pen, one male and four females, Pacific Incubator Co. Plymouth Rocks—Best pair, J. J. Jones; best cockerel and pullet, T. Waite; best breeding pen, J. J. Jones. Brown Leg-

horns—Best pair, J. J. Jones; best cockerel and pullet, T. Waite; best breeding pen, J. J. Jones. White Leghorns—Best pair, T. Waite; best cockerel and pullet, and best breeding pen, J. J. Jones. White-faced Black Spanish—Best pair, E. I. Robinson; best cockerel and pullet, same; best breeding pen, same. Houdans—Best pair, Pacific Incubator Co.; best breeding pen, same. Silver-spangled Hamburgs—Best pair, best cockerel and pullet, and best breeding pen, T. Waite. Polish—Best pair white-crested, T. Waite; best pair golden-spangled, Pacific Incubator Co.; best cockerel and pullet, and best breeding pen, T. Waite. Wyandottes—Best pair, best cockerel and pullet, and best breeding pen, T. Waite. Seabright Bantams—Best pair, Pacific Incubator Co. B. B. R. G. Bantams—Best pair, Pacific Incubator Co. Pit Gimes—Best pair, P. J. Williams, Sac.; best breeding pen, same. Turkeys—Best pair bronze, T. Waite. Geese—Best pair, T. Waite, Toulouse geese. Ducks—Best pair Rouens, T. Waite; best pair Pekins, same. Guinea Fowls—Best pair, Pacific Incubator Co.; six carrier pigeons, Pacific Incubator Co.

### Incubators.

Egg package, small, Pacific Incubator Co.

### Agricultural and Horticultural Products.

Flour and Grain—Best sample baker's flour, C. McCreary & Co., Sac.; whitest sample family flour, same; best bushel yellow corn, B. N. Bugbey, Sac.; white Chih wheat, L. Vertrees, Sac.; white sample of barley, same; exhibit garden seeds, Cal. production, Mrs. R. S. Lockett, Sac.; sample Australian wheat, J. Reith, Sac.; sample of prop. wheat, M. Wick, Butte P. O.; sample Sonora wheat, E. G. Morton, Sac.; best bale hops, D. Flint, Sac. Vegetables, Roots, etc.—Best six sugar beets, P. H. Murphy, Brighton; one-half peck gherkin cucumbers, Mrs. R. S. Lockett, Brighton; six crooked-necked squash, to same; twelve parsnips, F. Gabriella, Brighton; twelve carrots, to same; turnip beets, to same; peck of tomatoes, to same; six drumhead cabbage, to same; six heads red Dutch cabbage, to same; six heads other varieties, to same; three heads cauliflower, to same; six heads lettuce, to same; half-peck white onions, to same; six heads peppers for pickling, to same; twelve roots salsify, to same; six stalks celery, to same; dozen sweet-corn (green), to same; three muskmelons, to same; half-peck of dry white beans, to same; half-peck kidney bush beans, in pod, to same; half-peck pole beans, other than Lima, in pod, to same; half-peck field peas (dry), to same; half-peck castor-oil beans, to same; greatest variety of dry peas, to same; three mountain sweet watermelons, W. O. Davis, Florin; three cantaloupes, to same; six Hubbard squash, E. F. Aiken; six Boston marrow squash, to same; licorice root, Isaac Lee, Florin; six long blood beets, Mrs. R. S. Lockett, Brighton; half-peck of garden peas, dried, to same; three purple egg plants, to same; three watermelons, J. H. Hamilton, Sac.; half-peck Lima beans, in pod, E. F. Aiken, Sac.; red onions, F. W. Fish, Redding; yellow onions, to same; large pumpkin, Geo. F. Bronner, Sac.; six cucumbers, E. F. Aiken, Sac.; best table of vegetables, exhibited by producer, F. Gabriella, Brighton; squash and pumpkins, E. F. Aiken. Green Fruits—Apples—Best display and variety, F. W. Fish, Redding; 2d, Mrs. J. Lansing, Sac.; 3d, S. Purrrington, Brighton; 4th, P. H. Murphy, Brighton. Pears—Best display and best variety, Mrs. R. S. Lockett; 2d, Mrs. J. Lansing; 3d, F. W. Fish; 4th, P. H. Murphy; 5th, S. Purrrington. Peaches—Best display and best variety, J. G. Robinson, Newcastle; 2d, P. W. Butler; 3d, C. T. Adams, Newcastle; 4th, E. Greer, Sac.; 5th, Mrs. R. S. Lockett. Plums—Best display and best variety, C. T. Adams; 2d, P. W. Butler; 3d, Mrs. R. S. Lockett; 4th, P. H. Murphy; 5th, S. Purrrington. Figs—Best display green figs, E. Greer; 2d, Jas. Rutter, Florin. General Display—Best display of fruit by the producer, Mrs. R. S. Lockett; 2d S. Purrrington. Grapes and Raisins—Best six varieties table grapes (Flaming Tokay, Black Morocco, Muscat, Rose de Peru, Purple Damascus and Blue Malvoise), Wm. Foster, Lincoln; 2d (White Syrian, Black Hamburg, Isabella, White Tokay, Emperor and Black Prince), P. H. Murphy, Brighton; best three varieties table grapes, M. Mertes, Placer county; 2d, P. J. Adams, Newcastle; best variety table grapes (Emperor) Weinstock & Lubin, Mayhew's Station; 2d, L. Bannon, Penryn (Flaming Tokay); best seven varieties wine grapes (Catawba, Zinfandel, Verdal, Franken, Reising, Gray Reising and Golden Chasselas), J. B. Whitcomb, Rocklin; 2d, (Golden Chasselas, Rose Chasselas, Johannisberg, Reising, Zinfandel, Fehér, Szarga and Red Traminer), W. A. Heims, Rocklin; best three varieties wine grapes, Wm. Foster, Lincoln; 2d, W. A. Heims, Rocklin; best variety wine grapes (Zinfandel), Hawk & Wood, Rocklin; 2d, (Mataro), M. Mertes, Placer county; best general display of grapes, James Rutter, Florin; 2d, S. Purrrington, Brighton; best display seedless raisins, S. Purrrington, Brighton. [The reason for awarding the premiums to the Emperor and Flame Tokay was not for their superior quality as grapes for eating, but from the fact of their excellent shipping qualities, which make them of greater value in a commercial point of view.]

Dried and preserved fruits, nuts, etc.—Best to pounds dried apples, W. J. Hunt, Sebastopol; dried pears, same; dried apricots, same; dried cherries, same; dried blackberries, same; dried raspberries, same; 2d display of dried fruits by producer, same; best dried peaches, Mrs. R. S. Lockett, Brighton; dried nectarines, D. H. Clippinger, Brighton; dried prunes, same; dried plums, same; dried figs, same; best general display, same; 2d dried figs, Mrs. W. H. Hobby, Sacramento; best half peck soft-shelled almonds, W. H. Williamson, Router's; English walnuts, James Rutter, Florin; best package for shipping fruit, S. F. Woodworth, Clippert Gap.

### Brandies and Wines.

Best grape brandy, one year old, L. Bannon, Penryn; best over one year old, same; best white wine, same; California sherry, Mrs. H. Cronkite, Sacramento.

### Candies, etc.

Best display confectionery, E. M. W. Holden, Sacramento; candies made in hall during exhibition, same.

### Honey, Preserves, Pickles, etc.

Best display pickles, Mrs. James Lansing; six jars red currant jelly, Mrs. H. Cronkite; six jars raspberry jelly, same; six jars blackberry jelly, same; six

jars strawberry jelly, same; six jars quince jelly, same; six jars raspberry jam, same; six jars blackberry jam, same; best display jams and jellies in glass, same; 2d display jams and jellies in glass, Mrs. James Lansing; best display brandied peaches, Mrs. H. Cronkite.

**Bread, Butter, etc.**

Best soda biscuit, Mrs. P. M. Artz, Brighton; domestic rye bread, same; Graham bread, same; domestic brown bread, Mrs. A. W. Morrell, Sacramento; domestic corn bread, Lizzie B. Aiken, Sacramento; domestic bread, Rosa Sert, Sacramento; four loaves baker's bread, W. F. Peterson, Sacramento; pilot bread, H. Fisher & Co., Sacramento; butter crackers, same; sweet crackers, same; Boston crackers, same; soda biscuit, Lizzie B. Aiken, Sacramento; tub firkin butter, James Askew, El Dorado; special premium for fruit cake, I. Isaacs, Shasta Co.

**Miscellaneous.**

White Egyptian corn, early amber sugarcane, Chinese cane, China sorghum and field corn, P. H. Murphy, Brighton; bundles broom corn, B. N. Bugbey, Sacramento; hard-shell almonds, W. H. Williams, Routier's; Japanese persimmons, P. T. Adams, Newcastle; pumpkins, P. M. Artz, Brighton; butter-firkins, J. J. Miller, Lake Tahoe; quinces, P. W. Butler, Penryn; olives, same; assorted dried fruit, D. H. Clipping, Brighton; dried corn and peas, same; King Philip's corn, on stalk and in ear, John F. Silva, Nicolaus; goat's wool, mohair and goat skins, Julius Weyland, Colusa; cotton plant and flaxseed and sheaf, Mrs. R. S. Lockett, Sacramento; currant and cherry syrup, Mrs. H. Cronkite, Sacramento; catsup, same; peanuts, E. F. Aiken, Sacramento; various kinds squash, same; vineyard plow, Stanton, Thompson & Co., Sacramento; McCoy's patent doubletree and singletree, same; sack elevator, J. H. Wisheart; sack holder and filler, W. F. Jeans; Doby shovel and cultivator, E. E. Krause; plow, cultivator and weed-cutter combined, William Forbes & Son; spray pump for exterminating insects, John Bean; spring whiffletrees, H. H. Linnell, Sacramento; spray pump and combination, same; wine pump, same; wagon jack, A. & A. Heilbron, Sacramento; display dairy machinery, G. G. Wickson; tread horse-power, same; farmers' blacksmith outfit, same; garden barrow and stove trucks, Benicia Agricultural Works; lard press, canal barrow, hand garden cultivator, chilled gang-plow bottoms, single shovel plow, Stanton, Thompson & Co., Sacramento; orchard and vineyard singletree, milking pails, milk strainer, G. G. Wickson & Co.; gopher and squirrel exterminator, M. Scholl.

**SHEEP AND WOOL.**

**Wool-Growing in the United States.**

At a recent exposition of wool and woollen fabrics, at Indianapolis, Ind., Mr. J. C. Stevens, president of the Ohio Wool growers' Association, spoke as follows:

Since the most remote periods, wool has been the first and principal material employed by man for his clothing. Sheep husbandry has always been, and must continue to be, one of the most essential as well as the highest type of agricultural employment, furnishing, as it does, both food and clothing, and at the same time preserving the original fertility and productiveness of the soil, which is entirely unlike the growing of the cereals, tobacco or cotton, which constantly deteriorate, and without an expensive application of proper fertilizers will eventually exhaust the same. The meat of the sheep is of the very best quality as food for man, while the fiber or wool affords material for clothing quite equal in beauty to, and far surpassing, either in respect of durability or comfort, the products of silk or cotton. A pursuit furnishing employment for so many people, and demonstrating, as our agricultural journals and the great display of textile fabrics here on exhibition attest, the tremendous progress we are making in the material sciences, is certainly encouraging to the American citizen.

While wool-growing is carried on to a considerable extent in this country, it is susceptible of being vastly increased and profitably extended over a large expanse of territory lying west and south of us, where the climate and cheapness of soil render it peculiarly fitted for profitable sheep husbandry. With our constantly-increasing population, there should be a correspondingly increased production of wool, which should equal the wants of the American people in times of desolating war, as well as in times of profound peace. A country like ours, vast in extent and variety of resources, should be placed beyond the dependence of other countries for the supply of the necessities of life.

This may be accomplished by that wise system of legislation foreshadowed by the fathers of our Republic. \*\*\*\*\* All history demonstrates the fact that the statesman or ruler who has done most to develop, encourage and protect the material interests of the industrial population has invariably been the most renowned.

In these United States, and particularly in the Southwest and Northwest, the entire extent of the great Mississippi valley, where wool-growing may be so profitably extended in all of the varieties of sheep, and where wool may be grown equal to the best produced on the globe, and where all the material that enters into the manufacture of the same exists in such abundance, would it not be wise political economy to encourage home production? By so doing we relieve ourselves of those great burdens that are weighing down so heavily on the shoulders of our industrial population—the paying of freight commissions, etc., upon the raw material we export and a like duty upon the same thing imported, but in a different shape. Whenever you see a prosperous manufactur-

ing town or city, in that community the agriculturists are in a like prosperous condition, affording, as it must, a reliable home market for their wool, mutton, beef, pork, grain and vegetables, and at the same time giving employment to vast numbers that otherwise would be idle and dead weights on society.

The wool-growers of the United States should supply our manufacturers with all of the varieties of wool in request, but this is expecting very much of them, unassisted by proper legislation, under our system of intellectual and social culture, high taxes, the support of schools and churches, high-priced labor and real estate, to compete with the cheap wools of South America, South Africa, Australia, or other countries, where wool can be grown for from 8 to 15 cents per pound under their system of pauper labor, and the accumulated capital of Europe seeking investment at a very low rate of interest.

And the manufacturers ought to supply our people with all the goods of the best quality necessary for home consumption. And lastly, as the interests of the wool-growers and manufacturers are identical, and the chief cornerstones that underlie our varied system of industry, it is desirable that they rally to the defense of each other's rights whenever assailed.

**Australian Wool.**

The Australian colonies form the chief wool-producing region of the world. The tendency to wool-producing there gives no apparent sign of diminishing, as may be remarked in the quantity of wool yearly exported. Within the last 10 years the exports have increased, in the number of bales, 43 per cent, though in the last five years the increase has been only a little more than 14 per cent.

From the statistics, as furnished by the United States Consul at Sydney, it appears that nearly all the wool produced in those colonies finds its way ultimately to England and the continental cities of Europe. The Australian official reports give the exports of wool from the colonies for the three years last passed, as follows: For 1885, 1,094,000 bales; for 1884, 1,112,000; for 1883, 1,054,000. The statistics of all the wool reaching the European ports during those years show that but very little more wool was received in Europe than was exported from the Australian colonies. The statistics of wool imports into England and continental ports are given as follows: 1,095,000 bales for 1885, 1,135,000 bales for 1884, and 1,016,000 bales for 1883.

There is quite a marked difference in the character of the wool from the different colonies, especially this season. That from the southern portion of the colonies is reputed to be "well nurtured, bright, deep grown, sound and elastic, although somewhat heavy in yolk." That from the central portion "presents what is called a hungry appearance, being not only tender and short in staple, but containing, in many instances, a large quantity of earth, sand and burr." The causes of the difference in the condition of these two clips are attributed to the benefits of plentiful rainfalls in one instance and the baneful effects of drouth in the other, which was so severe as to necessitate the removal of many of the flocks to other pastures.

The best clothing wools, or rather the finer grades of wool, grown in New Zealand are obtained from South island, and the condition of them is reported to be lighter in grease and freer from tick stains than at any period in the history of the colony. The limestone districts of South Australia are developing peculiar characteristics to the wool grown therein, and remind one of the advantages found in the south of England, affecting the wool of the Southdown and other breeds of sheep.

**Complimentary Samples.**

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

**Don't Fail to Write.**

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some influential party to request to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

**RAILWAY EXPANSION.**—In climates having a difference of 70 degrees in temperature between the hot and cold seasons, a railway track of 400 miles is 338 yards longer in summer than in winter. Of course the length of road remains the same, but expansion forces the metal closer together, making an aggregate closing up of space between the rails of nearly a yard in each mile.

**Cheap Money for Farmers.**

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

**Fruit Engravings,** The finest, best and cheapest Photographs and Engravings of Fruits, Vegetables, Houses, Farms, Landscapes, etc., made by S. F. PHOTOGRAPHIC Co., 659 Clay St., S. F.

**EXTRAORDINARY OFFER!**  
This Valuable Book for 50 Cents!

To every one who subscribes to this paper. It contains 50,000 Separate and Distinct References, 1200 engravings illustrating various topics. Accurate and concise information on Art, Science, Philosophy and Religion, including learned essays by the compiler, Prof. H. L. Williams and several hundred other authors. The articles on Anatomy, Architecture, Agriculture, Astronomy and the

Fine Arts, are full and explicit. Botany, Chemistry, Geography, Geology and History, are each treated ably and explicitly. The article on Engineering is still further amplified by a full description, illustrated with plates and diagrams of the Great Brooklyn Bridge; Mechanics with plates illustrating Mechanical Motions; Mineralogy, Medicine, Law, Languages and Government, are so clearly treated of, that every one who reads can understand. In addition to the full and complete Cyclopædia, arranged in alphabetical form, we have, bound up in the volume, a Complete Library of Knowledge, including a Guide to Correct Speaking and Writing; Book-keeping, a complete guide to business; Chronological History; Mythology; AN INDEX TO THE HOLY BIBLE; a complete brief Biographical Dictionary; full and complete statistical history of the United States, corrected down to 1884. The Interest, Banking, Usury, Insolvent and Homestead Laws of the United States, are for the first time gathered together in one volume. A LIST OF COUNTERFEIT NOTES WITH RULES FOR DETECTION OF COUNTERFEITS. Separate Dictionaries of Musical, Nautical, and Geographical terms; a carefully prepared treatise on Pronunciation, giving rules and examples whereby every one can become his own teacher. AN APPENDIX OF THE ENGLISH DICTIONARY, giving hundreds of words not contained in the ordinary dictionary. FLAGS OF ALL NATIONS, beautifully illustrated by colored plates. In fact the book is a library in itself. It has 800 pages, and is more profusely illustrated than any other Encyclopædia at the price, and contains a mine of information on almost every subject known to man. Every one of the many departments is worth more than the cost of the book. As "knowledge is power," this Cyclopædia will be a source of wealth to thousands in all ages and conditions in life. This handsome octavo volume is printed in good paper, and handsomely bound in cloth embellished with gold.

Without guaranteeing all that is said above by the Eastern publishers of the work, the proprietors of this paper consider the book a valuable one, and (in the absence of a more costly publication) very desirable in most households, and worth several times the cost mentioned above. In fact, we will refund the cost, with postage added, if any subscriber chooses to return the Cyclopædia to us within thirty days after receiving it. Address the publishers of this paper.

While this notice appears, the WORLD'S CYCLOPEDIA will be sent to any subscriber (old or new) who orders it, and pays his subscription one year in advance and 50 cents additional.

**BULBS. SEED.**

Hyacinths, \$1.25 per dozen, colors separate; named varieties, \$2.00 per dozen; Tulips, 40 cents; Crocus, 20 cents; Anemones, double and single, 40 cents; Snow Drops, single, 30 cents, double, 50 cents per dozen—all flowering bulbs.

**PANSIES.**

Our strain is the very finest grown. Giant Odier, 50 cents per pkt. French Monstre, 25 cents. Giant Timardeau, 25 cents. Fourteen other fine sorts, colors separate, for \$1.

The above Bulbs and Seed sent free by mail on receipt of price, but orders for Bulbs must amount to \$1.00.

Rates, \$1.25 to \$2 Per Day.

Stage offices for Collierville and Oakdale, Roberts and Union Islands, and Isaac's Mineral Springs stages. The most desirable location in the city. Refurnished and refitted in the best style for the accommodation of the public.

**Situation Wanted.**

A married man, recently from the East, wishes a situation as coachman or to do general work. Understands management of horses thoroughly. Best of references given. Address, JOHN CRANDALL, Davisville, Cal.

## Lands For Sale and To Let.

### FOR LEASE AND FOR SALE,

40,000 ACRES

Of good land in Fresno, near the County Seat. Some of this land is already irrigated, and all can be easily irrigated. It is adapted not only to grain, but also to Alfalfa, Fruit and Vines.

1000 ACRES

Of the above land for sale at the low price of \$20 per acre. Apply to

E. B. PERRIN,  
404 Kearny St., San Francisco.

\$500 to \$50,000.

BARGAINS in ORCHARDS and VINEYARDS, STOCK and Grain Ranches in every County in the State. Send Stamp for Catalogue. We can find quick sale for your farm, large or small, if it is cheap and you will send us full description. If you want to buy, tell us what you want, and we can suit you.

GAMAN & CO.,  
339 Kearny St., San Francisco.

## CHEAP LANDS FOR SALE.

**5680 Acres** of rolling adobe hills, situated in Tehama County. Well watered by numerous springs, etc. Several thousand acres suitable for cultivation. Good two-story House, Barn and other out-buildings. Seven miles of fine wire fence.

**FIRST-CLASS CATTLE OR SHEEP RANGE.** The Cheapest tract of land in Tehama County. Price, \$6.00 per acre. Fair time and interest.

Also, a tract of 20,000 acres adjoining, can be bought at a great bargain. Title, U. S. Patent.

For terms, etc., apply to

J. E. CROOKS, Benicia, Cal.

N. B.—Upon timely notice, intending purchasers will be taken from Cottonwood to the land and returned free.

## A NEW COLONY

On the new extension of Southern Pacific Railroads, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. **20,000 acres** of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. **INTERNATIONAL IMMIGRANT UNION**, 401 California St., San Francisco.

## FRESNO COUNTY.

## BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being  $2\frac{1}{2}$  times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

For further particulars call on or address

O. J. WOODWARD, FRESNO, CAL.

L. SHARPE, SELMA, CAL.

## American Exchange Hotel,

SANSOME STREET.

Opposite Wells, Fargo & Co.'s Express, one door from Bank of California, SAN FRANCISCO.

This Hotel is in the very center of the business portion of the city. The traveling public will find this to be the most convenient as well as the most comfortable and respectable Family Hotel in the city.

Board and Room, \$1.00, \$1.25 and \$1.50 PER DAY, ACCORDING TO ROOM

Hot and Cold Baths Free. None but most obliging white labor employed. Free Coach to and from the Hotel.

MONTGOMERY BROS., Proprietors.

From imported stock direct from England, bred by Russell Swanwick, President Royal Agricultural College Farm, England, from the Celebrated STUMPY and SALLIE FAMILIES. Young stock always for sale at lowest possible rates. Address ANDREW SMITH, Redwood, or 218 California St., S. F.

Engraving Superior Wood and Metal Engraving, Electrotyping and Stereotyping done at the office of this paper.

**H. H. H. HORSE LINIMENT.** THE H. H. H. Horse Liniment puts new life into the Antiquated Horse! For the last 14 years the H. H. H. Horse Liniment has been the leading remedy among Farmers and Stockmen for the cure of Sprains, Bruises, Stiff Joints, Spavins, Windgalls, Sore Shoulders, etc., and for Family Use is without an equal for Rheumatism, Neuralgia, Aches, Pains, Bruises, Cuts and Sprains of all characters. The H. H. H. Liniment has many imitations, and we caution the Public to see that the Trade Mark "H. H. H." is on every Bottle before purchasing. For sale everywhere for 50 cents and \$1.00 per Bottle.

For Sale Everywhere.

**PRIVATE DETECTIVE,** Collector and Insurance Broker. The undersigned respectfully offers his services in any of the above capacities. Correspondence solicited. Address C. M. RICHARDSON, care "Fraternal Record," No. 252 Market St., San Francisco, Cal.

## THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

## PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

### TITLE, U. S. PATENT.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

## The Fair at Stockton.

The Sixth Annual Fair of the San Joaquin Valley Agricultural Association opened at Stockton on the morning of Sept. 21st, with the fire-bells ringing and bands playing. The work of arranging exhibits, however, went on all day, and it was not until evening that the pavilion was ready to receive the thronging visitors. The building was comfortably filled with booths for the numerous and rich exhibits, and while there was no crowding, little space was left vacant. Twenty electric lights were used in illumination.

The San Joaquin County Pomona Grange had an excellent and valuable display of grain, fruits and nuts raised in the county, and many varieties of flower seeds. The most admired feature of their exhibit was a miniature farm, with fields of growing grain; farmhouse surrounded by flower beds; a barn and everything complete.

Two large tables were devoted to pears, quinces and apples from Placer county. The Oak House farm had a table of grapes, peaches, nuts, etc.

The amateur sericulturists were well represented by cocoons and skeins of silk.

F. E. Austin showed models of the Relief windmill.

One of the largest crowds of the week assembled Thursday night, when Hon. P. D. Wigginton delivered the annual address. He is an entertaining speaker and held the attention of the audience until the close.

On "Flower Day" the interior of the pavilion looked peculiarly attractive. School children and ladies turned out in force and the building was full of delighted visitors. Many beautiful floral designs were on exhibition, and the air was redolent with fragrance.

On Friday they had a culinary display of home-made bread, cake and pastry. The exhibit was not large, but presented a neat and tasteful appearance. The first prize for bread was awarded to Miss Lotta Bell, 11 years old.

In carriages, Wm. P. Willet, of Stockton, exhibited a list of fine buggies that would compare favorably with the Brewster or any of the notable Eastern manufactories. This line of carriages and buggies cannot be duplicated in any manufactories in this State, and for which he took first prize on buggies.

M. P. Hudson & Son had a full line of carriages, phaetons and buggies, for which they were awarded six premiums.

The display of fruit was the finest ever made in the State, a portion of it being from the highlands.

H. H. Moore & Son had an artistic display of the H. H. horse medicine and a new remedy entitled the Arkansaw cough syrup and remedy. In this connection we may say that the H. H. horse medicine is growing in popularity and has become a staple article in California. We have learned that a new remedy that he is introducing has met with flattering results.

One very pleasant feature of the fair was the regulation that after 9 o'clock on each evening terpsichorean exercises were kept up with much interest to the spectators and participants until 11 o'clock.

Williams & Moore had two pyramids of domestic and toilet soap, and it was much admired.

Mr. Biven had the Peerless Incubator at work and a large number of chicks were hatched out during the fair. In this connection we may say that this incubator has proved a great success, and an illustration will appear in the RURAL PRESS soon.

The Stockton Business College had an artistic display of penmanship. The affable proprietor, Mr. Bainbridge, was in attendance each evening with his assistants, entertaining visitors with his educational enterprises.

The Becker Washer, which is being manufactured by E. W. Melvin, of Sacramento, seemed to have a special attraction for the ladies, who crowded around to see the manner of working.

George West exhibited a fine line of wines and brandies, some made as early as 1875.

The exhibition at the pavilion was such a noted success that there is no doubt that there will be a larger one in the coming year at Stockton.

## At the Park.

The recent fair held at Stockton was one of the best and most successful fairs ever held in this district. The live stock was represented by several notable herds of cattle, among which were Col. Younger's Shorthorns, Sargent's Jerseys, Leonard Bros.' Galloways, F. A. Burke's Holsteins and Tyler Beach's Ayreshires. There was a good showing of hogs—Duroc, Berkshire and Poland-China swine.

The display of horses was large, and included Clydesdales, Norman Percherons, Hamiltonian and Morgan strains. The largest of the Norman Percherons was A. C. Bailey's, of Stockton, whose family of horses had as their foundation the Duc de Chartres.

The contests for speed were well managed, and those who like this sport had the satisfaction of viewing lively and well-contested racing.

The exhibition of machinery was extensive and, in some respects, perhaps, the most notable ever seen at any fair in the history of the county. In Machinery hall, hear the race-track, were six combined harvesters; the Stockton Combined Harvester Works exhibited the Houser Improved. One of the notable improvements was an iron brake, invented by D. Gratt-

ton, of Stockton, which enables the sack-holder to stop the machine almost instantaneously. S. L. Gaines, of Stockton, exhibited the "G. C. H." harvesters, a light running machine for small farmers which it is claimed can be handled with 12 horses. C. K. Meyers, of Stockton, showed Meyer's harvester, several of which have been run with success the present season. Mattleson & Williamson exhibited a combined harvester known as the Harvest Queen, which claims to have a light draught and other points of excellence, especially the ease with which the platform may be lowered and facilities for turning short corners.

David Young, for whom it is claimed that he made the first successful harvester, exhibited "Young Centennial," which has been manufactured this year by the Benicia Agricultural Works. Preparations have been made to turn out a large number this year. E. J. Marston, of Stockton, exhibited Marston's combined harvester, which was awarded the first prize of \$250. It is not our purpose to enter into detail and describe the relative qualities of the several machines mentioned in this article. There are many features connected with them that are no doubt great improvements, and they will be satisfactorily brought to the attention of the read-

LITTLE GIANT FENCE LOOM.

ers of the RURAL PRESS for the next season. There is no doubt as much unanimity on the question of using combined harvesters for harvesting grain in the great inland country as there is generally found among men.

Our representative conversed with over 50 different farmers, and with but one exception, each declared that the combined harvester was one of the great inventions of the day, as a labor-saving, economical means of harvesting grain. It was not uncommon to hear these expressions: "They are the greatest thing ever made for the rancher." "We could not raise grain without them." "It is a saving of 50

ers and thrashers. M. P. Henderson & Son exhibited the Salsbaker farm and fruit wagon.

## The Result.

The attendance throughout the week has been larger than was expected, and without doubt the aggregate receipts of the Association have been greater at this Fair than for several years past.

## Little Giant Fence Loom.

We give on this page an engraving showing the Little Giant Fence loom, which was shown at the State Fair, by P. D. Poole, of Alameda, and noticed in our report of the implements and machinery shown at Sacramento. This is the device which weaves the wire and laths or pickets right in the line where the fence is to stand, and we saw from its operations at the fair that it would make a strong and true fence when correctly handled. The work seemed to be very easily done. This style of fence is becoming very popular in this State for all farm uses. Its strength can be made less or more by using lath for poultry, rabbits, etc., or square pickets for live-stock. Mr. Poole has

other specialties in his agency besides the fence loom. In this week's RURAL he has advertisements of a road grader and a line of school-desks.

## A Combined Sprinkling Nozzle.

We give, on this page, an engraving of a new nozzle for a garden hose, which has attracted much attention at the Mechanics' Fair, and which seems to have important advantages. The engraving gives a good idea of its construction and operation. By its use one can have a straight stream or a coarse sprinkle or a fine

WAINRIGHT'S COMBINED HOSE NOZZLE AND SPRINKLER.

per cent in harvesting." "We have harvested 500 acres this year and our expense for repairs was less than \$5.00." "In light grain I can cut and put up in the sack for 75c per acre." "All there is about it, if we did not have the harvesters, we could not raise grain at these prices." "I do not believe that all these manufactories can make enough harvesters to supply the demand next year." "The most I feared was the runaways, but since they have got brakes so that the driver and sack-tender can block the wheels, there is no danger from runaways."

In agricultural machinery H. C. Shaw had the largest exhibit, among which were the New Clipper mower, Triumph reaper, Buckeye seed drill, Ashley disk pulverizer, H. C. Shaw gang plow, Slip share plow, etc., etc. The Grangers Union, of Stockton, had a large exhibition of agricultural implements and farm wagons, carriages, phaetons and Mitchell-Lewis vehicles, "Empire mower and reaper" and improved Chill plow, "Farmer's Friend gang plow," Combined fence builder. Hudson Caubney exhibited fine light express wagons, and the Prize drill, notes of which appeared in our last issue, and illustrations of each will appear in our columns hereafter. W. H. Jeans, of Woodland, exhibited his patent sack-holder, which is a subject of favorable comment among the farm-

spray merely by the use of the thumb upon the attachment while the water is still flowing. Thus no time is lost in stopping the water to change nozzles, nor is the hose put to the great strain of having the full pressure of the water upon it. It is also claimed to throw a wider and longer spray with less force of water, and as the exit of the water is comparatively large there is no chance for obstruction, as in the case of the ordinary "rose," or sprinkler. It has an adjusting screw which can be set to regulate the fineness of the spray. We are told that this nozzle has been used with advantage in connection with a force pump in whitewashing barns in place of using a brush; also, that it answers well in place of an atomizer in applying pest destroyers to fruit trees. It is the invention of Wm. Wainwright, 1409 Jackson street, S. F., to whom all inquiries should be addressed.

P. A. BIDWELL & Co.—The great planing mill of Stockton, recently destroyed by fire, is now being rebuilt and reconstructed in a fire-proof building 100 by 180 feet, with a 75-horse power engine, and is expected to be running within six months. As showing the demand for manufactured lumber and the business of this firm, they have three small mills now running in Stockton to fill their contracts for this year.

## Yuba County Hops.

EDITORS PRESS:—We think we have grown the banner crop of hops for this season. From 97 acres of ground we have just harvested 627,000 pounds of green hops, these made 90 tons net of dry hops, three tons of which we lost by fire on the night of the 22d. Of these green hops, about 200,000 pounds were picked by white people of our town, at 75c per cwt. The balance were picked by Chinamen at 70c. Every one seemed satisfied and we expect to have less trouble to get white pickers hereafter. Pickers made from 75c to \$2.25 per day, and quite a number averaged \$1.50 per day.

All of these green hops, except about 50,000 pounds, were cured in our one house. We dried 26 days, with an average of over 22,000 pounds of green hops per day. Our largest single kiln was something over 16,000 pounds. The size of the kiln floor is 30x60 feet, and we think our driers, Messrs. Buck and Talbot, deserve credit for the quantity and quality of the crop turned off.

This is the largest record for a single house that we have ever heard of. We also have a record for baling which we are proud of. We use the Bear River hop press, a patent for which I secured through Dewey & Co. last year. On August 19th four men and one horse put out 120 bales of hops in 10 hours 5 minutes of working time. The four men did all the work and took the bales from the press. The bales were sewed entirely before being taken from the press. We think we could put out 130 bales in the same time. Four ordinarily good men will put out 100 bales per day and call it a day's work every day in the week. The trade says we make the neatest bale that goes from this coast.

The best record, so far as we can learn, for any other power hop press, is 65 to 70 bales; some say they can put out 80 bales; but we do not think it has ever been done. We can double an ordinary day's work on the Sacramento press "and not half try."

In short, we claim the banner crop for '86. The highest and most uniform quality, quantity considered, the best record for a season's curing and the highest baling by 50 bales in 10 hours' run. We challenge comparison on all these points, and consider that Sacramento county will have to look to her laurels in hop growing.

M. H. DURST.

Wheatland, Sept. 27, 1886.  
[The sample of hops duly received. It is a splendid product. We have donated the specimen to the agricultural museum of the State University, where it will be appreciated both for its excellence and because Mr. Durst is a graduate of the College of Agriculture, who is making his mark as a practical farmer.—Eds. PRESS.]

## The Walnut Crop.

EDITORS PRESS:—Your correspondent, J. R. F., in the issue of the 25th, says the walnut crop of California is estimated to be all of 20 per cent greater this year than in 1885. As this is so evidently a mistake, and is so palpably wrong, it should be corrected. In Santa Barbara county the largest growers estimated the crop at not over a fourth, if it is that. The reports from Ventura are about the same, and the Los Angeles and San Bernardino papers state that the walnut crop is a failure in those counties. Mr. Elwood Cooper, the largest grower in the county, states that this is the first failure in 16 years to produce a crop.

Many causes are ascribed for the failure. Honorable Russell Heath gives it as his opinion that the dry season last year did not allow the formation of sufficient sap, and the inner bark of the tree became dry and this year's sap could not force itself quickly enough through the bark to cause the trees to bud out uniformly. This looks reasonable, since the leaves and buds came out in a scattering manner, and the young nuts kept coming on for three or four months instead of coming out promptly and evenly. The pollen blossom thus mostly came on so far in advance of the nuts that but few of the nuts were properly fertilized, and, as a consequence, most of the nuts dropped before half grown.

L. B. CADWELL.  
Carpinteria, Santa Barbara Co., Cal., Sept. 26, 1886.

## Fairs Still to Come.

There are several fairs to come off this month in California, beside the Nevada State Fair, at Reno, Oct. 4th to 9th. We give the list below:

Seventh District—Monterey, Santa Cruz, San Benito and San Luis Obispo counties—Salinas City, Oct. 5th to 9th.  
Santa Barbara Agricultural, October 5th to 8th.  
Twelfth District—Lake and Mendocino counties—Lakeport, Oct. 5th to 8th.  
Los Angeles Co. Fair, Downey, Oct. 5th to 9th.  
Santa Cruz County Fair, Oct. 6th to 9th.  
San Diego Horticultural Society, Oct. 6th to 8th.  
Sixth District—Los Angeles, Santa Barbara, Ventura, San Diego, San Bernardino and Inyo counties—Los Angeles, Oct. 11th to 16th.  
Ukiah Park Association, Ukiah, Oct. 14th to 16th.  
Arroyo Grande Agricultural Association, S. L. O. county, Oct. 14th and 15th.  
Santa Maria Valley Agricultural and Stock Association, Santa Maria, Oct. 27th to 29th.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

### POULTRY.

D. D. BRIGGS, Los Gatos, Cal. Fancy Poultry breeder.

SHEEP AND SHEEPWASH.

Calvert's Carbolic SHEEP WASH  
\$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast.

LITTLE'S CHEMICAL FLUID SHEEP DIP.

Price Reduced to  
\$1.25  
PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Soas in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

The Halsted Incubator Co. 1011 Broadway, Oakland, - Cal. Price from \$20 up. Model Brooder from \$5 up. Thoroughbred Poultry and Eggs. Send for new Circulars containing much valuable information.

DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 25-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished. We ask you to give our mills a trial. We guarantee that you will find them precisely as represented.

For full particulars, apply to DANIEL BEST, San Leandro, Cal.

The "Boss" and "Walk-away" ROAD MACHINES.

For building roads, making ditches, levees, etc. Is strong and durable, of light draft and of great strength. Just the thing for farmers in opening ditches through their grain fields. Sold by

THOMAS D. POOLE, State Agent, 1114 Oak Street, Alameda, Cal.

HORTON & KENNEDY'S FAMOUS ENTERPRISE

Always gives satisfaction. SIMPLE, STRONG and DURABLE in all parts. Solid Wrought-iron Crank Shaft with DOUBLE BEARINGS for the Crank to work in, all turned and run in adjustable babbitted boxes. Positively Self-Regulating. With no co springs, or springs of any kind. No little rods, joints, levers, or anything of the kind to get out of order, as such things do. Mills in use 6 to 12 years in good order now, that have never cost one cent for repairs. All genuine Enterprise Mills for the Pacific Coast trade come only through this agency, and none, whether of the old or latest pattern, are genuine except those bearing the "Enterprise Co." stamp. Look out for this, as inferior mills are being offered with testimonials applied to them which were given for ours. Prices to suit the times. Full particulars free. Best Pumps, Feed Mills, etc., kept in stock. Address,

HORTON & KENNEDY, GENERAL OFFICE AND SUPPLIES (as always before) LIVERMORE, ALAMEDA CO., CAL.

IRRIGATION.

The Law of Water for Irrigation in Colorado.

By S. W. CARPENTER.

This book is intended to present in a clear and concise way the Colorado law of this very important subject at the present time, with all the latest decisions. It also contains many suggestions of the greatest value to those interested in securing and preserving water rights in Colorado.

The information will be found of great value to those who are interested in irrigation laws for California.

We append, by permission, a notice of the book from Hon. H. P. H. Bromwell, of Denver, a member of the State Constitutional Convention, and of the General Assembly at the time much of the legislation on the subject of irrigation was framed, and later referee in the establishment of priorities in Water District No. 3, Cache la Poudre river, and a well recognized authority in such matters.

DENVER, COLO., June 2, 1886.

S. W. CARPENTER, Esq.—Dear Sir: I have examined the digest and compilation entitled "The Law of Water for Irrigation in Colorado," which you have prepared, and beg leave to say that in my opinion it will prove to be of much use and value to the community. The work so much needed has been done by you remarkably well, considering the brevity necessary in preparing a book for the use of all parties interested in irrigation, as well as of members of the bar. Respectfully and truly,

H. P. H. BROMWELL.

Price, \$1.25. Post-paid.

## S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Sept. 29, 1886.

The past week has shown a fair degree of activity in all kinds of produce, but as a rule, with only slight variations in prices. Full particulars are given of the condition of the several lines under appropriate headings. The past week, foreign cables have not reported any change in the price of wheat, although at times a depressed tone was reported. Dealers are closely watching the Eastern question under the belief that fighting between the Powers may follow present complications, which will directly influence wheat values. Semi-public cables received to-day are as follows:

LONDON, Sept. 29.—WHEAT—Steadily held. California spot lots, 6s 7d to 6s 10d; off coast, 34s; just shipped, 34s 6d; nearly due, 34s; cargoes off coast, quiet but steady; on passage, slow; English country markets, turn easier; French, steady; wheat and flour in Paris, rather easier; weather in England, warm for season.

## Foreign Review.

LONDON, Sept. 27.—The *Mark Lane Express* in its review of the British grain trade for the past week says: Trade was exceedingly slow, but prices were sustained. Sound English new crops of wheat were in the best demand. Sales of English wheat during the past week were 52,121 quarters at 30s 9d, against 68,588 quarters at 30s 10d during the corresponding period of last year. Flour was slow of sale, owing to large stocks and continued American arrivals. Fine malting barleys are very scarce. Trade in foreign wheat was dragging. The large and rapidly increasing visible supply in America oppresses trade. American flour is 3d lower. Prices of round corn favor buyers. Oats were in large supply and cheaper. One cargo of wheat has arrived. About 14 sailing vessels with wheat from Chilean and other Pacific ports are due, and are expected to arrive when the wind changes. Trade in forward is somewhat steadier. At to-day's market there was no improvement in the wheat trade. American and inferior English wheat were cheaper. Flour was dull, American flour in some instances being lower than on Monday. Prices of barleys had a downward tendency.

## London Wool Market.

LONDON, Sept. 27.—Following is a detailed statement of the wool sales to-day: Victoria—1300 bales, scoured, 11½d@25 1d; do locks and pieces, 1s@1s 9d; greasy, 7d@1s 3d; do locks and pieces, 7d@8½d; fleeces, 1s 4d@1s 5½d. New South Wales—800 bales, scoured, 1s@1s 1½d; do locks and pieces, 10d@1s 6½d; greasy, 9d@1s ½d. South Australia—1100 bales, scoured, 11½d@1s 7½d; do locks and pieces, 10d@1s 9½d; greasy, 7d@1s; do locks and pieces, 4@7d. New Zealand—5400 bales, scoured, 9½d@2s ½d; do locks and pieces, 7½d@1s 10d; greasy, 7½d@1s 11½d; do locks and pieces, 4@8½d. Cape of Good Hope and Natal—1300 bales, scoured, 11½d@1s 3d; greasy, 6½@10½d. There was fair competition at the wool sales to-day. Scoured does not maintain the previous high rates.

## Eastern Wool Markets.

NEW YORK, Sept. 26.—Business has shown some irregularity, buyers in some cases inclining to cautious methods when handling stock for an actual use, and there is less inclination to speculate in clothing wools, since large and comparatively cheap lots have been taken up. As a rule, however, holders appear to feel very little disturbed by the present indifference of buyers and insist that any shortage in the demand now will only have to be made up later, and thus increase the eagerness of customers when they do come and create the very buoyancy sought to be avoided. The market last week closed with a fuller record of transactions than for a long time past, while the cost in many cases shows 5@6 per cent better than a week ago. Among sales were 45,000 pounds spring California at 22@23½ cents; 75,000 pounds spring California at 20@23 cents; 5000 pounds Oregon at 24@25 cents; 60,000 pounds Montana at 30@31 cents. The Philadelphia market ruled strong. Among sales were 20,000 pounds scoured California at 56½ cents; 1000 pounds scoured California at 52 cents; 15,000 pounds scoured California at 62½ cents; 5000 pounds scoured California at 63 cents; 18,000 pounds California greasy at 21 cents; 10,000 pounds California greasy at 20½ cents. The Boston market was active and sales enormous. Among sales were 621,000 pounds California spring and Oregon at 19@24 cents; 634,200 pounds Territory at 20@29 cents.

NEW YORK, Sept. 28.—Wool is in moderate inquiry. Domestic fleeces, 30@38c ½ lb; pulled, 14@35c; Texas, 9@25c.

BOSTON, Sept. 28.—The firmness in the prices of wool continues to be maintained and the demand has been good. Ohio and Pennsylvania X, 33c ½ lb; extra, 36c; Michigan X, 32½c.

## New York Hop Market.

NEW YORK, Sept. 26.—There is very little business. New States of decent quality are held out of reach and Pacifics are above the limits which dealers consider safe. Pacific coast crop of 1886, good to choice, is quoted at 30@35 cents; coast crop of 1885, good to choice, 15@20 cents.

## New York Wheat Market.

NEW YORK, Sept. 26.—Large accumulation of stocks at Western points, liberal receipts and a slow export demand seem to have wholly demoralized the bull party, and the pressure to sell has been at times very heavy. The market ruled unsettled and weak, spot closed ½@1½c lower; options closed steady above inside; losses ranging from ½ to ¾ cent. September 84½; October 84½; November 86½; December 88½; January 90½; May 85½ cents.

## California Products at the East.

NEW YORK, Sept. 26.—Seeds—Quiet. California yellow mustard is quoted at 5@5½c.

Canned Goods—The movement, in a general way, continues rather limited. Tomatoes continue strong. Corn is in fair request and firm. Peaches are dull. Salmon, rather firmer. California canned peaches, \$2.25@2.50; pears, \$2@3.25; plums, \$1.75@2; grapes, \$2; apricots, \$2.10@2.25; salmon, Columbia River, \$1.55.

Honey—Extracted, 4½c.

## California Fruit at the East.

CHICAGO, Sept. 25.—No special fruit trains have arrived here since our last report, but some fruit was received by passenger trains, which is meeting with fair demand. The weather during all of this week has been unusually warm, and much of the time it has been damp and muddy, which was very bad for the handling of fruit. Therefore, receivers of consignments have been obliged to use every effort to dispose of them as promptly as possible, and at prices below what they would have obtained for the fruit had the weather conditions been more favorable. Tokay grapes in 40-pound crates, when in good order, brought \$2.50@3; muscats, \$2.25@2.50, with occasional sales of some fine lots a little over this price, poorer lots bringing as low as \$1@1.50. Fall pears are selling at \$2@2.25, with some of the best varieties going at \$2.50@2.75. Winter pears sell at \$2.50@2.75, and some fine lots at \$3. Quinces have shown slight improvement, but prices remain about the same, \$1.50@1.75. There were a few plums sold at \$1@1.25 per box.

NEW YORK, Sept. 26.—Green Fruit—Grapes, California Tokays and Muscats, \$2@6½ 40-lb crate.

(Telegram to the Fruit Union.)

CHICAGO, Sept. 28.—Fall varieties of pears sell at about \$2.75; plums, about gone; Muscat grapes when good, 40 lbs \$2.50; Tokay grapes when good, 40 lbs \$2.50 to \$2.75. Many grapes arrive in bad order and have to be closed out cheap. Quinces range from 75c to \$2 per box.

## Local Markets.

BAGS—The season is over, and the carryover is placed at over 20,000,000. The syndicate is reported to have lost quite heavily.

BARLEY—The market has been fairly active for bright heavy chivalier and bright heavy brewing, with prices well sustained. Feed has gone largely into consumption, causing a steady market, but at this writing it is reported that the demand is easing off. On call there has been fair trading throughout the week at steady prices, but to-day they are weaker. The closing was as follows: Spot—100 tons, 92½c. Buyer season—500 tons, \$1.03. Seller 1886—100 tons, 92c; 200, 92½c ½ ctd. Buyer season—200 tons, \$1.03 ½ ctd.

BEANS—Receipts of new are increasing, but the market stands up well, for so far as can be ascertained, no concessions have been made. The quality as a rule is above last year's.

DRIED FRUITS—Receipts are very light, causing a strong market to rule for this season's with all coming in, in good condition going into consumption.

EGGS—Four carloads of Eastern are expected the coming week, but as they cannot be classed above good, it is claimed that choice to fresh laid eggs will not be affected in prices. The receipts of California are light.

HOPS—An inactive demand is reported, although the inquiry is still brisk, but chiefly for the better grades. All received so far has either gone into consumer's hands or been shipped East on orders.

OATS—Under light receipts and a steady demand the market has been gaining in strength. Choice continues scarce.

WHEAT—The sample market continues dull, owing to the difference between buyers and sellers. It is claimed that sales are few and far between, and to substantiate the same the receipts by rail and steam here and Port Costa, which are quite light, are cited. Ships now on berth are loading mainly with wheat bought before the break. Transactions on call are only fair. The following are to-day's transactions: Morning session: Buyer season—1800 tons, \$1.41; 100, \$1.40%. Buyer 1886—300 tons, \$1.36. Seller 1886—100 tons, \$1.31½; 200, \$1.31½ ½ ctd. Afternoon session: Buyer season—400 tons, \$1.40%; 400, \$1.40%; 400, \$1.40%. Buyer 1886—100 tons, \$1.35%; 200, \$1.35%; 300, \$1.35% ½ ctd.

DAIRY PRODUCT—More pickled butter is going out to the trade, causing a stronger tone to rule for gilt-edged. Fresh roll continues in good demand if the quality is choice to gilt-edged; but ordinary qualities are slow, yet the light stock and light receipts keep the latter from falling in price.

HONEY—Receipts are light, but the demand being only fair, no advance in prices is recorded.

FEED—Ground feed is steady with a good demand ruling. Hay is firmer with a slight advance obtainable on quotations. The following is the range for hay: Barley, extra, 80c; \$8@11; wheat, \$9@13, with something extra selling slightly higher.

[COMMUNICATED.]

## Market Information.

## Cereals.

Under call board manipulation the price of wheat was battered down until on Monday last it was difficult to get a bid of over \$1.31½ to \$1.32½ for fair to good shipping; but at the lower prices there were few sales of actual wheat. The knocking of prices was done so as to buy that which farmers are compelled to part with to meet pressing wants. This theory regarding lower bids is the more plausible owing to no actual decline abroad in the price of wheat cargoes for prompt shipment; but, on the contrary, rather, there has been a decline in wheat charters—vessels can be had at fully 25 6d per ton (nearly 6 cts per cental) less than a week ago, yet wheat went down with charters instead of advancing. Yesterday the wheat market was stronger with an advance in bids of fully 1½ cts per cental, but even this advance did not bring out supplies.

A. D. Logan, President of the Grangers' Bank, and who owns quite a number of warehouses in the

Sacramento valley, reports that his warehouses are not more than one-quarter full, which is considerably less than last year. This shows a very large falling off in the yield. Mr. Rideout, senior partner in a bank at Sacramento, one at Marysville and another at Oroville, confirms Mr. Logan's report of a very short crop, and also says that the outturn on the east side of the Sacramento river is less than he has known since he has been in business.

Sonora wheat, unless choice for milling, is hard to sell, as shippers do not appear disposed to want it, owing to a reported poor market abroad for it.

Good to choice milling wheat sold yesterday at \$1.36½, and for a parcel of gilt-edged \$1.37½ was refused.

The demand for chevalier barley, bright and plump, continues strong, with heavy shipments made to Europe. The East still takes our choice bright plump brewing barley, with in some instances an advance paid on current top quotations. The exports of barley from July 1st to September 22d aggregate 24,150 tons, against 6750 tons for the like time last year. For the past few days there has been a stronger tone to oats, with it possible to obtain a slight advance on last week's prices. The improvement is due to lighter receipts and a good consumptive demand.

California corn continues scarce with full prices ruling, but Western is in liberal receipt with prices favoring buyers.

Rye is dull, with an easier tone generally reported, necessitating lower prices to effect forced sales.

## Dairy Product.

Butter is in good demand, with choice pickle given the preference, but at no advance in prices except in a small jobbing way. Fresh gilt-edged in rolls is still scarce and commands full prices, but good to choice, as also fair, is in buyers' favor and with the supply liberal. From present indications, it looks as if all the surplus packed last spring will go into consumption and the next season open with the market almost bare. The severe drought experienced at the West curtailed the production in the large creamery districts, which is no small factor in aiding our market.

Cheese is firm, with a slight advance obtained on outside quotations for the best makes. The stock is lessening, with the supply to draw from not large for the season.

Eggs have ruled very strong for the better qualities, but poor "as is" have favored buyers. It is claimed that heavy shipments of Eastern are on the way and for which buyers are waiting, by not stocking up, in expectation of lower prices on their arrival and being put on the market.

## Feedstuff.

A good demand continues to obtain for ground feed, but at unchanged prices. Oregon sends us liberal supplies of bran and middlings that tend to keep the California product steady.

Choice to extra choice hay continues scarce, with the latter wanted at top quotations afloat. Owing to light receipts, all grades of hay are firmer at a slight advance. The consumption is not only large, but increasing.

Feed carrots find a ready market, at unchanged prices; the demand is chiefly from stockmen.

## Fruits.

Immediately following last week's issue, wine grapes were shut down in prices until on Friday Zinfandels sold at \$15 to \$18, and all others in proportion. The decline is said to have been due to city wineries being full and very heavy receipts of grapes. Table grapes also sold lower. On Tuesday there was a stronger tone, which resulted in an advance to-day, with a strong closing, owing to light receipts and a good demand.

Peaches have ruled weak and slow. Figs have been in better demand, with a slight advance obtained.

Poor apples and poor pears have been very hard to sell, but choice met with a quick demand, at full prices, owing to their scarcity.

Oregon apples and Oregon pears received do not give satisfaction, consequently, full prices are not realized—only the best should be sent here to net a profit.

Huckleberries are slow of sale, with concessions in order.

Strawberries and blackberries have ruled very strong under light receipts and a good demand.

Canners are still out of the market for quinces, which causes low prices to rule.

Cantaloupes, under light receipts, have advanced. Choice plums and prunes continue in good demand, with strong prices ruling.

## Hops.

Receipts are coming in more freely. Some re-sales have been made at 32½ cents for choice, to go to the East. There is considerable inquiry, but, as yet, buyers are not operating, owing to the light offerings. It is claimed that when buying does commence, there will be strong competition for the better grades, which will be apt to send values up to still higher figures. Two carloads were shipped East yesterday. They are said to have been purchased last month for delivery this month. Samples of hops received from Rogue River valley, Oregon, are good; and if the crop averages up to sample it will, so say buyers, fetch good prices.

## Live-stock.

The market does not present any new feature worthy of special notice. Choice, well-conditioned beef-cattle are scarcer and command a slight advance, but the consumption is, as yet, light of this kind, for butchers run almost entirely on fair to good which continue to press the market. With feed scarce on the plains and in the valleys, it is claimed that prices will appreciate as soon as the rainy season sets in. In mutton sheep there is nothing new; it is thought the flocks which were driven back into the mountains will soon begin to come back on their winter range, and for a time thereafter free offerings will follow. In horses the demand is sluggish, with only the best selected meeting with quick sales at good prices. More work-horses are offering, but as the demand is only fair, buyers are virtually masters of the situation.

The following are to-day's meat prices: Beef—Stall-fed, 7@7½c ½ lb; grass-fed, extra, 6@6½c; first quality, 5½@6c; second, 5@5½c; third, 4@4½c. Calves, small, 9@10c; larger, 7@8c ½ lb. Mutton—Ewes, 4½c; wethers 5c. Lamb—Spring,

6½@7c ½ lb. Pork—Live hogs on foot, 2½@3¼ for grain and dairy fed; 2@2½c for soft; dressed, 6c for hard, and 5c for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Vegetables.

It is now an admitted fact that the potato crop of this coast is below an average, with the bulk of those grown being defective, consequently a strong and good market is expected throughout the winter. Some buyers, though, claim that prices are apt to be kept from going too high by free importation from Utah. The past week the market steadily advanced up to Monday, when an easier feeling set in, causing prices to settle under free receipts and buyers asking bidding down. Oregon Burbank seedlings sold on the wharf, according to quality, at from \$1.15 to \$1.60; the latter price was commanded by a consignment of very choice. Cuffey Coves are beginning to come to hand, but as yet in small quantities.

Sweet potatoes have come to hand in more liberal quantities, causing a weaker market to rule. The quality received is generally good.

Onions have ruled steady, with a fairly firm feeling. The demand has been chiefly local, yet shippers have taken a fair quantity each day.

Canners have taken freely of tomatoes, causing a strong, steady market, with a slight advance obtained in several instances.

Cucumbers, summer squash, and green okra are firm at a slight advance for the better qualities. Receipts of each kind are light.

Egg plants are in heavy supply, with prices favoring buyers. It has been very hard to place at over 50 cts a box even for choice.

Lima beans and also string beans are in liberal supply, with the market weak, and only top prices reached by young and tender stock.

Marrowfat squash are in oversupply, with some difficulty reported in getting over \$5 on the wharf for the more choice.

Cabbages are in good supply, with, at times, some concessions necessary to effect sales.

## Wool.

The market continues very strong, with all received going into buyers' hands. The East reports a higher and stronger market, but notwithstanding which over 2200 bales of Australian, held in bond at New York, was reshipped to London, where higher prices could be realized than in either the New York, Boston or Philadelphia markets.

## Miscellaneous.

The demand for seeds is slow, owing to the absence of rains. There is a free call for yellow mustard from the East, but brown mustard is slow.

Wheat charters to Europe are again lower, with the tendency to a still lower range. The latest charter reported for Liverpool is 25s for a wooden vessel, and for an iron vessel 27s 6d. To-day shippers are bidding 1s 3d less than the above, with a fair chance of soon getting vessels at their bids.

This season's nuts continue to come in slowly, causing consignees to be backward in giving out quotations.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	283,430	228,806
In port, disengaged.....	67,561	99,618
In port, engaged.....	62,563	24,602

Totals.....413,554 353,026

The above gives a carrying capacity as follows: 1886, 661,684 short tons; 1885, 564,941 short tons; increase over last year, 96,743.

Tonnage on the way to Portland, Oregon, 49,012 tons; same time in 1885, 36,223.

Broom corn is offering quite freely, with buyers bidding lower. The quality of all received so far is unexceptionally good.

Provisions are weaker, with sales made at a slight slight decline in hams and bacon.

Poultry has ruled fairly steady throughout the week, with better prices looked for next week in all except ducks and geese. The demand for the two latter the past two weeks was chiefly to suit the Jewish holiday, which ends with Saturday of this week.

San Francisco, Sept. 20, 1886.

## Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

## Jeans' Sack Holder and Filler.

In our report of the State Fair in last week's RURAL we mentioned a sack holder and filler, shown by W. F. Jeans, of Woodland. We were favorably impressed with the device, and in order that our note might be more intelligible to the reader, we give on this page engravings of the sack-holder as fitted to a standard for barn or warehouse use (Fig. 1), also by itself (Fig. 2).

FIG. 1.

FIG. 2.

## JEAN'S SACK HOLDER AND FILLER.

ready for attachment to the separator or combined harvester (Fig. 2). We are told, as stated last week, that the sack-holder has been thoroughly tried during the last summer and given good satisfaction. By this machine the sack is suspended. The bottom never rests on the ground or floor—thus the sack is stretched to its full length, allowing it to be filled with every pound of grain it will hold without using a stick. It is especially adapted to filling old sacks, as it grips the sack all around the top, putting an equal strain on the sack, allowing it to be well filled without tearing. It is claimed that from 8 to 10 pounds more can be put in a sack than with any other sack-holder.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Montana.  
FRANK W. SMITH—Utah and Colorado.  
M. S. PRIME—Marin Co.  
W. J. TULLIS—Humboldt Co.  
Geo. McDowell—Fresno and Tulare Cos.  
O. F. BERGMAN—Tehama and Colusa Cos.  
S. S. LANNON—Nevada, Sierra and Plumas Cos.  
JEANNETTE HOUGHTON—San Mateo Co.

## Large Cyclone Windmills.

Our readers no doubt noticed that the advertisement last week of the Cyclone windmill, which received the prize at the Mechanics' Fair, did not give the prices for which the larger sizes would be furnished. These prizes are given in their advertisement this week. We are told that several Cyclones have recently been ordered by the S. P. R. Co., and by the Government for use at the Presidio.

## THE WHITMAN PERPETUAL HAY PRESS

Write for Circular. I am Agent for this Press.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING SEPT. 21, 1886.

- 349,295.—SASH-FASTENER—E. H. Alvord, Seattle, W. T.  
349,299.—SAFETY AIR CLUTCH FOR ELEVATORS—H. W. Bracken, S. F.  
349,479.—CABLE GRIP—H. Casebolt, S. F.  
349,632.—TRACE HOOK—Chas. Dudley, Stockton, Cal.  
349,489.—GAS METER—A. F. Fisher, Chico, Cal.  
349,586.—CHECK VALVE—A. D. Glace, Rocklin, Cal.  
349,498.—TRUSS—J. G. Henderson, Grizzly Flat, Cal.  
349,650.—ELECTRIC SYNCHRONIZER FOR CLOCKS—M. E. Hunter, Oakland, Cal.  
349,512.—ENGINE VALVE-GEAR—R. A. McLellan, S. F.  
349,450.—FRUIT EVAPORATOR—A. C. Penniman, San Jose, Cal.  
349,404.—MOLD-BOARD FOR PLOWS—J. W. Peters, John Adams, Cal.  
349,459.—ADDING MACHINE—Shattuck & Thorn, Jr., S. F.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

## Stockton Soap Works.

Messrs. Williams & Moore have a large factory in Stockton that supplies largely the San Joaquin valley. Their exhibit at the San Joaquin District Fair consisted of two large pyramids, in which were embraced family, laundry and toilet soaps. Their specialties are: Le Grand Savon, Bueno soap, chemical olive soap, bleaching soap, Angora soap, laundry soap. This local industry has grown within the last few years to keep pace with the demand for these popular brands.

Their business as dealers in hides and pelts and location has given them many advantages in building up this new enterprise. They are following a rule which was adopted at the commencement, of making a good reliable brand of soap, and selling at the lowest possible cost.

## The Fruit-Growers' Convention.

Elwood Cooper, of the State Board of Horticulturists, has written to Wm. M. Boggs, of this city, also a member of the Board, suggesting that the next Annual Fruit-growers' Convention be held in Assembly hall, Sacramento, commencing Nov. 8th and ending Nov. 13th. He also outlines a program covering a large number of subjects bearing directly upon fruit culture. The place, date and program are satisfactory to Mr. Boggs, and if they prove the same to one other member of the Board yet to be consulted, the matter will be considered settled.—Napa Register.

Sold by all Dealers in Ammunition

## Dewey &amp; Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING and SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

DEWEY & CO., Patent Agents.  
No. 252 Market St. Elevator 12 Front St.  
S. F. Telephone No. 658.

## Poultry and Stock Book

Niles's new manual and reference book on subjects connected with Poultry and Stock Raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid, 50 cts. Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

## State School Text-Books.

MESSRS. EDITORS:—The question of State text-books for the public schools is a very important one, and every candidate for a school office should define his position on that subject.

In 1882, I publicly announced my belief that "The State should publish the text-books and furnish them to the children at cost." I voted for the amendment to the Constitution, providing for such publication, and I have been in favor of it ever since. If I am elected to the office of State Superintendent of Public Instruction, I shall cordially do everything in my power to carry out the intent and spirit of the law, regarding State text-books.

The State Board of Education has announced the prices of the State series of readers, which are less than one-half the prices heretofore paid, and it is in my opinion to suppose that the same reduction will extend to other books.

I am now of the opinion that it would be still better for the State to furnish books for every child in the public schools free of cost to their parents.

The adoption of such a plan would, in my judgment, still further and materially reduce the total cost of text-books to the people of the State. Children would be taught to care for the property of the state, under penalty of being obliged to replace books destroyed or lost by them, and the books could last much longer.

Massachusetts has adopted the "Free Text Book" plan with great success, and there is no good reason why we should not do the same in California. Very respectfully,  
IRA G. HOITT.  
San Francisco, Sept. 27, 1886.

## Seeds, Plants, Etc.

## ERIE BLACKBERRY.

Hardy as the hardest, large as the largest, unsurpassed in productiveness, of good quality and Early. Just what everybody should have.

OFFICE—28 California St., San Francisco.

33d } STOCKTON NURSERY. { 33d  
YEAR.

WHITE ADRIATIC,  
SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Præparuriens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobalan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

## TRY THE PERSIAN MULBERRY.

NO SCALE—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

If You Want to Save Money and avoid a life of trouble, buy Trees Free from Scale.

W. M. WILLIAMS'

Free Coach to and from the House.

**J. W. BECKER, Proprietor.**

## PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

**JACOB PRICE, San Leandro, Cal.**

**Pacific Barley Crushing Roller Mill**  
WITH SHAKING SCREEN.

These Mills are constructed in the least complicated and most substantial manner possible, with rigid iron frame, long bearings, adjustable boxes, with coil springs to allow any chance obstruction, such as nails, screws, etc., to pass through without injury to the rolls. This feature is found on no other roll made on this Coast. Send for prices to

**JOS. WAGNER & CO.,**  
MILL MACHINERY AND SUPPLIES,  
101 to 107 Mission St., San Francisco.

**AGENTS WANTED** to sell the **MISSOURI STEAM WASHER**

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]

MRS. J. TAPPAN, Reynolds, Neb.: They excel all other washers I ever saw. JOHN R. DOBBS, JR., Norman, Ill.: The best machine ever invented by man. H. H. DURANT, Cottageville, S. C.: Everybody likes them and everybody wants them.

E. B. ADAMS, Aurora, D. T.: My wife would not take a quarter section (160 acres) of land for her machine, if she could not get another.

MRS. JOSEPH SWIFT, State Center, Iowa: The most useful article about the kitchen. ANNA RAMEY, Missouri, Tex.: Have thoroughly tested it on articles from lace collars to bed quilts; gives entire satisfaction.

ST. CLAIR INKSTER, JR., Kover, Washington, Tenn.: Sells itself and can not be spoken of too highly. JOHN DETON, Bismarck City, Utah: Have given it several severe tests and it came out triumphant every time.

JNO. B. WHEELER, Kansas City, Mo.: They have proved treasures to the families who secure them. A. P. SHIPLEY, Tulsa, Okla.: Gives entire satisfaction. Rather than the Washer than anything I have seen.

E. M. MANSEY, Lockport, Tenn.: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, Springfield, Mo.: If you will get up any instrument that will take as much labor off of men as this Washer takes off the women, and cost no more, I could sell one at every house.

MRS. M. C. DOBBS, Caldwell, N. J.: Gives perfect satisfaction. I do my washing alone in same time I used to with hired help. MRS. M. MOORE, Newburg, Va.: Will do more than it says, especially washing flannels.

MRS. F. G. SINDEN, Sullivan, N. Y.: Would not take \$50 for mine if I could not get another. Washes quicker and better than it can be done by hand.

MRS. FRED. H. HARRIS, Brattleboro, Vt.: In all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. POND, Northfield, Conn.: Have used it nearly four months. Am perfectly satisfied. I freely recommend it to all housekeepers. MRS. MARY E. VAIL, Patoka, Ill.: Saved me \$500 a year for 14 months I've had it.

MRS. C. W. TALCOTT, Northfield, Conn.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, Stanton, Mich.: I had rather give up my Decker cow than part with my Washer.

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 55 St. Louis, Mo., or Box 1968, San Francisco, Cal.

### H. W. DAVIS & CO.'S CELEBRATED BUGGIES.

These Buggies have been sold on this Coast for four years, and have made a fine reputation. Want of space prevents us giving as full a description as we would like. The principal points to which we call attention are:

AXLES. These are 1 inch DOUBLE COLLAR STEEL.  
SPRINGS are SWEDS STEEL, OIL TEMPERED, polished and fully warranted.  
TIRES are made of finest STEEL TIRE.  
WHEELS are SARVEN PATENT STANDARD "B" WHEEL, made from first-class timber, having screwed rims, and the ROUSE BACK FLANGE, with PATENT DROP SAND BAND. We also furnish the BROWN'S SHELL BAND WHEELS.

IRON WORK is applied and finished in a thorough workmanlike manner, it is all DROP FORGED WORK.  
WOOD WORK. Corners are mitered, screwed, glued and plugged.  
GEARINGS are choice selected HICKORY.  
For further description write us for Special Circular giving fuller information about the various styles made by this factory.

We build this job also hung on 3 Elliptic Springs.

#### No. 120.—DAVIS' CALIFORNIA BUSINESS BUGGY, WITH SHAFTS.

This Top Buggy is built in three different grades. Each grade a different price. Hung on triple Swede Steel Springs, 56 inches in length. The Side Springs are 1½ inch, 4 plate, taking the place of the ordinary wooden side bars; are attached to head-block and rear axle by shackles. The Center Spring, taking the place of the ordinary rigid perch, is of Swede Steel, 1½ inch, four plate, attached to bottom side of front and rear axles. These 3 Springs at the center are connected by 1½ inch square hickory bars supported by wrought iron braces. Body, 51 inches long, 26 inches wide. Wheels have "screwed" felloes; Sarven have Rouse Patent Back Flange and Drop Sand Bands. Are 3 feet 6 inches front, and 3 feet 10 inches rear, in height. Axles, best Steel, Fantail, Double Collar Axles, 1 inch or ¾ inch. Steel Tire, 1 inch or ¾ inch. These Springs, by their simplicity of construction and arrangement, impart a riding quality, that, for fast or slow driving over level or mountainous roads, have no equal, regardless of price. Painting, a rich Black. Wide or Narrow Track.

### Insolvent Farmers.

The Supreme Court of this State recently filed an opinion in relation to the exempt property of insolvent farmers that may interest our readers. An insolvent debtor, after the order adjudging him insolvent, petitioned the court to set aside to his use certain personal property as exempt from execution, and among other things a Cahoon seed-sower and a "thrashing rig," consisting of a thrashing engine, three tanks to hold water for the engine, a thrasher, a derrick and forks, a seed cleaner, a feeding machine, a feeding rack and a cookhouse. One of the creditors objected to the property being set aside, on the ground that it was not exempt from execution. From the evidence it appeared that the Cahoon seed-sower was worth about \$10, and that another one worth \$90 had been set apart to him. That the two seed-sowers, while used for the same purpose, were operated in a different manner. That the petitioner and his son jointly owned the thrashing rig, and that it required 16 men and six horses to operate it. It was further shown that all the above described implements were necessary to profitably carry on the business of farming, and that it was not unusual for two or more farmers to purchase, and use in common, thrashers, engines, derricks and forks, feeding-machines, cleaners, headers, mowers, seed-sowers, plows and other implements, for the simple reason that their cost was more than the average small farmer could stand. The court, after hearing this evidence, refused to set aside the said property as exempt, and ordered it to be turned over to the assignee. The appeal was from that order. The Code of Civil Procedure exempts from execution "the farming utensils or implements of the judgment debtor; also two oxen, or two horses, or two mules and their harness, one cart or wagon, and food for such oxen, horses or mules for one month." Now, the question is, does the Code exempt such an expensive outfit from execution, which is owned and used by two or more farmers in common? The court said:

"In our opinion the Legislature meant by the words 'the farming utensils, or implements of husbandry of the judgment debtor,' such utensils or implements as are needed and used by the farmer in conducting his own farming operations, and it was not intended that all farming machinery which a farmer may own should be exempt; because, while he uses it chiefly by renting it out, or in doing work on other's farms for hire, he still uses it to a small extent on his own land. To hold otherwise would enable the farmer who cultivates 40 acres to invest a large amount of money in expensive implements, and to hold them free and clear of his creditors, though they were used but for a day on his own land, and for all the balance of the year were rented or hired out to others. A reasonable construction should be given to the statute, and not one which would prevent its benevolent design, and enable gross frauds to be perpetrated under color of law."

The order appealed from was affirmed.

**OUR MILLING INTERESTS.**—A prominent writer holds that among the various manufacturing industries of any country, none are more valuable, interesting, or worthy of consideration and universal support than that of milling, whether it be of wheat, oats, rye, rice, or other grains.

**LAND FOR SETTLERS.**—The Klamath Indian Reservation, in the northern part of this State, is now being surveyed with a view of opening it up to settlers, but it will be some time after the survey is made before intending settlers can

**THE GREAT FLUME.**—It is announced that on the 2d inst. a contract was closed between the San Diego Flume Co. and Moore & Smith, of S. F., for the construction of a redwood flume from the headwaters of the San Diego

### Yerba Santa.

Many of our readers will recognize in the engraving on this page a very good representation of a twig of the native plant, Yerba Santa, known to the botanist as *Eriodictyon glutinosum*. This plant is well distributed over considerable areas of the State, and its healing virtues widely lauded. Dr. Vasey, botanist of the U. S. Department of Agriculture, from whose report we reproduce our illustration, gives a description of the plant, which will be read with interest.

The Yerba Santa is a low shrubby plant of California, growing from 3 to 5 feet high. The stems and twigs are smoothish and generally showing more or less of a resinous exudation, particularly on the vigorously-growing twigs. The leaves are thick and rigid, alternate, lanceolate in form, usually 3 or 6 inches long, acutish at the point, and tapering at the base into a short petiole, the margins irregularly toothed, smoothish on the upper surface, the lower surface with a prominent fine reticulation, whitened between the veins by a fine and close, woolly pubescence. The flowers terminate the branches in a panicle, and are collected in numerous small, rather crowded, cymes or clusters. The individual flowers are about half an inch long, the calyx small and deeply divided into five sepals, the corolla of one piece (monopetalous) rather trumpet-shaped, with the border five-lobed, its color varying from purple to white. Attached to the inner side of the corolla near the base are the five stamens. There are three thread-like styles nearly as long as the corolla, and at the base a roundish, two-celled pod containing the seeds. The plant belongs to the order *Hydrophyllaceae*. The upper surface of the young leaves and twigs are covered with a resinous, balsamic exudation. The under surface presents a beautiful network of veins with a fine, whitish pubescence between them. The leaves have a balsamic taste, and have long had a local reputation among the old Spanish settlers in diseases affecting the mucous membranes, as in chronic coughs, catarrhs, consumption, etc.

The engraving shows the plant in bloom, and in the small figure at the left the ripe seed-pods are represented.

**OUR BUTTER EXPORTS.**—The exports of genuine butter have fallen from 40,000,000 pounds in 1880 to 21,638,138 pounds in 1885, or nearly one-half, while the exports on butter substitutes have increased from 20,000,000 pounds in 1880 to 39,000,000 in 1885. The new law regulating the manufacture and sale of oleomargarine and other butter substitutes will, no doubt, soon restore the great industry of the country to its former status, and protect consumers from the imposition of "substitutes," or, at least, place them in a position where they will know what they are buying.

**ARBOR DAY.**—Professor E. W. Hilgard, of the State University, has written a letter to S. W. Forman, Secretary of the State Board of Forestry, giving his opinion that the 22d of February is the best time for the observance of Arbor Day. The 27th of November, at first fixed for this celebration, was only selected by Mr. Sutro, Joaquin Miller and others for beginning the work at Goat Island, but the State Board will no doubt adopt the suggestion of Professor Hilgard.

THE YERBA SANTA—A NATIVE CALIFORNIA SHRUB.

file claims. The survey will first have to be filed in the Surveyor-General's office here, then sent to Washington and approved, then sent back here and the plats made. After this is done a notice that the land is open to settlement must be posted for 30 days before claims can be filed. This notice will be posted in various places and published in the newspapers. This may not be until January, perhaps, but all will have time enough to file claims by reason of the 30 days' notice.

river to the city of San Diego, a distance of over 40 miles. The flume is to be completed and ready for use by July 4, 1887, and will supply the city and the neighboring country with about 4000 inches of fine mountain water brought from an elevation in the Julian mountains of over 5000 feet. The lumber used in the flume will aggregate between 7,000,000 and 8,000,000 feet and will make, at least, 30 schooner loads. This enterprise is another mark of progress on our southern border.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Napa Valley Notes.

EDITORS PRESS:—The busiest persons in the county at the present writing are grape-growers and wine-makers. Grape crushing commenced about ten days ago, and will continue for three or four weeks; the amount of wine to be made will be very large, the quality superior. Thus far the season has been very favorable for the vintage, and the prospects are good for its successful completion. Year by year, as the vines of the earlier planted vineyards grow older, and new vineyards come into bearing, the quantity of wine made in this county increases, and, notwithstanding the fears of quite a number of persons, expressed from time to time, that the business will be overdone and the market overstocked with wine, there is, at present, no indication of such an event. Many new wine cellars have been built this year, several of them of stone, very substantial. Prices have settled down to \$20 per ton all around, in many neighborhoods, while in others, rates for A No. 1 varieties range from \$25 to \$27. There seems to be a good and increasing demand for Napa valley wines, and new markets are opening up. Where all the wine here made goes to, puzzles many a person, for very little, comparatively, is drunk at home.

## Field Crops.

The very large hay crop raised in the county has been baled or stored loose. Prices have ruled so low, few farmers cared to sell, preferring to wait for an anticipated rise in the market; but the probabilities are that hay will rule quite low for some time to come.

## Corn Growing.

The large crop of corn in this valley is rapidly ripening, and the yield bids fair to be up to or above the average, notwithstanding no rain fell on many fields after they were planted. No fields of corn here are irrigated, and there never is a failure of a good yield. For the most part the yellow or white-dent is raised, though some farmers prefer the smaller, more rapidly-maturing varieties. One kind, lately introduced here—"Blunt's Prolific"—bears well and is appropriately named. One stalk, 10 or more feet high, we recently examined, bore five good-sized, well-developed ears, and on four stalks were counted 25 ears. This variety was planted after the middle of June, and matured rapidly in a much shorter time than the kind usually raised here.

No doubt one secret of successful corn culture is thorough, careful tillage; but of greater consequence is well-selected seed. The farmer who pays much attention to this point receives good returns for labor expended. Therefore frequent change of seed is beneficial, care being taken to select, of any kind chosen, the best ears. Years ago few farmers thought it worth while to top their corn; in fact a few years ago, comparatively, little or no corn was raised in this county—wheat, wheat, wheat being the principal, almost the only, product. Now the custom prevails almost universally of cutting the top stalks from corn while they are yet quite green, and before the corn fully matures. Some cut the corn up from the ground, letting it cure in large shocks, thus clearing the ground by once going over. Which method is preferable is a question with many farmers. There are those who contend that the latter is as quick a method, and cheaper in the end.

## The First Rain

Of the season is evidently not far distant, if numerous indications count for anything. Light showers would do no damage; on the contrary, the beneficial results accruing in laying the dust that is to be found on every thoroughfare and in purifying the atmosphere, would be great. One of the pleasantest seasons in California, if not the pleasantest, is the period succeeding the first rains. Very little land has here been summerfallowed, and the acreage that will be seeded dry will be comparatively small. The custom once prevailed of sowing corn ground (ground cultivated to corn during the current season) without plowing, but much of it is now plowed. Most of the wheat raised in the county this year was grown in Berryessa and Pope valleys. Causes heretofore cited prevented the raising of this cereal in Napa valley this year. More will be produced here another season.

## Transportation.

Considerable wheat harvested in Berryessa valley has been taken to Winters, Solano county, for storage; the balance has been brought to Napa. Earlier in the season it was given out by parties interested in the railroad now being constructed from Rutherford to Lake county that it would be finished to the lower end of Berryessa valley this fall, thus affording the farmers in that locality an opportunity of forwarding their grain, wool and other products to market by rail, thereby saving much valuable time now consumed in hauling in wagons to Napa or Winters. But no railroad has thus far brought the long-needed and much-wished-for relief, though by another fall there will probably be communication by rail with the above-named and neighboring valley.

## The Labor Question.

A large number of "blanket men" are to be found in this county at present, most of them

in the upper Napa valley, whither they drift in search of work in the vineyards. During a recent trip up the valley, the writer saw 50 or so daily, some going farther up the valley, some returning. Many found work in the vineyards; others, while hunting for work, were afraid they would find it. The "tramp" is no stranger to Napa valley. He seems to have an especial liking for the grape-producing localities at this season of the year, though this county seems to be less afflicted with this nuisance this season than Sonoma county. So large an area in this county is now devoted to grape-growing and the production of other fruits that large numbers of men are needed to care for vines and trees, especially during pruning and plowing time, and again during the summer and fall. Fewer Chinamen are thus employed this year than ever before, yet many of them find situations here and there. R.

Napa, Oct. 1, 1886.

## HORTICULTURE.

## Smyrna Figs.

EDITORS PRESS:—Some days ago, in conversation with my neighbor here, the Rev. D. H. Temple, he gave me an account of his early life in Smyrna, where his father was a missionary. This led to the subject of figs, about which I think we California fruit-growers cannot learn too much. As we parted I asked him to write an article on the subject, saying that I would gladly send it to you for publication in the RURAL PRESS. I beg to inclose herewith his very interesting little article, which I am confident you will be glad to find space for. Mr. Temple is a very kindly and scholarly old gentleman, and I am sure would be glad to do anything in his power to aid any one in search of information on the fig question.—F. H. McCULLAGH, Los Gatos.

## Figs in Smyrna.

The figs called Smyrna figs, because shipped from that port, grow several days' journey away, in a province of Asia Minor, southeast from that city. It is a special fig which is dried, and not one of those abundantly consumed in the green state by the people of those countries. The figs eaten fresh are of different colors and sizes—yellow, green, brown, light and dark purple, but the only fig dried on an extensive scale for export is a large, light yellow one. A smaller fig of the same color, with very thin skin, is that most esteemed for use green. It is not abundant, and is chiefly sold by Turks who carry them about in baskets and cover them carefully with napkins to protect them from the hot sun.

Rain is unknown in Asia Minor from April to November, the sun shines bright and hot and rarely is overcast. This sun heat is sufficient for drying the figs, and no artificial process is needed; but it goes without saying that a great deal of handling and an ample provision of clear surface are essential, besides experience and skill to insure completion as rapidly and thoroughly as possible.

Little is known about these details of the drying process outside the district where it is carried on. Turkey has no prying reporters and no readers dying with curiosity to know everything under the sun, whether it concerns them or not. To an American it is surprising how little is known in the port where the figs are packed for foreign shipment about their history before coming there.

The dried figs begin to come to the city by camel caravan early in September. The season is short, and business is lively while it lasts. The figs which arrive one day are offered for sale at daylight the next morning at the khan, where the caravans all gather. Merchants send their trusted and experienced buyers to act for them, and they tread on foot the narrow city streets, a mile and a half or more, to reach the khan. The figs are brought to the city in large haircloth sacks holding 200 to 300 pounds, each camel carrying two of the sacks, which are unloaded every night, the camel kneeling at his master's command to be loaded and unloaded. After the figs have been bought, the camels are loaded with them for the last time, and led through the narrow streets to the merchant's warehouse, where they kneel, and the sacks are taken off and their contents dumped on the warehouse floor, two to three feet deep, a brown mass of soft, moist, but thoroughly-cured figs.

## Packing the Figs.

A company of workers are immediately engaged, and early next day packing begins. The workers are of all ages and both sexes, and are ranged in long double rows, seated on the ground, facing each other, with large, flat, very shallow baskets of figs between them. The first operation is to pick out all figs with broken skins, which are not packed with whole ones, but disposed of as "damaged goods." There are not as many of them as might be expected, for the fig skin has considerable firmness, and the pressure which comes upon them when crowded into the sacks and roughly handled expends itself in squeezing them into every conceivable shape, so that the next thing to be done is to shape them by hand, one at a time, into the form they would naturally take if dried hanging on the tree. The packers, who are always experienced men, now take them, and, crowding a half dozen or more together at once, press them into the drums in circular layers, working from the outside to the center of each layer.

Pails of sea water are kept by all the workers, into which they continually dip their

hands, and a man is kept busy replenishing them. It is claimed that sea water is essential to successful fig-packing.

The wages paid these workers differ according to age and skill, but are very low. The retail price of average figs packed in drums, when the writer lived in Turkey many years ago, was the equivalent of from three to four cents a pound. The wholesale cost to merchant shippers was, of course, less. Small lots of very choice figs not packed in drums were sometimes offered and commanded a much higher price, but none of them went out of the country except perhaps as presents to friends.

## The Worms.

One circumstance connected with dried figs is singular and little known abroad. Every one of these figs, at some stage of its growth, has had a worm's egg deposited in it and is unfit for use unless the egg hatches and the worm does its work upon it. What natural necessity there is for this is not understood, but that there is such a need cannot be doubted. The worm comes from an egg deposited in every good fig by a small fly which comes from a species of fig raised for this express purpose, and good for no other. A number of them woven into a ring a little over a foot in diameter are suspended in the fig plantation early in the season. The little flies coming from them attack the growing figs and deposit in each a tiny egg. It hatches after the fig is ripe, and after it has been completely dried comes out from it, crawls away and soon dies and disappears. The maturing stage of this worm coincides closely with that of the fig's readiness to be packed, and vessels with cargoes of fresh figs aboard are overrun with these worms, cabin, fore-cabin, rigging and all, for several of the first days of their voyage. No trace of them is in the figs after reaching foreign shores.

Sometimes the fig from which these insects come is scarce and commands a high price. Has any one in California taken pains to obtain this, as well as the Smyrna fig? If so, the fact is not generally known as it should be, for the conditions of perfecting the fruit will doubtless prove the same on Pacific shores as on those of the Mediterranean sea. D. H. TEMPLE, Los Gatos.

## Peach on Myrobolan.

EDITORS PRESS:—As the myrobolan as a stock for the peach is being discussed to some extent by those interested in fruit, I would like to give my opinion in regard to the matter, as I may be able to throw some light on the subject. The question is asked, is the myrobolan a good stock for the peach? and I say it is. The plum stock that is used in United States and Europe for the peach is, viz., *Prunus Domestica*, St. Catharine, St. Julian, Columbia and Chickasaw. These varieties do not sucker much in the East, but will in California. But the myrobolan, which is the stock that should be used, does not sucker, has strong tap-roots and makes a perfect union.

It has taken years of experience to find out the true mode of propagating and transplanting the peach when on myrobolan, and by careful watchfulness I have found out why a large percentage is lost by transplanting. The reason is, the peach starts before the stock and evaporates sap from the root, and consequently the tree dies, and those that live are partly stunted or injured. This obstacle is easily overcome. The peach, when on myrobolan, must be trimmed close at the time when dug, and when they are reduced to a single cane it takes four weeks for the buds to start, and by that time the root has caught and they start to grow at the same time. They do better when planted four inches below the union, as the stock will thicken sooner, keeps softer and makes roots close to the union. This deep planting is intended only for the peach, and not the plum or prune, as they will root above the graft.

I also found that when the peach was dug with a tree-digger and left to stand a few days with limbs and branches on, the top would dry the root. The peach shows its peculiarities in this way, as I have often taken grafts from a tree when the root was dead. The peach should be dug with a spade and trimmed at the same time. I have read of different parties who have tried the peach on myrobolan without success; some say they get yellow, stunted, and outgrow the stock. This is true, but let me say to these parties that there is a big difference in myrobolan stocks now in use; the large leaf, large fruit French myrobolan does not dwarf the trees unless it is done in the nursery after the stub is cut. The peach should always be budded below the ground, and be covered with dirt after stub-cutting. Any tree can be stunted by putting it on poor stock and also by bad management. As to the peach outgrowing the stock, it seems absurd. Trees of my own and in my vicinity were examined by a number of gentlemen; among them, Mr. Klee, State inspector, and on digging down and measuring they were found to be all larger below the graft. Anybody by visiting Mr. Sidney Johnson's place, in Brooklyn, can see for himself myrobolan trees 32 years old which I budded to peach five years ago. This year they bore a fine crop of peaches. All I say is founded on experience, and is published to show that the peach is a success on the myrobolan if handled in the right manner.

I also have propagated a half-breed between the myrobolan and peach. It is a strong upright grower, resembles the peach somewhat,

and the prospect is that it may make a valuable stock for the peach. JAS. O'NEILL, Haywards, Cal.

DRIED APPLES FOR FRANCE.—The Chicago Tribune says that the American Consul at Havre, France, has written a letter to the president of the Chicago Board of Trade, inclosing invitations to send exhibits of dried apples, cider, etc., to an international exhibition to be held there next year. The letter contains some information which may be of interest to many parties in this State. Owing to a short crop of apples, as much cider was made in France in 1885 from dried apples as from fresh ones (the dried being to a large extent foreign product), and the people are so well satisfied with the result that there is promise of a large market for the dried article, which may be taken advantage of by the fruit-raisers of this part of the world. The opportunity is especially good since the ravages of the phylloxera have caused a material advance in the price of wines, and encouraged the palming off of a poor article on the wine-drinkers of that country as well as on the foreigner. As a consequence of that, the consumption of cider has much increased in France, even in the wine-growing departments where formerly no cider was used; and in Paris the increase in the consumption of late years is stated to have been as much as 15 or 20 per cent. This year the home crop of apples is a very short one, and the American apple is preferred to the native, which is selling at nearly three times the prices of a year ago. It is worthy of notice that the pared apple is subject to a duty which does not attach to the unpared fruit. This forms a powerful inducement to simply slice and desiccate it here, without taking away either the rind or the core. The presence of the latter is no objection to use in the cider-mill, while it makes a duty difference of not less than six francs per 100 kilograms. They are now worth about \$7 per 220 pounds on the market, the octroi being paid by the purchaser. There should be a very good prospect for a large market for the American product this year, as only a few hundred barrels of the old crop remain on hand.

## THE FIELD.

## Wheat Situation in California and also in the United States.

EDITORS PRESS:—It is generally conceded that by the middle of this month the grain crop of this State will be housed, after which it is not at all likely farmers will be free sellers until the character of the winter becomes settled so that a fair idea can be formed of the acreage that can be seeded to wheat. Taking this view, the question naturally presents itself regarding the outlook for or prospects of the market for wheat during the remainder of the season. That the requirements of the consumptive countries will exceed the surplus harvested this year in the supply countries, is an admitted fact; consequently the reserve stocks will be drawn on to make up the deficiency to a greater extent than for many years. This will necessarily give a less carryover stock at the end of July, 1887, in all countries, than at any time within 15 to 20 years past. But leaving the question of the world's requirements out, there is no doubt but that our market is a strong one. This position I base on the following: The wheat crop of this State is now conceded by the best informed to be not over 1,150,000 tons; to this must be added the known quantity in warehouses and the estimated quantity in farmers' granaries carried over from the season of 1885-86 into the season of 1886-87, amounting to 90,000 tons. This gives 1,240,000 tons to start with. For consumption and seed there will be required 350,000 tons, leaving a surplus of 890,000 tons. Of this latter there has been exported from July 1st to October 1st, 3,366,070 cts. wheat and 259,583 bbls. flour. The latter reduced to wheat equals 778,749 cts., which added to the wheat gives 207,240 tons; thus leaving, on October 1st, 682,760 tons surplus. The tonnage in port and at neighboring California ports, under charter to load wheat at the above date, had a carrying capacity of 117,338 short tons. Taking this from the surplus leaves 565,422 short tons. From this latter quantity the following must be taken: carryover stock at the end of the season (flour reduced to wheat), 50,000 tons. There also must be taken off the flour necessary to meet the demand to July 1, 1887, from China, Japan, Hawaiian islands and other countries which we supply outside of Europe, aggregating 600,000 barrels, which, reduced to wheat, is 90,000 short tons. In making this latter estimate I take last season's flour export as a basis, although so far this season the exports are over 7500 tons in excess for the like time last season. Taking the necessary stock (50,000 tons) to carry over from this season into the season of 1886-7, and the quantity of flour (equal to 90,000 tons of wheat) required for countries in the Pacific, and there is only left available of the wheat crop for shipping to Europe 425,422 tons from now to July 1, 1887. To take this there is in port here and at neighboring California ports, tonnage with a carrying capacity of 109,624 short tons; and to arrive within the next five months the published list gives a carrying capacity of 453,907 short tons, making a

## THE STABLE.

## The Great Percheron Show.

In our issue for September 4th we presented an engraving of the building especially erected for the grand Percheron Show at the Illinois State Fair, and gave something of the plans and anticipations of those who arranged the exhibition. The event has transpired, and the accounts which are coming to hand indicate that it was a grand success. We shall condense a report from several sources.

No more forcible illustration of the great popularity of Percheron horses in this country need be offered, says the Chicago Times, than the magnificent exhibit made by the American Percheron Horse-breeders' Association at the Illinois State Fair this year, which is conceded by all to be the greatest horse show ever made in the world. The interest shown in this breed by the three great countries—France, Canada and the United States—is unprecedented in the history of horses. They sent their most scientific and honored men in this branch of industry to compose the jury of awards in the persons of Marquis de la Motte-Rouge, inspector-general of the government studs of France; Hon. George B. Loring, ex-commissioner of agriculture of the United States; and Prof. Andrew Smith, president Ontario Veterinary College, Toronto, Canada. These three countries have acted in perfect accord in the promotion of the breed and in preserving and keeping perfect their pedigree record, which is the oldest in the world.

For the purpose of the American Percheron Horse-breeders' Association's exhibit there was erected on the State Fair grounds a building 700 feet in length, with stalls on each side, making 1400 feet of stall-room, with a large annex, which was made necessary by the great demand of this breed for space. The building was a model of taste and beauty. The main entrance to the building was massively built of baled hay, in imitation of the gateway entrance of the castle at Nogent le Rotrou, France (the center of the old district of La Perche, France, and the birthplace of the Percheron breed), built by the old counts of Rotrou in 1003, and which is now used for the headquarters of the Societe Hippique Percheronne of France, with over 400 members, which, under the authority and with the support of the French government, publishes the "Stud Book Percheronne" in the most carefully guarded manner.

The roof of the imitation castle at the fair-ground, and the handsome, lofty towers, from all of which waved countless French and American flags, were thatched with oats, indicative of the food of the breed. On entering one found himself in a reception-room 40 feet square, decorated in the style of the period above indicated.

Upward of 300 entries were made by some 50 breeders from every part of the United States and Canada. The displays of this stock created great enthusiasm at all times, and the Percheron show generally overshadowed all other features of the State Fair.

The part of the Percheron show comprehended in the merchants and manufacturers' procession is described as follows by the Chicago Herald: The merchants' parade on Washington boulevard in connection with the State Fair is a new feature, but it was found so valuable an addition to the entertainment that it will hardly be omitted hereafter. Speaking strictly, the parade was not a feature of the State Fair, but of the American Percheron Horse-breeders' Association's exhibition—nominally held in connection with the State Fair, though it is a show of sufficient interest to be run on its own merits. The Percheron breeders sent out invitations to all merchants employing grade Percherons in their business to parade their horses in the exhibition. Both the association and the merchants themselves were surprised to see 144 turnouts of two, four and six horse teams, sent out in response to the invitation. It was a sufficient token of the importance which high-grade Percheron horses have assumed in the commerce of the city. This importance, it is needless to say, was reflected upon the exhibition, from which some very important results are accordingly expected.

Shortly after noon the head of the procession, namely, an open barouche drawn by 12 splendid specimens of the famous Percheron breed, and tenanted by Senator John A. Logan, Senator Shelby, M. Cullom, and Senator Thomas W. Palmer, of Detroit, president of the association, took its position at the corner of Washington boulevard and Peoria street. The former thoroughfare for a good part of its length was thronged with expectant people, and eastward from Peoria street the roadway was effectually blocked with intending participants in the parade. Throughout the entire length Chief Marshal W. B. Dutton, of Racine, steered a spirited and highly-bedizened horse, which, no less than its rider, was fully sensible of the importance of its position. Messrs. C. B. Kimball and Edwin T. Blois, assistant marshals, flattered up and down the line.

At one o'clock the word was given to start and the 12-horse barouche headed the line, under the escort of eight policemen from the Desplaines-street station. Next came carriages conveying I. L. Elwood, the barb wire man, from De Kalb; George M. Savage, Detroit; Senator Manderson, Nebraska; Commissioner

E. M. Hudson, New Orleans; Mark W. Dunham, Wayne, Ill., and other prominent Percheron breeders and owners. After the carriages came the procession proper.

The procession, enlivened by bands of music, picked its way up the boulevard to Garfield Park and through the park to the fair-grounds. As it passed the Percheron stables it was reviewed by General Geo. B. Loring, Marquis de la Motte-Rouge and Professor Andrew Smith, of Toronto, the jury on awards. Upon its entry to the racing track the line halted a moment, and forth from the Percheron stables burst 310 horses, each led by a groom in livery and each bedecked in the highest style of equine art with ribbons and color. The grooms flitted their whips and the splendid animals arched their massive necks and went through the extravagant paces of the thoroughbred that knows he is the observed of a thousand eyes and expected to do his best. The Percherons led the way to the grand stand, where a right-about was executed and the line moved in the opposite direction around the ring. No such cavalcade had ever been seen in Chicago—perhaps never before in the world. Such, at any rate, was the verdict of several spectators who had seen the famous studs of Europe and were able to make the comparison. The line extended clear around the one-mile track and "lapped" at its ends the distance of a quarter of a mile. It drew all the attention away from the other features of the show. The line eventually broke up, and most of the wagons drove back to the city, presumably to resume business in the work-a-day world. A lunch was spread at three o'clock in the handsome headquarters of the Percheron Association. The officers of the association, T. W. Palmer, Rufus B. Kellogg and S. D. Thompson; Mr. M. W. Dunham, the famous importer; the jury of awards and the political notables above named, sat down at the table.

It was Percheron day. At four, the jury of awards established a ring in the center of the grounds and viewed the candidates for prizes. M. de la Motte-Rouge and Professor Andrew Smith, the appointees of the Ministers of Agriculture of France and Canada, respectively, took out pencil and paper and personally inspected the "points" of each candidate. Ex-Commissioner of Agriculture, Geo. B. Loring, the other member of the jury, appointed by the United States Commissioner of Agriculture, his predecessor, exercised the same office from his seat in the carriage. All three of the judges expressed their surprise and admiration at the high character of the show, and at the awarding of the prizes; General Loring, speaking, also, for his colleagues, declared that he had viewed the best field of draft horses ever seen together in any country.

GLANDERS IN FRESNO—A MAN TAKES IT.—The *Expositor* of Sept. 22d says there seems to be no doubt that H. Schell, of Temperance Colony, has the glanders. Dr. Hopkins, who attends him, is satisfied that it is the glanders, and Dr. Deardorff and others concur in this opinion. Mr. Schell says that he has lost six or seven horses with this disease lately, and has spent much time in doctoring them. He doubtless contracted the disease in this way, as it is highly contagious—so much so that it is only with extreme caution that animals infected are to be treated by veterinary surgeons themselves. It is only a few days ago that a horse was taken to a hitching post on J street that was suffering from a well-defined case of glanders, and so pronounced by a competent expert. There should be measures taken to prevent the spread of this contagious disease in such a careless and reckless way as this. We are informed that this diseased animal is still within the city limits. If so, it should be destroyed. Let every one be very careful in approaching animals diseased with glanders, as the merest trifle of the virus is liable to inoculate one with this virulent blood poison, and result in death. All infected animals should be promptly killed and buried deep.

## THE APIARY.

## Ventura Honey Notes.

We compile the following notes from recent dates of the *Free Press*: At the call of Mr. Richardson, the bee-keepers of Ventura county met at Santa Paula last month and merged themselves into the "Ventura County Beekeepers' Association." The following new members were enrolled: J. C. Gridley, T. H. Barrows, W. T. Richardson, Joseph A. Lugar, L. S. Snuffin, R. G. Sparks. Mr. Touchstone was elected president for the ensuing year, J. C. Gridley secretary, and Mr. Dudley, treasurer. The report of the inspector on foul brood was accepted, and the following was adopted:

*Resolved*, That inasmuch as the county foul-brood inspector talks of resigning his office, we, as a society, earnestly request him to withhold his resignation, as we consider his continuance in office very necessary to the bee-keeping interests of the county.

Mr. R. Wilkin was appointed to assess and collect money for suppressing foul-brood in Ventura county and vicinity. Moved and carried to adopt a trademark for the association; also to adopt four grades of honey, as follows: Off-grade, Amber, Light, Extra Light. It was resolved to appoint a grader, to be known as the Ventura County Honey Association Grader,

whose business it shall be to inspect honey and place the appropriate grade or brand of the society on each package. Mr. Shaw, of Ventura, was appointed such grader. Mr. Barrows was appointed a committee of one to arrange for raising money at a low rate of interest, on honey. Meeting adjourned, subject to call of the president.—J. C. GRIDLEY, Sec'y, Nordhoff, Cal.

## Record of a Hive of Bees.

At B. F. Warring & Co.'s apiary, on the Simi, from Feb. 15th to April 11th, the hive gained in weight 41 lbs. From the last date it rained and was cloudy until April 15th, when it gained 1½ lbs; 16th, 2 lbs; 17th, 1½ lbs; 18th, 2½ lbs; 19th, 1½ lbs; 20th, 3½ lbs; 21st, 3 lbs; 22d, ¾ lb; 23d, cloudy, lost 2 lbs; 24th, gained 5 lbs; 25th, cool and cloudy, lost 2 lbs; 26th, gained 2½ lbs; 27th, cool and cloudy, lost 2 lbs; 28th, gained 1 lb; 29th, 0; 30th, gained 2½ lbs; May 1st, gained 3 lbs; 2d, ½ lb; 3d, ¾ lb; 4th, swarmed, its weight 16 lbs, and gained 2½ lbs; 5th, ½ lb; 6th, 1½ lbs; 7th, extracted 51 lbs; 8th, 1½ lbs; 9th, 1½ lbs; 10th, 2 lbs; 11th, 2½ lbs; 12th, 3½ lbs; 13th, 4½ lbs; 14th, 4½ lbs; 15th, 4½ lbs; 16th, 6½ lbs; 17th, 7½ lbs; 18th, 4 lbs; 19th, extracted 40 lbs, and after extracting, same day, gained 3½ lbs; 20th, 10½ lbs; 21st, 11½ lbs; 22d, 8½ lbs; 23d, 6 lbs; 24th, 7½ lbs; hive had been queenless since it swarmed until 22d, when it gave a laying queen; 25th, gained 3½ lbs; 26th, 9½ lbs; 27th, 5½ lbs; 28th, 7 lbs; 29th, 2 lbs; 30th, 0, cloudy and cool; 31st, 5 lbs; June 1st, extracted 59½ lbs, gained same day, after extracting, ¾ lb; 2d, ½ lb; 3d, 4 lbs; 4th, 4 lbs; 5th, 3½ lbs; 6th, 3½ lbs; 7th, 5½ lbs; 8th, 3½ lbs; 9th, 3½ lbs; 10th, 3½ lbs; 11th, extracted 35½ lbs, and gained same day, after extracting, 2½ lbs; 12th, 2 lbs; 13th, 5 lbs; 14th, 5½ lbs; 15th, 4½ lbs; 16th, 5½ lbs; 17th, 5 lbs; 18th, 4½ lbs; 19th, extracted 32½ lbs, and gained same day, after extracting, 4½ lbs; 20th, 4½ lbs; 21st, 3½ lbs; 22d, 2½ lbs; 23d, 1½ lbs; 24th, 1 lb; 25th, 1½ lbs; 26th, 1 lb; 27th, ¾ lb; 28th, ¾ lb; 29th, ¾ lb; 30th, 1 lb. This was not an average hive of the apiary. The record was kept by J. B. Cherry, the past season of 1886.

## THE GARDEN.

## Hints for Correspondents.

EDITORS PRESS:—Will you be good enough to answer the following queries, or as many of them as you can?

1. Where and at what price can I obtain the wire netting for fencing? [The California Wire Works, San Francisco, can answer this question.]

2. Which is the customary way of planting rhubarb in this State? How often is it irrigated, and how often and how late is it pulled for market—in fact, what is the method all through, from preparing the land? Mine seems to rot off at the roots, and I should like to know the cause. How much does a box hold?

3. What is the customary method of preparing land for strawberries when irrigating?

4. At what distance apart and how close in the row are peas planted in this State as a market crop, and which are the best kinds?

I have been very much interested in your items on gardening, and should very much like to see them continued. It is getting so near the time for planting that I am sure it would be a great boon if some of your subscribers in the business would give a few hints as to the way they lay out and prepare their land for different crops; how they sow (with drill or not), and how to arrange so as to utilize the land for as many different crops as possible in the one season.

Could you put me in communication or give me the name of some one in the market-garden business, or who grows rhubarb and asparagus, especially in Oakland or Alameda county?

While apologizing for giving you so much trouble, I shall at any time be pleased to give you any information with regard to this section of San Diego county.

I am growing prickly comfrey. Have you any reports as to its success or otherwise? I have grown it for two years.

ERNEST T. ORFORD.

Moosa, San Diego Co.

[We trust our correspondents on garden topics will take courage at the appreciation of the contributions by Mr. Orford and take his queries as hints for future writing. It is just the time of the year for a general conference on gardening. Will our readers take it up? Prickly comfrey was tried by quite a number of people in different parts of the State a few years ago, but, so far as we know, it was not long grown by any of them. If our correspondents find especial value in it, let him tell us of it.—EDS. PRESS.]

LABOR COMMISSIONER ENOS has received from the United States Bureau of Labor printed copies of sets of questions to be used by him in his intended investigations into the different classes of industries in this State, and of the causes of the present strikes. These questions are very exhaustive, ranging from the age and appearance of the person examined to the number of Chinamen engaged in the industry which he is engaged in.

total available tonnage of 563,531 short tons, which is over 140,000 tons in excess of our requirements, without taking into consideration the tonnage not now on the list that will arrive before the end of the season. It is reasonable to place the latter at not less than 70,000 tons, with a carrying capacity of 112,000 short tons. From the above it will be seen that in our market the position of wheat is strong, and that of ships weak, so that further reduction in charter is not at all unlikely.

If I extend the statistical position of wheat to the United States as a whole, still the situation favors the wheat interest. Last season there was exported from the United States, with the flour shipments reduced to wheat, not quite 95,000,000 bushels of wheat, and for this season the most sanguine do not expect the exports will go above 100,000,000 bushels. To export last season's quantity, the stock carried over from 1885-86 did not exceed 75,000,000 bushels against a carryover of about 150,000,000 bushels from the season of 1884-85 into the season of 1885-86. But then, last year's wheat crop was only 357,000,000 bushels against about 425,000,000 this year. If we add the estimated carryovers to the estimated wheat crops, then this present season commenced with a less stock than did that of 1885-86. But laying that aside and accepting an estimate of 100,000,000 bushels for export, and still the position is strong, as the following official export returns show: The export returns for July and August from all ports in the United States aggregated 17,886,498 bushels of wheat and 1,952,781 barrels of flour, or with flour reduced to wheat, a total of 27,547,403 bushels, which is an increase over the like months of last year of about 15,000,000 bushels. For September last the exports from all ports in the United States, flour reduced to wheat, are estimated at 16,000,000 bushels, which, added to the July-August exports, make 43,500,000 bushels exported the first quarter of the season of 1886-87, which is very nearly one-half of the highest quantity estimated as being available for export, by allowing a less stock to be carried over at the end of the season than was carried over from the last season into the present. If the exports aggregate in three months nearly one-half the available surplus, how much will there be to spare by the time six months pass by? J. R. F. S. F., Oct. 2d.

SOLID MATTER OF THE WHEAT KERNEL.—Does the solid matter of the wheat kernel increase after cutting, when the grain is cut before ripening? This is a question oftentimes discussed by farmers. Some hold that when wheat is cut while still green the growth of the kernel is completed after cutting, in the same manner as when the wheat is allowed to stand until fully ripe. In order to get information on this point in experiments conducted by Professor Jordan on the Pennsylvania State College grounds, samples of wheat were cut at various stages of growth, in each case the kernel of a portion of the sample being removed immediately upon cutting, and the kernels of the remaining portion being allowed to dry on the stalk in the usual manner. After the wheat had become as dry as it would get in a warm, dry room, two lots of 500 kernels each were counted from each sample and then weighed. In this manner any appreciable growth on the part of the wheat dried on the stalk would be detected. A table giving the various weights of the kernel at different stages makes the increase in weight of the kernel after the wheat was cut to have been about 22 per cent in the case of the partially developed kernels taken June 24th. In all subsequent samples the kernels dried on the stalk seem to be no heavier than those removed before drying and immediately after cutting.

UNDERDRAINAGE FOR HOPS.—Some of the farmers of Puyallup are awakening to the importance of laying drainage tile in their fields. There were Ezra Meeker and Mr. Sahm talking to some hop-growers at Puyallup yesterday. "Look at the hops in that field there," said Mr. Meeker. "There are 16 acres. Do you notice their height and general appearance of thrift? I spent a good many hundreds of dollars in underlying that field with cedar-box drains; now notice the result. See how the vines are burdened with hops worth 35 cents per pound. Now look across the fence at that other field, which for want of drainage has been left as cold as the day when it was cleared of its timber. It contains hop vines, also, you see; but how different from those of the drained field. The contrast is so great as to be startling, and to show drainage will pay for itself over and over again by a single season's crop. In fact," continued Mr. Meeker, "I know of no single improvement that could be proposed to the farmers of this valley better calculated to increase their crops and advance their material welfare than drainage by tile, which does not rot and which is so much cheaper than wood."—Tacoma Ledger.

THE GREAT FLOUR CENTER, Minneapolis, is turning out something over 20,000 barrels of flour a day, or enough to supply the three largest standing armies of Europe with bread. Although the chief center of the milling industry, it has plenty of rivals. Of all the manufactures in the United States, flour mills head the list in the value of their products, and yet they do not distribute as much money in wages as many other industries, the raw materials costing three-fourths the value of the products.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## The Farmers in Council.

## THE STATE GRANGE MEETING.

## Fourteenth Annual Session.

On Monday evening a large number of members of Yuba City Grange, with Patrons from other northern Granges, were at the railroad station, Marysville, on the arrival of the San Francisco, Sacramento and Stockton train, and right heartily did they welcome a large delegation of Patrons and Matrons, coming from all quarters south of the city. Past Masters I. C. Steele, B. R. Spillman and Daniel Flint, and about a hundred other good, old veteran Grange faces, were visible at the station. These annual greetings are always most cordial, and all the cheerful, happy faces seem to brighten o'er and o'er as the hand-shaking between old, as well as new, acquaintances goes round and round. Never before were so many attendants seen on hand previous to the opening of the session as on this occasion. There is also noticeable a greater preponderance of old and well-known Patrons present.

## Committees of Arrangement.

The Committees of Arrangement of Yuba City Grange seem to have done their work well, and all Patrons, on arrival, were speedily secured comfortable quarters, according to their liking, in hotels, lodging or private boarding-houses at very reasonable rates. The different committees were constituted as follows:

On Reception—Bro. and Sister Hollister, of Wheatland; Bro. and Sister O. Clark, of North Butte, and Bro. and Sister Frisbie, of Yuba.

Feast of Pomona—Bro. and Sister Ohleyer, of Yuba, Bro. and Sister Spillman, of North Butte, and Bro. and Sister Jasper, of Wheatland.

On Procuring Hall—G. W. Carpenter and H. C. Jones, of Yuba; D. Ostrom and Sister Keys, of Wheatland, and Bro. T. Lane and Sister Lane, of North Butte.

On Accommodations—Bros. Frisbie and Ohleyer, of Yuba; Frasier and Ostrom, of Wheatland, and Pattridge, of North Butte.

On Music—Bros. James and Berry, of Yuba City, and Bro. Clark, of North Butte.

The Executive Committee were in session at the Secretary's headquarters, at the Western (the leading hotel) on Monday evening, preparing their report, and for the business of the session. A large number of Patrons also stopped at the United States and Golden Eagle hotels, and some at private boarding-houses and residences, a generous welcome being generally extended.

## Tuesday Morning.

State Grange was opened in ample form, by Worthy Master Wm. Johnston, in Masonic hall, Marysville, Tuesday A. M., October 5th. The following roll of officers was called:

## Officers of the State Grange.

Master, Wm. Johnston.  
Overseer, W. L. Overhiser.  
Lecturer, Daniel Flint.  
Steward, Don Mills.  
Asst. Steward, E. W. Davis.  
Chaplain, B. F. Frisbie.  
Treasurer, I. C. Steele.  
Secretary, J. Chester.  
Gate-keeper, J. E. Beach.  
Ceres, Mrs. S. J. Cross.  
Pomona, Mrs. A. P. Roach.  
Flora, Minnie M. Plummer.  
Lady Asst. Steward, Mary J. Carter.  
Executive Committee, A. L. Chandler, J. F. Deming, H. G. Keesling.

The Steward, Assistant Steward, and Lady Assistant Steward were noted absent, and the following temporary appointments were made: Steward, Bro. Dennis; A. S., Bro. Toole; L. A. S., Sister C. A. Hull.

The names of most of the representatives present were given in our Grange list published in last week's RURAL.

## Address of Welcome.

The address of welcome to the State Grange was delivered by Bro. B. F. Walton, W. M. of Yuba City Grange:

*Worthy Master, Officers and Members of the State Grange:* In behalf of our local Grangers, the people of Marysville, Yuba and Sutter counties, I welcome you to our midst. Indeed, it is with pride and pleasure we all unite in extending to you a hearty welcome, and hope your stay with us may be of sufficient length to convince you that our attachment for the representatives of the Grange is real and lasting.

The meeting of this body in Marysville is to mark an important era in the history of our Order.

This central portion of the great Sacramento valley, away from the influence of city life, with no extensive ownership in land to prevent settlement, is a natural field in which to plant the Grange.

Divided as it is into small lots or farms, each occupied by its owner and each owner possessed of or building up a happy home, surrounded by such a wealth of nature that the magic soil has only to be stirred by the intelligent hand of industry to supply all the physical wants of man.

While the refined and cultivated taste and

skill of the fair Matrons soon adorns it with all the attractions of living nature, together with such artistic embellishments as make it a place of beauty and almost a heaven on earth.

These happy homes, with others scattered over our vast country, are the evidences of real success and prosperity, and the substantial and lasting foundations upon which our great nation rests; as our true wealth and dignity as a nation is in proportion to their numbers.

Around these quiet hearthstones the important personages who are to mold, educate and control the future destiny of this State are now playing; and it is fondly hoped the influence of our noble Order through its State and Subordinate Granges will keep pace with the rapidly developing country, and ever be strong enough to imbue each unfolding mind with a love for rural life and an overpowering attachment for home and country. So that as time and intelligent cultivation shall bring to light the latent possibilities of this fertile region, it will be no uncommon thing to hold the State Grange at Marysville, Wheatland, Auburn, Nevada, Grass Valley, Oroville, Chico, Colusa, Red Bluff and other business points, as well as at the great centers of the San Joaquin, Santa Clara and other valleys.

A thorough acquaintance with our people will reveal to you the fact that our farmers, mechanics, merchants and business men of all classes have faith in the Grange, and its extension and advancement meet with no opposition from their hands. They have long since learned that we wage no warfare against any industry or calling, but seek to benefit our members and their surroundings by a more intelligent application of their own means and energies; to give to each the combined experience and knowledge of all, and bring our neighbors into more intimate social and business relations, thus strengthening the ties that bind our communities together.

The frank, manly and outspoken expressions of the State Grange, six years ago, when we were in the midst of our struggle with the hydraulic monitor, so endeared the representatives of the Order to us that when a year ago you decided to meet in Marysville the news was hailed with delight and enthusiasm by all classes.

The fact of this being the first State organization that had the moral courage to place itself squarely on the side of right, law and justice, at that time, to be afterward sustained by the highest legal tribunal in the land, renders the Order worthy the confidence and support of our entire community.

And now, fellow-Patrons, without desiring to detain you with any extended remarks, I bespeak for you all a very pleasant and interesting week in Marysville, and a successful session of the State Grange.

## Response.

After an appropriate musical selection by the choir, the Worthy Master called upon Bro. Dunn, Master of San Jose Grange, who pleasantly responded, on short notice, as follows:

*Worthy Master and Officers of the State Grange:* On behalf of the members of the Subordinate Granges here assembled I thank the brother for his hearty words of welcome. The courteous manner in which we were received by the committee of the State Grange on our arrival here is sufficient evidence of their sincerity. I agree with the brother that the meeting of the State Grange in this agricultural center of the great Sacramento valley must be of great benefit to the Order. No doubt there are historical reminiscences connected with this city which endear it to its residents, but which I feel at present incapable of dealing with; but its improvements in agriculture and horticulture are sufficiently interesting to us from the central, fruit-growing and other parts of California.

Thanking you again for your kind welcome, I will reserve further remarks on this subject until some future occasion.

## Tuesday Afternoon.

The report of the Committee on Order of Business was received and adopted. Three sessions will be held daily, the Pomona feast occurring on Tuesday evening.

A number of committees were appointed, and other preparations made for the work of the session.

## Worthy Master Johnston's Address.

*Patrons of California:*—Another year, with its blessings and its lessons, its joys and sorrows, its doubts and fears, its successes and failures, its triumphs and regrets, its achievements and bereavements, its conquests and defeats, with all that is beneficial as well as all that is prejudicial, has passed, and we are again, according to constitutional provision, assembled in annual convention for the purpose of consulting together concerning the things that directly interest the tillers of the soil.

To erect another mile-stone on the pathway of progress, and make the necessary demands for our future welfare, Ceres, from her golden horn, has redeemed her promise of a bountiful harvest, and you seem to enjoy the fairest hope of health, happiness and good cheer. You come from your homes by the snow-fed springs of the mountains, the blooming orchards and vineyards of the foothills and the broad and fertile fields of the valleys, to spend a season with us deliberating upon those questions that immediately concern the welfare of our noble Order.

Let us as a fitting preparation for our duties render our homage of praise, adoration and thanksgiving to Him who does all things well, and has crowned the year with His goodness. Since the last meeting of the State Grange we have organized two Pomona Granges—one in Sacramento Co. and one in San Joaquin Co. Both have a large membership, and are in a prosperous condition. We have also two Subordinate Granges—one in Tulare Co. and one at Paso Robles.

When the history of the past year shall have been written, it will not contain anything of an extraordinary nature (except the extraordinary occasion); but it will be the history of a year of slow but sure and steady advancement. The general health of our people has been better than usual; there have been no epidemics of a serious nature to disturb us. Our wheat crop is not as large as it was expected, and prices are ruling low. Our fruit crop was light, but prices were good. We have an average grape crop, with remunerative prices. Our hop crop is light, but prices are good. Our wool clip is large, with fair prices. Meat is plenty and cheap. Live-stock of all kinds rules low, but, after all, we can see a steady, healthy, prosperous growth throughout the State. But there seems to be an overproduction of almost everything in manufacturing and agricultural products, consequently there is a cheapening all along the line in everything but labor. We find the mechanic and farm laborer demand and receive more wages and find employment more readily than they did 40 years ago. Yet we hear the constant cry, "The poor are getting poorer and the rich are getting richer," and upon examination we find that the declaration is true. Now if the necessities of life are as cheap as they were 40 years ago, wages as high, and labor as plentiful, then we ask the question, what is the cause of all this trouble and unrest? I must confess the question is one which I do not feel quite able to solve. There are some things, however, that present themselves to my mind as answering the query, at least in part. One of the good things that Robert Ingersoll said, in his lecture on "Hard Times," was that the way out of it was this: The economy of the rich, and the extravagance of the poor, caused more hard times than all other causes combined. Ingersoll may have put this a little strong, but there is much truth in his declaration, and the sooner we make up our minds that there are lessons of economy, that are necessary for us to learn, the better it will be for us and our posterity. The quicker we make up our minds that a 50-cent hat is a better covering for a sensible head, a better protection for a pretty face and more beneficial for mankind generally at six o'clock in the morning in the poultry yard, than a \$10-feather is at a full-dress party at two o'clock in the morning, the better it will be for us and for those who follow after us. The anxiety to appear rich when we are really poor is one of the great hindrances to prosperity. This, however, does not apply to those who live in the country so much as it does to those who live in cities and towns. It would be much better if we would try to appear as we are, feel as we appear, and act as we feel—that is to say, the rich should be honest, generous, liberal, charitable, giving employment to the unemployed, giving freely of their means to any and all movements the object of which is the elevation and improvement of mankind. The poor should be economical in the use of money, goods, or provisions of any kind, saving unnecessary expense either in money or anything else which is to be used or consumed, not profuse, prodigal, or lavish in anything, and all the intermediate stages between riches and poverty should be governed according as they approach either of the extremes. If a man's income is but one dollar a day, if he is honest, if he is true to himself, if he is true to his family, his neighbor, his country and his God, he will not allow his expenses to exceed his income. There are two great evils with which we are contending, the saloon and the credit system, and I think sometimes it is difficult to decide which is the greater curse to the poor. My advice is to shun them both as you would a pestilence, for if you follow either of them they will sooner or later destroy the peace and happiness of yourself and family; but let us pay as we go, and give the saloon the benefit of our absence. In connection with this subject I would recommend the repeal of all immigration laws between the United States and China, and advocate the passage of an iron-clad restriction law, which would forever prohibit the landing of Chinese laborers within the borders of the United States, on any pretext whatever. Those that are here, are here under a contract with the United States, and we cannot afford to violate that contract, and, if necessary, the whole power of the United States must and will be called upon to enforce obedience to that contract. The immigration and naturalization laws between the United States and China are not the only immigration and naturalization laws I would recommend being changed. I would like to see all immigration and naturalization laws so changed that all immigrants to this country be required to take the oath of allegiance to the United States as a condition of landing on American soil; that they be required to give some guarantee for their good behavior, and that they be required to make themselves sufficiently acquainted with the English language to be able to understand the principles of our government before they are honored with the elective franchise; and then only those who have been faithful to

their first obligation and those only who have been good, law-abiding citizens and worthy of the great honor conferred upon them—an honor to which many of them need not aspire in our native land. I do not wish to be understood as underrating or underestimating the value of those naturalized citizens who come here with honest intentions, who are true to their obligations, and who believe this to be a better country for the poor laborer than where they came from. The more of that kind of immigrants that come to this country the better; but there is a class of immigrants flocking to this country who will not make desirable citizens, who have nothing in common with us, but who claim the right to blow up a city with dynamite whenever things do not go to suit them, to deprive decent people of the privilege of earning a living for themselves and families, to trample our laws under foot, whenever they do not suit them, and are always ready for anything except honest labor. The sooner we put up the bars and lock the gate, and throw the key away against these outlaws from foreign countries, the better it will be for the future of the United States. Under our present immigration laws, we are receiving the paupers, outlaws, murderers, socialists, anarchists, escapes from justice and scoundrels of all kinds from all nations; and if some check is not put upon the system soon, I will not vouch for the stability of our Government; and who are more interested in this question than the farmers? Their isolated condition makes them more dependent upon the laboring class than any other. He is obliged to employ in the busy season just such labor as he can get, take them into his family, make them his companions for the time in order to save his crop from destruction. Fellow farmers, let us rise from our Rip Van Winkle condition, shake off this incubus; prepare ourselves by the acquisition of knowledge to take our stand among the men of the nations, and demand our rights. The question is sometimes asked, "Why have not farmers taken a position of influence and power in the councils of the nation and otherwise in proportion to their numbers and wealth?" Simply because they have not used their brains. The world pays homage to intelligence and intellect. The world is not partial to lawyers, ministers and doctors, but the world wants to use brains and accepts them wherever found, and uses them to promote its wishes; and if farmers want to be placed in the foremost rank of the nation and in the world, if we wish to be put into positions of trust where we can have power to aid our fellows, if we wish to have influence and make our mark in the institutions of the land, if we wish to stand where we can do something toward governing the price of our commodities, if we wish to weigh according to our size in the scale of public opinion, we must use the brains more and, if necessary, our muscle less. Our brains are as sound in quality as liberal in quantity, and if polished by constant use, refined by study and thought, are capable of measuring intellectual souls with the most learned professionals.

But I speak it in sorrow, I admit with deep and burning shame, that the farmers furnish but few men whose minds are fitted to organize great enterprises.

Look at the farmers in our Legislature. In numbers they are very small, in proportion to the population of the State, and smaller yet in the influence they have upon legislation. When they come in contact with men who are in the habit of close and logical reasoning, they, with few exceptions, prove wanting. It may and probably will be said that head work will not sow wheat or pick grapes. Granted; but prove to me that an intelligent man is disqualified from performing the duties of a farmer and you will prove to me that farming is a business which it is disgraceful to follow, and that it is grossly unjust to say ought to induce any young man of common sense to become a farmer. But this is not the case, and the Grange is proving every day that farmers, their wives, their sons and daughters are as capable as competent, and when given the same opportunity develop as much intellect and are as prolific in brain-power as the most favored sons and daughters of the land. It is also proving that our most successful farmers are those who have best improved their educational opportunities.

## In Memoriam.

*Patrons:* With every revolving year, as we come together in glad reunion, some shadow falls upon our heart; time moves on, but the past years do not live again, as in nature the flower and fruit life goes on, but not the same flower and fruit; so mankind lives, but not the same men. The race continues, but the individual dies. The cradle and the coffin, with but a few swift years between. Death is as common as birth, yet we never become reconciled to its visits. We stand round the cradle with joy and hope, but follow the casket that contains the ashes of loved ones clothed in sorrow. And yet there ought to be some solace in the thought, however sad the bereavement, that death is no blunderer, no judgment of wrath, no stupid fatality that has strayed into the world and strikes in the dark, but is a part of the same beneficent plan that marks the sea and stars and appointed under the leaf and flower its season. It becomes my painful duty to announce that, since my last, Sisters Hooper, Blackman and Ewer and Bro. Chandler have passed away.

## Miscellaneous Mention.

The music by the choir of Yuba City Grange,

supported by Bro. G. W. Hancock and other visiting Patrons, has been of the best order from the start, and adds greatly to the enjoyment of the sessions. Miss Roache, of Watsonville Grange, recited, on Tuesday morning, a rural poem so ably and so rarely appropriate as to receive great applause. The hall is one of the best and most comfortable the State Grange has ever enjoyed.

**THE FARMERS' CONVENTION TICKET.**—At a meeting of the Executive Committee, held in San Francisco, October 1st, vacancies in the list of candidates nominated by the Farmers' Convention were duly filled, and the completed ticket is as follows, viz.:

For Governor, Joel Russell; Lieutenant-Governor, J. V. Webster; Secretary of State, Frank E. Kellogg; Attorney-General, W. H. Hart; Justices Supreme Court, Jackson Temple, Jere Sullivan, Wm. H. Patterson; Controller, John P. Dunn; Treasurer, H. S. Graves; Superintendent of Public Instruction, Ira G. Hoitt; Clerk of Supreme Court, J. D. Spencer; Surveyor-General, George B. Tolman; Members of Congress—1st District, L. W. Simmons; 2d District, Geo. Ohlreyer; 3d District, W. W. Smith; 4th District (President Blackwood authorized to choose candidate); 5th District, Frank J. Sullivan; 6th District, Wm. A. Harris; Board of Equalization, C. E. Wilcoxson, John Beatty, L. D. Moorehouse, M. D. Hamilton; Railroad Commissioners, W. W. Foote, J. A. Filcher, J. W. H. Campbell. President Blackwood was also authorized to substitute the name of D. A. Mobley for that of Ira G. Hoitt, in case he deem it proper.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Butte.

**THE ORANGE GROVE.**—Oroville Register, Sept. 30: Through the kindness of W. M. Bowers, secretary of the Oroville Citrus Association, we were enabled on Monday last to take a drive through the young orange grove on the north side of the river. Work on the land was begun late in the winter, and greatly interrupted by the heavy storms of spring; yet the soil is now in fine condition, the clods well broken up and the soil loose and finely pulverized. About 40 acres of land have been inclosed by a substantial fence, and a new barn and a small dwelling-house have been erected. Twenty-seven acres of land have been set to orange trees, including the Riverside, Navel, St. Michael, Mediterranean Sweet, Malta Blood and a few seedlings. In addition to these there are several thousand young trees, a part of which are the Florida Sour Stock. The trees have made a thrifty and vigorous growth, the new shoots being in many places from 20 to 36 inches in length. The loss has been very light, though many of the trees were not set out till late in May. They have been irrigated about once in 15 days. Should the trees winter well, they will another year begin to fruit, and the following season pay all the expense of care and cultivation.

#### Fresno.

**RAISIN CROP.**—The *Expositor* of Sept. 29th gives the following estimate of the yield of some of the larger vineyards and packers, and the total yield of Fresno county. The estimate is largely in excess of what has heretofore been claimed, but from careful inquiry and observation they are convinced it is full low enough:

Vineyard.	Boxes.
Butler vineyard.....	50,000
*Forsyth vineyard.....	40,000
†Geo. W. Meade & Co. (packers).....	40,000
J. W. Pew.....	6,000
J. P. Thomas.....	4,000
N. W. Trezevant.....	3,000
T. C. White.....	6,000
Curtis Packing Co.....	6,000
Phelps vineyard.....	12,000
Temperance and Scandinavian colonies.....	5,000
J. W. Gould.....	5,000
†Other packers.....	25,000
Total.....	202,000

\*Forsyth's pack will include the vintage of the Fresno vineyard, Miss Austin's vineyard, and several smaller places.

†Geo. W. Meade & Co.'s pack include the raisins from Goodman's vineyard, amounting to about 10,000 boxes, those from the Barton, Eggers, Braly and Cory vineyards, etc.

‡Included in the miscellaneous list are such growers as J. W. Brooks, who will pack 1000 boxes; Mr. Southworth, 1000 boxes; the Messrs. Vieu, 2000 boxes; and many others.

The raisins of the county will be principally handled this year by Wm. T. Coleman & Co., commission merchants, Geo. W. Meade & Co., dealers and packers, and A. Lusk, commission merchant.

#### LAKE.

**A NICE RANCH.**—Lakeport Democrat, Oct. 1: One of the finest farms in the county is the old Ritchie ranch, near Middletown, owned by Mr. Thos. Hopper. This year he cut 160 tons of hay, thrashed 3075 sacks of grain, had planted about 20 acres of corn which yielded 60 bushels to the acre, and out of a large wagon-load of watermelons raised on this farm and which he hauled to Middletown, not one weighed less than 40 pounds. Mr. Hopper is justly proud of his beautiful farm.

#### Modoc.

**SURPRISE VALLEY.**—Eagleville Cor. Sagebrush Stockman: Unless one is well posted in the local geography of the country he is liable to get all mixed up in regard to State and coun-

ty boundaries on first entering this valley from the southward. Within a distance of six miles the stage road passes from Washoe county, Nevada, through the northeast corner of Lassen county, California, and into Modoc county in the same State. The most productive and by far the larger part of the valley is included within the limits of the latter county, although the ranch of Mr. Wm. Coppersmith, one of the best in the valley, is in Lassen. A monster haystack on the Ward Brothers' ranch is 196 feet long, 38 feet wide and 38 feet high, and contains about 300 tons of hay. The hay crop in the valley the past season was a good one, and parties driving through to Reno for shipment can purchase this staple at \$4 per ton, which includes winter privileges, i. e., pasture and a house for the vaqueros to stop in. My next stop was at the Barber Brothers' ranch. They are horsemen chiefly, and own a thoroughbred Norman stallion which has been in service in the valley for several seasons and has done much to improve the breed of draft horses.

#### Sacramento.

**COTTON GROWING.**—Record-Union, Sept. 30: Cotton growing has been for some time successfully carried on in the San Joaquin valley, but for some reason has not received attention, nor been tried to any considerable extent in the Sacramento. Last winter S. H. Gerrish, of this city, received some cotton seed from a gentleman in New Orleans, but did not plant it until May. He then put a few seeds into the ground at the rear of his residence on G street. He irrigated the place occasionally for about a month, as it was so late when planted, but has not done so since early in June. The plants now stand nearly eight feet high, and are a wonder to those familiar with the sight of cotton fields, as the ordinary height of the cotton plant is from three to four feet. The plants are well loaded with bolls, which are large and excellently filled, indicating a heavy reliable yield and fine staple. Each succeeding season forcibly impresses the fact that the people of Central California have as yet little conception of the variety and extent of products that may be here successfully grown.

#### San Benito.

**MAKING A HOME.**—Independent, Sept. 28: One of the hardest-working men in the county is Mr. Geo. T. Elliot, the candidate of the Prohibition party for Assembly. Two years ago he bought 190 acres on the bank of the San Benito river, opposite Hollister. There was a fair-sized orchard of apricot, almond and other trees, but through neglect they were not productive. Mr. Elliot at once commenced pruning them heroically. As a consequence, there is not today a more thrifty orchard in the county or one which yields larger crops. Beside this he has planted a large number of apple, cherry and apricot trees, and they, too, look very thrifty. A vineyard which he has started has had a phenomenal growth. Last February something over 1000 settings of choice table and raisin grapes were set out. The 1st of August a second growth commenced, and now many of the vines are loaded with blossoms, and several have bunches of perfectly-developed ripe fruit, although they have been in the ground but seven months. The vineyard is on the north slope of one of the many natural terraces which distinguish the place and give it the name of Terrace Farm. One year ago this spot was a wild tangle of underbrush. With his own hands Mr. Elliot dug out the stumps, cleared the ground, and graded it. Dirt was taken from the top of the terrace, and over a considerable space the "made land" has a depth of six feet. The corn he has raised this year, although it was never irrigated, has stalks about eight feet in height. In many of the hills are from 10 to 15 perfect ears, and in no hill are there less than 5. The 10 acres will yield at least 600 bushels. Mr. Elliot is planning a 25-acre orchard of cherries, and proposes to put in 10 acres this fall. He is continually making improvements on the farm, and it is becoming famous for its neat and orderly appearance. While attending to the farm he has not neglected his home. He has adorned the yard with 100 rare and beautiful flowering plants and made a beautiful lawn, and to-day there is not a more pleasant place to visit than the home of Mr. and Mrs. George T. Elliot.

**CODLIN MOTH.**—Free Lance, Oct. 1: San Benito county has almost entirely escaped the pests which have this year proved so disastrous in many localities, and in many orchards lessened the fruit crop one-third or often one-half.

#### San Bernardino.

**MELON AND ALMONDS.**—Ontario Record, Sept. 29: A mammoth melon, labeled an "Ontario Plum," looks out complacently on the innocent tenderfoot from the office window of Morgan & Dyar. It weighs 103 pounds and was grown by Roscoe Morgan, being one of several large ones on the same vine. We were much interested in the harvesting of a crop of almonds on Mr. Lester's place at Rincon. He has six acres in almonds, the trees being five years old and grown entirely without irrigation. They are a beautiful sight, and were loaded with nuts. They average about eight pounds to the tree, which makes only a fairly remunerative crop.

#### Santa Clara.

**PILFERERS PUNISHED.**—San Jose Times, Sept. 29: C. A. Pitkin, who owns a vineyard in the vicinity of the fair grounds, drove up to the police station yesterday with two young men, apparently 18 or 20 years of age, who lay bound hand and foot in the bed of the wagon. It ap-

pears that the boys had accompanied two others on a raid on Mr. Pitkin's vineyard, and stolen about a dollar's worth of grapes. After chasing the boys for some distance Mr. Pitkin succeeded in capturing two, and forced them, at the point of a shotgun, to get into the wagon and be bound. On being examined before Justice Pfister, both pleaded guilty, and as their appearance indicated them to be professional tramps, and the names they gave were evidently fictitious, they were each fined \$15, or 15 days in the county jail. The boys said they had come to the fair.

#### Santa Cruz.

**BEANS AND SPUDS.**—Pajaronian, Sept. 30: Potato digging and bean thrashing have been in progress for a time. Beans show a fair yield, but prices are low. Potatoes also are a fair crop, and prices are higher than they have been for some time. Some of the beach-road farmers, who felt blue last spring at the continued rains, now feel thankful that the potatoes have taken an upward turn. One got over 100 sacks to the acre. With potatoes of that variety worth from \$1.30 to \$1.40 in the city, the yield in coin shows larger than any Pajaro grain-grower will have.

#### Shasta.

**NORTH COW CREEK ITEMS.**—Cor. Democrat, Sept. 29: Our farmers are generally content with the season's yield, though in some respects not so abundant as in times past. The fruit yield has been fair, both in quantity and quality. J. W. Nixon, of the Gipson Ranch, has sent for a force of Italians and proposes devoting an extensive tract to gardening, which is not only a wise move for John, but will aid materially in excluding the Chinese, who have heretofore held a monopoly of this, one of the most valuable of our resources.

#### Sonoma.

**CROPS.**—Petaluma Courier, Sept. 29: Thrashing in this county is over and we can now estimate the yield. Thrashers tell us the crop of wheat did not average over 15 bushels to the acre. The hay crop was unusually large and the yield per acre extra good. The fruit crop is good as to quantity, but nearly half the apples are wormy. The grape yield is good in this section, and this may be said of most kinds of fruits. Corn, potatoes, and vegetable crops generally, are fair. The spud crop, though not so large as in former years, promises well as to price. Potato-growers feel hopeful.

#### Stanislaus.

**HARVESTING A RATTLESNAKE.**—Modesto News: As the crew of Johnson & Grey were cutting grain about 20 miles east of Modesto, Jeff Boone, the loader, discovered a rattlesnake on the platform of the header, and it was carried into the wagon. Boone made a lunge at the reptile with the pitchfork, but the fork hit the draper slat, was wrenched out of his hand and fell out of the wagon. Al Nourse, the driver, seeing the perilous position of Boone, dispatched the snake, which proved to be very large, having 11 rattles. The grain was lodged at the place the snake was encountered, and the reptile must have been coiled on top of the lodged grain, and the knife cutting low, went under it, which landed it in the wagon without injury. The incident took place over a month ago, but as we have just learned of the occurrence, we give it publicity.

#### Tulare.

**MOUNTAIN FRUIT.**—Delta, Sept. 30: At Nanscawen's drugstore may be seen some fine looking winter apples from N. P. Dillon's place, on North Tule river. Although large, they were not especially selected for exhibition. His orchard is young but promises well, and he is satisfied that he can make a success of fruit-growing in the mountains near his sawmill, where these were grown. The crop this year amounts to 25 tons, and Mr. Dillon will build a brick cellar in which to store his winter apples. Late apples require a cooler climate than that of the warm plain and lower foothills, and we are pleased to know that orchards are being planted in the vicinity of the pine forests. Cherries, currants and raspberries, which do not produce well in the valley, leave nothing to be desired in flavor, size and yield in the cooler climate of the mountains, as has been proved by different persons this year. Mr. Dillon has had several of his young trees destroyed by bears, but his orchard is entirely free from every species of insect pest. The future of the mountain region is a bright one, and a large amount of very desirable Government land is to be had therein.

#### Yuba.

**LIVE-STOCK.**—Marysville Appeal: An examination of the assessor's books for the year 1886 shows that there are about 400 persons in this county outside of the city who own stock to the number of 10 head or more each. The list shows that there are 44,708 sheep, 10,147 hogs, 9800 cattle and 3660 horses.

#### NEVADA.

**EUREKA COUNTY NOTES.**—Palisade Cor. Stockman, Sept. 27: Eureka, though a small county, is rapidly assuming a front rank as a cattle producer, and some of the finest strains of blood in the State can be found within her borders. The principal valleys of the county are Pine, Garden, Cortez and Diamond, and it also takes in about three miles of the Humboldt river. As is the case with our sister counties, the feed is shorter than usual, and our stockmen are uneasy about the coming winter. Unless something unforeseen occurs there will be

considerable loss on the ranges in consequence. With their usual foresight and business acumen, however, most of our stockmen have prepared themselves, and will, if it should prove necessary, feed their poor stock, wean as many calves as possible, and thereby give the cows a better chance to winter. The hay crop in the valleys this year will compare favorably with those of the past few years, and as most of the ranches have a supply of old hay, they will be in a much better position to "fight the common enemy" than their brethren in other counties.

**FEED SCANT.**—Elko Cor. Stockman: In conversation with a gentleman from the southern part of the county recently, your correspondent was informed that the outlook for winter feed in that section is very discouraging, and that in localities where it is usual to find a good supply of winter feed at this season of the year, there is scarcely a sign of vegetation, and that even sheep, which require but little feed, will scarcely subsist during the coming winter.

**HUMBOLDT COUNTY FIGURES.**—Stockman: The number of stock cattle in this county, as shown by the assessment roll, is 38,837, a slight decrease from last year's estimates; the number of sheep, 69,700, an increase of nearly 6000 head. The total assessed value of property is \$3,332,232, an increase of \$38,967. These figures show that, on the whole, there is quite an improvement in our industries, the only one that retrogrades in value being mining.

### Experiments with Sorghum Sugar.

WASHINGTON, October 4.—Last year the Department of Agriculture began to experiment in a small way at Ottawa, Kansas, with the diffusion sugar process as applied to sorghum cane. Instead of crushing the cane as in the sugar-cane process, it was shaved off in minute slices and the sucrose or sugar-yielding sap extracted by streams of water. The results obtained were so encouraging that the scene of operations was removed to Fort Scott this year, and with a largely-increased plant where experiments are now in progress on a scale of some magnitude.

To-day a telegram was received from Prof. Wiley, the chemist of the department, who is in charge of the works, announcing the complete success of the experiments. The telegram states that syrup has been obtained from the sorghum cane of light color, good flavor and crystallizing well. There was a complete extraction of the sucrose in six of the cells of the battery. Commissioner Colman is very much elated at the results of the experiments, and regards them as of great value from an economic point of view. In the process now in use in the South there is a loss of nearly 50 per cent of the saccharine matter contained in the cane, while these experiments at Fort Scott show an absolute extraction of all the sugar.

### Death to Coyotes.

The Red Bluff Sentinel says that B. A. Bell, superintendent of the Gallatin ranch, has discovered an excellent plan to get rid of coyotes. He had five iron-picket pins made, then took an old ewe of little value to the range where a band of mutton sheep were herded. He tied one end of a rope about six feet long to her neck, and the other end to a picket pin, which he drove into the ground. He then planted four steel traps at equal distances from each other, in a circle, a short distance outside the circle that would be made by the sheep going round. Over the ground and traps hay was spread so that the coyotes could not see them. The plan worked like a charm, and three mornings in succession Mr. Bell had the satisfaction of finding a live coyote in one of the traps. He changed the location of the old ewe and caught two more coyotes. Since that he has not been troubled with coyotes killing his sheep.

**AMERICAN NEWSPAPER ANNUAL.**—N. W. Ayer & Son, of Philadelphia, have favored us with a copy of their "American Newspaper Annual" for 1886. It contains a carefully prepared list of all journals and periodicals published in the United States and Canada, corrected up to last July, giving their names, times of issue, general character (as political, agricultural, medical, etc.), age, size, circulation and advertising rates. These are arranged by States in geographical divisions, and by towns in alphabetical order, with a deal of other valuable information, compiled in handy form, and all made easy to refer to by table of contents and index. It makes a handsome octavo volume of over 1000 pages, and is altogether too convenient for editors and advertisers to be without.

**GALLOWAY SALES.**—Mr. Goulding, agent for Leonard Bros., of Mo., has sold Mr. H. W. Cowell, of Lathrop, two bulls and eight cows of their imported Galloway cattle. Mr. Cowell has made arrangements to supply any parties who wish to purchase either Shorthorns or Polled Angus of Leonard Bros.' importation. Mr. Goulding has also sold a bull and heifer to John Snyder, of Mountain View, Santa Clara county.

THURSDAY, OCT. 14th, is set for the general wool sales at Cloverdale. The salesday last spring was reported a great success.

### The West.

Oh ho! for the West, the boundless West,  
Where pastures and creeds are broad,  
Where the breeze is a tonic that thrills the breast,  
Blown straight from the hills of God.

The East is a land of dead men's bones,  
Laid tier on moldering tier,  
And the damp, malarial wind that moans  
Is the breath of those dead men near.

And its slow, pale people seem merely wraiths  
That have strayed away from the tomb,  
Clutching their cold, ancestral faiths  
And wrapped in the garments of gloom.

And the mountains rise up and restrict the sight,  
As its creeds restrict the soul;  
But away and over the frowning height  
Those billowy pastures roll.

And there the people are flesh and blood,  
Sinew and muscle and brain,  
And the strong life-tide is a crimson flood  
Thrilling through nerve and vein.

They ride for miles o'er meadows of green,  
They follow the trail of the kine,  
And scarcely a tomb by the way is seen,  
And the air they drink is like wine.

Brown of feature and bold of heart,  
They ride in the face of the blast;  
And Nature is dearer to them than Art,  
And the Present is more than the Past.

They do not sit down by the tombs of the dead,  
They live in the world of to-day;  
For the Present is here, and the Past has fled,  
And the Future is on the way.

Then ho! for the West-land, fair and broad—  
The land where thought is free,  
Where people live close to Nature's God,  
Oh! that is the land for me!

—Ella W. Wilcox.

### Aunt Sabrina's Teapot.

[Written for the RURAL PRESS by M. B. D.]

Lotta had been sweeping all the morning, and as the weather was clear and warm her task had been unusually tiresome. She pushed the broom before her in a rapid, irregular manner, that sent puffs of dust all about the rooms and over herself, making her feel disagreeable as well as tired, and giving her an undue amount of dusting to perform. When the whistles blew at noon, and she saw how little of her work was done, she felt discouraged and rebellious.

Placing the broom against the wall carelessly, and donning a wide-brimmed garden-hat, she hurried away from her unpleasant duties, and soon found herself in the hayfield. She sat down upon a low mossy stone, in the crevices of which grew delicate ferns, and all about her nodded the wild oats with their pendant bead-like heads drooping down among the wild flowers. Here was a cluster of poppies, yellow and bright as golden twenties; and near them bent a bunch of bluebells, ringing with gilden tongues their airy chimes, heard only by elves. The breezes came whispering over the fields and seemed to be welcomed with nods and courtesies from the verdure. While she was watching the gentle undulations, and rubbing with a soothing motion her soft palms that were nearly blistered by sweeping, she heard a voice calling in the distance, "Chick! chick! chick!" and looking up saw Mrs. Stratton scattering grain in her poultry yard for the fowls that came flocking from all directions with outspread wings.

Lotta could see her snow-white apron gleam in the sunshine, and pictured to herself the Swiss lawn cap, with its edges of lace, which that lady usually wore in the morning. She recalled the outlines of her trim-rounded figure as it appeared in her neat house dresses. Her home was as tidy and pleasant as its mistress. Lotta knitted her brows as she sat wondering how Mrs. Stratton could do so much and yet always be cheerful. Her family was particularly hard to care for. There were three brown-eyed Stratton babies, the eldest of whom had seen scarcely eight summers. These children were as dimpled and merry as their mother. Two orphan cousins, delicate as lilies, five and seven years old respectively, had come to share their home; and, with the work for so many little ones, the poultry yard and the garden, she seemed the possessor of magic to do so well. Looking from the hayfield that sloped down to the Stratton cottage, the scene appeared like a part of some play.

"What a late hour to begin such work," thought Lotta, as Mrs. Stratton increased her hands in a pair of her husband's old driving gloves and began her sweeping. She first opened the windows and sprinkled the floor with tea leaves. No little clouds of dust followed the broom as they had hers that morning; so here the furniture was comparatively

clean and the lace window curtains remained clear as frostwork. Lotta's hazel eyes opened their widest as she murmured to herself, "Oh! I know the secret now. It is tea leaves. I will call there this evening."

Hastily plucking the wild poppies and bluebells, she fastened them into the bosom of her dress and arose with alacrity. As she turned she was startled to see a young man close beside her. He had a gun on his shoulder and a gamebag full of quail. His intelligent face expressed as much surprise as her own. Evidently she had not attracted his notice before, and suddenly to see a full-grown field goddess appear, as though she had been walking invisible, startled him for a moment. He raised his hat and politely begged her pardon for having surprised her. Replying hastily and in rather a confused manner, it must be confessed, she sped along the slope and was soon hidden among the lilacs that bloomed about Mr. Hunt's home.

Lotta Delgate was an orphan, and she lived in the Hunt family as a maid-of-all-work—a position hard to fill at best, and in this instance particularly so, since Mrs. Hunt was a strict disciplinarian and very fond of engaging in public work. When they took Lotta she had described the situation.

"If I am to do any good in the world, I must be free to go and come when I please. A hired girl always takes advantage of such things, and I have had enough trouble with them. A young orphan entirely dependent upon me for everything would have to consider my wishes and share my household responsibilities. She could not turn up her nose and leave if I did not suit her."

Lotta had been selected from a number of applicants, because she seemed a cheerful, vigorous girl, who would perform her duties with resolution.

"I like to see some spunk in the people about me, and this one appears to just suit," Mrs. Hunt concluded, after she had criticised the girl to her own satisfaction.

Lotta found her new position pleasanter after several months; for her disposition was bright and amiable, and enabled her to gain the good-will of the family. Mrs. Hunt was not a methodical housekeeper, and Lotta, having had no previous experience in such matters, did her work in an irregular manner that made it harder than it ought to have been.

When the early dinner was over and the children were engaged with their lessons, she gained permission to spend part of the evening at the Stratton cottage. Lightly she tripped through the garden, bright with blooming annuals and vines, and knocking at one of the French windows, opened it herself and stood looking into the dining-room. The Strattons had just sat down to their evening meal, and formed a pleasing group. Fresh and sweet as pinks were the children, all sitting demurely in their high chairs, and eating out of little painted bowls their pudding and milk, while Mr. and Mrs. Stratton chatted together and discussed a heavier meal. Lotta was very welcome, and they invited her to a seat at the table. Before her was placed a cup of tea, so dainty in appearance, and from which arose so fragrant an aroma, that she was tempted to sip it as she talked. She avoided, half unconsciously, a little stem of the tea plant that floated about on the surface.

"That bean in your teacup reminds me of your old Aunt Sabrina," remarked Mrs. Stratton, as she noticed it. "She delighted to read fortunes from the tea-leaves, and she did it, too, with the air of a genuine sybil. Once she tried to explain to me the secret of her necromancy. I recollect little of the art, but the evening that I spent with her over the teacups I remember well. It was the last term she taught in the old Lafayette school, and I was one of her pupils. I think I was nearly as old as you are now, and Miss Delgate, having taken a fancy to me, used to invite me to her house sometimes. What a queer old place it was! I always thought of a ship's cabin when I entered it. I believe she bought it of a retired sea captain, did she not?"

While Lotta listened she recalled this old maiden aunt and associated her with the tall wallflowers about her cottage entrance that held up proudly their luxuriance of orange-colored blossoms. Aunt Sabrina moved among them with a kindred grace that seemed to mark her as one of their own sisterhood. She had always given Lotta prune sauce and cookies for refreshments, and called her "child" in a deprecating way when she visited the cottage.

"Yes," answered Lotta to Mrs. Stratton's question, "Captain Blake sold the place to Aunt Sabrina. He left there large quantities of shells, corals, and other things of the same nature, which he had brought from beyond seas. She had an old tea-chest half full of savage ornaments, walrus tusks and dried sea-mosses, and she used to let me look them over when I went there with my mother. Her patchwork and knitting she kept in the same chest, and I remember it sat in her chamber beside her writing desk."

"When she died, she gave it to me with her last words. She tried to say something more about an old Britannia teapot that was in it; but her voice failed before she could make herself understood. I have it still in the same chest, and some time when you take tea at our house I will use it, and you may tell my fortune from the tea-leaves, just as Aunt Sabrina used to tell yours."

This recalled the incident of the morning, and led to a discussion upon the art of sweeping.

It was late in the summer before Mrs. Stratton took tea with the Hunt family. She sat talking with her hostess, while Lotta prepared the meal. The hayfield had been stripped of the waving oats and wildflowers that had been so fresh that spring noontide, when Lotta had sought a refuge there from her unfinished tasks. Now, the low gray stone rose above the stubble, and she could see it from the window. She had learned the name of the stranger who had surprised her that day. He was Walter Snell, a young doctor who had come to obtain a practice in the town. And he was well known, since his father was a considerable farmer in the county. Lotta had been introduced to Dr. Snell since, and the low gray stone often recalled him to her mind, although she seldom saw him. Indeed, she was thinking of him when she took the old Britannia teapot from the chest and wondered what sort of a fortune Mrs. Stratton would tell her. She opened the lid to wash it, and was surprised to find a little roll of notes—some papers and some old-fashioned trinkets—inside.

"Poor Aunt Sabrina must have appropriated this for her strong-box," thought she. "How queer old people grow in their ways."

After making the tea she slipped out into the arbor and sat down in the children's swing to examine her treasure. First, she noticed her aunt's gold thimble, and fitted it upon her own finger. Then an old-fashioned gold buckle and a cluster of watch charms, formed of a tiny enameled heart and cross attached to a ring. The notes and two or three small coins must have been her aunt's ready spending money.

"What a queer, stiff paper this is," remarked Lotta to herself, as she unwound a piece of tape from a neatly-folded roll. Her hands trembled and her blooming cheeks lost their color when she discovered that it was her aunt's will. She and two cousins whom she had never seen were left the bulk of Miss Delgate's property. She gave it to them, she explained, because they had been poor, and yet had never asked her for anything.

This missing will had caused her relatives much wonder and disappointment. They had all supposed her rich, and when no will and but little property could be found they were exceedingly chagrined. The wise old lady had invested most of her money in Government bonds, and it had been increasing in safety ever since. Lotta's share was \$8000, a sum which was riches to her.

She folded these precious gifts in her handkerchief, and placed them carefully in her pocket; then hurrying to her duties, for she had lingered longer than she ought to have, she met Mrs. Hunt in the kitchen, and was severely reprimanded by her for her unusual carelessness.

"You heedless girl!" exclaimed her mistress, "you have burnt the toast and oversteeped the tea. This is all the worse because Mr. Hunt has invited the young doctor to dine with us."

Poor Lotta, nervous with excitement, hastened to repair the mischief. In a trice the ham and eggs were daintily prepared, the tea cakes ready and all served in a proper manner. Dr. Snell spoke to her pleasantly as he took his seat at the table, and she poured out the tea for him.

Mrs. Stratton told a splendid fortune from the leaves in Lotta's cup when the meal was over, and they lingered together after the rest were gone. She painted in glowing colors a handsome young man who would soon lay his heart and fortune at her feet; and this was done in the mysterious gipsy style. Lotta listened and waited in vain for a prophecy of her new-found treasure.

What a glorious evening that proved! The air was scented with flowers and moonlight streamed through the vines, penciling a tracery of shadows upon the veranda where they were all seated. Lotta pictured in a thousand dreams the bright future which her aunt's will made possible to her. This new hope gave her a confidence that rendered her manner and conversation far more engaging than ever before. She did not guess that her modest grace and worth had quite won the young doctor. He had noticed that she did her work with a natural tact and aptitude that gave to those homely duties a pleasing beauty. She waited upon the children graciously, as though it was a pleasure; and he imagined to himself what a delightful mistress she would make of her own home. He resolved to offer her a fairer opportunity than even she had yet deemed possible for herself. This he did without delay and in a characteristic manner. Mr. Hunt had asked him to write a prescription for one of the children who was troubled with a cough. He wrote two, and giving them both to Lotta, said, "One is for yourself."

"But I need no medicine, doctor," she replied. "Read that one and then tell me if you will take it," he returned rather anxiously.

He did not wait for an answer, but said, as he bade them good-night, that he would call to-morrow and see what effect his prescriptions had produced. When Lotta admitted him the next evening he read the promise of his happiness in the first glimpse of her fair, radiant face, and he made it known to Mr. and Mrs. Hunt as soon as Lotta consented.

"That is just my luck," fretted Mrs. Hunt, after the doctor had taken his leave. "The first girl who ever suited me must betroth herself without the least consideration for me. How can you permit it?" she asked her husband. Then, observing his amused look, she continued: "Of course I told the young fellow that he could take her myself, but I was consider-

ing only her own good, though she is well off here. However, she has been a first-rate girl and I will make her a wedding. Do you hear, Lotta, I promise you as fine a wedding as any one in town could have."

Lotta thanked her warmly for her kindness. Mrs. Hunt kept this promise, too, bestowing upon her much happiness; and as Lotta showed no undue pride in her good fortune, she won the life-long friendship of her old mistress.

Mrs. Dr. Snell often gives tea parties in her pleasant, tasteful home, and the old-fashioned Britannia teapot always appears upon these occasions. She cherishes a fondness for it because, as she once said to her husband, "If it had not kept Aunt Sabrina's secret so long we should never have met each other."

### Thoreau on Books.

Books must be read as deliberately and reservedly as they were written. To read well, that is, to read true books in a true spirit, is a noble exercise, and one that will task the reader more than any exercise which the customs of the day esteem. Most men have learned to read to serve a paltry convenience, as they have learned to cipher in order to keep accounts and not be cheated in trade; but of reading, as a noble, intellectual exercise, they know little or nothing; yet this only is reading, in a high sense; not that which lulls us as a luxury and suffices the nobler faculties to sleep the while, but what we have to stand on tiptoe to read and devote our most alert and wakeful hours to.

I think that having learned our letters we should read the best that is in literature. There is a work in several volumes in our circulating library entitled "Little Reading," which I thought referred to a town of that name which I had not been to. There are those who, like cormorants and ostriches, can digest all sorts of this. If others are the machines to provide this provender, they are the machines to read it. They read the nine-thousandth tale about Zebulon and Sephronia, and how they loved as none ever loved before, and neither did the course of their true love run smooth—at any rate, how it did run and stumble, and get up again and go on. How some poor unfortunate got up on to a steeple, who had better never have gone up as far as the belfry; and then having needlessly got him up there, the happy novelist rings the bell for all the world to come together and hear how he got down again. For my part, I think they had better metamorphose all such aspiring heroes of universal noveldom into man weathercocks, as they used to put heroes among the constellations, and let them swing around there till they are rusty, and not come down at all to bother honest men with their pranks. The next time the novelist rings the bell I will not stir though the meeting-house burn down.

"The Skip of the Tip-Toe-Hop, a romance of the middle ages, by the celebrated author of 'Tittle-Tol-Tan,' to appear in monthly parts; a great rush; don't all come together." All this they read with saucer eyes and erect and primitive curiosity. The result is dullness of sight, a stagnation of the vital circulations, and a general deliquium and sloughing off of all the intellectual faculties. This sort of gingerbread is baked daily and more sedulously than pure wheat or rye and indian in almost every oven, and finds a surer market.

How many a man has dated a new era in his life from the reading of a book. The book exists for us, perchance, which will explain our miracles and reveal new ones. The at present unutterable thing we may find somewhere uttered. These same questions that disturb and puzzle and confound us have in their turn occurred to all the wise men; not one has been omitted, and each has answered them according to his ability by his words and his life.—Thoreau's Walden.

### Not for Sale.

"A few weeks ago," said a drummer, "I told you a little story about Schumacher, the Ohio oatmeal king, who has just been ruined by a fire, sacrificing several thousand dollars rather than break his rule of refusing to employ a man who drinks liquor. Since then I have been in Akron and seen the ruins of Schumacher's great mills. A few days after the fire two men from Cincinnati called on Schumacher. They said they had heard that in the cellars of the mill was a vast quantity of grain damaged by smoke and water, and they had come with the intention of buying it. The matter was talked over and a bargain finally struck. The men drew their check for the purchase price, a sum running into the thousands, and were just about to hand it to Schumacher when one of them happened to remark that they would be able to make a good deal of good whisky out of that grain."

"Do you want this grain to make whisky of?" inquired Schumacher, stepping back a few feet.

"Yes; we are distillers in Cincinnati."

"Then, gentlemen, you cannot buy any grain of me. I have no grain to sell to be made into whisky. Good-day, sirs."

"And as the damaged grain was only good for distillers' use, Schumacher gave every bushel of it to teamsters, expressmen, draymen and poor families keeping cows to feed their stock, on condition that they would haul it away."—Chicago Herald.

## YOUNG FOLKS' COLUMN.

## A Certain Day.

[Written for the RURAL PRESS by BECCA M. SAMSON.]

It was a beautiful, sunny September morning, one of those bright days when the sky is so blue you can scarcely look at it, and the birds seem to sing as loud as all the birds of the world together. It was one of those happy mornings when little children rebel against schoolrooms and lessons, and linger till the last moment by the hedges, where the nuts are beginning to ripen and the green leaves are putting on their pretty autumn coats.

But this is not the reason the little boys and girls of Miss Porter's private school crept along the high-road with such slow, unwilling steps.

The schoolhouse, which was really a dear little cottage home, was pretty enough to tempt the laziest scholar of them all to run to get there; and Miss Porter, with her gentle face and sweet voice, was not the sort of a person children are afraid of.

If you follow the little band of boys and girls along the winding road, and steal behind them as they enter the grassy playground behind the cottage, you will soon find out what the trouble is.

"It's the end of the world to-day," whispered a little girl to a group of playmates, who stood huddled together as you may have seen little chickens huddle together when something has frightened them.

"Oh, my! oh, my!" said another, "I'm frightened half to death; I've been just as good as can be all morning, and begged mamma to let me stay home from school; but she only laughed when I told her why, and sent me off."

"Granny Bobkins says awful things are going to happen," piped a little voice from the center of the group; "she says the moon will turn red and there will be three days darkness; then there will be an awful bump, just like two cars banging together, and the whole world will burst up and all of our heads will be blown off."

"Oh! I want to go home to my mamma," cried a little tot who wore socks and high pinafores; "I don't want to be all blown up without my papa and mamma."

"You silly goose!" exclaimed Freddie Hilton, a mite of a boy just in trousers, "ain't that way at all; my big brother knows all about the end of the world, and he ain't afraid of it, neither; he says we'll just pop off quicker 'an a flash; that's how it is."

"Will it hurt?" asked timid Rosie Dalton.

"Hurt!" exclaimed the wise Freddie, in disgust at such a question; "would it hurt a worm to be blown out of a cannon? My big brother says we ain't no better than worms, and the world is bigger than 10,000,000 cannons."

"Will Miss Porter go too?" asked a pretty little maiden, with blue eyes full of tears.

"I don't mind the end of the world so much," said another little girl with a very sad face, "because then I might get to heaven where my papa and mamma are; but if my head gets blown off here will they know it's me?"

"Perhaps," said another, "when the big bump comes, this part of the world will stick fast; it must be dreadful strong because there are so many mountains in it."

"Ho, ho, ho!" yelled Tommy Teazer; "what a silly boy you are! Don't you know mountains are the very things the end of the world comes out of? I can show you a picture of one in my house, with smoke and fire coming out of it just as good as any chimney in the town; besides, I know this is just the shakiest part of the whole world; it's full of cracks down below by the river. I tell you the end of the world is going to cut awful capers about here. I've seen lots of them where I come from. There'll be noises like thunder, and fire and smoke'll come tumbling out of all the cracks in the mountains, and you'll be burnt up before you know it; but I ain't afraid, 'cause I know a place to hide where no earthquakes nor nothing can catch me."

Tommy Teazer was the biggest boy in the school, and was, besides, a very naughty one to frighten his little schoolmates by such silly tales. Nothing ever seemed to frighten him—not even the cross bull in the next field, who made such horrible eyes at the children when they were playing.

"Dear, dear!" whispered the poor children, cuddling closer together. "I wonder if it will soon be here?"

Just then the school bell rang out so loud and suddenly that the trembling little creatures gave a sharp cry of terror and ran pell-mell toward their teacher, who stood smiling down at them from the doorway.

"Don't play so roughly, little ones," she said, in her gentle way, as the frightened group rushed panting into her arms. "Come, now," she continued, turning and leading them into the cheerful parlor where they learned and recited their lessons, "take your places and let us see what wonderful things you can do this beautiful morning."

"Isn't it funny, teacher doesn't look one bit frightened?" whispered Lulu Martin to her neighbor, Blanchie Thompson.

"Perhaps she doesn't know it's to be the end of the world," Blanchie whispered back. "Oh, dear me! I wish I didn't know it."

Miss Porter was so busy arranging a pile of

copy-books that lay before her that she didn't see the children's pale faces or notice how nervously they started at every sound.

"Oh, dear! oh, dear!" said poor little Gertie Paylor, shutting her book with a deep sigh, "there's no use trying, I can't study this morning. What's the use, anyhow, if we'll all be dead before two o'clock?"

The little tot in socks and pinafores heard what Gertie said and screwed up her lips for a big cry.

Gertie thrust a handful of peppermints into the little tot's hand to keep her quiet.

"See, the sun's turning black; the end of the world is coming for sure now," said naughty Tommy Teazer to the boy next to him.

In another minute every head in school was turned and twisted for a glimpse through the open window of a little gray cloud that had sprung up from somewhere and was slowly sailing into the big yellow sun.

"Come, children, your places for geography," called Miss Porter, who had finished with the copy-books.

Up rose all the little boys and girls, and spread themselves out in a row before their teacher.

"Well, Miss Rosie, what is an island?" asked Miss Porter of the little girl who stood at the head of the class.

"I don't know, ma'am," Rosie answered in a low voice, and hanging her head.

"Why, Rosie! how does that happen?" asked Miss Porter in surprise; "are you not well this morning? It is something new for you to miss a question. Can the next little girl tell me what an island is?"

"A big thing that roars," answered the other little girl, whose eyes were far away out of the window and up in the sky, where the little gray cloud was sailing.

"Lucy, Lucy!" exclaimed Miss Porter, "what foolish things are you trying to say? I'm astonished; perhaps wee Sadie can tell us what an island is better than that."

"An island is—an island is—boo-hoo-hoo," cried Sadie; "I want my mamma."

Miss Porter laid down her book. "Come here, Sadie," she called; then, putting her arm about the little girl, she said, gently: "Don't you remember you promised your mamma to be a good child and study well? Are you not going to keep your promise?"

"I want my mamma, and I want my kittle," Sadie answered, screwing her two fat fists into her eyes.

"Well, well," said Miss Porter, kindly, "sit by me, and listen while Master Freddie tells you what an island is."

"An island," Freddie replied, in a big voice (he wasn't going to let the girls think he was afraid), "an island is—" at this moment somebody dropped a book with a bang—"Oh! oh!" yelled poor, startled Freddie, "I don't know what an island is; I want to go home."

"Freddie! I'm ashamed of you!" declared Miss Porter, gravely; "the idea of such a big boy as you are, setting so bad an example. There! you have made little Tottie cry."

Everybody was crying now; "boo-hoo-hoo," piped the girls; "boo-hoo-hoo," roared the boys. At the same time the little gray cloud got into the sun's way and made the old fellow frown in quite a gloomy fashion. At the very same moment a wagon went rumbling and creaking over the bridge that crossed the river; it was enough to send all the children screaming with fright to bury their faces in Miss Porter's lap.

"The end of the world is coming," they cried. "Teacher, dear teacher, don't let us be burned up."

"Why, you dear, foolish little children," exclaimed Miss Porter, who understood all in a moment, "who has been telling you these silly stories?"

"Everybody says so," answered Lulu Martin, lifting up a flushed, frightened face. "They say the world is coming to an end to-day before 2 o'clock, and lots of folks have packed up their trunks and gone away."

"I hope my little boys and girls have better sense than these foolish people," said Miss Porter. "Look up and see the bright sunlight trying to peep into your faces. Listen! how merrily the birds are singing; do you know what they are saying? They are saying, 'Run away, little children; put on your hats, bring your lunch baskets and come out to the woods where we can play with you.'"

The children, forgetting in an instant all their fears, ran with a shout to the cupboard, where their hats and baskets were kept. In a few minutes they were rambling and scrambling after their kind teacher, who led the way across fields to a little hollow between the hills, where there was a stream to wade in, a cave to explore and a beautiful wood full of curious things.

"Now, boys," said Miss Porter, after they had all had a nice little rest on the cool grass, "run, gather as many dry branches as you can find and we'll soon have a roaring camp-fire to cook our lunches by."

"But they're all cooked," said a little girl, with wondering eyes.

"Yours are, but mine is not," Miss Porter replied, with a wise smile.

Presently the boys came back, their arms loaded with branches and pine-cones. The girls cleared a space upon the banks of the stream, and in less than no time a great fire was crackling and roaring in the woods.

Suddenly, who should appear in the midst of them, like one of the good genii in the Arabian Nights, but Jerry, Miss Porter's man-of-all-

work, who trundled before him a wheelbarrow which held—what do you think? Miss Porter's lunch!

How the children laughed when they saw what a quantity of things she had provided for herself!

"You see, children, I have a big appetite," Miss Porter laughed, as she dragged from the wheelbarrow a sack, out of which tumbled such a quantity of big brown potatoes—enough for the whole party of 12 little people; then followed as many round, rosy apples, saying "eat me," as plainly as possible; next came a tin of crisp, spicy cookies, and a bag of last autumn's nuts; and best of all, there was a huge can of sweet milk, just warm from the old brindle cow.

"There, children!" cried Miss Porter, as she lifted the milk-can from the barrow and stood it in the tall grass, "you must all help me eat my lunch; and while the potatoes and apples are roasting you can empty all your own little baskets on the grass, and we'll see how many good things we can find among them."

Miss Porter then whispered something to old Jerry, who nodded and smiled and looked very wise as he mopped his hot forehead with a red cotton handkerchief; but the children forgot all about him before he and his wheelbarrow were well out of the wood. They had more important things to occupy them than old Jerry.

The apples and potatoes buried in the hot cinders needed constant watching. Even naughty Tommy Teazer was too busy finding the hottest place for the biggest potato to think of mischief.

And Baby Tottie, who wasn't a day over five years old, sat on the grass before the fire toasting a tiny red apple stuck on the end of a twig; and she was so busy that she never noticed three big mosquitoes sitting on her little bare legs.

When the potatoes were well baked they were poked from the cinders and piled in a great heap on the grass, and didn't a lot of hungry little people make a rush to get at them! Even fussy little Pearl Watson, who never touched potatoes unless they were whipped to a froth with cream, actually devoured two of the very biggest without salt, and then asked if she couldn't have a third one.

As to the roasted apples—well, please don't ask me about them; they didn't live long enough to know they were cooked. The cookies flew away as though they had wings, and, strange to say, nobody seemed to know where they went to; perhaps the long-legged spiders carried them off.

And oh, wasn't it fun to empty the lunch-baskets and discover what was in them?

One had a slice of lemon pie, another a piece of coconut cake; some had tarts, others buns; there was just enough of everything for a bite all around.

By-and-by, when there was nothing more to eat, and the milk was all gone, Miss Porter took the children into the woods, where they gathered flowers and collected pretty stones and mosses, and when they were tired she gathered them about her and told them the prettiest stories she knew. It seemed as though she had barely commenced when she started up suddenly, crying, "Dear me, children, I'm forgetting; it will soon be time for little boys and girls to be in bed. Now let's see who'll reach the schoolroom first."

It didn't take long for the happy, frolicsome children to scamper away across the fields and over the ditches; they were already at the schoolroom door before Miss Porter, with little Tottie, were over the last stile.

What time do you think it was by the clock in Miss Porter's hall?

I am sure nobody can ever guess.

Two o'clock?

Indeed, you are very much mistaken!

Three o'clock, then?

Wrong again!

Well, I'll have to tell you—it was six o'clock. Six o'clock in the evening, when the chickens and ducks begin to think of going to bed.

The children were so astonished that they could do nothing but stare, first at the clock, then at one another.

"I guess we were so busy roasting the potatoes we didn't notice the time," said little Lulu Martin at last, which was probably the very reason, as nobody gave any other.

"I wonder why our mammas didn't get frightened and come after us," said Gertie Paylor.

"I think Jerry can explain that better than I can," said Miss Porter, with a smile.

But Jerry didn't explain anything at all. He walked home with the children and left them one by one at their homes, where nobody was surprised to see them or scold them for coming so late. It was more than a week afterward that some little boy or girl of Miss Porter's private school was heard to say: "Why, the end of the world didn't come, after all."

Alameda, Cal., Sept. 30th.

THE KING OF SERBIA seems to have a parental care over his subjects, as witness the following edict, which, it is said, he has recently issued: "Whereas, it is irrefutably proved by science that the so-called antiseptic treatment of wounds yields more beneficial results than all other methods, we are pleased to order that henceforward the said antiseptic plan of treatment be solely employed in all the hospitals of our kingdom, and that corrosive sublimate and iodoform be used until our further disposition."

## DOMESTIC ECONOMY.

**RED CABBAGE PICKLE.**—A pickle which will keep a few weeks, and which is very appetizing, and will help to save the other more expensive pickles, is made of red cabbage. Choose firm heads, cut them into quarters, and after removing the stalk cut the cabbage across into very thin slices; spread it upon large platters, scatter salt with a liberal hand over it. The next day, drain through a colander. Then put the cabbage into a jar, and pour vinegar heated to the boiling point over it, some whole black pepper, and, if you choose, a little cayenne pepper or curry powder or ginger may be put into the vinegar and be heated with it.

**BATTER AND FRUIT PUDDING.**—Chop up one pound of apples and put them in a greased pudding basin (gooseberries, plums or any other fruit will do), and sprinkle sugar over them; now make a batter of one egg, six ounces flour and one breakfast-cupful of milk; one-half a teaspoonful of baking powder must be added to the flour; when the batter is smooth, press it over the fruit and steam gently for one hour; care must be taken that the water remains boiling and does not evaporate too much.

**TO MAKE A TOUGH FOWL TENDER.**—The French have a way of making a tough fowl tender in roasting which is worth following. It should be seasoned and tied up securely in two thicknesses of soft white or pale brown paper and put into the oven half an hour earlier than the time one would choose to assure its being done. It will steam slowly in this way, and if delicately dredged with flour when the paper is taken off at the end of the half-hour in a hot oven, it will come out brown and easily carved.

**BOILED LETTUCE.**—If the lettuce is not delicate enough for salad, cut it in pieces and boil it soft in water slightly salted; when cooked, drain every drop of water from the leaves. Put some flour in a pan with some butter on the fire, and let it cook until it is yellow; turn the lettuce in it, and let it boil once or twice. Pour some stock over the lettuce; let it boil once again, and just before serving pour in a little cream. A little nutmeg is sometimes liked.

**TOMATO CATSUP.**—Cut up and stew ripe tomatoes, but do not peel them. When sufficiently cooked, strain through a sieve. To one gallon of the tomatoes, measured after straining, add four tablespoonfuls of salt, four tablespoonfuls of ground black and white pepper, three tablespoonfuls of ground mustard, three red peppers chopped fine and one pint of vinegar. Simmer all together slowly for four hours, then bottle and cork tight.

**CALF'S LIVER.**—Try this Austrian method of cooking calf's liver: Remove the skin from the liver and cut it in pieces as thick as your finger and lay them in milk for several hours; then take them out of the milk and sprinkle them with flour; dip them in beaten egg and cover them with flour with which you have mixed a little salt. Fry them in hot drippings and serve garnished with minced parsley.

**ITALIAN CREAM.**—Rub the zest of two lemons upon three or four lumps of loaf sugar; stir these into a pint of rich cream and add enough sugar to sweeten. Whip the cream with the juice of one lemon, straining in one ounce of gelatine that has been dissolved in a little water. When thoroughly light, flavor to taste and pour into a mold and freeze. When served, garnish with preserved fruit.

**STUFFED POTATOES.**—Bake large potatoes until done; cut a "cap" from the top of each; scoop out the inside carefully and mash softly with butter and milk. Mince the giblets of your chicken fine, season with pepper and salt, stir into the potatoes, add the beaten yolk of an egg, beat in a saucepan until very hot, fill the skins, replace the tops and set in an oven for three minutes.

**STUFFED TOMATOES.**—Get them as large and firm as possible; cut a round place on the top and scrape out most of the inside and mix it with fine bread crumbs, parsley, onion, pepper and salt. Chop all fine and stuff the tomatoes carefully. Put a good lump of butter in the pan and baste while baking. Cook until brown and well done.

**COOKED CUCUMBERS.**—Peel and put into ice water for a few minutes, then slice thicker than for the table and put into salted boiling water and cook until tender. Drain and add butter, salt and pepper, with cream enough for a dressing, and pour over buttered toast. Serve quickly and eat at once. Excellent.

**APPLE MARMALADE.**—Take any kind of sour apples, pare and core them; cut them in small pieces and to every pound of apple put three-quarters of a pound of sugar; put them in a preserving pan and boil them over a slow fire until they are reduced to a fine pulp; then put in jelly jars and keep in a cool place.

**CHEESE AND EGG SANDWICHES.**—Grate the cheese, and to each cupful add the yolks of three hard-boiled eggs, minced fine; rub to a paste with a teaspoonful of butter, season to taste with salt and pepper, and spread between buttered bread or crackers. These are nice made of graham bread.

## The Week.

The question now seems to be, were the very  
light showers which came last week intended  
to constitute our "first rain" for the year?  
They seemed to be enough to produce a sensi-  
ble effect upon the air in the upper part of the  
State at least, while there was hardly enough  
reached *terra firma* to pit the dust. If this is  
all we are to get of the terrific phenomena  
which the prophets set down for California, we  
certainly have escaped very easily.

The State is still all alive with district and  
county fairs. Just behind us are the San Jose  
fairs, (elsewhere described) and that of the  
Tenth District, embracing Shasta, Siskiyou and  
Trinity, which was held at Yreka with a very  
large attendance from all parts of that region.  
This week the Nevada State Fair has opened  
at Reno with fine weather, many visitors and  
lively racing; while here in California, Lakeport,  
Salinas City, Santa Cruz, Santa Barbara, Downey  
and San Diego have fairs in progress. Next  
week the Sixth District—six counties—exhibits  
at Los Angeles; the Ukiah Park meeting takes  
place; the new Arroyo Grande Agricultural As-  
sociation holds a fair and cattle show, and Visa-

lia is making active efforts to accommodate the  
horses, cattle, sheep and swine, and those bipeds  
who are expected to show and view the four-  
footed creatures between Monday and Satur-  
day.

## Pleuro-Pneumonia.

In the RURAL of September 4th we published  
a circular from Col. Colman, Commissioner of  
Agriculture, concerning the way in which the  
U. S. Government, under the law passed by  
Congress last winter, could take part in efforts  
for the suppression of pleuro-pneumonia if the  
dread disease should break out in any part of  
the country. Readers who turn back to that  
publication will see that the General Govern-  
ment can only act as assistant to the State Gov-  
ernments when requested to do so by the State  
authorities, and can therefore act only as pro-  
vided by State laws in the matter of killing ani-  
mals necessary for stamping out the disease. It  
was designed by those who urged the establish-  
ment of the Bureau of Animal Industry that  
greater power should be given to it, but Con-  
gress thought otherwise. As will be seen by the  
circular to which we allude, the Bureau is  
authorized to determine the existence of the  
disease and establish quarantine, but can go no  
farther, apparently, except in conformance  
with State laws.

The wisdom or folly of this arrangement is  
now under test in a manner calculated to draw  
the attention of the whole country to its re-  
sults. Pleuro-pneumonia has appeared in Chi-  
cago. For the last two weeks about 2000 ani-  
mals have been under quarantine, and future  
proceedings are so entangled between the State  
laws of Illinois that there is some doubt as to  
the outcome.

An outbreak of pleuro-pneumonia is, by reas-  
on of its dread possibility, calculated to arrest  
attention, not only in this country, but where-  
ever cattle are grown all over the civilized  
world. Contagious pleuro-pneumonia, or "lung  
plague," has within two centuries spread from  
a very small area over nearly every part of the  
world. From 1769 to 1789 the disease was  
more or less limited to the Swiss mountains—the  
Jura, Daphine, the Vosges, Piedmont and  
Upper Silesia. Since the revolution its appear-  
ance has been greatly accelerated, and it has  
been carried to almost every country on the  
globe. In consequence of its insidious inva-  
sion, the subtlety of its contagion, and the  
great fatality attending it, there can be no  
doubt that it is one of the most disastrous  
plagues that can afflict a cattle-producing  
country. Fortunately it is entirely confined to  
the bovine species. No well-authenticated in-  
stances of its transmission, either accidental or  
experimental, to other species have been re-  
corded.

The appearance of the disease in Chicago  
was, as might be expected, among the swill-  
milk factories of that city. Distillery dairies  
are an abomination. Their product saps the  
strength of the city, murders the babes and ad-  
ministers a slow poison to the adults. This  
work is so insidious that only occasionally are  
the people aroused. These filthy distillery  
stables are also hotbeds of cattle disease, owing  
to their total lack of sanitary regulation and  
the nature of the feed given which predisposes  
the animals to virulent disorders.

The telegrams to the daily papers have given  
rather confused statements about the Chicago  
outbreak, and we have preferred to wait until  
mail advices brought more intelligible accounts.  
The disease was discovered on September 12th,  
by John Casewell, State Veterinarian. He was  
called to treat a sick cow, and found pleuro-  
pneumonia. An examination of the swill-milk  
establishments was then made with the follow-  
ing results:

On Monday a visit was made to the Schu-  
feldt distillery, where were kept 865 cows. A  
 cursory examination resulted in the finding of  
seven pronounced cases of the fatal malady. The  
cattle were ordered quarantined and a couple  
of officers were stationed at the distillery to see  
that no cows were permitted to enter or leave  
the place. The wisdom of the move was appar-  
ent when Thursday it was found the disease  
had made inroads on the herd.

At the Phoenix distillery, North Branch and  
Clybourn, 1100 head of cattle were housed.  
It was from that place the Quinn cows  
were removed to Harvey's farm, where they  
spread the disease. A careful examination was  
made into the condition of the animals. The  
sheds were far from being clean; in the stalls  
there was little room for the cows to do any-  
thing but give milk. After traversing half the  
distance of the large corral, the commissioners

came upon two cows that were almost dead.  
They were removed from the others, an effort  
having evidently been made to prevent their dis-  
ease, of whatever nature, from communicating  
itself to the other animals in the herd. The  
cows were unable to stand, and lay gasping in  
the filth of their stalls. They were ordered  
killed, and when their lungs were removed the  
presence of pleuro-pneumonia was observed in  
such a pronounced form that there was not  
room for even a doubt on the point.

At the Empire distillery no trace of the dis-  
ease was found, but a guard was kept on duty  
to watch for further developments.

A visit was made on Tuesday to the Harvey  
farm, where three cases of pleuro-pneumonia  
were reported. The cases were in better con-  
dition than when the veterinarian had last vi-  
sited them. Four deputy sheriffs were left to  
quarantine the place. One case was found at  
the Chicago distillery, and a quarantine was  
established there.

Something of the condition in which the cat-  
tle were found in some of the places visited may  
be learned from the following paragraph in the  
*National Live Stock Journal* of Sept. 28th, just  
at hand:

Arriving at the miserably-constructed sheds,  
wherein no fewer than 1200 head of cattle were  
quarantined, the foul odor arising from the  
premises was freely commented on in terms by  
no means complimentary to those to whose  
keeping the health and care of the animals were  
intrusted. Everywhere evidences of filth were  
visible, the poor brutes being obliged to stand  
in their own excrement to the depth of several  
inches. Bedding of any sort was nowhere to  
be found, not even one square foot of a dry  
board being visible. On entering the premises  
the first thing to be met with was the carcass of  
a cow that died that morning awaiting the ar-  
rival of the State Veterinarian and his small  
corps of experts.

The experts of the U. S. Bureau of Animal  
Industry and the State Veterinarian of Illinois  
at once undertook the repression of the disease.  
Effective quarantine was established, and is  
still maintained. The Governor of Illinois has  
given the outbreak his personal attention. The  
disposition of all concerned was at first to de-  
stroy all the animals found in infected places,  
and burn up the sheds in which they were kept.  
This would call for the slaughter of about 3000  
cattle. Where was the money to come from  
to pay for them? for, according to the Illinois  
law, all healthy animals killed must be paid  
for, and there was but \$49,000 in the fund for  
this purpose. The United States fund con-  
tained \$100,000, but the regulation is that the  
diseased animals shall be paid for if condemned  
to destruction. The Illinois law says diseased  
animals shall not be paid for, so within that  
State the United States cannot pay for cattle  
killed. The proposition then arose that the  
cattle should all be killed, and the meat of those  
pronounced healthy by the inspectors should be  
sold. This proposition brought the stockyards'  
interest and the beef-canning interest to the  
front, because to have it go out to the world  
that the meat from bands of cattle infected  
with pleuro-pneumonia was being sold in Chi-  
cago would be fatal to the meat-shipping in-  
terests of Chicago. Thus amid the conflict of  
authorities and laws, the cattle are still living  
in quarantine, the expense of which (\$150 per  
day) is being paid for by the United States.  
The latest advices by telegraph from Washing-  
ton are as follows:

Commissioner Colman, speaking of the opera-  
tions of the department at Chicago, says there  
seems to have been a total failure on the part  
of the State authorities to destroy the infected  
animals, and unless some action in that line is  
taken, a very large sum of money will have  
been expended simply in quarantining cattle,  
and the infected animals will still be on hand.

From Chicago the telegraph announces that  
the matter is still in conflict, with a probability  
that the meat of animals not showing disease  
will be allowed to go upon the market.

CHICAGO, Oct. 4.—It is learned this evening that  
at a later session of the Board, James Lynch, of the  
Shufeldt distillery, proposed to the commission that  
the owners be allowed to remove their cattle if found  
to be in perfect health. The commission then ren-  
dered a decision that will set stock-yard people by  
the horns. It was declared that if, upon an ante-  
mortem examination, the cattle were declared sound,  
the owner could take them out and slaughter them.  
Then a post-mortem examination would be held by  
the inspectors authorized by the commission, and, if  
no disease were found, the owner could do what he  
liked with the meat, sell it or destroy it as he chose.  
This is exactly what the stock-yard officials and  
business men say will ruin their business, and what  
they particularly protest against. Secretary Johnson  
is reported as saying: "There is no reason why  
the State or Government should pay for healthy cat-  
tle and destroy them. The law itself is against it.  
The stock-yard people are the only parties interest-  
ed in destroying the meat, and if they want healthy  
animals destroyed their only course is to destroy  
them."

All the Governors of States bordering on  
Illinois have issued proclamations quarantining

against Illinois cattle unless declared healthy  
by State certificates. The Range Association  
of the great interior States and Territories has  
declared itself against Chicago and the whole  
cattle interest is in an excited and apprehen-  
sive condition.

## Arbitration.

To the average mind nothing seems more  
strange and inexplicable than the conflict be-  
tween law and common sense in the law courts  
of the land. Submit any question of dispute to  
a few practical business men and they will settle  
it promptly on just and equitable business prin-  
ciples. Submit the same controversy to the  
arbitrament of a court, and common sense is  
straightway turned out of doors. The whole  
case is soon entangled in such a mesh of in-  
scrutable technicalities of pleading and evidence  
that the parties to the controversy can scarcely  
recognize their own case. It is a well-known  
fact that justice does not always insure a ver-  
dict. The whole case may go off on an absurd  
technic. Judge Edward A. Thomas, in an article  
contributed to the *North American Review*,  
says: "Justice should be meted out with cer-  
tainty, economy and promptness. Under our  
present system this cannot be done. The sys-  
tem itself is antiquated and unreliable, expen-  
sive and cumbersome. Litigation is feared and  
avoided by merchants, bankers and others  
on account of the delay, uncertainty and great  
expense which it entails."

The advantages of arbitration as a mode of  
settling disputes among business men are great  
and many. The arbitrators are the immediate  
choice of the parties and may be selected for their  
known integrity and intelligence. They hear a  
statement of the case, the evidence, and anal-  
yze and decide with the habits, instincts and  
tact of business men aiming to do what is fair  
and just between the parties. There need be  
no tedious delay, no unnecessary expense. The  
advantage of arbitration is no theory. The  
Boards of Trade in all our large cities have  
their courts of arbitration for settling disputes  
among the members. It is the rule among the  
Grangers, and the report is that troubles are  
promptly and satisfactorily settled in this way.  
A large class of cases may always have to be  
adjudicated in courts of law, but it is neverthe-  
less true that many controversies may be set-  
tled more promptly and with less delay and  
expense out of court. Litigation is too slow,  
too expensive, too vexatious, too uncertain and  
too unjust to satisfy the average business man  
of to-day, and it is a good sign of the times  
that arbitration is growing in favor.

EXPORTS AND IMPORTS.—The large balance  
of exports over imports, by which the country  
has for a long time been constantly growing  
richer year by year, is gradually decreasing.  
The figures for the 12 months ending July 31,  
1886, are as follows: Exports of merchandise,  
\$686,555,499; imports, \$641,852,273, leaving a  
balance in our favor of only \$44,703,226. The  
movements of precious metals during the same  
period were as follows: Exports of gold, \$42,-  
797,932; imports, \$20,735,009. Exports of sil-  
ver, \$28,541,554; imports, \$16,419,957. Bal-  
ance against us in precious metals, \$34,184,520,  
which reduces the balance of trade in our favor  
to the very low figure of \$10,518,706. Such  
figures do not look as though the country was  
on the road to prosperity, especially in its for-  
eign trade.

THE NEXT CITRUS FAIR AT SACRAMENTO.—At  
a meeting of the Sacramento Board of Trade, on  
Monday evening, a plan of organization of a  
permanent Central California Citrus Fair Asso-  
ciation was agreed upon and a constitution  
unanimously adopted. It provides for a board  
of directors of nine from Sacramento county,  
with two from each of the other counties in the  
citrus fair belt of Central California. The fol-  
lowing were unanimously chosen from Sacra-  
mento: Newton Booth, Albert Gallatin, L. L.  
Lewis, P. E. Platt, Joseph Steffens, E. J.  
Gregory, E. K. Alsip, A. S. Hopkins and C. H.  
Hubbard. Another meeting for the selection  
of directors from the other counties, and to  
make arrangements for the approaching citrus  
fair, will be held.

BRITISH COLUMBIA PLANKS.—One plank 9 feet  
wide and 20 feet long, without knot or blemish  
of any kind, and another 12 feet wide, are  
among the contributions of British Columbia to  
the Liverpool Exhibition.

### The Wreckers' Light.

There used to be certain wild shores infested by bands of land-pirates called wreckers, who had it for a business to watch along their dangerous coast for the purpose of seizing whatever property might float within their reach from wrecked vessels. To increase their chances for plunder they would often go deliberately to work to decoy ships on the rocks by false-lights and beacons. The reader can easily picture the scene. It is a dark, tempestuous night upon the sea, and the fierce winds are howling like wolves among the fatal reefs. Far away in the thick darkness may be heard, above the surge and roar of the sea, the faint boom of the signal gun. It announces that a vessel is in distress. The wreckers are always alert when the night is stormy. They watch; they listen! In a moment more that signal of distress is heard again, and they catch a glimpse of the ship-lights as they glance from the crest of a billow. There are wails of despair on board of that ill-fated ship. There are voices along the shore, but not of pity and help. Beacons flash from the cliffs above, but they are false-lights to lure upon the rocks. In hope of finding a haven of safety, the ship strikes upon the black, jagged reef, careens and spills its treasure upon the sea. There are shrieks of the lost upon every wave; there are rejoicings on the shore. The business of the wreckers has prospered; they have received a rich harvest of booty for their cruel treachery.

The advance of civilization, the development of commerce and the love of law and order have swept the pirates from the sea and the wreckers from the land; but a more evil shape of mischief and destruction still exists among us under the protection of law and with the approval of social customs. In this age of boasted progress, in the high noon of a Christian civilization, 200,000 licensed saloons in this country alone are open day and night and using all the false lights of the free lunch, the charms of music, the splendor of mirrors and pictures, reading-tables and sumptuous furniture, and the bewitching smiles of beauty to decoy the unwary and unsophisticated upon the black rocks of dissipation. Around the gin-mill stands its foul progeny of dives, deadfalls, gambling dens, the parlors of lust and shame with all the magnetic fascinations of boon companionship, the merry, light-hearted charms of perfumed lewdness to lure our bright boys and blithe girls, our young men and maidens, to certain ruin. Is it any marvel that so many of them fall into bad ways? Rather is it not a wonder so many of them escape?

Not far away the "strictly confidential" medical vulture waits to rob and fleece the lame and diseased as they come from this hell-dance of vice, lechery and dissipation. Around his spider-parlor is a showy display of forged diplomas from the leading medical schools of the Old World. His pardoned face may be seen in most of the newspapers of the land announcing to the unfortunate that he has discovered an infallible rejuvenator for youthful indiscretions or the excesses of maturer years. Almost every week we hear of some fragile and trusting one who loved not wisely literally murdered by these harpies of the Barbary Coast, and only the light of eternity can disclose the full extent of the woe, misery, despair and premature death they have caused. In nearly all our great metropolitan Sunday papers, under the head of "Personals," we have the advertisements of seemingly love-sick maids and pretty young widows, bachelors and widowers, who appear to be anxious to find some one upon whom they can direct the overflow of their affections. They usually begin by modestly setting forth their own merits and stock in trade for the matrimonial journey and the qualities they desire in a life-partner. All this looks very plausible, but only fools and nincompoops will take these matrimonial advertisements for anything more than a sly, subtle way of seeking to form illicit acquaintances.

But space would fail to enumerate all the various and numerous forms of false-lights along the social breakers. There are hundreds of men and women who have it for a business to entrap honor and virtue of the young as hunters would hunt for game. They are drilled experts in all the arts of leading a fellow-creature to destruction by perverting habits, slinging youthful thoughts and desires, feeding erotic imaginations by means of obscene pic-

tures and literature, salacious novels and many other crafty ways. They are the scale bugs of thought, the codlin moth of virtuous impulse. And yet, strange to say, while our wine-growers are all in arms against the phylloxera, the fruit-raisers are carefully spraying their trees with lye, and we are all nervously afraid of wormy apples, foul water and diseased meat, the majority of the community seems oblivious to the ravages of these social pests, and the Government actually goes into partnership with the arch-wrecker and pockets its share of the money coined from the woe, agony and despair of millions.

### Foul Brood Under the Microscope.

Several times during the last few years we have published articles from our correspondents treating upon this fatal bee disease, and this time we will not attempt to add anything to what has been said.

The illustrations here shown are from drawings made by Mr. Frank Cheshire, of whom the *American Bee Journal* says, "there is not a more progressive and scientific apiarist in England," and it might have added in the world. Mr. Cheshire has spent much time in studying

no material; but soon I obtained a comb from a suffering colony, and then had the opportunity of expressing the juices from the death stricken larvae. These, when examined under a power of 600 diameters and carefully illuminated, were seen, to my great delight, to be full of active rods, swimming backward and forward, and worming their way between the degenerate blood disks and fat globules, as represented in Fig. 4, while here and there were long strings of them, the leptothrix form. Three questions now required answers: 1. Was this undoubted bacillus always associated with foul brood? 2. If so, was it cause or effect? 3. If the cause, what was its life history? It would weary one to explain how these answers were obtained, as the work involved many days of incessant application at the microscope, the preparation and comparison of about 200 microscopic slides, and the rough or somewhat careful dissection of at least 100 grubs, taken from various colonies, in different conditions of disease, and at sundry periods after their removal.

I found in every instance that the beginning of the attack was marked by the appearance of bacilli in the blood; that these bacilli were, in many cases, at first long, thin, and marked by the presence of bead-like points;

### FOUL BROOD AND ITS CAUSE, AS SHOWN BY THE MICROSCOPE.

the cause and cure of this disease, and from his observations and experiments he will, we hope, discover a satisfactory cure for it. His pamphlet on the subject is a masterly treatise, and from it we make a few brief extracts.

Taking a small quantity of the juices of a healthy grub, and spreading it out under a thin glass under the microscope, one is presented with such an appearance as is seen in Fig. 1. Fat globules are numerous, while blood disks abound, and everywhere may be noticed tiny particles which are constantly slowly dancing with what are called Brownian movements, but if a speck of coffee-colored foul-broody matter be similarly treated we find neither fat globules, blood disks nor molecular base, but observe the field crowded with very small ovoid bodies, as represented in Fig. 2. These are the micrococci of Schonfeld, but if this substance be stained according to the modern plan of Weigert and Koch, and then carefully examined, in all probability we shall discover, associated with the ovoid bodies, a very few other organisms longer and rod-shaped, while we notice that the so-called micrococci are neither round nor dumb-bell like, but oval or boat-shaped. This led me at once to suspect an error, and further searching showed me if, instead of coffee-colored matter, such as that usually sent for microscopic examination, the body of a grub, dead, but in a fresher condition, were taken, the number of rod-like bodies very considerably increased, while that of the ovoid ones diminished, as seen in Fig. 3.

My own inoculated colony—inoculated for experimental purposes—was cured and gave me

that as this form disappeared, the bacilli, pure and simple, multiplied by repeated division; that this bacillus, when magnified about 1300 diameters, presented the appearance seen in Fig. 5; that these were active, swimming rapidly either backward or forward, and that when an end-view could be obtained of one of them, it was seen to be describing a small circle; that when the disease was in rapid progress leptothrix forms were common, some of them reaching even to .01 of an inch in length; and that as the fluids of the grub failed by loss of fats and albuminoids, the bacilli put on the spore condition. They widened and drew up their protoplasm or mycoprotein from their extremities, as we see indicated in Fig. 6, and thus became what Schonfeld in error called micrococci. After the death of the grub, and during the assumption of the viscid, putrid condition, this alteration of bacilli into spores continues.

As a remedy for the cure of this bee scourge the author recommends the use of absolute phenol.

**LOUR MILLING IN RUSSIA.**—In Russia it has been determined to push the flour export trade, the estimate being that the milling capacity of the empire as it is at present may furnish for export, if need be, 5,000,000 half bags of flour of 82 kilograms, the export of Russia mills having so far more exclusively been limited to rye instead of wheat flour, the export of the latter to Turkey and Italy being light, and of the former heavy to Norway. Russia wheat flour, it is believed, can compete to advantage in England and elsewhere with American.

## FRUIT MARKETING.

### The Eastern Market for California Green Fruits.

A Field for Vast Quantities of First-Class California Table Grapes.

[Special Correspondence RURAL PRESS.]

In his last letter, dated at Saugatuck, Michigan, the writer promised your readers the result of his observations and inquiries on the sale of California green fruits east of Chicago.

He has since visited Washington, Pittsburg, Baltimore and New York.

In the city of Washington, which boasts of a population of nearly 200,000, he found that, up to date, less than 50 crates of California grapes had been received.

On interviewing the leading retail fruit dealers, it was learned that what few California grapes had been sent to Washington had retailed at from 25 to 40 cents a pound, and at these prices the trade of Washington could use from 15 to 20 crates per day. For two weeks past, however, no California grapes had been offered in Washington; and when the writer informed a number of retailers that a shipment might be looked for within a day or two, they expressed great eagerness to secure some. One of the leading wholesale fruit dealers, who for many years past had handled California fruits, said that he had not touched any this season because Porter Bros. Co., the agents for the California Fruit Union, were not prepared to allow more than five per cent commission, which, he claimed, does not pay for the cost of handling and for the risk in carrying customers' accounts. It was his opinion, however, based upon his experience and thorough knowledge of the fruit market of Washington, that, if arrangements could be made whereby first-class California grapes could be delivered in Washington every day or every other day, at a cost to the retailer not to exceed 10 cents a pound, so that he might retail them with a fair profit at 15 cents a pound, the consumption could be increased from its present average of 10 crates a week to at least half a carload a week. In other words, the quantities of California grapes sold in Washington City alone could be easily increased from an average of a crate and a half to an average of 60 crates a day. Regarding other green fruits, Washington, like all other Eastern markets at this season of the year, is filled with an abundant supply of native peaches, plums and pears, which are sold at prices that California fruits can never hope to compete with.

The city of Baltimore has a population of nearly 400,000, and is regarded as a most excellent market for all kinds of fruit. As many as 40,000 boxes of peaches have been sold there in one day. Its large number of wealthy and well-to-do families liberally support many extensive and magnificent markets, as well as a great number of very fine retail fruit stores. Some idea may be formed of the importance of Baltimore as a market for fruits when it is stated that Malaga grapes to the amount of 125 tons were sold in Baltimore from last October to March.

The Malaga is a grape which, while resembling the Muscat, is much inferior in flavor, smaller in size, and is retailed at from 20 to 25 cents a pound. One of the reasons for the large consumption of the Malaga grape in Baltimore and elsewhere is because those who are interested in its sale thoroughly understand how to distribute it, and as a result it is found in the hands of nearly every Eastern fruit dealer of any consequence; whereas the California grape—outside of the city of Chicago—is seen, if at all, in the hands of but few dealers, and no matter how little these few dealers may pay, they can thus successfully maintain fancy retail prices.

Notwithstanding the importance of Baltimore as a fruit market, your correspondent was surprised to find, after a most thorough canvass among the leading wholesale and retail fruit dealers, that thus far this year less than 70 crates of California grapes had been received in Baltimore. The wholesale dealer representing the California Fruit Union had received but 20 crates out of this number, and the most of these were so poor and reached him in such bad condition that more than half of them realized but a nominal price. The few grapes that reached Baltimore in good condition met with ready sale, realizing at wholesale from \$2 to \$2.50 a single crate and at retail 25 to 30 cents a pound. At one of the leading fruit stores the writer found some grapes raised in his own vineyard at Mayhew's Station, Sacramento Co., Cal. Though picked 12 days before, they were in excellent condition, and, according to the statement of the dealer, were good for another week.

After paying 30 cents for a single pound, from which, as the grower, he will get back from two and a half to three cents, he engaged the dealer in conversation on the prospects for California fruits in Baltimore.

It would seem that this particular retailer had been more fortunate than some of his neighbors in getting sound fruit this season. He accordingly expressed himself well pleased with the products of California in general, but did not take kindly to the idea of selling California grapes at 15 cents a pound, though he admitted

that if this was done the consumption would be greatly increased; yet, from the standpoint of a narrow self-interest, he was opposed to low retail prices, on the ground that he would be obliged to sell much more fruit to make his present *fancy profits*. A number of other first-class fruit dealers were interviewed, and nearly all expressed themselves thoroughly disgusted with this season's experience in California grapes.

Not being able to find any California grapes in Baltimore, they had ordered small lots from New York and Chicago, and, as a rule, were charged high prices and received stuff that proved almost worthless.

They had repeated this experiment several times, with the same poor results, until they had finally resolved *not to bother* with California grapes again. Some of these grapes, which had been received but a day or two before, were shown the writer, and on examination he found them in a state of rapid decay; the stems withered and dried and the berries ready to drop at the slightest touch.

A tour through the extensive and magnificent markets that supply the tens of thousands of Baltimore families with table fruits, failed to bring to light a single pound of California grapes. A large number of prominent wholesale and retail fruit dealers, including those doing business in the markets, were asked to estimate the quantity of California grapes Baltimore would consume if retailed at 15 cents a pound. Some estimated as low as half a carload, others as high as five carloads per week. In the opinion of the writer, provided, however, that the fruit be thoroughly distributed and placed in the greatest possible number of retail hands, the consumption for the city of Baltimore would be at least one and a half carloads a week, and with proper management this amount could in time be increased to a carload a day. On inquiry it was learned that California wines were meeting with much favor in Baltimore, that there has been a large increase in the demand during the past year, and that it was only a matter of a short time when California wines would become one of the staple articles in the wine trade of that city.

The state of affairs in the city of New York was found to be but little better than that of other places east of Chicago. Proportionately, New York has consumed little more California green fruit than Baltimore or Washington or the dozen other larger cities on the Atlantic Slope. New York City with its population of a million, and with nearly an equal population surrounding it, should be, and in fact is, the largest and best market on this continent for domestic and foreign fruits. And yet there are those who, from self-interest, dare to claim that not to exceed a carload a week of California fruit can be sold to advantage in the city and vicinity of New York. This in face of the fact that New York received 1500 tons of Malaga grapes last season from ports in Spain. If by "selling to advantage" is meant that California fruits shall retail at 25 and 30 cents a pound, then a carload a week is likely to be as much as New York can use for many years to come. But there is no more sense in charging 30 cents a pound for California grapes in the city of New York than there would be to ask 15 cents a pound in San Francisco. Grapes—the finest kinds—are retailed in San Francisco at five cents a pound, with profit to all concerned. And California grapes—the finest kinds—can and should be retailed in New York at not over 15 cents a pound, with profit to all concerned.

It seems in the interest of a few wholesale and retail fruit dealers here to keep the New York market as barren of California fruits as possible, in order to maintain *fancy prices*. While this policy may be well enough so far as the few are concerned, it certainly is against the interest of the many; more especially is it against the interest of the California fruit-growers whose acreage has become so great and whose yield so vast that they must either develop a broad and expansive market or dig up trees and vines. It will, however, prove as futile for a few to attempt to stem the tide of California fruits entering the far-East as was the attempt on the part of a few to control the Chicago market. California, with its generous and abundant fruit crops, must and will find an outlet for its products throughout the East. Its fruits possess merit, can be sold at reasonable prices, and should become as much an article of every day food in every city of the Union as they have become in the city of Chicago.

If the East continues to consume so little California fruit, it will not be because the people of the East do not want our early cherries, peaches, pears, plums and apricots, or our choice table grapes, nor because they are not willing to pay reasonable prices, but it will be because the growers and shippers of California lack the push, the energy, the enterprise and the ability to properly develop the best markets.

It seems absurd to think that a market like New York, which does not stagger under such receipts as 500 carloads of peaches a week, and 1500 tons of Malaga grapes a season, with prospective receipts of 2500 tons of Malaga grapes the coming season, should not be able to use more than a carload a week of our choicest California fruits.

Your correspondent has under consideration a plan to develop the Eastern market for California green fruits. It will be based on the results of the information acquired and the observations made on his tour through the East,

and he hopes to present it for the consideration of your readers in his next letter.

A. WEINSTOCK.

New York, Sept. 27.

### State Fair—Additional Premiums.

Beside those which we gave last week, the following awards were made at the State Fair for exhibits directly or indirectly agricultural:

#### Gold Medals.

(For most meritorious display in each department.) Live-stock—R. J. Merkley, Sacramento, horses, and Leland Stanford, San Francisco, herd of Holstein cattle. Display of agricultural machinery and implements—Benicia Agricultural Works. Display of agricultural products, etc.—Bell Conservatory, Sacramento. Display of fruits—Mrs. R. S. Lockett, Brighton. For the most attractive display in the pavilion, the gold medal was awarded to the Glass & Crockery Co.

#### County Exhibits.

First premium, Placer Co.; 2d, Sacramento Co.; 3d, San Joaquin Co.; 4th, Nevada Co.; special mention, Shasta Co. Not entered for premium, but display very creditable and gold medal awarded. [No resident of Sacramento Co. nor San Joaquin was upon the committee of awards, and that committee was unanimous in its decisions.]

#### Horses.

Roadsters—Stallions—Best four-year-old, Juno, C. S. Crittenden, S. F.; 2d, W. Ober, Sacramento, Jolly; best three-year-old, M. W. Hicks, Sacramento, Brilliant; 2d, L. Whitmore, Woodland, Darkness; best two-year-old, Henry Klomp, Pleasant Grove, Prompter, Jr.; 2d, Chris. Sieber, Woodland, Prince; best one-year-old, same, Cleveland; 2d, same, Hendricks; best sucking colt, Henry Klomp, Pleasant Grove, Prompter, Jr.; 2d, A. D. Miller, Walsh's Station, Garland; best gelding, J. R. Hodson, Sacramento, Illustration; 2d, J. L. McCord, Sacramento, Gues's Mares—Best four-year-old, M. W. Hicks, Sacramento, Empress; 2d, G. W. Griffin, Woodland, Lucy; best three-year-old, J. H. Martin, Woodland, Dolly B; 2d, L. Whitmore, Woodland, Dell; best two-year-old, W. Ober, Sacramento, Katydid; 2d, L. Whitmore, Lute; best one-year-old, Ben E. Harris; 2d, C. Kirby, Sacramento, Rosebud; best sucking colt, J. H. Costello, Elk Grove, Lady Sterling; 2d, E. K. Alsip, Sacramento, Birdie.

Carriage horses—Best matched span, James McNasser, Geo. Morgan and Gray Chief; 2d, same, King and Bob.

Roadster teams—Best double team, C. S. Crittenden, San Francisco, Allie Whipple and Dawn; 2d, Geo. Dickinson, Roseville, Little Nell and Dinah.

Saddle horses—Best mare or gelding, Ben E. Harris, San Francisco, Dandy; 2d, J. A. McCloud, Stockton, Judge P.

#### Sweepstakes.

Best stallion, C. S. Crittenden, San Francisco, Juno; best mare, C. Halverson, Routiers' Maggie S.

#### Agricultural Products.

Flowers—The Bell Conservatory, Sacramento, was granted all premiums in this class, as follows: Best collection flowering plants in bloom, collection ornamental foliage plants, cut flowers, collection new and rare plants, display colors of distinct varieties, varied exhibit dahlias, roses in bloom, fuchsias in bloom, tuberose, pinks, ferns, bouquets, best collection, suitable for greenhouse, window and arbor culture, display hanging baskets containing plants.

#### Agricultural Machinery, etc.

Machinery, engines, etc.—Best portable steam engine, Benicia Agricultural Works; Westinghouse engines, 40 and 35 horse power, Park & Lacy, premium recommended; apparatus for raising water for irrigation or mining purposes, San Francisco Tool Co.; display machinery from one shop, same; apparatus for raising water for irrigation purposes, Stanton, Thomson & Co., honorable mention; well pump, H. H. Linnell, Sacramento; quartz crusher, William Gutenberg, Sacramento; fence-making machinery, John Lambert, Sacramento; machinery for same purpose, T. D. Poole, Alameda, honorable mention; best engine California manufacture, San Francisco Tool Co.

#### Agricultural Machines.

Best thrashing machine, Baker & Hamilton, Sacramento; horse hay-rake, same; bean thrasher, same; Power corn-sheller and lawn-mower, same; best display agricultural machinery, California manufacture, Benicia Agricultural Works; cider mill and press, A. & A. Heilbron, Sacramento; lawn-sprinkler, John Bean, Los Gatos; hay-press, J. S. H. Miller, Sacramento; sweep horse power, H. H. Linnell, Sacramento; hay and straw cutter, G. G. Wickson, San Francisco; grain broadcast sowing machine, Baker & Hamilton, Sacramento, special mention; self-raking reaping machine, same; combined reaper and mower, same; machine knives, hand corn-planter, same; potato planter, same; one-horse elevator, same; horse hoe, same; header, Benicia Agricultural Works; field roller and crusher, William Gutenberg, Sacramento; wheat drill, Holman, Stanton & Co.; hay-pitching machine, same; corn-planter, horse power, same; cultivator, same; self-binding harvester, A. & A. Heilbron, Sacramento; pulverizing harvester, same, premium recommended; harrow, same; double-shovel plow, same; mowing machine, Farmers' Union, San Jose; broadcast sowing machine, J. Price, San Leandro; best grain-cleaning attachment for thrashing machine, Baker & Hamilton; farm feed-mill, Benicia Agricultural Works; fanning mill, D. Best, Oakland; beehive without bees, H. H. Linnell, Sacramento; refrigerator, same; windmill, same.

#### Tools and Household Implements.

Best display haying and harvesting tools, Baker & Hamilton; garden seed-drill, same; Acme steam fruit-drier, F. Batchelor, San Francisco; churn, A. S. Hopkins & Bro., Sacramento; butter-worker, same; clothes-horse to occupy least space, same; clothes wringer, E. W. Melvin, Sacramento; farm road-scraper, Wm. Zartman, Petaluma.

Plows—Best stubble plows, Baker & Hamilton; cast-iron plow, same; chilled plows, same; subsoil plow, Benicia Agricultural Works; gang plow, same; one-horse plow, same; side-hill plow, same; sod plow, same; dynamometer, Stanton, Thomson & Co.; plow for all purposes, same; sulky plow, A. &

A. Heilbron, Sacramento; steel plow, same; sulky gang plow, Matteson & Williamson, Stockton, special mention.

#### Vehicles.

Best farm wagon for general purposes, Baker & Hamilton, Sacramento; breaking cart, Myron F. Tarble, Los Angeles; track sulky, same; open buggy, C. Neilsen, Sacramento; business wagon, same; trotting wagon, same; pleasure cart, Knox & Baker, Woodland; top buggy, J. F. Hill, Sacramento; display carriage-wheel hubs, same; exhibit California-grown woods, same; closed family carriage, Studebaker Bros., Sacramento; spring market-wagon, same; wagon or carriage brake, same; two-seated open wagon, E. Meister, Sacramento; open family carriage, same; lady's phaeton, same.

#### Mechanical Products.

Geo. Muddox, Sacramento, water pipe and water lime, drain tile, roofing tile, flooring tile.

### Stockton Fair Premiums.

Following are awards at the late San Joaquin Valley District Fair for products of agricultural and allied industries. Unless otherwise stated, exhibitors live in Stockton.

#### Horses.

Thoroughbred—Best stallion three years old, Joe Daniels, owned by H. S. Sargent; best stallion one-year-old, Joe Douglass, by L. U. Shippee.

Roadsters—Best stallion four years old, Hawthorne, owned by L. U. Shippee; best stallion two years old, Electric, by L. A. Richards; second, Reliable, by C. W. Turner; best stallion one-year-old, Moses S., by L. U. Shippee; best mare or gelding four years old, Arthena, by J. H. Tennent, Pinole; second, Maud F., by L. U. Shippee; best mare or gelding three years old, Geo. W., by J. W. Dougherty, Lodi; best mare or gelding two years old, Flora M., by L. A. Richards, Grayson; second, Clara S., by Joshua Steves; best yearling filly, Carrie Vernon, by J. A. McCloud; second, Bess, by H. Eberhart; best trotting sucking colt, Ed, by L. U. Shippee; second, Ed, by W. R. Bailey, Linden; best trotting sucking filly, Dora, by L. U. Shippee; second, Minnie Vernon, by D. McCoy; best span matched roadsters, Geo. and Lady Washington, by R. C. Sargent, Lodi.

Horses for all purposes—Best three-year-old, Tasso, by A. Starkweather, Farmington; second, Comet, by S. Acker, Linden; best one-year-old, Dexter, by J. Crist; second, Burwood, by L. L. Huntley, Burwood; best sucking colt, Nephew, Jr., by N. Nevin; second, Jody, by J. C. Bowden; best mare three-year-old, Molly, by D. McCoy; second, Flora, by N. Nevin; best mare one-year-old, Daisy Vernon, by Ed Gross; second, Maud W., by C. F. Bunch; best sucking filly, Black Swan, by Lucy P. Goff; best mare other than thoroughbred with four colts, Mack, by L. U. Shippee.

Draft horses—Best stallion, three-year-old, Eureka, by C. K. Bailey, Linden; 2d, Young Duke de Chartres, by D. S. Matthews; best stallion, two-year-old, —, by C. K. Bailey, Linden; stallion, two-year-old, Jesse, by Uriah Martin. Committee recommended special premium 2d best stallion, two-year-old, Granger, by W. L. Overhiser; best sucking colt, Sampson, by McCormick Bros.; best mare, three-year-old, Dolly, by McCormick Bros.; 2d, Susie, by E. Hildreth; best mare, two-year-old, Moss Rose, by C. K. Bailey, Linden; best sucking filly, Fannie, by L. U. Shippee; best matched draft team, Susie and Mary, by E. Hildreth.

Carriage animals—Best carriage team, 15 hands high, Chieftain and Belle, by Dan McCoy; 2d, Maid and Mabel, by W. A. French; best single carriage animal, owned and used by exhibitor, Blucher, by Maggie Cunningham.

Mules—Best span mules, owned by exhibitor, Molly and Coley, by L. U. Shippee; 2d, Joe and Johnny, by John S. Ladd.

Jacks and jennets—Best jack, three-year-old, Logan, by L. U. Shippee; 2d, King Philip, by H. W. Childs; best jack, two-year-old, Jeff, by L. U. Shippee; 2d, W. F., by Stowe Bros.; best jack, one-year-old, Ben, by L. U. Shippee; best sucking jack, Washington Eclipse, Jr., by Levi Carter; best jennet, three-year-old, Lummyx; 2d, Betsy, and best jennet, one-year-old, Susie, all three by L. U. Shippee.

#### Cattle.

Durham—All awards to C. Younger, San Jose, except for 2d best bull, three-year-old, Pharaoh, owned by Andrew Smith, Redwood City.

Jerseys and Alderneys—All awards to H. S. Sargent, except 2d bull, three-year-old, Tempest, by W. L. Overhiser; best bull, one-year-old, Jersey King, and best calf under one year, Shippee, by W. A. French.

Ayrshires—All awards to Tyler Beach, San Jose. Herefords—All awards to Williams & Saxe, San Francisco.

Holstein—Best bull, three-year-old, Duke, by G. C. Clark; best bull, two-year-old, Sedro; and best bull one-year-old, Kingsbury, by F. H. Burke, San Jose. Best cow, three-year-old, Lena Wit, by F. H. Burke, San Jose; best cow, two-year-old, Teakja, by G. C. Clark; 2d, Kentucky Gem; and best cow, one-year-old, Edna, of Troy, by F. H. Burke, San Jose; best heifer calf under one year, Frederica, by G. C. Clark.

Galloways—All awards to Leonard Bros., Mt. Leonard, Mo.

Graded cattle—Best cow, three-year-old, Tin Pail, by A. Smith, Redwood City; 2d, Big; and best cow, two-year-old, Rooney, both by C. Grups, Linden; 2d, cow, two-year-old, Rose, by L. Carter, Ceres.

Herds of cattle—Durham—Forest King, Red Dolly 2d, Red Dolly 8th, Red Dolly 14th, and Oxford Rose, by Col. C. Younger, San Jose.

Jersey or Alderney—Earl Marmaduke, Daisy W., Faithful May, Hattie Carter, H. Wenneke and May Day, by H. S. Sargent.

Holstein—Sedro, Lena Wit, Wenneke, Kentucky Gem, Edna of Troy, by F. H. Burke, San Jose.

Ayrshire—Narragansett Chief, Mamie Pierce, Fannie 2d, Etta Brown and Pussie, by Tyler Beach, San Jose.

Galloway—Bull, Hopeful of Lyons; cows, Davina, Nancy Lee of Mt. Leonard, Blossom of Newton and Crocus of Minydom, Leonard Bros., Mt. Leonard, Mo.

#### Poultry.

Best pairs Langshans, Brahmas, Plymouth Rocks, White Leghorns, Brown Leghorns, White-faced Black Spanish, Houdans, Silver-spangled Ham-

burgs, Silver-penciled Hamburgs, Polish, Dorkings, Javas, Wyandottes, Black Sumatras and best trio game "sweepstake," Cutting & Robinson; 2d pair Brown Leghorns, W. A. French.

Ducks—Black Cayuga—Best pair and best trio ducks, sweepstake, Cutting & Robinson.

Turkeys—Best trio Narragansett turkeys, sweepstake, Cutting & Robinson.

#### Sheep.

Best South-down ram, Long John; best pen South-down ewes, R. H. Crane, Petaluma.

#### Swine.

Best Berkshire boar, Redwood Duke, sow, Redwood Sally, and sow and pigs by A. Smith, Redwood City; best Essex sow and pigs, William Christopher.

#### Agricultural Implements.

Best header, H. C. Shaw; self-raking reaper, S. S. Burge; mowing machine, "Victor," Hudson & Cabney; steel plow, "Morrison," entered by H. C. Shaw; gang plow, Grangers' Union; cast plow, to Imperial chilled plow, entered by S. S. Burge; grain sower, to Gem seed-sower, entered by H. C. Shaw; harrow, to iron frame harrow, entered by H. C. Shaw; seed drill, to Havana press drills, Hudson & T. C. Cabney; farm gate, Max Muller, San Francisco; grain cleaner, D. Best, San Francisco; wine press, H. C. Shaw; derrick fork, to Jackson fork, entered by Grangers' Union; windmill, "The Davis," entered by Smith & Wilson, sweepstake.

#### Wheelwright Work.

Best display imported carriages, S. S. Burge; two-horse wagon and one-horse wagon, Studebaker's, entered by M. P. Henderson & Son; single buggies, Mitchell top and Mitchell open, entered by S. S. Burge; four-wheeled truck, by M. P. Henderson & Son.

#### Miscellaneous.

Lift pump, force suction pump, John Jackson; horseshoe nails, best display, Byrd & Morgan.

#### At the Pavilion.

(Unless otherwise stated in the list, the exhibitors live in Stockton and the premiums are first prizes.) Corn: T. J. Chaloner.

Hops, baled: Joseph Putnam, Clements.

Vegetables: Largest and best variety and best raised on one farm, G. S. Locke, Lockeford. Special mention.

Apples: Best and largest collection, Joseph Putnam, Clements; 2d, L. U. Shippee.

Pears: Best and largest collection, L. U. Shippee; 2d, Joseph Putnam.

Figs: Best collection, Miss Lulu Reid; 2d, Hugh Quinn, Chinese Camp.

Quinces: L. U. Shippee; 2d, George S. Locke, Lockeford.

Peaches: Largest and best collection, L. U. Shippee; 2d, Hugh Quinn, Chinese Camp; best 12 of any variety, L. U. Shippee.

Plums: Best 12 of any variety, L. U. Shippee; 2d, Hugh Quinn, Chinese Camp.

Grapes: Best collection, George West; 2d, L. U. Shippee; best five varieties, Hugh Quinn, Chinese Camp; 2d, L. U. Shippee; best single variety, Geo. West; best eight bunches raisin grapes, Hugh Quinn, Chinese Camp.

Fruit: Largest and best exhibit, L. U. Shippee. Pomegranates: Best collection, Hugh Quinn, Chinese Camp.

Fruit: Largest and best exhibit raised in district by one person, Joseph Putnam, Clements.

Dried Fruit: Best box plums; peaches, pears and apricots, Mrs. Jos. Hale.

Preserved fruits in sugar: Mrs. J. C. Reid.

Preserved fruits in spirits: Mrs. Jos. Hale.

Jellies: Mrs. J. C. Reid.

Figs: Best box, Hugh Quinn, Chinese Camp.

Butter: Packed before July 5th last, Wm. Christopher; five rolls pickled, same.

Cheese: J. F. Gibson.

Wines: Madera and red, Geo. West & Co.; white, C. Von Detten; best display, Geo. West & Co.

Silk cocoons: Best display, Mrs. J. D. Utt; 2d, Mrs. L. M. Fairbanks.

Reeled silk: Best display, Mrs. J. D. Utt.

Incubators: F. Fiven.

Green corn, wheat and barley: Hugh Quinn; special mention.

Buhach, fruits, etc.: Buhach Co.; special mention.

Potatoes: Arthur Thornton; special mention.

Pampas grasses: Jos. Goodell; special mention.

The county exhibit made by Pomona Grange received the first premium.

### Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

### Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

"HOLSTEIN AND JERSEY"—ERRATUM.—In C. D. Stuart's article in our last issue (page 279), half-way down the column, in paragraph beginning "A German chemist," "35 pounds" should have been "3½ pounds," so that the corrected sentence will read: "While a breeder of Jerseys claims for a cow of this breed that 3½ pounds of her milk made a pound of butter," etc.

### Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

### STODDARD, AND CLIMAX, DISC HARROWS.

WHAT THEY WILL  
DO:

THEY WILL

- SAVE TIME,
- SAVE LABOR,
- SAVE MONEY,
- SAVE SEED GRAIN.

THEY WILL

- Thoroughly Pulverize the Soil,
- Thoroughly cover up your seed grain,
- Thoroughly cover up your surface manure,
- Thoroughly satisfy you in every respect.

OUT OF THE STODDARD HARROW.

The Stoddard and the Climax Pulverizing Disc Harrows are the most convenient, effective, durable and reliable. They economize time, save labor and money, and secure the greatest yield of crops by the most perfect tillage. They are unrivaled for power, and incomparable for rapidity and effectiveness, for surface tillage of all tenacious and tough soils. Are often a substitute for the Plow. Positively the lightest draft Harrows of their kind.

The concave plate wheels are BEST QUALITY STEEL and are SELF-SHARPENING BY USE.

Each steel wheel or disc makes a groove for its passage through the soil, by clearing, crushing, and lifting FROM THE GROOVE ALL THE SOIL, and rolling it in a furrow one side.

All rootlets are cut off or torn from the groove and exposed to the air and sun, or buried below the surface.

Instead of a DEAD DRAFT BY IMPACT against heavy and inert soil, they cut it like a knife and split it like a wedge.

They loosen, crumble, and lighten the soil, but do not harden it.

They roll and cover seed grain deeply and uniformly beneath the surface, and insure germination and growth by preparing a perfect seed-bed.

They cover broadcast grain so effectually and perfectly as to save from a tenth to a fifth part of seed commonly lost when scratched in with a tooth drag.

They take the soil from BELOW, and roll it upward to the surface, pulverizing and exposing it to the enriching sun and air. Good tillage requires this, and this is what no other Harrows can accomplish so effectively and speedily as the Stoddard and Climax Pulverizing Harrows with their double solid gang of steel wheels.

THEY WILL  
INCREASE YOUR CROPS,  
INCREASE YOUR PURSE,  
INCREASE YOUR HAPPINESS,  
INCREASE THE VALUE OF YOUR LAND.

THE STODDARD HARROW in Field Work can be turned about as readily as a cart.

Descriptive Price List of the Different Sizes :

No. 7, width of cut, 6 feet, 12 Discs, size of Discs, 16 inches, Price, \$60.

No. 8, width of cut, 8 feet, 16 Discs, size of Discs, 16 inches, Price, \$75.

#### LEONARD COATES

Has re-assumed the entire management of the

NAPA VALLEY NURSERIES.

Address, LEONARD COATES,  
P. O. Box 2, Napa City, Cal.

Catalogue and Price List free on application.

Democratic Congressional Nominee,  
FIFTH DISTRICT,

FRANK J. SULLIVAN.

"I believe that the silver dollar of labor should equal in value the gold dollar of capital."

1114 Oak Street, Alameda, Cal.

NURSEYRMEN, ATTENTION!

WANTED, a man well up in the propagation of Evergreens and Ornamental Shrubbery, to put his time against land and material for a nursery in a good location. Address, Box 88, PASADENA, CAL.

ORANGE CULTURE

A practical treatise by T. A. GAREY-giving the results of long experience in Southern California. 196 pages, cloth bound. Sent post-paid at reduced price of 75 cts. per copy by DEWEY & CO., Publishers, S. F.

#### THE LITTLE GIANT Fence Loom.

The only machine securely covered by patents.

It Fences Against Rabbits, Dogs, Wolves, and stock of all kinds.

Sold by T. D. POOLE,  
Sole Agent for the Pacific Coast,

ERKSHIRE PIGS.

BERKSHIRE PIGS.

From imported stock direct from England, bred by Russell Swanwick, President Royal Agricultural College Farm, England, from the Celebrated STUMPY and SALLIE FAMILIES. Young stock always for sale at lowest possible rates. Address ANDREW SMITH, Redwood, or 218 California St., S. F.

#### WEAK, NERVOUS PEOPLE

And others suffering from nervous debility (exhausting chronic diseases, premature decline of young or old are positively cured by Dr. Horne's famous Electro-Magnetic Belt. Thousands in the Union have been cured. Electric Belt instantly felt. Patented and sold 10 years. Whole family can wear same belt. Electric Suspensories free with male belts. Avoid worthless imitations and bogus companies. Electric Trusses for Rupture. 700 cured in '85. Send stamp for pamphlet. DR. HORNE, INVENTOR, 702 MARKET ST., SAN FRANCISCO.

## Lands For Sale and To Let.

### FOR LEASE AND FOR SALE, 40,000 ACRES

Of good land in Fresno, near the County Seat. Some of this land is already irrigated, and all can be easily irrigated. It is adapted not only to grain, but also to Alfalfa, Fruit and Vines.

#### 1000 ACRES

Of the above land for sale at the low price of \$20 per acre. Apply to

E. B. PERRIN,  
402 Kearny St., San Francisco.

### \$10.00 PER ACRE.

On the C. P. R. R., in Placer county; one half mile from Applegate; one-half hour from Auburn; fine climate; plenty of water; school, postoffice and telegraph near; easy terms; title perfect. Apply to

S. C. OSBORN,  
Applegate, Placer Co., Cal.

## CHEAP LANDS FOR SALE.

**5680 Acres** of rolling adobe hills, situated in Tehama County. Well watered by numerous springs, etc. Several thousand acres suitable for cultivation. Good two-story House, Barn and other out-buildings. Seven miles of fine wire fence.

**FIRST-CLASS CATTLE OR SHEEP RANGE.** The Cheapest tract of land in Tehama County. Price, \$8.00 per acre. Fair time and interest.

Also, a tract of 20,000 acres adjoining, can be bought at a great bargain. Title, U. S. Patent.

For terms, etc., apply to

J. E. CROOKS, Benicia, Cal.

N. B.—Upon timely notice, intending purchasers will be taken from Cottonwood to the land and returned free.

## A NEW COLONY

On the new extension of Southern Pacific Railroads, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. **20,000 acres** of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. **INTERNATIONAL IMMIGRANT UNION**, 401 California St., San Francisco.

## FRESNO COUNTY.

## BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being  $2\frac{1}{2}$  times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

For further particulars call on or address

O. J. WOODWARD, FRESNO, CAL.

L. SHARPE, SELMA, CAL.

## WEST COAST LAND CO.

SAN LUIS OBISPO, CAL.

### THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

### TITLE, U. S. PATENT.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,

West Coast Land Co., San Luis Obispo, Cal.

## DEWEY & CO.'S

Scientific Press

Patent Agency.

INVENTORS on the Pacific Coast will find it greatly to their advantage to consult this old, experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enabled us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not few. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

### LARGEST STOCK ON THE PACIFIC COAST!

OFFER FOR THE SEASON AN EXCEPTIONALLY FINE STOCK OF

Fruit Trees, Semi-Tropical Trees, Small Fruits, Grape-vines, Resistant Vines, Etc., Etc.

All the Standard Sorts are grown in large quantities, also many New and Rare Sorts never offered before.

### SPECIALTIES:

PLUMS, PRUNES, and APRICOTS  
On Myrobolan Stocks.

PEACH ON ST. JULIAN PLUM,

HATCH'S ALMONDS, and

MUIR PEACH.

Our Apple, Pear, Plum, Prune, Apricot, and Cherry are grown on imported stock, on new land, isolated from any old orchards and are free from all insects and defects. An inspection is solicited by all those intending planting the coming season.

Four Trains leave and return daily from San Francisco for Niles.

Our Facilities for Shipping and Packing for distant points are unsurpassed.

Catalogue will be mailed gratis upon application. Descriptive Catalogue upon receipt of 4 cents in stamps. Address all communications:

CALIFORNIA NURSERY COMPANY,

NILES, - - - CALIFORNIA.

### The San Jose Fairs.

Two fairs were held at San Jose last week—one at the Park, where stock, vehicles, machinery and implements were exhibited under the auspices of the Santa Clara Valley Agricultural Society; the other, that of the Fifth District Agricultural Association, at Horticultural hall, devoted to products of field, garden, orchard and vineyard, and arts useful and ornamental.

#### At the Park,

On the day of opening, President Edwards said: "There are 50 more stalls, either occupied or engaged, than last year, and we haven't enough for the applications that are still coming in. Our hope is that some who have made entries will fail to bring their stock, because we really don't see how we are to accommodate all."

The stock parade was claimed to be at once the largest and most valuable ever seen in the county. Over 250 horses passed the judge's stand, any one of which would have done credit to any stable. Fully 50 were stallions of various breeds, some of them magnificently proportioned. The thoroughbreds made an especially handsome showing. The display of carriage teams has rarely been equaled in California, and there were 100 or more very fine roadsters. A graded draft stallion sucking colt, six months old, weighing 830 pounds, was shown by Simon Mathews, who also had a Norman mare, Flora Adolph, in the four-year-old class.

E. T. Turner, of Hollister, exhibited his stallion Milo, seven years old, weight, 2100 lbs., and Vanguer, dark bay, seven years old, weight, 1800 lbs. They were Dunham's importation, and are considered among the best of their class in the State. There were on exhibition a number of superior young horses, including grades of this stock. It has become a settled opinion among horsemen and farmers that for horses of all work and roadsters for pulling heavy loads, there has been a marked improvement effected in our stock, by a crossing with the Norman Percheron.

Of cattle there were cows and bulls that had been exhibited in Europe and all over the United States. Leonard Bros. had about three dozen Galloways; Saxo & Williams a large herd of Herefords, imported stock and progeny; Tyler Beach a score of remarkable Ayrshires, and Quinn's Durhams were deemed the peers of any on the grounds. Wm. Farrington made a good display of Holsteins, and C. P. Polhemus of Jerseys. Robert Ashburner's Shorthorns were there, and Younger's herd of 26 head. There were beside these other meritorious exhibits, which we have not room to specify.

Southdown sheep were displayed by R. H. Orane; Cotswolds by C. Younger; and there was a noticeable show of swine—Berkshire, Essex, Poland-China and Chester white—the exhibitors being Andrew Smith, J. S. Connors, Tyler Beach, W. D. Rucker and W. B. Rogers. Mr. Rucker's herd of Poland-Chinas was considered by judges one of the best. The boar, 20 months old, and sow were imported from Shepherd Alexander's choice stock. This pair with five pigs took the sweepstakes over any and all herds, of which there were a number.

The chief contributors to the poultry show were E. H. Freeman, D. H. Murphy and W. Fisher. We understand that the first-named has lately received from Sid Conger a trio of Plymouth Rocks bred from the famous "Old True Blue."

We print in another column the awards of live-stock, which will give a better notion of the extent and relative merit of the exhibits.

#### The Pavilion at the Park

Contained a fine display of carriages, machinery and farm-tools. The San Jose Agricultural Works' exhibit embraced farm and fruit-wagons, the San Jose haypress, cultivators, plows, harrows and other implements. The Standard fruit-wagon attracted special notice by reason of its convenience, solidity and beauty of construction and easy draft.

A new mowing machine, patented by C. A. Greene and W. E. Bidwell, of Stockton, has a double eccentric upon a single shaft by which means it drives two sickles, that act like a pair of shears. With this arrangement the knives need be run at only one-half the usual speed, the knives cutting upon each other and upon the guards above and below, saving fully one-third the power. The patentees claim that it is not a "horse-killer," and is less liable to choke than old-style machines.

E. C. Morrell, of Boulder creek, exhibited the Moughie riding-harrow pulverizer clod-crusher and leveler. He has bought the right to manufacture for the Pacific Coast, and from previous testimonials and interviewing several practical farmers who have operated it, our representative formed a very favorable opinion of this implement, as especially adapted to the needs of Californians.

The American fruit evaporator (H. C. Bristol, S. F., general agent) has an inclined trunk over a hot-air furnace, so as to give the highest heat to fresh-cut fruit, with currents unobstructed by trays. The U. S. Cook-stove drier can be applied to any cooking stove.

#### In Horticultural Hall,

The decorations put up by the Native Sons had been allowed to remain, adding greatly to the beauty of the scene. Music, both vocal and instrumental, was provided evenings, and the attendance here, as well as at the park, was increasingly large as the week lengthened.

One of the most interesting and important

displays was D. C. Feeley's, of Patchen, consisting of about 40 varieties of grapes, grown in the Santa Cruz mountains, 1200 feet above sea level. About 15 varieties were wine, the remainder table grapes; and neither the State Fair nor Mechanics' Institute had anything superior. It was grapes and fruit from Mr. Feeley's vineyard that took the premium at the New Orleans Exposition.

John Rock, the veteran nurseryman, had two tables of cut flowers, evergreens, nuts, apples, pears, pomegranates, also fruit in glass. On his ornamental table were 65 varieties of gladiolus, 150 of roses and a large number of dahlias.

A. Damonte showed a fine assortment of many different kinds of crystallized fruit.

Emile Bourguignon presented over 100 varieties of dahlias, and about 200 of roses, handsomely arranged. Interspersed with these were hothouse and garden flowers, perfume shrubs, maiden-hair, ferns and mosses in countless profusion. Among his pieces were three marvels of the florist's art, the most prominent of which was a large full-rigged ship. The hull was made of the finest hothouse plants, including some rare orchids, and the rigging of smilax decked with balls of milk-weed flower. The second piece was a floral cradle from which peeped a flaxen-haired doll. In this, only the daintiest and rarest hothouse flowers were used, and the whole was arranged with exquisite art. The third piece was a white swan, made of gilly-flowers and pompon chrysanthemums resting in a nest of choice exotics.

O. J. Albee made a varied exhibit of grain, vegetables, fruits—green, dried and in glass—nuts, plants, flowers and dairy products.

The display of silk by the Pacific Silk Factory was a notable feature. Mr. Van de Castele, the manufacturer, says: "Silk fabrics can be made in California in successful competition with Eastern manufacturers. All statements to the contrary are erroneous. A loom is a loom the world over. If we get weavers from Lyons, and give them the same quality of material to work with, we shall, of course, make the same silk as is produced in Lyons. I find that the supply of native silk produced in California is not sufficient. This I attribute to the discouragement of those who began to raise silkworms some years ago, and who did not proceed systematically. They raised cocoons, but had secured no market for them. Now, I raised 100,000 last season, and found a ready market for what I wanted to sell." The mills at San Jose now employ eight experienced weavers.

Messrs. Hartman & Normandin exhibited a line of carriages, both of their own make and from leading Eastern manufacturers, that was worthy of special notice. In no part of the State are more elegant turnouts seen than in San Jose. To supply the demand this firm has imported the finest carriages of celebrated makers, among whom are T. H. Briggs & Co., of Amesbury, Mass.

The baby-show, Friday night, drew the greatest crowd of the week. Seventeen entries were made. The committee, consisting of Mrs. Dr. Pratt, Miss Alice Younger and Miss Nora Farnsworth, after making their tour of inspection, decided that the prettiest boy was Albert Herold, 12 months; the fattest boy, Alphonse Salbrooke, 13 months, 28 pounds; the prettiest girl-baby, Etta Levy; the fattest girl-baby, Mattie Lulu McDonald, six months, 28 pounds. An additional or special prize was given to Carrie Hamilton, four months old, 21 pounds.

The Horticultural Exhibition was continued two evenings this week, to afford those who had been engaged at the Park further opportunity to attend.

Excepting some complaint as to the inadequate lighting of the hall, the praise accorded the arrangements and management of both fairs has been unstinted, and the directors have been warmly congratulated on the success of their endeavors.

#### Premium List.

Next week we will give the list of premiums awarded at the San Jose Fair.

"A THING OF BEAUTY."—"Wm. T. Coleman & Co.'s exhibit of California products, showing location of industries," bound in brilliantly illuminated, flexible covers, makes a volume of 30 pages, 14x10 1/2 inches. It is a collection of cards and announcements respecting the various branches and connections of the vast business of this famous firm. They are very elaborate in design, and handsomely printed in colors, embracing many beautiful pictures of Pacific Coast scenery—shore, valley and mountain, field, orchard and factory, as well as fruit and fish—interspersed with a number of maps.

MORGAN HORSES.—There has been regret expressed that the notable stock of "Morgan" horses was, in a measure, becoming extinct. Our representative at the Stockton Fair noticed the celebrated Morgan horse, Comet, imported by Smith Acker, of Oakdale, with his family of colts, which attracted a great deal of attention and favorable comments among horsemen. Comet is a dapple bay, weighs 1250 lbs., and is a fine stepper. He was imported by Mr. Acker, three years ago. It is generally conceded that as horses of all work and roadsters no stock surpasses the Morgan.

#### Mohair.

C. P. Bailey, San Jose, Cal., has this year raised more mohair and it has sold for more money than the combined product of any other four goat-raisers in the U. S. A. He has bucks for sale now.

### PACIFIC COAST WEATHER FOR THE WEEK.

### The Rohnerville Fair.

(Written for the RURAL PRESS by W. J. TULLIS.)

The Seventh Annual Fair of the Ninth District Agricultural Association, comprising the counties of Humboldt and Del Norte, opened at Rohnerville, Sept. 21st, and continued four days. As the exhibits were confined to these two counties, it could arouse only a local interest.

The display of live-stock was very fine, when you take into consideration that 10 years ago the two counties could hardly boast of a single thoroughbred. Now you will see as fine a collection of cattle as any of the middle counties possess, the Durham predominating, with a very good showing of Herefords, Alderneys, Jerseys and Holsteins. A great interest is taken in the dairy, and the display of butter and cheese, though small, was good.

Quite a curiosity was shown in the shape of a pair of French pigs. They were purchased from the captain of a French vessel and resemble the guinea pig in formation of head and body, but are larger. These are believed to be the only ones of this variety on the coast.

The display of poultry was very small, only about a dozen exhibits being made.

The horses were very fine, 84 being in the "stock parade." Deserving of special mention in this class was a yearling colt, shown by Mr. W. H. E. Smith, of Rohnerville. He was sired by a Percheron stallion also owned in this county, stands 15 hands 2 1/2 inches high, and is estimated to weigh 1300 pounds. The racing stock was all owned in the counties of Humboldt and Del Norte, and most of the races were very good, no jockeying being allowed, and the owners themselves driving in some cases.

The display of fruit was fine, the apples especially, with a good show of pears, grapes and peaches; the Japanese persimmon and Osage orange were also shown. Nearly all the varieties of vegetables were on exhibition, the cabbages and potatoes being very fine. The prize pumpkin, weighing 112 pounds, was raised near Camp Grant, I believe. Much complaint was made on account of the dust, the grounds not having been watered at all.

Financially the fair was a success, and the association is sound and growing.

#### Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Montana.  
FRANK W. SMITH—Nevada and California.  
GEO. McDOWELL—Fresno and Tulare Cos.  
O. F. BERGMAN—Tehama and Colusa Cos.  
S. S. LANYON—Nevada, Sierra and Plumas Cos.  
JEANNETTE HOUGHTON—San Mateo Co.

NAPA VALLEY NURSERIES.—Leonard Coates announces that he has purchased the interest of his partner, Mr. Tool, and will carry on under his own name the business formerly owned by Coates & Tool. Mr. Coates has always managed the nursery himself, so that there will be no change in the conduct of the business because of the change of ownership. We understand that the nursery is well stocked and equipped for an active and extensive business this winter.

#### The Cyclone Windmill.

The advertisement of the Cyclone again appears in this week's issue. We are assured by the company that the statement of sales which is made by them is absolutely true. There is every reason to think so, as the mill has been given high rank by its premium secured at the Mechanics' Fair; and the prices are very low, both of which facts are calculated to arrest public attention.

#### TO OWNERS OF HORSES, COWS, ETC.

Convince yourself by trial that the most speedy and effective cures are made by the use of Homeopathic Medicines, and that this is by far the CHEAPEST treatment. Horse-car companies in New York who have adopted this treatment have found their losses by sickness and death very materially diminished. We can give the highest references in this State to prove the superiority of this treatment over any other. Send for our "Guide" and "Veterinary Index," pamphlets of 64 and 42 pages, respectively, containing most valuable information. Sent FREE by mail upon application to

BERICKE & SCHRECK,  
234 Sutter St., San Francisco, Cal.

### List of U. S. Patents for Pacific Coast Inventors.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING SEPT. 28, 1886.

349,831.—MOVABLE ICE CHAMBER—I. Allegretti, West Berkeley, Cal.  
349,835.—PRESERVING PILES—Jas. Cass, Cayucos, Cal.  
349,700.—EXPANSION DRILL—J. F. Dye, Santa Paula, Cal.  
349,712.—OVERFLOW GATE FOR RESEVOIRS—Halley, Wilkinson & Bissett, Auburn, Cal.  
350,002.—SUBMERGED FORCE-PUMP—L. A. Kelly, East Oakland Cal.  
350,070.—SHIRT—S. Mendelsohn, S. F.

349,750.—PLOW—F. Rothmund, S. F.  
349,815.—MOLDING MACHINE—Richard Savage, S. F.  
349,817.—ANTI-FRICTION THILL TIP—R. W. Simpson, S. F.  
350,008.—CASTRATING INSTRUMENT—J. Trullinger, Silverton, Ogn.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

### Land and Water to Rent for One-Sixth of the Crop.

A quarter section—160 acres—of very fertile grain land, can be secured for one year for one-sixth of the crop, without sacks, in one of the most prolific grain-growing sections of California. Location, about 8 miles S. W. of Tulare City, a large and thriving place. The land is very smooth and level. If the season is an average wet one there will be no need of irrigating. Forty to fifty acres was summer-fallowed in the spring of 1885, and has not been seeded. The rest is unbroken, but not difficult of cultivation.

Also, one section of non-irrigable land, very level and easy of cultivation, to be had FREE, if thoroughly cultivated. Soil productive. About four miles westerly from Pixley S. P. railroad station. (Or a part of the section.) (This offer will not stand long.)

Enquire at this office, or call on or address E. M. DEWEY, Tulare City, Cal. (Residence, seven miles S. W. of Tulare.)

## HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

J. R. GATES & CO. PROPRIETORS,  
417 Sansome St. San Francisco

### Dr. Pierce's Electric Belt.

This small truthfully engravings exhibits the Grandest Medical Electro-Appliance of the age. By means of this BELT the human body is supplied with a constant current of Electricity. It positively relieves and cures, without medicine, all diseases and weaknesses of male or female, that can possibly be relieved or cured by Electricity and Magnetism. Dr. Pierce's Belt is the only one which will produce electricity with or without acids; giving when charged a current of high tension, which can be instantly felt by the wearer. Contains all the latest improvements, including an improved Electric Suspensory for Men. In fact it is warranted to be the only complete and durable GALVANIC BODY-BATTERY ever invented. Satisfaction guaranteed. Prices very reasonable. 25¢ Avoid inferior imitations. Call or write for our FREE descriptive pamphlet, No. 2. **MAGNETIC ELASTIC TRUSS, CO.** 304 N. SIXTH ST., COR. ### SHEEP AND SHEEPWASH.

**Italian Sheep Wash.**

EXTRACT OF TOBACCO

Free from Poison.

Cures the itching the SCAB OF THE SHEEP. The BEST remedy known. Costs Less than 1 cent per head for dipping. Reliable testimonials at our office. For particulars apply to **CHAS. DUISENBERG & CO.** Sole Agents, No. 314 Sacramento St., San Francisco.

**Calvert's Carbolic**

**SHEEP WASH**

\$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast

**LITTLE'S CHEMICAL FLUID SHEEP DIP.**

Price Reduced to

**\$1.25**

PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Scab in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

**FALKNER, BELL & CO.**  
San Francisco, Cal.

Recommended by Professors Hilgard, Cooke, etc.

**Powdered Potash & Caustic Soda**

KILLS GOPHERS, INSECTS, Etc.

Makes a pure Soap at a cost of \$1 per 125 lbs. Send for directions to **T. W. JACKSON & CO.**, 304 California St., S. F.

The Halsted Incubator Co. 1011 Broadway, Oakland, - - Cal. Price from \$20 up. Model Brooder from \$5 up. Thoroughbred Poultry and Eggs. Send for new Circulars containing much valuable information.

DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 28-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction. By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished. We ask you to give our mills a trial. We guarantee that you will find them precisely as represented. For full particulars, apply to DANIEL BEST, San Leandro, Cal.

SHOPPING BY MAIL!

Music as easily purchased at a distance of a thousand miles from a music store as at the side of its counter!

DITSON & Co. call attention to their wonderful system of sending music and music books, by mail, to any part of the continent. Packages of music up to the weight of Four Pounds go readily by mail. BONDS' ECONOMY WINDMILL

Is the cheapest ever offered to the trade, and as efficient and durable as the most elaborate self-regulators. It is intended to run constantly, and turns on the stand facing the wind, from whatever direction. The wearing parts are few and cheaply replaced. Requires little or no attention. Will raise 25 per cent more water than any "self-regulator" of same diameter of wheel. Anyone can put it up. Write for Circulars to BYRON JACKSON 625 6TH STREET SAN FRANCISCO.

IRRIGATION.

The Law of Water for Irrigation in Colorado.

By S. W. CARPENTER. This book is intended to present in a clear and concise way the Colorado law of this very important subject at the present time, with all the latest decisions. It also contains many suggestions of the greatest value to those interested in securing and preserving water rights in Colorado.

The information will be found of great value to those who are interested in irrigation laws for California. We append, by permission, a notice of the book from Hon. H. P. H. Bromwell, of Denver, a member of the State Constitutional Convention, and of the General Assembly at the time much of the legislation on the subject of irrigation was framed, and later referee in the establishment of priorities in Water District No. 3, Cache la Poudre river, and a well recognized authority in such matters.

By S. W. CARPENTER, Esq.—Dear Sir: I have examined the digest and compilation entitled "The Law of Water for Irrigation in Colorado," which you have prepared, and beg leave to say that in my opinion it will prove to be of much use and value to the community. The work so much needed has been done by you remarkably well, considering the brevity necessary in preparing a book for the use of all parties interested in irrigation, as well as of members of the bar. Respectfully and truly, H. P. H. BROMWELL.

Price, \$1.25. Post-paid. FOR SALE BY DEWEY & CO., - 252 Market St., S. F.

THOMAS POWELL, General Commission and PURCHASING AGENT.

for Fall, 1886. P. O. Box 1501.

Depot, 317 Washington St.  
SAN FRANCISCO.

## PEPPER'S NURSERIES.

Established in 1858.

Apricot, Plum, Prune and Peach on Myrobalan Plum  
stocks. Bartlett, Winter Nelis, B. Clairgeau, B. Hardy  
and other varieties, 1 and 2 years. A full stock of 1 and  
2-year-old Apple Trees, Peach on Peach, Nectarine,  
Quince, Fig, Grape, Currants, Gooseberries, Almonds,  
Walnuts, Chestnuts, etc. Prices reasonably low. No  
scale bug. Also Myrobalan Plum and Pear Seedlings,  
home grown. Address W. H. PEPPER, Petaluma, Cal.

## CLEMATIS.

## TO THE TRADE.

Correspondence invited with dealers requiring Clematis,  
giving varieties and number of each wanted. We  
are making extensive preparations to supply any possible  
demand, with home-grown stock. Address

W. A. T. STRATTON,  
Petaluma, Cal.

THISSELL'S  
CODLIN MOTH  
TRAP

Will destroy every Codlin  
Moth Larva that crawls up  
or down the tree. The best,  
cheapest and simplest trap  
now invented. No orchard-  
ist can afford to do without  
this trap. It is a sure cure  
for the codlin moth. For  
further information, address  
G. W. THISSELL, Winters,  
Yolo Co., Cal.

## SPRAY PUMPS.

Fruit Growers, Farmers, and all desiring to purchase a  
Spray Pump that is far ahead of all others in the market,  
as it is the ONLY Pump made with all metal valves,  
should buy the "CLIMAX SPRAY PUMP." all  
complete with tube, spray nozzle, six feet of best Rubber  
Hose, capacity, 8 gallons; also plain nozzle, galvanized  
iron can, all ready to use. Price, \$15.00. Good Agents  
wanted at once. Send for Circulars. No. 211 CALI-  
FORNIA ST., SAN FRANCISCO, CAL.

American Exchange Hotel,  
SANSOME STREET.

Opposite Wells, Fargo & Co.'s Express, one door from  
Bank of California, SAN FRANCISCO.

This Hotel is in the very center of the business portion  
of the city. The traveling public will find this to be the  
most convenient as well as the most comfortable and  
respectable Family Hotel in the city.

Board and Room, \$1.00, \$1.25 and \$1.50  
PER DAY, ACCORDING TO ROOM.

## WHALE OIL SOAP,

STRONGEST MADE ON PACIFIC COAST.

Especially adapted for Vineyards and Fruit Orchards.

OFFICE—28 California St., San Francisco.

33d  
YEAR.

STOCKTON NURSERY.

33d  
YEAR.

## WHITE ADRIATIC,

SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Praparturiens, Macrocampa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives,  
Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobalan Stock, Grape-  
vines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

## TRY THE PERSIAN MULBERRY.

NO SCALE—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had  
my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The  
nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to  
get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other  
pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

If You Want to Save Money and avoid a life of trouble, buy Trees Free from Scale.

W. M. WILLIAMS'  
SEMI-TROPICAL and GENERAL NURSERIES.

300,000 TREES. 1,000,000 ROOTED VINES.

FOR THE SEASON OF 1886-7.

and Cherries. Cypress, Gums, Acacias, Ornamental Shrubs, Greenhouse Plants.

8,000 WHITE ADRIATIC FIGS—The fig of commerce, home grown, for sale the coming  
season. Sixty varieties of Grapes, rooted and cuttings, including all the best Wine and Raisin  
varieties. Catalogue free.

W. M. WILLIAMS,

P. O. BOX 175.

Fresno, California.

Kieffer's Hybrid, Le Conte and P. Barry Pears, at Reasonable Prices.

## The Fresno Nursery

IS HEADQUARTERS FOR THE CELEBRATED TEXAS UMBRELLA TREE.

We have the only stock of genuine in the State; also a full line of Fruit Trees of all varieties, and rooted  
Grapes, French and American Elms. We make a specialty of Pear Trees, and have all sorts, including the latest  
Early Pear, The Lawson; 20,000 branched yearling Bartlett. Our Stock is Clean. New Catalogue  
ready Oct. 1st; free to any address.

D. W. LEWIS (Successor to Lewis & Bard), Fresno, Cal.

## WINDMILL.

After many years' experience in the invention and  
manufacture of Windmills, among which may be named  
the "Hercules," "Saunders," "Cyclone," "Eureka," the  
subscriber has perfected a mill that infringes no patent;  
will face the wind; is direct action; solid wheel; no  
wood screws, pivots, loose joints, flapping sections or  
spider legs to get out of order. Is beautiful, strong, not  
liable to get out of order, and in cheapness below any  
other. Send for pamphlet of the "Eureka Improved  
Windmill." Pumps of various kinds at very low rates.

## PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

## AGENTS WANTED to sell the MISSOURI STEAM WASHER

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]

MARY J. TAPPAN, REYNOLDS, Neb.: They excel all other washers I ever saw. JOHN R. DODGE, JR., NORMAL, Ill.: The best machine ever invented by man. H. H. BURK, CORTLANDT, S. C.: Everybody likes them and everybody wants them. S. B. ADAMS, ASHTON, D. T.: My wife would not take a quarter section (160 acres) of land for her machine, if she could not get another. MRS. JOSEPH SWIFT, STATE CENTER, Iowa: The most useful article about the kitchen. ANNA RAMSEY, MILFORD, Tex.: Have thoroughly tested it on articles from lace collars to bed quilts, gives entire satisfaction. ST. CLAIR INKSTER, JR., EGYPT, WASHINGTON TER.: Sell itself and can not be spoken of too highly. JOHN DETTON, BIGHAM CITY, UTAH: Have given it several severe tests and it came out triumphant every time. JNO. D. WHEELER, KANSAS CITY, Mo.: They have proved treasures to the families who secured them. A. P. SHIPLEY, TOANO, Nev.: Gives entire satisfaction. Rather handle the Washer than anything I have seen. E. M. MASSEY, LOCKPORT, Tenn.: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, SPOTTSWOOD, Mo.: If you will get up any instrument that will take as much labor off of men as this Washer takes off of the women, and cost no more, I could sell one at every house. MRS. M. C. DOBBS, CALDWELL, N. J.: Gives perfect satisfaction. I do my washing alone in same time I used to wash hired help. MRS. M. MOORE, NEWFANE, Vt.: Will do more than it says, especially washing flannels. MRS. F. G. SINDEN, SHERMAN, N. Y.: Would not take \$50 for mine if I could not get another. Washer quicker and better than it can be done by hand. MRS. FRED. H. HARRIS, BEATTLEMORE, Vt.: Is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. POND, HARTFORD, Conn.: Have used it nearly four months. Am perfectly satisfied. I freely recommend it to all housekeepers. MRS. MARY E. VAIL, PATOKA, Ill.: Saved me \$15.00 per year for 18 months I've had it. MRS. C. W. TALCOTT, NORTHAMPTON, Mass.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, BRANTON, Mich.: I had rather give up my service than part with my Washer.

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Payable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

**FREE!** New Book of Fancy Works with 100 Illustrations, 130 New Stitches, 10 Special Offers. 200 Picture Bulletin, 48 column story paper, all for 4 cent. post. e. NATIONAL BAZAR, No. 7 WEST BROADWAY, NEW YORK.

# HAWLEY BROS. HARDWARE CO.

## SOLE AGENTS FOR THE

# HOOSIER GRAIN DRILL.

The Best  
DRILL  
Ever Made!

Especially  
Adapted  
FOR USE IN  
CALIFORNIA.

The HOOSIER Force-Feed Grain Drill is universally acknowledged to have no superior. It is strongly built, handsomely finished, and has many improvements which no other Drill possesses. A positive Force-Feed, regulated without change of gear wheels or stoppage of Drill.

Every Drill has a Force-Feed Grass Seeder Attachment, constructed and regulated on the same principle as the Grain Feed.

The Hopper is placed so as to balance weight that would otherwise rest on the necks of the team. This, in connection with the double-tree, being attached beneath the tongue, so that the pull is inclined upward, makes the weight very light on the horses.

All HOOSIER Drills sold by us are especially constructed with heavily built wheels, with three-inch tires, which is of great advantage for the soft soil of this section.

For Prices and further information send for Catalogue.

Also Agents for the JOHN DEERE MOLINE GANG, NEW DEAL, SULKY and SINGLE PLOWS, South Bend Chilled Plows, Schuttler Farm and Spring Wagons, Perkins' Windmills, Keystone Disc Harrows, ALL KINDS OF LARGE AND SMALL FARMING IMPLEMENTS, HOWE SCALES, ETC.

301 to 309 MARKET STREET, - - - SAN FRANCISCO, CAL.

# TRUMAN, ISHAM & HOOKER.

## LA DOW JOINTED PULVERIZING HARROW.

SUPERIOR TO ALL OTHERS, BECAUSE IT IS

**Simple, Durable and Flexible.**

THOUSANDS IN USE GIVING ENTIRE SATISFACTION.

### POINTS OF SUPERIORITY:

It will do better work.  
It is much easier for the team.  
It is easier to manage.  
It has a lever to change the angle.  
It is not heavy on the horses' necks.  
It has no side-draft.  
It leaves no ridge at the center.  
It has a wrought iron frame.  
Its chilled bearings cause it to wear longer and work easier.  
It is easy to ride.  
It conforms to uneven surfaces perfectly.  
It can be made rigid if desired. It has self-feeding oil cups. Best Disc Harrow in the world.

BUY THE BEST:

## THE MILBURN HOLLOW IRON AXLE WAGON.

LIGHTEST,  
STRONGEST,  
CHEAPEST  
WAGON  
IN THE WORLD.

WHEELS  
RUN THROUGH  
BOILING OIL.  
BUY NO OTHER.

MADERA, CAL., October 5, 1886.

MESSRS. TRUMAN, ISHAM & HOOKER, San Francisco, Cal.—GENTLEMEN: We have now used a 3½-inch axle Milburn Hollow Iron Axle Wagon for more than four years, and must say it is the best Wagon that we ever run. It has stood every test over all kinds of roads, and we have used six horses. We ran it four years without the tires loosening or hubs cracking. We have used all kinds of Wagons, but the Milburn runs the lightest and is the best.

Yours very truly,

JAMES HOUSTON,  
B. HOUSTON.

We have the finest Carriage Repository on the Pacific Coast. Agents for David Bradley Manufacturing Co. A full stock of Garden City Plows, Harrows and Cultivators on hand; also a full line of extras. Than any other Cider Mill manufactured.

THEY HAVE AN ADJUSTABLE THROAT,

Which adapts them to all kinds and sizes of fruit.

The Grinding Rollers are Adjustable.

They Grind Finer than Other Mills.

They are Light, Substantial and Handsomely Finished.

## The Superior Grain Drill.

BEST DRILL IN THE MARKET.

Does Better Work and Takes Less Seed per acre than any other kind of Drill.

Can be worked in trashy and on ground where other kinds will not. Has the best Adjustable Force-Feed in the market, a feed especially adapted to drilling

OATS and BARLEY. WHEAT and RYE, FLAX and MILLET.

IT IS THE CHEAPEST DRILL, Because it saves and returns more on the investment.

The ONLY Drill in the world that DOES NOT Crack the Grain.

## SHERWOOD NOVELTY STEEL HARNESS

This is the Greatest Novelty ever offered, and a boon to Farmers. Traces and Doubletrees done away with.

Collar \$3.50  
Lines 2.25  
Bridles 3.25  
EXTRA.  
PRICE \$17.50 ONLY  
Sent C.O.D. by Exp's.

TRUMAN, ISHAM & HOOKER, San Francisco. Reasons why Sherwood's Steel Harness is the Best and should and will be Universally Used:

1. It is a common sense Harness.
2. It is made of material that will last a lifetime.
3. In plowing, dragging, logging and scraping there are no whiffletrees.
4. In all farm work you can change from plow to wagon quick.
5. In plowing in the orchard, you can't bark fruit trees.
6. In plowing and cultivating hops it has no equal.
7. In plowing along the fences you can get two furrows closer.
8. Horses cannot step over the traces or calk themselves.
9. A small boy will handle plow readily.
10. There is no weight on plow beam.
11. Team works one third easier.
12. There is no chafing, crowding or fretting of team.
13. For man and team it has no equal. Do not hesitate, but order at once from your nearest agent.

# PACIFIC RURAL PRESS

TWENTY-PAGE EDITION.

Vol. XXXII.—No. 16.]

SAN FRANCISCO, SATURDAY, OCTOBER 16, 1886.

{ \$3 a Year, in Advance  
SINGLE COPIES, 10 CTS.

Hon. Wm. Johnston.

The meeting of the State Grange at Marysville last week was harmonious, energetic and effective for good to all who were present and for the Order generally. The welcome accorded by the Patrons resident in the district was warm and sincere; the visit to an important region never before the scene of a State Grange meeting was very interesting and gratifying to all who participated in it. On other pages of this issue may be found some of the proceedings of the meeting, and there will be more to follow until the full report, which we give each year, is attained.

We have desired to adorn this issue of the PRESS, which is especially given to the Order, with an appropriate engraving, and we have chosen as the artist's theme a portraiture of the official head of the organization—Bro. Wm. Johnston, of Sacramento county, Worthy Master of the State Grange. Bro. Johnston was elected at the meeting in Oakland last year, and consequently this was the first State Grange wholly under his guidance and leadership. We think our judgment will be that of all who attended, that Bro. Johnston's course was marked throughout by ability, impartiality, courtesy, and was highly gratifying to all who took part in the meeting. The sight of his face upon our first page will no doubt be pleasing to all who sat under his presidency and to the many others who were not so privileged. Though not as perfect as we would like, it is a striking likeness, and is produced by a new process directly from a photograph. The use of his portrait will be a greater surprise to Bro. Johnston than to any one else, unless it be his wife, for we take the liberty of presenting it at this time without the knowledge or consent of either of them. In a compliment to Bro. Johnston for his course at the State Grange, Sister Johnston should be included. She is an accomplished and noble woman, thoroughly in earnest in Grange work.

Brother Johnston is one of the leading farmers of the river district of Sacramento county. He came in early, has worked energetically and enterprisingly, has made a fine home for his excellent family and won the esteem and goodwill, first, of his neighbors, and then, by a widening circle of honorable acquaintance and esteem, has come to be prominent throughout the State. He has served with distinction in the State Senate and while there exerted a marked influence in the promotion of legislation in the interest of agriculture as well as for the general good. He has frequently been mentioned as worthy the highest gifts bestowed by the commonwealth. Of Bro. Johnston's special service to the Grange we cannot do better than to quote a paragraph from the *California Patron* of a year ago:

Hon. Wm. Johnston, Worthy Overseer of the California State Grange, is one of the largest of the farmers of Sacramento county, whose thorough acceptance of the theory of co-operation has been shown in all his relations to the Order, and has been practically carried out in his connection with the Grangers' Co-operative Business Association of Sacramento. As a presiding officer he has few equals, and he has acquired no inconsiderable celebrity as an eloquent public speaker. His recent address before the members of the Grange at Santa Rosa was spoken of as one of the best ever delivered upon the important questions treated by him. At the last election of officers of the State Grange he was defeated by only one vote for Master, which result he accepted in excellent submission, and received the offer of the inferior service of Overseer in the kindest spirit.

Such officers give character and bestow honor upon the Order everywhere.

Brother and Sister Johnston will soon take their journey eastward to represent California in the National Grange. Their presence at the meeting in Boston last year was very creditable to our State. We have learned from several sources that the impression they produced by their wisdom in deliberation and agreeable social qualities was most excellent. We are glad that California's greeting to the National Council is to be borne again by representatives so able as Brother and Sister Wm. Johnston.

EXPORTS AND IMPORTS.—The large balance of exports over imports, by which the country

Inspector of Fruit Pests.

W. G. Klee, State Inspector of Fruit Pests, returned a few days ago from an official tour through the southern counties of more than a month's duration. He visited the various places where injurious insects have secured a foothold and thoroughly examined into the character and extent of the infection and the various measures which are being adopted to cope with the pests. Before going south Mr. Klee visited most of the fruit regions of the central part of the State, and has thus, since his term of office began in June, seen most of the State except the foothills and northern counties.

plish the results for which they were intended. He thinks the growers by full consultation may arrive at a better understanding of the matter, and take steps which will lead to more general and effective co-operation in coping with the dangers which now threaten.

Luxury and Moral Decay.

It has become a trite observation that the prevalence of luxury and expensive habits leads to national corruption and decay. The usual explanation of the fact is said to exist in the evil of excess, idle habits and physical enervation into which the wealthy classes are liable to fall. But, while these influences should not be overlooked, the whole philosophy of the case cannot be thoroughly understood till we contemplate the effect of the spectacle of high living upon the poor. As it passes every day under the eyes of a man of small means, it naturally inspires him with an undue appreciation of the value of money, and with an inordinate desire for its possession. He sees men no smarter, no better born or bred than himself, suddenly assume the highest social rank by the sheer force of money. He finds all at once that a great gulf has opened between himself and those who were once his associates. What is the consequence? He jumps straight to the conclusion that social distinction is nothing but the "guinea's stamp." If his passions are strong, his ambition eager, he will begin at once to lend all his energies to the accumulation of wealth.

Now this would be beneficial if it did no more than induce thrift and industry, but it does more. It produces a thirst for gold that leads men to take short cuts to riches. The haste to become rich lures them out of the regular channels of business. Gambling takes the place of trade. The line is so fine between fair operations and ventures and illegitimate speculation that it is easily overlooked. The gambler in stocks, grain and merchandise, like all other gamblers, grows desperate with his losses, overreaches himself, uses what is not his own, and lives in constant dread of exposure. It is an every-day story. But he who writes the great American novel, and would come nearest the dominant passions of the age, must make it his leading theme. American literature waits for some Balzac or M. Daudet, who will tell the story of the poor and ambitious young man thrown suddenly into the whirlpool of a rushing, dazzling metropolitan life, dazed and fascinated by the glare and glitter of its upper circles, seduced by the sirens of pleasure who are ever ready to smile upon those who have the power to purchase, is at last tempted beyond his means and plunges headlong to ruin.

FRUIT-MARKETING.—We have received another letter from Mr. Weinstock, presenting most interesting results gained by his study of the marketing of California fruit at the East. The length of the letter prevents its use entire this week, and its parts are knit too closely for separation. We therefore reserve it for printing in our next issue. We can assure our readers that the statements by Mr. Weinstock will be found full of interest and importance. He is taking great pains to secure an understanding of the matters involved, and all growers will be interested in his conclusions.

HON. WM. JOHNSTON, W. M. CALIFORNIA STATE GRANGE.

has for a long time been constantly growing richer year by year, is gradually decreasing. The figures for the 12 months ending July 31, 1886, are as follows: Exports of merchandise, \$686,555,499; imports, \$641,852,273, leaving a balance in our favor of only \$44,703,226. The movements of precious metals during the same period were as follows: Exports of gold, \$42,797,932; imports, \$20,735,009. Exports of silver, \$28,541,554; imports, \$16,419,957. Balance against us in precious metals, \$34,184,520, which reduces the balance of trade in our favor to the very low figure of \$10,518,706. Such figures do not look as though the country was on the road to prosperity, especially in its foreign trade.

THE OLEOMARGARINE BILL, recently passed by Congress, provides that manufacturers of all sorts of the stuff, which has almost superseded butter in many parts of the country, shall pay an annual Government tax of \$600; all who sell the stuff in packages must pay a tax of \$480, and retailers are required to pay \$48 per year.

These regions will be visited as soon as possible. Mr. Klee will be engaged during the next month in experiments to test several important things, and in preparation of his report to the board at their meeting in November. He will also be at the Fruit-growers' Convention, in Sacramento, beginning November 15th. During the afternoon of each day, until the holding of the Sacramento meeting, Mr. Klee may be found in the office of the State Board of Horticulture, at No. 40 California street, and will be glad to confer with any one who desires information on the matters pertaining to his office.

Mr. Klee returns from his examination of the different parts of the State more convinced than ever that the menace to our fruit industry by insect pests is most serious, and the distribution of the insects is continuing at an alarming rate. He believes it incumbent upon all growers to attend the Sacramento convention if possible, and determine by conference whether something more effective cannot be done toward checking the spread of pests. The laws as they now exist are inadequate to accom-

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## From Santa Maria.

EDITORS PRESS:—I at last fulfill my promise of giving you my impressions of this part of California. I arrived here in harvest time, the busiest portion of the year. A tourist, or one who travels for pleasure alone, would, I think, be very much disappointed, for the hills are brown and the dust dense and active; but a true Californian recognizes that these things must needs be, and that these heavy wagons laden with brown sacks foretell both pleasure and profit in the future. This is emphatically a grain region. The soil is a sandy loam, capable of producing all kinds of grain, vegetables, as well as fruit; apples, peaches, apricots, plums, and prunes thrive well here, but the great trouble is that there is not enough water. If artesian wells could be dug or the water of the Santa Maria river utilized, a longfelt want would be realized, and treble the amount of produce raised. This water which now sinks into the sand is capable of irrigating 500 acres, to say the least. It would cost some capital, of course, to construct proper canals, but the results would certainly repay the farmer.

There are several large ranches here, notably the Suay and Nipomo, the former of which contains over 28,000 acres, 3200 of which were sown in grain this year, of which over 2000 acres were cut for grain, balance for hay, averaging 15 cents of barley, 10 cents of wheat and 3 tons of hay per acre. The remainder of the land is used for stock. Nipomo ranch contains about 38,000 acres; one-third is used for farming, the remainder for stock.

Santa Maria has grown greatly since I saw it last. It is a town now of about 600 inhabitants, and boasts a good school, the principal of which is Miss Ida Twitchell, who was nominated on the Republican ticket for county superintendent. Another lady—Mrs. Wheelock—was nominated on the Prohibition ticket for the same office, and each has many friends; but if Miss Twitchell be elected the town will lose a good teacher.

The people of Santa Maria are quite enterprising. They have a reading-room, a town hall, a photograph gallery, several dry goods, drug, millinery and shoe stores, and three churches—Methodist, Presbyterian and Christian—all with good buildings and a fair membership. The Woman's Christian Temperance Union is also very active and determined to carry on the war against liquor to such purpose that the saloon will soon be a thing of the past. The ladies need courage, for there are eight saloons in the town at present.

The valley of Santa Maria is about 8 miles wide and 30 long; the town itself, called Central City in 1875, was laid out in that year by four settlers on their government claims, each laying out 40 acres in the town plot; and since the narrow gauge road was built from Port Harford the town has continued to grow rapidly.

Los Alamos and Guadalupe are also small places about 10 miles distant, both the center of a good dairy country. One of these three places is destined to prove of considerable importance in the future. The railroad will decide that all-important question. Los Alamos, I think, has the prettiest location, being in a rolling valley, surrounded by green hills covered with large live-oak trees. The people, many of them, are turning their attention to a good paying industry—that of raising hogs for the market, and a great abundance of pumpkins are raised as food for them. I think farmers occasionally make a mistake in trying to farm land only fit for stock. Rolling land, covered with trees, is certainly better adapted to stock than grain. Chicken-raising is a very paying industry.

Going from Santa Maria to Los Alamos we passed a small, solitary farmhouse, surrounded by about 20 chicken-coops. The land looked very dry and barren, but the grass abounded in insects. The fowls looked fine and the owner is making it pay. There are many dairy farms in this locality; I visited one, and the butter and cheese made there I found to be of particularly fine quality. A man who comes with enough capital to buy a home and has a determination to work will find the land respond liberally to his efforts.

A. D.

Santa Maria, Sept. 28, 1886.

## Points to be Noted in Buying a Wagon.

EDITORS PRESS:—When purchasing a wagon, see that the brake is either exactly on the center or a little above on the wheel, and never below. In this way you will readily feel that your wagon runs with an even motion and free from all jarring and shaking. On the other hand, if you have the brake below the center, you have not the purchase and cannot so easily block the wheels. Your brake is easily broken, as the weight of the wagon is greatly brought to bear on it. If you will observe, half the wagons of the day have their brakes set in the wrong manner. I have tried and experimented on this for years.

AN OLD SUBSCRIBER.

Red Bluff, Oct. 5, 1886.

## THE FIELD.

## Home-Grown Sugar.

The following is the report of the Committee on Sugar at the meeting of the State Grange held last week in Marysville:

Worthy Master, Officers and Members of California State Grange, P. of H.:

Your committee appointed at the last annual session of this body, in pursuance of Resolution No. 53, of that session (P. 93, Journal of 1885), "to derive information and report on the adaptability of the soils and climate of California to the production of sorghum, sugar-cane, sugar-beets and melons, for the manufacture of sugar; also, the best methods of manufacturing sugar from the above named productions," begs leave respectfully to offer the following:

Your committee, on an examination of the subject, finds its own inequality to a task involving questions of such gigantic and momentous importance. The sugar consumed in the United States during the fiscal year ending June 30, 1884, amounted to the enormous quantity of 2,720,894,684 pounds.

This amount was divided as follows:

Foreign product.....	Lbs.	2,442,357,448
Domestic cane and sorghum.....		121,492,963
Domestic maple.....		55,000,000
Domestic beet.....		2,134,273
Total.....		2,720,894,684

The amount of sugar and molasses imported into the United States during the fiscal year ending June 30, 1884, as shown by the report on Commerce and Navigation, 1884, is as follows:

DUTY FREE.	Quantity.	Value.
Molasses, galls.....	163,347	\$ 22,963
Raw sugar.....	125,158,677	7,108,293
Total.....		\$7,131,256

DUTYABLE.	Quantity.	Value.
Molasses, galls.....	38,965,293	\$ 5,577,722
Sugar, not above Dutch Standard No. 13.....	2,430,952,807	91,050,958
Above 13 and not above No. 20.....	768,832	61,111
Above No. 20.....	136,280	12,251
Candy and confectionery.....		20,982
Total.....		\$96,758,019

Total value of sugar, molasses and confectionery imported.....\$103,884,760

The domestic productions of sugar and molasses for the same year were as follows:

CANE SUGAR AT 5 CTS. PER LB. AND MOLASSES AT 30 CTS. PER GAL.	Quantity.	Value.
Louisiana.....	Lbs. 247,712,230	\$14,356,611 50
Other States (estimated).....	Lbs. 14,000,000	700,000 00
Molasses (Louisiana).....	Gals. 15,277,316	4,583,194 80
Other States (estimated).....	Gals. 750,000	225,000 00
Total.....		\$19,868,805 30

MAPLE SUGAR AT 10 CTS. PER LB. AND MOLASSES AT 75 CTS. PER GAL.

	Quantity.	Value.
Sugar (estimated).....	Lbs. 36,576,061	\$3,657,606 10
Molasses (estimated).....	Gals. 1,796,048	1,347,036 00
Total.....		\$5,004,642 10

SORGHUM SUGAR AT 5 CTS. PER LB. AND MOLASSES AT 30 CTS. PER GAL.

	Quantity.	Value.
Sugar.....	Lbs. 726,711	\$ 36,335 55
Molasses (estimated).....	Gals. 30,000,000	9,000,000 00
Total.....		\$9,036,335 55

BET SUGAR AT 8 CTS. PER LB.

	Quantity.	Value.
Sugar.....	Lbs. 1,277,826	\$102,630 80
SUMMARY OF THE VALUE OF DOMESTIC SUGAR AND MOLASSES PRODUCED IN THE FISCAL YEAR ENDING JUNE 30, 1884.		
Cane.....		\$19,868,805 30
Maple.....		5,004,642 10
Sorghum.....		9,036,335 55
Beet.....		102,630 80
Total.....		\$34,912,413 75

To which by adding the estimated product of glucose or starch sugar at 3 cents per pound.....Lbs. 300,000,000 9,000,000 00

We have a total domestic product of...\$43,937,409 03

RECAPITULATION.	Value.
Value of imported sugar, confectionery and molasses.....	\$103,884,760 00
Value of domestic product.....	43,937,409 03
Total.....	\$146,822,169 03

Owing to the variation in the retail price in different parts of our country, occasioned by the cost of transportation and other causes, it would be impossible for your committee to give the exact cost to the consumers of these commodities, but it is probable that it amounts to not less than 33½ per cent above the first cost.

When we reflect that less than one-third of this vast quantity of sweetness is produced in our own country, we are impressed with the propriety of instituting an inquiry as to the adaptability of our soils and climate to their production.

And when we consider the rapid increase of our population, and are reminded by statistics that our consumption of these commodities is increasing even more rapidly than the number of our population, the importance of such an inquiry becomes doubly manifest. In 1867 the amount consumed was 36.2 pounds per capita; in 1869, 38.3; in 1871, 41.2; in 1873, 45.7; in 1875, 51.4.

These figures show an enormous increase in the consumption per capita in our country and admonish us of the necessity of making provision for increasing the supply.

The attention of your committee was directed by the resolution to "Sorghum, sugar-cane, sugar-beets and melons," which are the

only vegetables from which sugar has been successfully obtained, if, indeed, it may be said to have been successfully obtained from all of these.

So far as your committee can learn, no experiment of sufficient magnitude has been made in California to determine the reliability of either of them for the successful production of sugar, except the sugar-beet.

This is a demonstrated success. It is true some failures have been made, but we believe that it can be shown that every failure has been justly attributable to other causes than unfitness of soil or climate, and that no more inviting field is open to capital and industry and enterprise in California than in the production of sugar from beets, in almost any part of the State.

Sufficient investigation has been made to demonstrate that we have vast areas of soil peculiarly adapted to the production of sugar-beets, rich in cane-sugar, and as free from deleterious chemical ingredients as can be produced in any part of the world. And our climate is such that they may be manufactured more conveniently and at less expense than in almost any other country.

While we have an abiding confidence in this source of supply, we are not unmindful of the other sugar-producing plants to which our attention was directed by your resolution. We are impressed with the belief that in the southern and central portions of California there are localities in which the sugar-cane of the South could be successfully grown and profitably manufactured.

As for the production of sugar from melons, which was included in the subjects presented to your committee by the resolution, we can only say that, so far as we know, the melon is not promising as a source of sugar. Professor Hilgard, in his report for 1879, gives a full account of his analysis of two varieties of watermelon grown at Lodi, San Joaquin county. We quote from his conclusions as follows: There was in the juice but 2.66 per cent of cane-sugar, which he says "is far too little, in proportion to the other substances, to be made available for the manufacture of cane-sugar; and the proposition to use the watermelon for this purpose is thus effectually disposed of in the negative." He further says that a sweet and pleasant flavored syrup can be made by evaporating the melon juice, but it is of too dark color to be accepted in the market, and there is so far no way known to remove this color except by filtration through bone charcoal, as is done in sugar refineries; but this is not available for home use, because it is too troublesome, long and costly when employed on a small scale.

Many localities have soil and climate which seem well adapted to the growth of sorghum; and yet, so far as your committee is advised, no experiment worthy of mention has been made in California to determine its merits as a sugar-producing plant, except some small experiments at the University, in a climate, perhaps, less likely than any other that could be found to give satisfactory results. All these sources of supply ought to be developed, and among them, we feel confident, can be found not only a sufficiency to meet our constantly increasing demands, but also to supply, in a large measure, the wants of other countries less favorably circumstanced for the production of sugar than we believe our country to be.

The investigation necessary to test the possibilities in this direction must be attended with expense beyond what individual enterprise may be expected to incur, and it is a proper thing to be done at public cost. You have sought, in the past, to procure the establishment of experimental stations by the Federal Government at different points on our coast. We believe that your efforts in this behalf should be prosecuted with renewed vigor, and when successful, the first experiments instituted at such stations should be directed to the determination of the possibilities of this coast in the line of sugar production. The importance of pushing these investigations may not be apparent to those who are unfamiliar with the causes which have conspired during the past few years, in the face of a constantly increasing consumption, to cause a constant depression in the price of sugar.

Among these causes may be mentioned, first, the stimulation given by European governments to the sugar-beet industry, to aid it, in its efforts to challenge sugar-cane for the supremacy in the sugar markets of the world, and second, the peculiarly favorable seasons in most of the cane-sugar producing countries, which have enabled them to compete with the artificial, and we may suppose, temporary stimulus which so animated the sugar-beet industry, and enabled it to put its product on the market at prices below what had been known in the past.

The indications now are that the price of sugar will advance from this time forward with the increase of population and consumption.

If you desire to consider the subject in an economic light, we would suggest that, in view of the great excess of imports over domestic product and the fact that these commodities are of universal consumption, and are regarded by everybody as necessities and not as luxuries, it is desirable to have the price at so low a figure that they will be within the reach of the poorest and humblest of our people.

It appears to be better that governmental aid and encouragement to this industry should be in the form of experiments designed to lessen the cost of producing these commodities, rather than by taxation, which increases their cost to the consumer.

During the fiscal year ending June 30, 1884,

as shown by the report of the Secretary of the Treasury, the duty collected on sugar, molasses, confections, etc., was as follows:

Duty paid on sugar.....	\$47,500,749 79
" " confections.....	10,432 25
" " molasses.....	1,412,283 16
" " sugar-cane.....	63 28
" " sugar-drainings.....	6,133 30

Total duty.....\$48,922,668 28  
Add first cost of imports.....103,884,760 00  
And the value of domestic product.....43,937,409 00

Total first cost of sugars.....\$195,451,837 28

It is fair to say that of this sum, \$69,200,360.96 has been paid by the consumers of sugar as a bounty on the domestic production, in order to foster and encourage that industry.

It is true that of this sum \$48,922,668.28 went into the treasury of the nation. But as it is admitted that the revenues are greatly above the requirements, the question naturally suggests itself, whether it would not be better to spend \$20,270,692.68 as a direct bounty on the domestic production of sugar, or in efforts to devise means by which our sugar producers can so cheapen the cost of its production as to enable them to compete with the foreign producer, than to require the consumers to pay into the treasury, where it is not needed, more than twice that amount to effect the same purpose.

It has never been the practice of our Government to foster this industry, except by the application of a protective tariff. But it has enabled our refineries to put high-grade sugars on the markets of Liverpool and London in competition with the bounty-fed sugars of European production, by refunding as drawback more than the amount of duty paid on the raw sugar represented by the refined sugar exported.

And we are led to institute the inquiry whether it would not be wiser and better if our Government, now that its revenues are so greatly above its requirements, would adopt the policy of European nations, which has made them such formidable competitors in this industry, of giving it direct rather than indirect encouragement and assistance. Or, if the policy of indirect aid is to be pursued, whether cheapening the cost of production would not be better than increasing the cost of consumption.

Through the courtesy of Prof. E. W. Hilgard, of the State University, your committee has been permitted to examine the manuscript of an article on "Sugar in California," which he has in preparation for a coming number of the *Overland Monthly*. Prof. Hilgard notes the fact that the true sugar-cane can be successfully grown in the lower counties of California, and says the extension of its culture becomes purely a commercial question. He says: "It was in the fields of Los Angeles that the sugar-beet and sugar-cane, the two competitors for the championship of the world in sugar production, met face to face, perhaps for the first time in the history of the industry; one of the many examples afforded by the California climate of the bringing together of cultures elsewhere separated by wide climatic and geographical intervals."

We find also, in Professor Hilgard's paper a clear statement, drawing a comparison between sorghum and the sugar-beet as a source of sugar. This is of such importance to those contemplating sugar production that we quote as follows: "The juice of the sorghum is much less pure at best than that of the true sugar-cane, and it varies greatly in the different varieties. In the first place it contains, beside the true sugar or sucrose, a variable but very considerable amount of glucose or grape sugar which is predominant at first, then gradually diminishes as the maturity of the cane is approached, and forms an inevitable source of difficulty in the making of sugar from the juice. In other respects, as in the contents of mineral salts, the sorghum juice is not as pure as that of the sugar-cane; and as the stem is not nearly as juicy as in the case of the latter, its product per acre, with the ordinary processes, is at best considerably less. But it can be grown where the cane cannot, and geographically is the real competitor of the sugar-beet, since both flourish in the same conditions and soils, at least in this country."

"The average sugar percentage found in sorghum in the East is about 14.8 per cent; the average of three California samples, not yet quite mature for sugar-making, which the writer analyzed in 1880, was over 14.3 per cent. The juice contained at the same time, however, an average of 6.5 per cent of impurities which stand in the way of the granulation of the cane-sugar." \* \* \* From these causes sorghum has been until recently regarded as adapted only to the manufacture of syrup or molasses, and it has gained wide acceptance in this capacity in the Eastern States; while the production of sugar from it is as yet in its infancy, with the chances of financial success apparently against it, from causes inherent in the nature of the plant."

Of the character of beet-juice Prof. Hilgard says: The juice of the beet ranges in its sugar contents from 6 to as much as 21 per cent, but the average contents of the beets worked in Germany does not exceed 12 to 13 per cent of cane-sugar. The juice of the beet however, does not naturally contain any other kind of sugar that would follow the cane-sugar into the purified juice, as in the case of sorghum. Besides the sucrose, the beet-juice carries only what the manufacturer designates as "non-sugar," and practically all of this sugar that

is of vegetable origin can be more or less readily separated out by the treatment of the juice previous to, or after, the final evaporation. After this purification there remain with the cane-sugar only the greater portion of the ash ingredients—mineral salts derived from the soil. The quantity of the latter is from twice to as much as five times greater than in the tropical cane-juice; but apart from these salts, and usually a smaller percentage of sugar, the purified beet juice stands even with cane-juice as regards purity and consequent facility of granulation.

Your committee has thought best to incorporate in its report this comparison of sorghum and the sugar-beet, for in the character of the plant is the foundation of sugar enterprises. Prof. Hilgard proceeds to describe at length the process of beet-sugar making, and the parts of the State which promise to yield beets best adapted for sugar-making, but for this information we must refer those who are interested to the full essay when it is published.

With reference to the last duty assigned us—that of reporting "the best methods of manufacturing sugar from" the productions mentioned—your committee regrets its inability to produce a report that would be satisfactory to the committee or profitable to any one.

The manufacture of sugar involves the application of scientific and technical knowledge to which your committee makes no pretensions, and a multitude of processes of which we have no knowledge. We are, therefore, under the necessity of asking that you seek desired information on this subject elsewhere. Perhaps the most available information may be found in two special reports by Prof. H. W. Wiley, published by the U. S. Department of Agriculture. One is entitled "The Northern Sugar Industry" (1884); the other "The Sugar Industry of the United States" (1885). These are government documents, and may probably be obtained by application to any California Senator or Representative.

## THE APIARY.

### Experiments in the Production of Comb Honey.

EDITORS PRESS:—Last spring I promised to make some experiments in the production of comb honey—something that would work with more satisfaction than the wide frames. I was unable, for want of time, to do much experimenting in this line.

The Flory corner clamp I do not think I should like, as it leaves at least one side of the section exposed to the bees, which would become so soiled by them as to make it quite a task to clean it off, and even then it does not look neat. By whatever means comb honey is stored in the sections, they must be protected on all sides from the bees.

I have tried several experiments the past season in regard to the use of comb foundation in the section. I placed in different hives one-pound sections, with starters, triangular pieces, half and full sized sheets of foundation; also, sections that had no foundation in them. In each case separators were used. After the sections were filled with honey by the bees, each section that contained a starter, triangular piece or a half sheet of foundation, could be easily detected by the eye, as in every case the bees changed the style of the cells (in the remaining part of the section not filled with foundation) from worker to drone cells. This injured the looks of the honey quite materially.

Some of the foundation used was quite dark, some a golden yellow, while part was white as snow. In the finished section the color of the foundation used could not be detected in any way.

The next test was for "fish bone," as it is called, a thick sheet of wax found at the base of the cells. From some of the sections partly filled with foundation the honey was extracted; even then they did not show the color of the foundation used. The cells of the comb were then cut away down to their base or foundation. In every instance the base of the cell where the foundation was used was as thin as that of the natural comb, and in some cases even thinner. Only when the comb was cut away to the base could the color of the foundation be seen.

For the benefit of those who do not understand the science of bee-keeping, I would say that comb foundation is made from pure beeswax, any adulteration being easily detected. Paraffine makes a very pretty foundation, but as it melts at a low degree of heat it cannot be used for this purpose, as the heat of the hive is sufficient to soften it so that it will break down when filled with honey. If resin is added it can be easily detected by the taste.

An article has been going the rounds of the newspaper press about the manufacture of artificial honey-comb filled with glucose, capped by machinery and sold as "pure honey." It always has been and always will be beyond the ingenuity of man to imitate the work of the bee in building honey-comb or capping it when filled with honey. W. W. BLISS.

Duarte, Cal.

## THE VETERINARIAN.

### Pleuro-Pneumonia in Cattle.

EDITORS PRESS:—Late telegrams bring us the unpleasant news of an outbreak of this disease among the cattle in the State of Illinois. As California and the Pacific Coast are largely interested in cattle-raising and considerable wealth is invested in the business, and, moreover, our wideawake cattlemen are constantly endeavoring to push still further the improving of their already high-graded herds by new importations, I think it timely to make a few remarks regarding this dreaded disease, to give those concerned some enlightenment about it and some valuable hints against its introduction into our domain.

**Symptoms:** In the beginning the symptoms are mainly those of simple pneumonia—general fever, light coughs, rough standing hair, quickened respiration and pulse and changing surface-temperature; appetite, milk secretion and digestion are depressed; patient usually separates from the herd and selects a cool or sheltered place. The further development depends on constitutional, climatic and general surrounding influences. We may classify the forms as acute, sub-acute and chronic. The first form usually attacks fat and vigorous animals and reaches its culmination in from 8 to 12 days, after which slow convalescence sets in or the patient succumbs to gangrene of the lungs. The other two forms develop in less vigorous cattle, or follow the first form; are less violent, but offer in the result no better chances. Patients sometimes linger for months, get very weak, and though they may partially recover, are worthless.

The post mortem examination shows one or both lungs—more frequently the left one—enormously enlarged and heavy—up to 30 pounds and over. The texture of such lungs or lung parts (the progress is usually upward) has changed to more liver-like (hepatized). The pleura, the serous membrane lining the lungs and ribs, is covered with false plastic membranes, which often unite lungs and ribs. The thoracic cavity and pericardium often contain a great quantity of serum. Incisions into the degenerated lung parts present a marmorated appearance. If some parts are gangrenous, dissolution and gangrenous gases will testify.

#### Prevention and Remedy.

Therapeutically no specific remedy is known. Besides strong counter-irritants on the sides of the chest, such as croton oil, Spanish-fly blister or corrosive sublimate solution or firing with red-hot iron, the internal treatment must depend on the stadium and the form of sickness, etc. In the very beginning anti-pyretics, such as glaucous salts, saltpeter, tartar emetic, etc., are in place. Where the sthenic fever has subsided, the treatment has to be changed and light stimulants and expectorants given.

Prophylactically, the general rules of health will answer. Fresh air and water, and good, not over-rich food is preferable. Hot, sultry, impure as well as damp and too cold air, is detrimental. The cardinal point is avoiding the contagion.

This disease is highly contagious and, in my opinion, which is based on large experiments and observations as government veterinarian in Germany, only spreading by contagion to the exclusion of spontaneous development. Pleuro-pneumonia has become more or less stationary in some of the Eastern States, Europe and Australia. Our State has, so far, been free, but once introduced here and not extirpated on the spot, it will spread and become very expensive and troublesome. The main danger is in the importation of new stock, and if such importation is necessary, it should be conducted with the greatest care. Don't buy in or near infected districts, and further ascertain if the shipping car or vessel is perfectly clean and disinfected, as healthy cattle may contract the disease in this manner. Cattle thus imported, however healthy seemingly, should be vigorously quarantined for at least two months after their arrival.

## THE GARDEN.

### Notes on Pea Growing.

EDITORS PRESS:—I. N. Clark, a veteran gardener living near Aptos, gives us the following notes on the pea:

Considering all its qualities, Bliss' Everbearing is the most valuable of all our peas. It is a very large bunch pea, bears heaviest and in season longer than other varieties. It is very sweet, and for table best. It is easily handled, and most valuable for shipping; comes in two weeks later than the next following.

The Telephone is the largest pea and pod. The growth is rank, the vines some six feet long, falling on the ground; a prolific bearer, a magnificent pea. Rather too much hull is the only objection to it. Next to Bliss' Everbearing in point of value.

Large Sweet pea. Fine for shipping and

brings highest price in market. Season same as Telephone.

For dwarf the American Wonder is the finest and sweetest early. For table use, fine quality, sweetness and shipping it is the best early dwarf pea.

The only dwarf Mr. C. is using, however, is McClain's Advancer. Tall-growing, very prolific. The only objection is, the pod is not large, and so is tedious picking for heavy growers. For table use, first-class, and brings the highest price. Time same as Bliss' Everbearing.

Mr. C. does not train peas, but lets the tops lie on the ground. He ships to San Francisco. Has been in the business of gardening 40 years, and seems well informed. Has been raising here and shipping to S. F. for five years. Was in this business near Portland, Oregon, five years. His place here is a sandy loam.

## THE VINEYARD.

### A Modified Raisin-Drier.

J. T. Goodman, the well-known vineyardist, is about to commence the construction of a large raisin-drier upon a plan originated by himself, which will, in all probability, be an invention of much value to raisin-growers. The objection to raisin-driers now commonly in use is the expensiveness of their construction and of their operation. Mr. Goodman's drier will be made with a view to avoiding this objection. In size it will be 200 feet in length, 10 feet in width and 8 feet in height. It will be covered by a shed roof, and the high side of the drier will be covered with glass in movable frames. The lower side will be made of lumber, and will also be movable. This will permit of closing the drier at night and during damp weather, and of opening it when the atmosphere is warm and dry, so that there will be a free circulation through it. For use in case of unusually bad weather a furnace will be built on each end, and a six-inch stovepipe will lead from the furnaces to the opposite end of the drier. The drier will be built with the high glass side fronting the south, so that it will get the full effect of the sun's heat during the day.

A very important part of the plan, so far as economy is concerned, is the manner of placing the trays in the drier. Driers commonly have frames with cleats upon which to slide the trays, or where the trays are piled one upon another, extra slats are usually nailed on the ends of the trays to give them the necessary distance apart. Mr. Goodman has adopted the simple but very satisfactory plan of piling his trays so that the ends lap, thus doing away with the necessity of extra slats except upon the outer edge of the end tier of trays.

This drier will be built at once, and will be used as necessity may require in curing his second crop of grapes. Mr. Goodman's experiments may well be watched with interest by all raisin-growers.—*Fresno Republican*.

**HOME-GROWN GRAPES IN NEW YORK.**—A dispatch from New York, October 8th, says: The grape season is now at its best in this portion of the country. The supply is enormous, and growers are selling at very low prices. The most abundant are Concord, Catawba, Delaware and Malaga. A fruit dealer said today that along the Hudson valley the supply is greater than it ever has been. He said the vines are so loaded as to hardly pay for picking and sending to market. Growers are shipping to all parts of the country by boat and rail. Last year was a phenomenal season, but from estimates made in a few of the grape-growing sections, the gross tonnage this fall will exceed that of 1885 by at least 5000 tons. Most of the Concord sold in New York come from the country in the neighborhood of Newburg. There is one tract, 12 miles broad and 30 miles in length, which is nothing but vineyards. You can buy grapes now as cheaply as you want to, and out of the city get all you want by just asking for them. Grapes are being stored in coolers, and we shall have this fruit all winter. It ought to be a good year for wine, too, as the grapes are very rich in quality. Delaware grapes are coming into market in such a large supply that they are as cheap as the common kinds usually are.

**THE RAISIN-STEMMER.**—The following is a description of the machine used for stemming raisins, at McPherson Bros.' packing establishment. We clip it from the *Grocer and Canner*: "The stemmer consists of two wire cylinders, one inside of the other. The outer cylinder is stationary, the inner one movable and inclining at an angle of 35 degrees. Above the outer cylinder is a hopper or receiver, into which the bunches of raisins are fed. The inner cylinder is revolved by means of a crank. The machine can be run by hand, horse-power or steam. The raisins pass from the hopper into the space between the two cylinders, the revolutions of the inner cylinder rubbing the stems off the raisins, which drop into a trough at the end of the machine and pass down into a large box or receiver. The stemmer is very simple, but does its work perfectly. We publish the above for the benefit of all who are in need of raisin-stemmers."

## HORTICULTURE.

### Sulphuring Almonds.

EDITORS PRESS:—A few days ago we were at the residence of Mr. J. J. Brown, of Madrone, and found him in the backyard of his orchard-house hulling almonds, and had with him an interesting conversation on the subject of almonds, their preparation for market, etc., and in the course of his remarks found that he highly condemns the public taste which calls for the practice adopted by many almond-growers of sulphuring to give the unnatural color so much admired by some superficial observers, and so frequently seen among almonds in the markets. He thinks the natural color of the ripe almond is, to the properly cultivated mind, the most beautiful, as it indicates the genuine article not tampered with by artificial processes. After sulphuring, the almonds have to at least be sold within the year, or sulphur will damage and spoil them. He has personally known of sulphured almonds for sale on commission at San Francisco, which, upon examination, were, through the influence of the sulphur, so badly spoiled as to be unfit for use.

Many persons let almonds remain on the tree long after ripe and until fogs and rains have so discolored the nuts that to hide the want of the natural brown almond color they sulphur, thus catering to the taste for the changed and yet unnatural color thus secured. This exposure to bad weather is generally wholly unnecessary, and if almonds are gathered in the proper season, before rains come or fogs have had time to weather-beat the shell, the nut will show the natural color, and no purchaser should require a change from this to any other, if even the color substituted should under other and natural conditions be very attractive.

This matter of naturalness in appearance is of importance in the sale and purchase of all natural objects, but more especially is this true with reference to articles of food. Our standard of taste should be high enough to force from the market almonds that are colored artificially. As it is known that sulphuring does no good, but only injures the nut, it should be understood that when almonds come into market sulphured, this process is resorted to only to make them appear better than they really are. Otherwise it is presumable that the color should be natural. This would show genuineness, and from it we might reasonably infer that the producer and dealer are acting on the square. This thought induces the cultivation of the higher taste for the natural color heretofore mentioned. It would seem that a little reflection would be sufficient to banish the taste that requires a sacrifice of the good, sound nut for this unnatural coloring of the shell with sulphur. McD.

Santa Clara Co.

### The Central California Citrus Fair.

Active preparations are being made for the coming Central California Citrus Fair, which will be held in Sacramento, at a date yet to be determined upon. The *Record-Union* of Friday has the following: The Executive Committee of the Central California Citrus Fair Association held a meeting at the Board of Trade rooms yesterday afternoon. L. L. Lewis was chosen chairman, and Dr. Latham, secretary. It being deemed of great importance for the success of the approaching fair that the organization of the association should be completed with the least possible delay, with a view to entering immediately upon preparations for collecting exhibits, the committee proceeded to the selection of directors for the citrus-growing counties of Central and Northern California. The additional members of the Board of Directors thus chosen are as follows:

Calaveras—H. A. Messenger and H. H. Paulk.  
El Dorado—S. G. Beach and H. Mahler.  
San Joaquin—W. B. West and Joseph Hale.  
Placer—J. J. Morrison and M. Williamson.  
Nevada—S. G. Lewis and Felix Gillet.  
Yuba—N. D. Rideout and C. B. Kimball.  
Butte—L. D. Freer and John Bidwell.  
Tehama—N. P. Chipman and Mr. Harvey.  
Shasta—C. C. Bush and Marion Griffin.  
Colusa—W. P. Harrington and Mr. De Jarnatt.  
Yolo—George D. Fisk and R. B. Blowers.  
Sutter—George Ohleyer and A. F. Abbott.  
Solano—A. T. Hatch and L. W. Buck.  
Napa—M. M. Estee and H. A. Pellet.  
Sonoma—Thomas L. Thompson and W. McPherson Hill.  
Contra Costa—Dr. Strentzel and L. C. Wittemeyer.  
Marin—F. C. DeLong and F. M. Pixley.  
San Francisco—W. T. Coleman and J. B. Stetson.  
Alameda—H. W. Meek and E. J. Wickson.  
Amador—J. W. Violet and Mr. Turner.  
The election of officers was next proceeded with, and the following were unanimously elected for the ensuing year: Honorable Newton Booth, President; Albert Gallatin, Vice-President; Dr. H. Latham, Secretary; and A. Abbott, Treasurer.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## The Farmers in Council.

## THE STATE GRANGE MEETING.

## Fourteenth Annual Session.

(CONTINUED.)

Continuing our report from last week, we give a portion of the proceedings had during Wednesday, Thursday and Friday, as follows:

## Patrons' Rally for Right, Truth and Justice.

Written, recited, and by request repeated by Worthy Pomona, Mrs. E. Z. Roache, of Watsonville Grange.]

From near and far, from here and there,  
Is heard upon the troubled air  
The coming sounds of desperate strife  
To freedom, meaning death or life.

This mighty power, with vengeful force,  
Sweeps onward in its destined course,  
With banners waving at its van—  
A token that the force is man.

And from the North a countless band,  
In myriad ranks, united stand,  
Their friends to shield, their cause to save,  
Though even Justice find a grave.

And from the South another band,  
With cheer and shout and stern command,  
Proclaims that conquest is its cause,  
With power, alas! to make our laws.

And from the East a lesser band  
For human rights a voice demand  
That all shall hear and profit, too,  
And rum's fiend fly to fields and new.

And all these powers, with columns long,  
Demand their rights with voices strong,  
Yet stand as one in every fray,  
And work together night and day.

And from all quarters comes a band  
With faltering steps and stiffened hand,  
With forms that bear the marks of toil,  
The sun-browned patrons of the soil.

With heads bent low, like any slave,  
They doff their hats to every knave;  
No banners wave, no trumpets grand  
Foretell the standing of this band.

But march they on, with mournful tread,  
These winners of the nation's bread—  
Their raiment rags beyond repair;  
Their souls are sunk in black despair.

So pass they by, to toil for years  
Mid sorrow, scorn, and vilest sneers;  
The scoffed of earth, their courage dead—  
To them the joys of earth have fled.

So here I'll pause, while men of mind  
The reason seek, yet fail to find  
Why men and women, millions strong,  
Should be held down by any throng.

Because in union there is might,  
That man sustains in wrong or right;  
That binds together all whose cause  
Is governed by the self-same laws.

And here is where we fail to find  
The riches of our mighty mind;  
Our ranks so strong, but catch the gleam  
Of union on life's beacon stream.

But having seen the brilliant star  
That shines so bright but yet so far,  
We'll rally quick ere 'tis too late,  
And like free men avert our fate.

Why stand we idle at each gate  
While foes are marshaling in their hate?  
Why longer bend the knee in fear  
Because our lords are drawing near?

And flaunt they in our very face  
The wrongs they've piled upon our race;  
They tramp us down like any beast,  
While on our rights they foully feast.

Oh! is your manhood, then, so dead  
That on your homes you let them tread?  
Your chivalry laid so very low  
That for your wives you strike no blow?

Your fathers' blood from sea to sea,  
That flowed to make your country free,  
And bind true men in union's fold,  
This, brothers dear, will you not hold?

Your children's lives will you not save,  
Because, perchance, they're born a slave?  
And will you let the hand of scorn  
Be pointed at your yet unborn?

No, Patrons, no! the day has come,  
Our thoughts no more shall be held dumb;  
We'll strike for right, as did each sire,  
And mow down wrong with vengeful ire.

We'll strike till fraud is in its grave,  
We'll strike to free each farmer slave;  
We'll strike for maid and matron, too,  
And battle for the good and true.

We'll loose the horn-gloved hands of toil  
And make them master of the soil;  
And sheathe no more bright reason's sword  
Till justice fair is our reward.

We'll match the world with mind and thew,  
With bone and strength, and muscle, too;  
With brains that rival classic Greece,  
Our victories all we'll gain through peace.

But hand in hand, and heart to heart,  
Each one must bravely do his part;  
And, like a granite rock, defy  
Our treacherous friends that gold can buy.

Hurrah, then, Patrons, for the day  
When crime and wrong are swept away;  
When one and all shall equal stand,  
And truth and right shall bless our land!

## Committees Appointed.

The following committees were appointed by the Worthy Master during the session, in addition to some published last week:

Credentials—Bros. Amos Adams, Geo. W. Hancock and D. A. Ostrom.  
Order of Business—Bros. B. R. Spilman, N. Mertes, W. C. Blackwood, Sisters Blackwood and Frisbie.

Officers' Reports—Bros. Frisbie, Dennis, Raymond, and Sisters Cross and Frisbie.  
Transportation—Bros. Totman, Ashley, Flint, Hancock, and Sister Coulter.

Constitution and By-laws—Bros. Adams and Ostrom, and Sisters Hull, Jones and Dewey.  
Resolutions—Bros. Capels, J. Strentzel, J. D. Bagnal, J. V. Webster, Sisters Lander and Coulter.

Education—Sisters Lander, A. P. Roache and W. D. Ashley, Bros. J. W. DeGolia, W. Cunningham and J. C. Marsh.

Taxation—Bros. D. A. Ostrom, J. H. Gardner, I. C. Steele, A. D. Nelson, E. Kelsey, W. D. Freeman and J. F. Cross.

Irrigation—Bros. V. E. Bangs, A. A. Krull, H. Raap and A. M. Plummer.

Good of the Order—Bros. B. F. Walton, J. D. Huffman, D. S. Sherburn, Geo. W. Hack, R. G. Ham, and Sisters E. A. Johnston and L. A. Clark.

California Patron—Bros. W. C. Blackwood, A. P. Roache, B. F. Walton, Amos Adams and J. P. Loucks.

Memorial Committee—Bro. Spilman, Sisters Dewey, Lander, Overhiser, Roache, Mertes and Plummer.

Feast of Pomona—Bros. C. A. Hull, T. B. Hull, G. W. Carpenter, J. D. Bagnal, Geo. Ohleyer, C. E. Williams and D. A. Ostrom; Sisters Hull, Frisbie, Jones, Smith, Walton and Keyes.

To Select Matter for the Local and Associated Press—Bros. A. T. Dewey and B. F. Walton.

## Worthy Lecturer Flint's Annual Report.

Worthy Master and Patrons:—I herewith present my report as Lecturer of the California State Grange for the past year. It is well known for the last two years that the farmers have not prospered as well as in former years. Short crops and low prices has been the universal complaint.

Low prices are beyond the farmer's control, but short crops are in some instances chargeable to neglect, want of skill in his methods, and a lack of the knowledge of the soil he is cultivating, and its adaptability to certain kinds of crops.

With a live man that is full of experiments, observation and inquiry, and that reads the best agricultural works of the day, I think some of these losses might be avoided.

From my point of observation there is not that progress made in the advancement of the Grange during years of depression and short crops that there is in years of general prosperity. Hope is not as bright—the smile does not come and go like the song of the lark; the step is less elastic; there is a less desire for social intercourse, and self-improvement and advancement are more overlooked.

If these suggestions are correct it goes to make up a large factor for the lack of progress made in the Grange in this State for the last two years. When reverses come upon us, whether human or divine, we need these very associations; this commingling together; this co-operation; these suggestions, and words of encouragement, words of hope, to buoy us up, that we may drive away the gloom of despondency and polish our shields for a renewed attack.

Two Granges have been reorganized, two Pomona Granges have been instituted, some of the Granges have made remarkable progress, and I have had the pleasant duty to dedicate two halls or buildings in the last year.

I have visited several Granges, and a number of invitations I had to decline on account of previous engagements or personal matters preventing. I do not think it can be said the Grange is on a decline. The Grange is such a household and family institution. Its teachings so broad and grand. It inspires and stimulates the loftiest and purest thought. It is laying foundations for future monuments, that shall be more lasting than brass or steel; and mid the realization of these facts we are impatient of delay. Innumerable suggestions and brilliant thoughts have been advanced for the quickest and surest road for the success of the Grange. But, according to my mind, all will be failures unless we take into our confidence that little word, work. Somebody must be vigilant, somebody must stand guard at the outer ramparts, somebody must stand in the highways, by-ways and the high places as living monuments for the principles we advocate.

According to instructions, I visited Oregon State Grange in May. Mrs. Flint and I went by water and returned overland. By the earnest solicitation of Bro. Cook, I was prevailed upon to visit their Grangers' picnic at McMinnville before the session of the State Grange. Their three-days' picnic was gotten up in good style—good attendance, good speaking and music—and they treated me with all the courtesy due a representative. I attended two picnics, two Pomona Granges and the State Grange. I found the members intelligent, courteous, warm hearted and hospitable, and fully imbued with the high order of our institution.

We supped with the Worthy Master and State Lecturer, and found they fully appreciated and were in possession of the good things of the land. Other brothers and sisters

contributed to our pleasure by entertaining us at their firesides. I invariably received a kind word for California and the sisters and brothers of our order.

The affairs of the Grange were conducted on thoroughly business principles, and the way they dispatched business showed they knew the value of time. Their Pomona Grange meetings were regular business meetings for buying and selling, and a general discussion of farm interests. The members took up the discussion with a vigor and will that showed how fully they appreciated the benefits of the Order. The vitality and life of the Grange in Oregon owes its existence to the untiring efforts of its Master and State Lecturer. Bro. Hays is most constantly on the go, to the detriment of his private affairs.

No good cause can fail where they have such good material for its guide and support. Bro. Hays is fortunate in having a State Grange that makes an appropriation of \$500 to the Lecturer's fund to lubricate the rusty machinery of the Order. I neglected to say in the proper place that when we were presented to the State Grange we were welcomed by the Worthy Master, Bro. Boyce, in such eloquent and flattering language that for a time I hardly knew whether I was a delegate from California or dreamland. Whether the occasion justified it or not I will not say, but it was a grand and successful effort to please the ear. We were well compensated for our time and expense in our trip to the Oregon State Grange, and we shall ever turn to it as one of the pleasant memories of the past.

In my visits to the subordinate Granges I make no charge. If they are able and willing, I accept the bare traveling expenses. If they are not, I go just as cheerfully without expectation or reward. I long to see the time come when our State Grange can put the right man in the field with sufficient funds to canvass the entire State and awake the farmers to their duty and pleasure.

I wish it had been my good fortune to have done as much for the Patron as my predecessor. But circumstances and individuals proved the contrary. He never left a stone unturned or a pool unfathomed.

All cannot work in the same channel. Each has talents peculiar to himself, and in the mutual development and combination of the whole it will form a symmetrical structure whose imposing sides shall be a monument to the earnest and faithful.

We behold a beautiful and massive structure or a towering monument on whose summit rests the dome of the sky. We applaud the genius and handiwork of the architect on whose brain its first impressions were made, and were traced and planned for the guidance of the builder. Do we consider that the vast and varied material was furnished by different contractors from different sources, grooved and dovetailed together stone by stone, brick by brick, by different hands into one complete whole?

Our architects have drawn the plan of the Grange; its skeleton form we see, it is beautiful in its outline and promising in its completion. It is inviting bids for construction. Its promise of profits is large. It settles its bills on the deposit of every pound, yard or foot of material.

It engraves upon its sides, in indelible letters, the name of every assistant.

We have our architect; the plans are prepared; the season is propitious; we are eager to build; we are waiting for material.

In the abundance of material the facilities for transportation and the adaptability to construction, who will volunteer and send in the first invoice that our labors may be employed?

## Resolutions Adopted.

The following resolutions were duly reported from the appropriate committees and adopted during the session:

## CONCERNING EDUCATION.

To the W. M. and Officers: Your Committee on Education beg leave to report that the following resolution, which has been referred to them, has been duly considered, and the committee recommend its adoption.

Your committee would also recommend that the school law, relating to the library fund, be so amended that a majority of the trustees, with the concurrence of the County Superintendent, may have the power to expend the library fund, or any portion of it, when in their judgment it is not required in the libraries for the purchase of school furniture or other necessary fixtures for the schoolroom. Many of the schoolhouses are lacking in trees to protect children from the hot sun, and sheds to keep roads and vehicles dry. Therefore, as most of the libraries are full, we suggest that a small part of the fund be used for those purposes. Many of the books of fiction for older children in school libraries vitiate the taste for solid reading, such as the study of insects that destroy fruit. The education now most needed is of a practical, thorough, systematic kind. There should be less of theoretical and more of practical information imparted, therefore your committee would suggest in employing teachers, that those who are practically given to labor thoughts, both physically as well as mentally, should always have the preference.

WHEREAS, The school law as at present enforced makes each fiscal school year commence on the first of July, and requires that all school funds shall be expended in and for the year for which they are collected; and

Whereas, Said funds are collected with other State and county taxes in December and January, all of which must be expended on or before the first of July following, therefore leaving no funds in the treasury with which to pay the salaries of teachers for the full term of school; therefore, be it

Resolved, That the law should be so changed as

to make the school year commence on the first of January.

## ON TRANSPORTATION.

Resolved, That we hail with delight the concessions that have been made by the transportation companies to the fruit interests of our country, and regard them as a happy omen to the return of reason to the brain that directs these companies and feel encouraged that our demand for further reductions, both in freights and fares, may receive intelligent consideration by the transportation companies. That a standing committee of five be appointed to present to the Board of Railroad Commissioners the reforms which inevitably inure alike to the producer and transporter.

## NATIONAL GRANGE—EXPERIMENTAL.

Resolved, That our delegates to the National Grange be and they are hereby instructed to use all honorable means in their power to induce the National Grange to hold its session of 1887 in the city of Sacramento.

Resolved, That the Master, Secretary and Executive Committee be requested to inform our delegation in Congress of the passage by the State Grange, 1885, of the resolution concerning the establishment of agricultural experimental stations.

## ON IRRIGATION.

WHEREAS, The question of water for the purpose of irrigation stands paramount to every other in this State at the present time; and whereas, the necessities of our people are such that a speedy solution of the question must be reached which will admit of the innavigable streams of the State being equitably distributed for the purposes of irrigation; therefore, be it

Resolved, That irrigation districts should be established under authority of law and State control which will secure such equitable distribution of the waters of said streams.

Resolved, That no individual or corporate right to the waters of the streams shall be recognized or allowed with the exception of a sufficiency for the actual and legitimate use of riparian owners. But to satisfy the greater necessities of farming communities, even this single reservation may be taken under the law of eminent domain, upon the payment to said riparian owners of the actual damage resulting from such diversion.

## ON TAXATION.

WHEREAS, In consideration of the fact that the property-holders of this State are taxed more than any other in the Union, and doubly so in comparison with the great agricultural Middle States, and with whose products we are forced to compete, and while our people are staggering under this strain upon their finances and subsistence, our State Legislature and Boards of Supervisors of the various counties have, from the early and flush years, been in the habit of making extravagant and sometimes useless appropriations; and as the Governor of the State, at the last session of our Legislature, recommended an increase in the salaries of our State officers, notwithstanding all agricultural products have scarcely paid the cost of producing, and the additional fact that some of our largest commercial firms have been forced into insolvency by the stagnation and general depression of business; therefore, be it

Resolved, That the time has come to call a halt, and we demand, as taxpayers, retrenchment in all governmental affairs, in both State and county, and that as close economy as may be consistent with good government be inaugurated.

Resolved, That we are unalterably opposed to an increase of salary of any office, but rather favor a decrease in accord with the times, and also we are opposed to the creation of new offices, but favor the wiping out of all unnecessary ones.

Resolved, That we recommend that at the coming session of the Legislature laws should be passed so that all goods, wares and merchandise of whatever form shall be assessed under an itemized statement, and that we favor one system of taxation for all.

## ON GOOD OF THE ORDER.

Resolved, That the thanks of this Grange be tendered the officers of the State Grange for the able and efficient manner in which they have conducted the proceedings of this session.

Resolved, That the thanks of the State Grange be tendered to the officers and members of Yuba City Grange and the residents of Marysville and vicinity, for their kind and fraternal welcome and the hospitable and generous manner in which they have entertained us. That the promises made before the State Grange at its last session have been more than fulfilled.

Resolved, That the sincere and heartiest thanks of the Grange be especially tendered to the Yuba City Grange Musical Union for their able and well-rendered musical and literary program, which was prepared for our entertainment.

Resolved, That the thanks of this Grange are hereby tendered to the Masonic Fraternity, for the uninterrupted occupation of their handsome and commodious hall.

We shall be able to give further resolutions in our next, together with the names of the authors of the above.

## Report of Committee on Literary Entertainment.

Worthy Master and Patrons:—Your Committee on Literary Exercises have but a brief report to make. The regular proceedings of the session have been more than usually brisk, and the order of business, arranged for four days instead of the usual term of five days, has afforded shorter time for literary exercises than in preceding years, so that our present list of contributions rendered is correspondingly less.

The following contributions have been presented during the session:

Recitation—"The Substantial Bank," by Miss Josie Roache, of Watsonville Grange.

Original Recitation—"The Patrons' Rally for Truth, Right and Justice."

Original Address—"Sweep Out the Bases," by D. Lubin, of Enterprise Grange, Sacramento county.

We have the pleasure to recommend the publication of the following worthy contributions in our official proceedings, the reading of

which, we exceedingly regret, was omitted for want of time only:

*My Father's Home*—Original Essay—By Sister E. O. Smith, of San Jose.

*Our Educational Interests*—Original Essay—By Brother Charles Wood, of Danville.

Essay—Written by Brother Henry Clark, of North Butte Grange.

Thursday evening, apportioned to literary exercises, was well given over for one hour to the excellent entertainment by the Yuba City Grange Choir and children, under direction of Sister B. F. Frisbie, and for which the thanks of the Grange were tendered by the Worthy Master. The program was as follows:

Opening, piano solo by Miss Annie Cooper; chorus, by the Grange; instrumental piece, by Miss Gertie Wilkie; song, duet, by the Misses Mattie and Ella Walton; rendition of several pieces by selected quartet; recitation, "Gone with a Handsome Man," by W. J. Hardy; song, by Miss Ada Ohleyer; recitation, by Miss Mattie Walton. The program was closed by a chorus rendition of the song "Farewell."

We deem it appropriate to mention here the musical selections rendered by the Yuba City Grange Choir and other volunteers, which have added so materially to the literary and social pleasures of our grand gathering. From the first rousing song, rendered before the Grange opened, to the last inspiring strains (that shall go with us when, with hearts forever united, we part hands around our fraternal altar), their ministrations to our good cheer will prove in all respects most elevating and praiseworthy.

We are glad to say that our work has been so harmonious, and so kindly received by the Grange, during the three years that we have each and all served on this committee, that our duties have proved only a pleasure.

We now resign our official career with most sincere thanks to the talented contributors who have, without compensation, made the introduction of the literary exercises so easily and satisfactorily effected in this Grange under the feeble administration of your committee.

A. T. DEWEY,  
J. D. HUFFMAN,  
A. P. ROACHE,  
Sister E. Z. ROACHE,  
Sister JAMES MARSH.

#### Pomona Feast.

THE Marysville *Appeal*, which gave very creditable daily reports of the session, mentioned the Pomona feast in its Saturday's issue, as follows: Fully 2000 people attended the festivities at the Pavilion given by the State Grange. At about half-past nine o'clock the Yuba City Band marched to the Masonic hall and there waited until the Grange was ready to come down in a body. When it did, those who had invitations fell into line, and the whole procession was nearly three blocks in length, two by two. When once inside the building there was found to be half a dozen rows of tables stretching half the length of the hall, laden with cake and all the palatable fruits the land can produce. The floral pieces upon the tables were exquisite and showed much taste.

When all had marched to position at the tables, the chaplain's prayer was said by Bro. B. F. Frisbie. Many were compelled to wait. The opening ceremonies of the Feast of Pomona were announced by Worthy Master Johnston in the simple words "Partake of that which is before you," and all readily responded. Pomona in this instance was Mrs. A. P. Roache, who sat at the head of the center table, dressed in an elegant costume of white, with fruit in profusion. Her throne was also a very handsome affair.

In the hurry of writing up the reports this week we have no chance to do justice to this leading feature of the occasion. We hope some Sister present will do it for us with a more graceful pen, in a future issue.

At the conclusion of the feast, the music was started, and the lovers of the light fantastic indulged to their heart's content.

#### Fatherly Congratulations.

Near the close of the session, at a late hour on Saturday evening, the chairman of the literary committee, in an informal manner, requested the five stalwart Past Masters of the California State Grange to step forward in front of the Master's chair, facing the altar, when he expressed the great pleasure of himself and fellow-Patrons in annually meeting these grand old patriarchs in our cause, the men who have labored so long, ably and faithfully for the good of our Order. In most fraternal societies, after reaching the highest honors, past presiding officers are apt to become lukewarm, and seldom, if ever, are so many past presiding officers ever found remaining hand in hand, faithfully continuing their good work. He was sure that each would have some welcome words of wisdom and encouragement to speak in their usually eloquent and heartfelt manner. Bro. Spilman, being the senior in years, was called upon. Each, addressing the Worthy Master and brothers and sisters, responded in about the following language:

B. R. Spilman.

So long as I have strength and live, I intend to uphold the great work and noble principles of this Order, and to the utmost of my ability carry out my sacred obligation made in the presence of my brothers and sisters, before high heaven. We must part, and most probably, we shall never all see each other again in this world; therefore, let us strive fearlessly, with faith, and in harmony, to do our full duty,

that we may in the end meet in the great Grange above where partings are never known.

J. V. Webster.

If I must respond to this call, I will simply say that, from the infancy of the race, agriculture has ever been acknowledged the first, as well as the most important calling of man.

Fresh from the hand of his Creator, with the blue arch above him, sparkling with its new jewels, and in the midst of rural scenes, the first man was placed. And, sir, it was here, surrounded by rich fruits and fair flowers, radiant and emblematical of the beauty and glory which surrounded her, that woman first appeared. Since then, ever sounding down along the stream of time, the echoes from the flocks and handiwork of the husbandman have been heard in all the land.

In every struggle for freedom and in all the wars waged in aid of ambition and for the perpetuation of despotic governments the tiller of the soil has stood the brunt in every fight. And, sir, every cradle, in which liberty has been rocked and nurtured, has been discovered in the midst of rural homes. In conclusion I will say that in the history of the world from its beginning, no page can be found wherein is recorded the existence of an intelligent, prosperous people, that did not encourage and honor agriculture. And the standard of enlightenment and liberty possessed by each nation and people upon the earth at the present time is accurately gauged and determined by the degree of intelligence and thrift of its farmers. And, sir, the chief glory of our calling rests in the fact of the stability and prosperity of the governments wherein agriculture is fostered.

I. C. Steele.

To have passed the Master's chair in a State Grange is to have enjoyed the best opportunities at the disposal of the Patrons of Husbandry in a State, and to have incurred obligations that can only cease with duties well done—duties which only cease with translation to the higher life. Past Masters know by experience the value of harmony in the Order, and are bound by every consideration of honor to cultivate fraternal affection in the Grange, as it is the only sure foundation on which harmony can rest.

Your Past Masters standing among you, united in feeling, devoutly desire moral strength to exemplify the principles of our Order in our lives, and to be worthy of the generous confidence so freely extended to us by the brothers and sisters in the Grange; and whenever from the weakness of our common nature we fail in a duty or commit a fault we are ever ready to acknowledge it, and, so far as possible, correct it. We rejoice with you over the good accomplished at this session of the State Grange, and we will go forth to other duties with fond recollections of its many happy incidents, and with renewed hope and unflinching determination to labor in our cause.

Daniel Flint.

*Worthy Master and Patrons:* When elected to preside over the State Grange, I put on the badge of office with many misgivings, fully knowing the responsibility which such a position carried with it. If you made a mistake in the selection, I ask you to bear one-half the responsibility and I will assume the other. I did the best I could. My conscience is clear. I never could have gone through my term of office even as well as I did if I had not received the almost united support and kindly words of the Patrons. For the kind words and the advanced manner in which I was heralded to our Order by the *California Patron* and *RURAL PRESS* I shall ever bear a kindly remembrance.

When I look upon these bald heads and gray hairs around me (and do not look in the glass), I feel as though I was a mere boy; while they, as it were, are just ripening and growing to maturity.

To have the honor to stand beside and be ranked with the distinguished Past Masters of this State Grange is an honor worthy of the ambition of any true man, and I try and bear it with that modesty and timidity of one who has doubts of its proper allotment.

My mind has been expanded, my sympathy quickened, my intelligence enlarged, my observation clearer, and the needs of the farmer made more apparent to such an extent that it compensates me for all time and means expended in this great work.

S. T. Coulter.

I suppose it is my first duty to ask your pardon for absenting myself from the opening and first few days of this session. I beg to assure you that it was a great cross to me to be detained by public duties from your midst. And during the time of my absence I have been continually thinking of you and desiring to be present with you. You have so honored and petted and flattered me that I could not but feel that I ought to be here, and reproach myself for being away. But since my arrival—since I have learned how well and nobly you have conducted the business of this session, the glorious achievements accomplished, with so much harmony and unanimity, for promoting the honor and usefulness and influence of our beloved Order—I find that, instead of regretting my absence, I ought to be congratulating you on the wisdom that has guided you and the success which has crowned your efforts.

If anything has occurred to mar the peace, concord and fraternal affection which should pervade our gatherings; if, in a moment of excitement and forgetfulness, any word has been

spoken or act performed calculated to wound the feelings of any of our members, let us banish it from our memories; and, going from this important and successful meeting, let us endeavor to forgive any wrong and forget any folly that may have been committed, and only cherish in our hearts the memory of the pleasures we have enjoyed. Let us each carry with us to our homes a more unalterable purpose to labor more zealously for the prosperity, usefulness, honor and ultimate triumph of our noble and beloved Order.

Worthy Master Johnston responded, thanking the Past Masters for their kind and faithful attendance, and all the brothers and sisters present; also the people of Marysville, for their generous treatment. He expressed the belief that we shall all return to our homes better Patrons and with renewed zeal for the work of another year.

Sister W. D. Ashley being called upon, closed her remarks as follows: Bro. Spilman has given us a loving benediction; let us receive it and depart in peace.

The Worthy Master closed the Grange in ample form in the fifth degree, and the final goodbys were said by the brothers and sisters near the hour of one o'clock on Saturday morning.

In future issues we shall give still further information of interest, which we regret our space in the present issue will not admit of.

#### Miscellaneous Mention.

For liquidating the Patron Publishing Co.'s debts, over 300 shares, at \$10 each, were generously subscribed for at the State Grange, in addition to stock previously sold. [At the stockholders' annual meeting, Oct. 13th, the following directors were elected: I. C. Steele (Pres.), J. F. Deming (V. P.), A. D. Logan (Treas.), J. Chester (Sec'y and manager), W. G. Keesling, A. L. Chandler, Wm. Johnston.]

The weather was entirely delightful the whole week through. The days were warm and balmy, the nights cool, and the mornings clear and crisp.

Bro. H. C. Jones, while suffering constantly from a disabled hand, nobly performed an important part in preparations for the comfort of all and success of the Pomona feast, including the services of the band and successful march in the pavilion.

The results of thoroughly established confidence between clear-headed business Patrons were plainly evidenced by the well-planned and perfectly-carried-out entertainment of the large body that gathered at the session. Bro. and Sister Ohleyer, and their equally able co-operators in the work, will ever be remembered for their delicately but efficiently bestowed favors. We all now have to thank Bro. Ohleyer over again for his consistent and persistent efforts last year in securing the location of this session at Marysville; also for reduced rates of fares, which doubtless added greatly to the attendance. It was a wise thing, too, for Yuba City Grange to so thoroughly interest the citizens of Marysville to aid in making the visit every way convenient and agreeable.

Often, during the delightful scenes of the session, our hearts would reach out to the absent members of old who have gone before us to their final Grange home, and those still near and equally dear souls who were, by misfortune or otherwise, detained from attending. We could heartily wish that every member of our own, and every other Grange, could have been present through the session, and especially its closing hour.

Worthy Steward E. W. Davis, Master of Santa Rosa Grange, in more than usual eloquent and forcible words, cordially and heartily invited the Grange to hold its next annual session at Santa Rosa, offering on behalf of his estimable Grange and the enterprising and generous citizens of "Santa Rosa and its environs" every possible inducement for the convenience, comfort and economy of representatives and visitors. This cordial offering, backed by the remembrance of the beautiful city and rarely complete entertainment enjoyed there seven years ago, effected a very large vote on the first ballot in favor of Santa Rosa—blessed Santa and beautiful Rosa.

The officers of this session have reason to be proud of the efficient manner in which the work of the session was performed, especially in the orderly and perfect method in which the fifth degree was conferred and the Pomona feast ceremonies were conducted. The vote of thanks passed for able services rendered was well deserved, and not the least those of Bro. Chester's assistant secretaries, Sisters Nellie G. Babcock and Roxie Dennis.

Bro. Colter was detained as a member of the Board of Supervisors of Sonoma county during the first portion of the session, although his faithful work was present throughout the session. His well-written report on sugar culture published in this issue, as adopted, was read by Bro. J. D. Huffman, of the literary committee, before Bro. Colter's arrival.

The Marysville *Appeal* of Saturday promised to publish on Monday the list of contributors to the Pomona Feast, furnished them by kindness of Bro. Williams and ourselves. Through some inadvertency, no doubt, the list failed to appear, and we are unable to publish it. Gen. Bidwell and a number of local contributors gave very ample donations, and the supply of fine fruits, nuts, cakes, raisins, flowers, etc., was extensive.

The untiring assistance of Bro. Geo. W. Hancock and Sister M. G. Frisbie, to the choir, was notably valuable. The following special-

ties rendered during the meetings were received with favor:

Quartet—"The Belfry Tower." Vocal Solo, by Claude Phipps—"Jack Came Home To-day." Quartet—"Farewell to the Forest." Piano Solo, by Frankie Stevens, of Sacramento Grange—"Old Black Joe." Solo by Miss Roxie Dennis, of Eden Grange—"Consider the Lilies."

#### Sutter County Farmers and Homes.

Our thanks (wife included this time) are due Bro. B. F. Walton for a fine ride and visit to his home and dairy farms on Saturday last. Quite a number of other visiting Patrons were also pleasant participants of Brother and Sister Walton's kind and thoughtful hospitality. It is always refreshing and a real delight to newspaper men so closely confined as ourselves to enjoy such hours of recreation, and especially at homes so thoroughly, sensibly and comfortably conducted, both indoors and out, as evidenced at Bro. Walton's. His farms, considering the quality of land, are extensive and show so much practical system in layout and conduct that we invite him to furnish our readers with a diagram and description, believing it will afford good practical hints to many, and be read with rare interest by all.

Bro. Walton's hospitable residence shows a substantial build, commanding appearance and beautiful surroundings, and we are glad to say that, like Bros. Geo. Ohleyer and A. L. Chandler, he is one of the small band of representative pioneers who have unitedly, bravely and intelligently protected their fair land from debris destruction.

They have also been the foremost farmers in the State to combine their capital and real estate securities in co-operating in the purchase of sacks, storage of grain, marketing their produce, purchasing supplies, etc.; and beyond all this, they combined and purchased two newspapers, each of which was bound to quarrel with the other, right or wrong (all for bread and butter, of course), on every question of public interest arising in the community. They merged these papers into a single engine of public good, devoid of politics and liberal and impartial in its conduct to meet the approval of its owners, composed of men of various views, creeds and politics, but all bent on protecting the true interests of the highest and lowest citizens. This sensible combination of the two papers helped them fight the anti-debris contest successfully, without the chance of a rear or side fire in their own community. It has proved a financial success, enlightened the men who have conducted it, brought to the front and established confidence in some of the most modest but best and ablest of farmers, and stands ready to protect the highest interests of the community and to lead the fight against any common enemy that may approach the people's rights hereafter.

Best of all that we can say of these men is that they have builded better than they knew, from the fact they have made apparent, that what they have done in Yuba county a few intelligent, reliable and determined men may similarly accomplish in any other good farming section of our own State or the United States.

#### On the State Grange.

The *Sutter County Farmer*, the farmers' co-operative journal of Yuba City, issued on Thursday, speaks of the State Grange as follows: The attendance is quite large, and yet not as many came from the south as we had anticipated. Those who did come express themselves delighted with the town and surroundings and the reception so cordially extended to them by our people. As years roll by these annual reunions (as we prefer to call them) are anticipated with increasing pleasure, and none need the recreation more than the isolated farmers and their household. A year has passed since we last met, a year of joys and sorrows, of trials, triumphs and disappointments. All this furnishes food for thought and a joyful greeting by those so fortunate to make this fraternal call. Though it is but a year, many old comrades are missed; some for one reason and some another, unable to attend, and others, alas! have gone to that bourne from whence no traveler returns. Their places are occupied by others, and in turn all will be succeeded, and let us hope our own experience will be a guiding star to our successors. In this Order the men and women are on a perfect equality. In this instance the men seem to do all the talking and the women the listening; this is not in accordance with the usual pretense of the lords of creation and should be revised. The literary exercises, which devolve chiefly upon the sisters, have so far been rendered with consummate ability and have been received with universal favor. The music, both vocal and instrumental, could scarcely have been excelled, and through its popularity is likely to encroach upon the other business of the session. The local Granges of Yuba, Sutter and Colusa counties, through their committees, are entitled to great credit for the very efficient manner in which they have discharged their labors. We feel sure that no promise heretofore made to this body has or will remain unfulfilled, and that our visitors will depart to their homes with a more exalted opinion of Marysville and her surroundings.

(Continued on page 329.)

### Berkeley Blossoms.

[Written for the RURAL PRESS by ANONYMA.]

Berkeley blossoms, bright and rare—  
(Sweetest blossomed anywhere),  
Were ye mindful of your duties  
While the sunlight dyed your beauties,  
As ye budded slow and saintly in the summer air?  
Berkeley roses, gold and cream,  
Did your folded petals dream  
Most of dark sad rooms and faces  
Turning mutely to the vases  
Where your bending clusters would in stately beauty  
gleam?  
Did ye dream so, cream and white,  
Waxen roses, frail and light,  
Of the pain ye would dissemble,  
Of the fingers that would tremble,  
To reach forth and clasp you in the weary, wakeful  
night?  
Purple pansies, widely blown,  
In your fancies was it known  
What your mistress was desiring,  
Bending o'er you so, untiring,  
While her soul's sweet musings in her clear eyes  
shone?  
Heliotrope in bud and bloom  
Breathing fragrance to the noon,  
She had meanings rare and tender,  
She had duties for your splendor,  
As she cut and bound you for the sorrow-haunted  
room.  
Dewy, dainty, softly fair,  
Berkeley blossoms, ye were there  
In the gilded vases smiling,  
All the long, sad hours beguiling,  
While about you hovered, surely, lost words from a  
prayer.

### The Evolution of Mrs. Thomas.\*

NUMBER 2.

[Written for the RURAL PRESS by M. H. F.]

If an audible voice from heaven had fallen upon the ear of the sad and troubled mother of the Thomas household, it could hardly have brought more surprise. She believed in a special Providence in a vague, general way, but nothing in her experience had ever seemed so direct and personal, so fatherly-kind, as this. The letters had caught her eye, and then she had read a dozen lines before she could quite take in the idea, a dozen more before she could believe her eyes. Why, here was a plan exactly fitted to her needs! There were other souls, then, as hungry and thirsty as her own, and here was the manna dropping from the sky, the water gushing from the rock, in response to their famished cry. Some women would have had doubts and fears lest this curriculum of scientific and historical and literary study might prove too long and difficult for their tired feet; but our heroine had a dauntless spirit. She was used to hard work. The discipline of all these years of toil had hardened her muscles and strengthened her will. She just slowly re-read the whole article, thanked God and took courage. Should she keep her thoughts and plans to herself, she queried silently, or should she talk it over with them all and ask their help and sympathy? The younger boys had gone to bed, so there were only Albert and the girls to be confronted with the scheme; but the poor mother felt strangely shy before these young scholars. She made up her mind, however, to take them into the council, and so struck womanfully into the subject.

"Here's something in the paper that interests me very much," she said with a little tremor in her voice, "and as you all seem to be about through with your lessons, I guess I'll read it aloud."

"Yes," assented Mary, just a trifle slowly, lest the interesting matter should prove rather dull to youthful listeners.

"It is about a new society—a sort of school for old folks—this is what it says," and Mrs. Thomas read the clear prefatory explanation, and then the aim and method and proposed plan of study for the Chautauqua Literary and Scientific Circle.

The children took it in silence, very much as they would have taken a short sermon, and then Albert said, jocosely, "Well, what does it prove?"

"It proves," said his mother, "that everybody isn't satisfied with the book-learning they have when they're 20 years old" (here Amy gave Albert a significant nudge with her elbow), "and that there is a chance for them to do some more studying even after they are 40; and," she slowly added, "I'm one of the people that feel so."

Mary drew her chair close beside her mother, and took her toil-worn hand. "You dear old mamma," she said, "you know more than 40 girls and boys, books or no books."

"That's all very well for you to say, Mary,"

but there's another side to it, and I'm going to be a—a—" she couldn't quite trust herself with the new word which she had skipped each time in reading—"I'm going to join."

Mr. Thomas, who was warming his feet at the grate, suddenly woke up. "Join what?" he asked.

"Mother is going to college," said Albert.

"Mamma is going to stop working for us every blessed minute, morning, noon and night," said Mary, "and going to do what she has a mind to 40 minutes every single day, and I'm going to help her! Here, mamma, let's have the paper. Now, papa, you listen." Again the C. L. S. C. article was read, and this time with all the vigor that Miss Mary's elocutionary training could bring to bear upon it.

Mr. Thomas seemed considerably dazed, but made no comments or objections.

"See," said Mary, "there's a 'Pacific Coast branch' just organized, and so, of course, we can find out all about it right away. Mamma shall 'belong,' shan't she, papa? And what's this first book?" ran on her voluble young tongue. "Green's Short History of the English People?" Why, that's the very book they've just bought for our school library, and I'll bring it home to-morrow!"

"Well, I guess you and mother will run it without my help," said Mr. Thomas, "judging by the way you go on."

"I'm going to help 'run it,' too," said Amy, kissing her mother good-night.

"And I speak for a professorship in the new college," said Albert.

"For my part," said Mr. Thomas, "I'll try and foot the bills."

And so it came about that before New Year's day, 1880, Mrs. Richard Thomas, of San Luis, became a Chautauquan and was duly enrolled as such upon the secretary's books at San Jose.

Mary brought home the Green's history, as she promised, but ere many days elapsed she and her father had a whispered consultation, and a copy was ordered from San Francisco, which in due time arrived and was formally presented to our Chautauquan. Mrs. Thomas had thought when she was young that she did not like history. Its cruelties and barbarisms shocked her gentle heart. It seemed to her that it was just a record of man's fierce greed and selfishness, with scarcely a gleam of noble feeling to redeem it.

"Right forever on the scaffold,  
Wrong forever on the throne."

So she had almost utterly neglected it in her limited school days, and since then she had really never opened a historical book. It had not been an alluring prospect to her, therefore, to see a history as the very first book she was to read in her new course; still she was glad that the Pacific Coast Chautauquans were behind their Eastern classmates, and so were doing the reading which had been done at the East a year previous. This year the Eastern class were reading Roman history, and Mrs. Thomas was sure that would be far more trying than English history. It did not seem as if the English were such wholesale butchers on principle. So our heroine fell resolutely to work. She did not see at first just where she was to find the required 40 minutes for the daily reading. It seemed as if she never had a spare moment, and a leisure hour was just a figure of speech to the busy house-mother; but the time must be found, if not in one entire period, then in odd minutes. There was usually a little time for sitting down in the afternoon, after the dinner work was cleared away, which had been wholly given to sewing. Out of this Mrs. Thomas tried to get her Chautauquan hour, but often there would be interruptions or some stress of work, so that the reading was put off till evening. Often there would be too much sociability in the evening to admit of much concentrated attention, but she persevered. The long, unused mental faculties were a little rusty, of course, and names and dates were more easily forgotten than learned; but she did not give up. Ere long she began to reap her reward. She had not read 50 pages in Green's history before she became so interested she could scarcely lay her book down. No romance could have charmed her so much. She found herself looking at history in an entirely new light; no longer was it the story of one tyrant succeeding another, by virtue of wielding a stronger battle-ax, or using baser perfidy, but instead, the record of the slow but steady uplifting of a great people. Mrs. Thomas found herself thinking of it as she went about her daily round of housework. Much of her cooking and clearing away she had done so often that it was almost a mechanical process, and now she found great advantage in this perfect familiarity with her duties. She cooked and washed dishes and swept and dusted in California, but her heart was far off in "Merrie England," with her ancestors of 1000 years ago. Out of the abundance of the heart the mouth speaketh, and it followed very naturally that at the table or by the evening fire-side she would open a conversation with the novel preface "I have been reading," and then tell the children of the way in which the English people grew through fierce struggles, lighted by heroic deeds and lives. Even Albert and Mary had not read much English history, and they very soon grew to depend on these intelligent bits of talk. The end of it was that the mother read with redoubled interest for the sake of telling it to the children, and thereby fastened the story in her own mind. The whole family grew interested. When the mother took up her book in the evening, if there was not the great-

est need of other study, she was besieged to read aloud, and then, when she had read awhile, Albert or Mary would take a turn at reading, and the father listened to it all with as keen zest as if he, too, were a Chautauquan.

Did the mending basket heap up and overflow on to shelves and into drawers? Not to any distressing degree. The daughters of the house nobly redeemed their promise. When Mrs. Thomas read aloud in the evening they plied their needles, if not with their mother's speed and dexterity, at least with very passable results; and every Saturday morning saw a pair of extremely energetic young ladies take hold of sweeping, cleaning, baking and cooking of all sorts. They had always been good girls to help, but now they felt pledged to see their mother through with her undertaking. She often looked at them through happy, grateful tears as they merrily drove her out of the kitchen and declared it was her schooltime and she must not be tardy. Mary had a great knack also in the management of that most untractable being—the small boy. In the Thomas household each boy had an ostensible amount of "chores" to do, but it by no means followed that he did them day by day of his own free will and choice. On the contrary, it was a notorious fact that it took far more energy on the part of some older member of the family to look after these boys and get the work out of them than to do it one's self. Mr. Thomas was not particularly successful as an overseer, and Mrs. Thomas had a way of doing altogether too many of these "chores" herself; but Mary was blessed with a sort of cheerful and contagious energy, which, when backed by the mother's and father's authority, was quite successful. She put it to good use now, and every morning she devoted a few moments to "cheering her band," like Marco Bozzaris. Woodboxes were filled, steps were cleaned, the yard put in order, balls and tops, stilts and traps, cages and machines, all picked up. "You know mother has got to have a little time, boys, and we must help her or she'll never get it in this world!" urged Captain Molly.

Thus a sweet spirit of helpfulness spread in the household, blessing both giver and receiver with a heavenly benediction.

(To be concluded.)

**THE TOMBOY AT WOMANHOOD.**—The girl romp, otherwise known as the Tomboy, is an eager, earnest, impulsive, glad-hearted, kind-souled specimen of genus feminine. If her laugh is too frequent, and her tone a trifle too emphatic, we are willing to overlook these for the sake of the true life and exulting vitality to which they are the escape-valves; and, indeed, we rather like the high-pressure nature which must close off its superfluous "steam" in such ebullitions. The glancing eye, the glowing cheek, the fresh, balmy breath, the lithe, graceful play of the limbs, tell a tale of healthy and vigorous physical development which is nature's best beauty. The soul and the mind will be developed also in due time, and we shall have before us a woman in the highest sense of the term. When the Tomboy has sprung up to a healthful and vigorous womanhood she will be ready to take hold of the duties of life, to become a worker in the great system of humanity. She will not sit down to sigh over the work given her to do, to simper nonsense, or fall sick at heart, but she will ever be ready to take up her burden of duty. In her track there will be sound philosophy, in her thoughts boldness and originality, in her heart heaven's purity, and the world will be better that she lived in it. To her allotted task she will bring health, vigor, energy and spirits; these will give her both the power and the endurance, without which her life must be, in some respects at least, a failure.—Cincinnati Enquirer.

**ANTI BIRD WEARING LEAGUES.**—The birds and the flowers have always gone together as types of innocent loveliness, and partly on that account have always found congenial friends in women. But of late the birds have found this attachment fatal. The fashion of wearing feathers and whole birds as headgear has led to such an enormous laughter of the birds that nature cannot make good the waste. Why will the women be so impatient to assume their wings? As it is, the pretty birds are disappearing so rapidly that their scientific friends are becoming alarmed, and in the true American way have formed a committee and issued an address. It is to be hoped that "anti-bird-wearing leagues" will now extend and flourish in the land, and that the woods and meadows may have rest from the relentless emissaries of fashion. The simple and unassisted resources of nature gave out long ago in the attempt to keep pace with woman's desire for flowers. And perhaps unless the fashions change, we shall have aviaries, as we have conservatories, where birds of striking plumage will be cultivated for the market.—Washington Star.

"Is THAT a Landseer, Mr. Croesus?" asked the visitor, pausing before the painting. "No," replied the host, "reckon it's a Durham; see how broad it is between the horns, and see the color and the curl on its forehead. That's a genuine Durham, sure. That ain't no Landseer."—Burdette.

**CITY BELLE** (pointing to a wild plant by the wayside).—"What's that?" Country cousin.—"That's milkweed." City Belle.—"Oh, yes, what you feed the cows on, I suppose."

### The Useless in Nature.

[Written for the RURAL PRESS by PROF. GRANVILLE F. FOSTER.]

No traveler to the sea-coast can fail in being struck with the vast numbers of apparently useless pebbles with which the beaches are strewn—mere fragments of rock detached from the storm-beaten cliffs overlooking the sea, worn smooth and polished by attrition and thrown up upon the shore. There they lie in exhaustless profusion, of all sizes, colors and forms, of no apparent use to anybody, save perhaps to the child, who, admiring them for their gaudy colors, chooses a few of them for jackstones. To the ordinary mind, what useless things are the pebbles!

The rainy season has come. The soil of our gardens is prepared after much labor and pains, and we plant therein the choicest and purest of seeds, but vain will be our hope if we look for no other seeds than ours to germinate. No sooner do the useful, yet delicate (delicate, perhaps, because useful), plants appear above ground but the worthless and hardy weeds must appear also, and while the former will require our constant and vigilant attention, the very elements themselves seem to have combined to promote the healthy and vigorous growth of the latter. To save the useful plants from utter destruction in their struggle (a bootless one unaided) for existence, a reversal of Darwin's favorite idea of the "Survival of the Fittest," we must vigorously ply the hoe, root out and toss over the garden wall the evil and noxious weeds, which to our minds are the very embodiment of utter uselessness. Indeed, in no pleasant mood, we cry out in our indignation: How comes it that such unsightly, useless, good-for-nothing weeds are allowed to grow in a world pronounced by the Almighty so good? Is it just and right for a benevolent Father to allow such weeds to grow to vex and annoy His children? Indeed, we often think had the world been in our hands to create, we would have been able to plan and construct it on a more reformed and progressive model.

Then there are the insect pests—the mosquito, fly, canker-worm, curculio, woolly aphid, and myriads of others, whose sole purpose of existence seems to be to inflict pain upon and give annoyance to man or to rob him outright of a well-earned hope of a harvest. Shall we believe that an all-wise God created them, or shall we adopt the solacing creed of the old Persian Magi, that Ahuro Mazdao, the Supreme, made the blue sky, the lofty and beautiful mountains, the laughing rill, the majestic river, in short, all that is grand and beautiful in Nature, but Ahriman, the devil, made the weeds, the insect pests and all that is evil, unsightly and hateful in Nature?

The mistake made here is in judging everything from the human standard of whether it is adapted to minister to the passions and appetites, or can be made to yield a pecuniary profit. Then, too, man's discipline must be taken into account. A perfect world, according to our standard, would have at least one very imperfect being in it—man; and the worst of it is that he would always remain in this condition—there would be and could be no improvement. Man wants difficulties to overcome, weeds to destroy, insect pests to study, and thus learn to avoid their annoyances and to save the fruits of the earth from their depredations, or a pitiable being indeed would he be. Then the learned hold, that having found out much already of the infinite wisdom and goodness of God, as portrayed in the scheme of creation, in the admirable adaptation of means to end displayed therein, and in the eminent usefulness of most of what appears about them, and since too, in the constant advance of science the circle of the utterly worthless narrows yearly in area, that all things have their uses, but man's ignorance prevents these being seen in many cases. It may be, too, for aught we know, that the world is still an unfinished work, that agencies are still at work putting on the finishing touches, and that in consequence, as an unfinished building, some of its parts may seem to be useless or unsightly or out of place, simply because we are profoundly ignorant of the far reaching and infinite designs of the Divine Master-builder.

The scholar, however, has made an advance beyond the ordinary untrained person, and sees uses where the latter does not. Take the case of the pebble. To the unreflecting and unob-servant mind, how utterly useless are the heaps of stones, scattered everywhere along the sea beach! But they have an intelligent story to tell the geologist—a wonderful story of the baths of fire and flood through which this old world of ours had to pass ere it was fitted for the advent of man, and by means of the fossils or parts of fossils contained therein, they may serve to extend the story to a description of the strange flora and fauna of periods when our planet itself was young. It is a fact that some very important facts, pertaining to the history of our globe, have been derived from the study of even pebbles. But the chemist, too, has had something to learn from pebbles, since a few years ago some very rare, simple substances were discovered by fortuitously analyzing in the laboratory a few rare pebbles picked up in out-of-the-way places.

And the term weed is only relative. What is esteemed a weed in America is often considered a very valuable plant in Europe, and the reverse. Then, too, many of the so-called weeds are from time to time found to contain

\* Continued from the RURAL PRESS of Sept. 26th.

active medicinal principles useful to the pharmacist, or are discovered to have a value by a use to which they can be put in the economic arts. A chemist has lately found quinine in a common despised weed of the fields and roadsides, and a vile shrub of Mexico has been found to furnish a fiber of great value in the arts.

Of the insect pests much might be said, for it is a fertile subject; but we must cut the matter short. It is pretty safe to conclude that any temporary inconveniences or annoyances arising from their habits of life are at least counterbalanced by some corresponding useful function which they perform in the economy of nature. Take the case of the mosquito, that almost intolerable pest, and yet that marvel of beauty when examined under the microscope. In the larva state, this insect acts as a scavenger in the stagnant waters in which it lives. As to the imago or completed insect, a late scientific authority assures us that the poison which the female inserts into the wound, whence she draws blood, has a medicinal use in fortifying the system more or less against the effect of malarial germs in the blood. If this is true, it is an incidental good to what seems an evil to us, though it is but fair to Madam Mosquito to say that she is not, as some suspect, possessed with the demon of vindictiveness against the human race. She must have blood, for certain functions necessary to the perpetuation of the mosquito race cannot be performed without it, and she is unable to employ her wonderful blood-pump to any advantage without dilution with the liquid poison she injects into the wound. It remains here to say that the male mosquito, more retired in his habits and less bloody in his intentions, contents himself with the juices of succulent plants. A number of years ago some of the Central States suffered severely from the grasshopper plague. It was, at the time, a terrible calamity, but there was a compensation. It was found that the soil was materially increased in its fertility by incorporation with it of the remains of these pests, and, therefore, however unpleasant at the time seemed the awful scourge, when in the path of the invading host the very heavens were darkened, and nothing but barrenness and desolation left behind, it became pleasant afterward when the compensation took place in increased fertility of the soil and consequently increased harvests.

Nature is a system of compensations when not interfered with by man, who, often by his conduct, robs himself of the benefit of these compensations. An evil at one time is often fully counterbalanced by a corresponding good—a good often depending for its very existence upon the very evil preceding it. Man oftentimes in destroying an evil hinders himself from receiving an ultimate good. To destroy the birds because they rob us of a small share of corn, which, after all, is their due for the good they do, would be to multiply the number of insects, which might leave us no corn at all. To cut down the forests, under the notion that the land occupied by the trees might be better employed in growing thereon grain, might result in drying up the fountains of water in the firmament above us, and thus defeating the very object aimed at.

History attests the fact that most of the great evils of the world were only the mere pains of travail, which resulted in the birth of some great and lasting good to the race. Let our labor friends who think they have not received their share in the distribution of wealth, and let the socialists and communists who, like Ishmael, whose hand was against every man, have placed themselves in antagonism to the existing state of things, beware. It is possible by seeming to right present wrongs, or by destroying the status of society now existing, to prevent the coming of a good depending on the very existence of the evils which now afflict society, or, in seeking to escape one evil, bring upon their heads hundreds they know not of.

Sunol Glen.

### The Churches on Strong Drink.

At the Congregationalists' Convention in Woodland last week, the Committee on Bills and Overtures presented the following resolutions:

*Resolved*, That this association would express its sympathy with the W. C. T. U., and would recommend the active co-operation of the women of our churches.

*Resolved*, That we especially favor the endeavors of this society to secure the passing of a law by our Legislature for scientific temperance instruction in schools.

The report of the Committee on Temperance was presented and adopted. The gist of the report is contained in the resolutions that follow:

1. That we will labor the best we know and until final victory for the total destruction of the liquor traffic.

2. That we recommend to our pastors increasing efforts to enlighten the people in this behalf, and to the churches to see to it that the children in the Sunday-school receive ample instruction regarding the evils of strong drink.

3. That we earnestly request our people not to encourage the liquor traffic by their trade.

4. That we urge our voters to vote in the fear of God, and to withhold their ballots from all whose position or influence favors the liquor traffic.

"NAUGHT" AND "NOTHING."—Many seem to think that "naught" means "nothing," whereas "aught" actually means anything. This is to explain that it is wrong to say "aught" for the "cipher" (0), the proper term for which is "naught."

## YOUNG FOLKS' COLUMN.

### Grandmother's Quilt.

[Written for the RURAL PRESS by LAURA EVERETT.]

Only a patchwork quilt,  
Faded and torn;  
Packed in this chest away,  
Worthless and worn.  
Only a patchwork quilt,  
Ugly and old;  
How many has it kept  
From winter cold?  
Only a patchwork quilt,  
Log-cabin style,  
Pieced forty years ago  
By Grandma Lisle.  
Ugly you say it is,  
Worthless and old;  
Yet has in grandma's eyes  
A wealth untold.  
Each piece to her brings back  
Memories fond,  
Twixt her and dear ones  
A holy bond.  
She knows whence each piece came;  
That indigo  
Was the last dress she made  
For little Flo.  
That fine soft brown down there  
Was Kate's best dress  
Full fifty years ago—  
It can't be less.  
This was Will's baby dress,  
And that was May's;  
Amelia, when twelve, spun  
Those browns and grays.  
Here in the very last block,  
The final page,  
Is grandma's wedding dress,  
Yellow with age.  
Ye searchers for antique,  
Come not too near.  
'Tis dear to grandma's heart  
As life is dear.

Marysville, Cal.

### From Our Younger Folks.

DEAR EDITOR:—How for Morro and its surroundings? As nobody else seems to notice poor little Morro, I will write a few lines. The thrashing will be through Monday night. I know everybody will be glad. People are hauling their grain to Morro and Cayucos to be shipped. There have been three steamers in at Morro. The *Newport* once, the *Salinas* twice. The *Salinas* stuck on the sandbar for two days. When a steamer appears I never feel easy until it is in and out again. There were three steamer loads of grain taken from Morro and there is yet more to go out. I think that is pretty good for Morro. The Portuguese will soon be thrashing beans, and then there will be more freight.

There is a larger school in Morro than there ever was. There used to be only 12 scholars and now there are 25. Our teacher's name is Mrs. Hamlin and she is a fine teacher.

The cattle are dying up Morro creek with the blackleg. I am sorry, because it is a great loss to the dairymen.

They have a very fine teacher up Morro creek. Her name is Miss Churchill.

Cayucos can boast of having had an ice-cream festival one night for the church, also, a theater and a minstrel show two nights. It has two butcher shops and two dressmaker's shops, three hotels and a number of stores.

San Simeon bay is growing; they are building a new schoolhouse.

I had almost forgotten to speak of the railroad. It is to come down Morro creek. There are 20 men working on the survey.

Morro, Cal.

EDITH MEAD.

From Visalia.

DEAR EDITOR:—I am an orphan girl of 12. I have a brother nine years old. We live on a farm with our uncle and aunt. We live about eight miles from Visalia. My uncle has 640 acres of land; he raises wheat, barley, Egyptian corn, fruit and vegetables. We have 11 horses and four little colts, and about 150 cattle, and a good many hogs. My aunt raises ducks, chickens and turkeys. We have four dogs and five cats; two of the cats are mine; their names are Pete and Spindleshanks. I will close now, for I am very much afraid this will find its way to the waste-basket. MOLLIE BELGRADE, Visalia.

### The Sloth.

[Written for the RURAL PRESS by EDITH M. SFAR.]

There are two different kinds of the sloth, distinguished from each other by their claws—one called the unau, which has only two claws upon each foot, and being without a tail; the other, which is called the ai, having a tail, and three claws upon each foot. The unau has a longer snout, the ear more apparent and the fur very different from the other. It differs also in the number of ribs; it has 46, while the ai has but 28. They are very slow in their movements; it often takes them a week in crawling to a tree not 50 yards distant. All motions seem to torture them; every step it takes it will set forth a melancholy cry. The ai from which I shall take my description, and from which the other differs only in the slight particulars above mentioned, and being more active, is of the size of the badger. Its fur is coarse and staring, somewhat resembling dried grass. The tail is very short, the mouth extending from ear to ear, the eyes dull and heavy. It has four stomachs.

## GOOD HEALTH.

### Boys and Cigarettes.

The city council of Oakland has recently done two very wise things: First, in passing an ordinance making it a misdemeanor for boys under the age of 16 to smoke cigarettes in any public place; and second, in passing a "curfew" ordinance, requiring the city hall bell to be rung at nine o'clock every evening, after which hour every young person under the age of 16 must go directly home and keep within doors until morning. The first ordinance, we understand, is promptly enforced; but we do not hear of any arrests for those ignoring the "curfew," and those whose business keeps them on the street after that hour are very much surprised at the great number of quite young-looking boys and girls whom the police seem to regard as having passed the proscriptive age.

Cigarette smoking, by young boys, has become an alarming evil in both Oakland and this city, and the ordinance referred to, if properly enforced, cannot fail to have a good sanitary effect, while it will also accomplish much moral good otherwise. In nine cases out of ten the boy who gets the habit of cigarette smoking well fixed upon him will have his days largely shortened and never amount to much in any way. An inveterate cigarette or cigar smoker gives very little promise of any very extended or useful future. A large portion of that class fall into the ranks of dullards, while all are more or less affected with a weak brain and decided lack of stamina.

The German Government understands this matter fully and has placed its interdiction upon the habit with boys of under age, giving as the reason that a young man who thus abuses himself can never make an effective or useful soldier; and all male Germans are required to give at least three years of their lives—from the age of 21 to 24—to active duties as a soldier in camp. To be serviceable to the Government it is considered necessary that they should not allow their intellect and physical strength to be undermined with the pernicious habit. And yet the Germans, as a nation, are the greatest smokers in the world. But under present laws they are not allowed to incur the habit until the physical system has become fully developed and in a better condition to withstand the poisoning and debilitating influences of tobacco. Is Oakland to be alone in taking care of her embryo citizens who are going to the bad? Will not San Francisco also assert herself in this direction? Just what the moral difference is in the act of smoking one day short of 16 and two or any number of days after, we cannot see, but as that question is not just now a matter of discussion, we should try to be thankful for even the small modicum of good sense that might be evinced by our city fathers if they would follow in the good way, only so far as the Oakland council has gone.

TETANUS TREATED BY REST.—Dr. De Renzi states, in the *Rivista Clinica*, that by treating patients with traumatic tetanus by means of perfect rest, he has been able to restore four out of five to health; whereas when treated in other ways these patients usually die in two or three days. He places the cases in a special room, where absolute silence reigns. Even in the passages leading to it, and in the neighboring wards, care is taken to lay down carpets so that no sound shall penetrate the tetanus ward. The door of the latter is, of course, well oiled, so as to open and shut noiselessly, and the patient's ears are stuffed with cotton wool, he himself being strictly enjoined not to make the slightest noise. He must, of course, be fed. This has generally been considered impossible, the teeth being clinched and the spasmodic contraction being increased by attempts to masticate. The obstacle may, however, be easily overcome; by parting the jaws and introducing liquid food, swallowing is accomplished without difficulty. This method of treating traumatic tetanus has been tried with success by several Italian practitioners—Drs. Pisani, Maragliano, Ria, etc.

THE THROAT.—The throat is a wonderful instrument of music. Place the fingers upon it, and every time you speak you can feel the vibration of the musical organs. Anything that ever touches the throat impairs the purity of those sounds. Throw a cloth over the strings of a piano or violin and get music out of it if you can. So every piece of cloth which surrounds the throat impairs the sweetness of the voice. Women go with necks bare; men have theirs swathed and bandaged, and 10 women have sweet voices where one man has. A man's voice should be as pure as a woman's. Why not? He is shaved and choked. God has provided a covering for a man's throat, light and soft. It clothes the neck and preserves the health. But man gets a sharp iron, scrapes his neck and face, ties a rag around the former, takes cold, has a sore throat, bronchitis, consumption, and dies.—*Christian Advocate*.

PRECOCITY.—Precocity is the too early unfolding of the higher faculties of the mind. For instance, the love of sport and play in a child would not indicate precocity; but a dislike of sport, and a love of arts, sciences and subjects proper for adults, would. Precocity is generally at the expense of physical development.

## DOMESTIC ECONOMY.

### Tested Recipes.

[Written for the RURAL PRESS by ADA E. TAYLOR.]

Daisy Sponge Cake.—One cup sugar, one cup flour, six eggs, a little salt, one teaspoonful yeast powder. Beat yolks and whites separately, mix sugar with beaten yolks, add whites beaten stiff, sift yeast powder with flour, beat all together thoroughly. Bake rather slowly. Flavor to taste.

Delicious Hotcakes.—One quart flour, small half cup yeast, a little salt, mix to a thin batter with warm milk, in the morning add one teaspoonful of yeast powder, stir briskly for a moment. When fried they are as light as a feather.

Omelet.—Four eggs, one cup sweet milk, a little salt; beat whites and yolks separately, beat the yolks and milk together, whites and salt, then mix very gently, pour in a buttered tin; when commencing to set, place in the oven a few minutes.

Epicurean Cake.—One cup sugar, yolks of three eggs, two small cups flour, one cup sweet cream. Beat the yolks very light in three tablespoonfuls of sweet milk, mix with the sugar; then add cream and a little salt, sift two teaspoonfuls of baking powder with flour, and mix lightly. Bake in a shallow tin, rather quickly. Flavor to taste. When baked, beat the whites of three eggs to a stiff froth, add one-half cup of white sugar, one teaspoonful of flavoring, and spread over the top, return to the oven a few seconds.

Mulled Buttermilk.—To two quarts of fresh buttermilk, when about scalding hot, add a teacup of sugar, two well-beaten eggs, a teaspoonful of ground allspice, and boil together. Have ready in a tureen some nice bits of light bread, and turn the buttermilk over them. Good either hot or cold.

Fruit Cake.—One pound sugar, one pound of butter, one pound of flour, twelve eggs, two pounds raisins, one pound currants, one pound citron, one-half cup syrup, one cup sour milk, one teaspoonful soda, spices of all kinds, one wineglass of brandy and one of wine. Bake two hours.

Creamed Tapioca.—Put one small cup of tapioca in water and let it stand over night. In the morning drain it, add a quart of milk, a pinch of salt and a teacupful of sugar. Boil it five minutes in a double farina-kettle, and add the beaten yolks of four eggs; boil it a trifle longer and remove as soon as it becomes a cream. When cold, stir into it a teaspoonful of vanilla and the beaten whites of four eggs. Set on ice or in a very cold place. It is frothy and delicate and very attractive in appearance.

Fricassee Chicken, with Green Corn.—One chicken, six ears of green corn, one teacupful of sweet cream, two tablespoonfuls of flour, a little water, a large lump of butter, seasoning. Cut the corn from the cob; put it in the pot with water enough to cover it; let it stew until the corn is nearly done; then cut up the chicken, put it with the corn, and let them stew together for about half an hour; add pepper to season it and cream; thicken with the flour and butter, and add the salt the last thing.

Layer Pudding.—Place in a pudding dish a layer of fine bread crumbs, then a layer of finely-chopped apples; on top of each layer of apples put four tablespoonfuls of white sugar and one of butter, cut in small bits; have the top layer bread crumbs. Let the pudding stand three or four hours before putting in the oven. To be eaten with a sweet sauce or beaten cream.

### Hints to Housewives.

[Written for the RURAL PRESS by MRS. DORA KOPFITT.]

In dressing wounds, instead of using linen rags, tinfoil is a most excellent substitute, being cooling and does not stick. There is no danger whatever in it, being used entirely by the surgeons of the German army. Save the foil wherein the compressed yeast is wrapped, wash it and put away for use. Don't take any lining of teaboxes.

To mend leaky water pipes, where a plumber is not handy, turn off the water and dry the pipes by waiting or pouring over scalding water; then take shoemakers' cement (you can buy a bottle from any shoemaker for 25 cents), pour some of it on a piece of pliable, warmed leather, and quickly apply to the pipe and wrap tightly with some braiding or other flat, strong material; in 15 minutes turn on water.

Alma, Cal.

ITALIAN CREAM.—Rub the zest of two lemons upon three or four lumps of loaf sugar; stir these into a pint of rich cream and add enough sugar to sweeten. Whip the cream with the juice of one lemon, straining in one ounce of gelatine that has been dissolved in a little water. When thoroughly light, flavor to taste and pour into a mold and freeze. When served, garnish with preserved fruit.

POPOVERS.—Two cups sweet milk, two eggs, two teaspoons of baking powder, half teaspoon of salt, and enough flour to make a thin batter; bake quickly in gem pans.—MRS. SARAH BRITTINGHAM, San Felipe.

## The Week.

Winter is drawing on with shower, and frost, and snow in the higher altitudes. There was rain at Vacaville on Saturday last, but not in amount sufficient to harm the grapes. White frosts have appeared in many places, and here and there light films of ice have formed on still water. The mountains in Lake county were snow-clad on Sunday morning, and on the same day Sacramento announced the approach of winter with white frost and a temperature of 36° Fah. These little weather tonics seem to act well on the blood, and the delightful clear sunlight, which is characteristic of California winter, is a blessing which all can enjoy. So far there has been no complaint of winter's heralds, except that they trod too heavily on the bean crop in Northern Santa Barbara and in San Luis Obispo counties. Large destruction is reported by telegraph, which we trust later reports may lessen.

The autumn fairs are closing this week and the winter fairs in which the citrus fruits reign are being arranged. The central part of the State is determined to do better even than last year. We trust the southern counties will begin early, not only for their local citrus fairs, but for a grand, central fair in which all will do their best. It seems to us that it is time

that Los Angeles should put forth inducements to secure the grandest citrus display the world has ever seen. There is plenty of material for it in the southern counties.

## Pluck and Energy.

There are thousands of young men in this city and throughout the country who have passed through their school days and arrived at the point where they must throw off the dependence of youth and assume the helm of their own fortunes. It is one of the most eventful periods in human history. All depends on the way they start. Very few seem to think how much success hinges upon the spirit, pluck, energy and equipment of the individual at the outset. Five or six years will usually determine what sort of a destiny the maturer years of manhood will develop. Fortunate circumstances may place here and there one above the plane of toil and effort; but it is certain that 99 out of every 100 will have to work out their life problem. If a young man starts life in a mood of indifference, with low aims and ambitions, inclined to wait till he is married and settled in life before he puts forth any special effort, or to trust to luck, adventure or a prize sent to him from the wheel of fortune, he may for a season have a good time, but old age is almost certain to overtake him not far from the place where he started.

The first element of success is a proper equipment. "The winds and waves," says Gibbon, "are on the side of the ablest navigators," and it may be added that fortune favors the man who woos her knowledge. Take, for instance, the most unskilled labor of all, that of the tiller of the soil. It is his business to make the earth grow food; the elementary rules are very simple, the practice easy, yet between the worst agriculture and the best lie agricultural chemistry, the application of machinery, the law of the economy of force and some of the curious problems of physiology. But each point of science which the farmer acquires will not only make him a wiser but better tiller of the soil. The same fact is true of the whole catalogue of manual craftsmen—the blacksmith, carpenter, tailor, bricklayer, printer, or those who toil with hand and brain—doctors, lawyers, editors, reporters, engineers and preachers. Whoever would grow and thrive must become skilled in his particular art or vocation. This is no world for mopes and idlers. The young man who cares more for fine clothes than a knowledge of his business, more for cards, billiards, places of amusement than hard work and fidelity to his employer, may for awhile enjoy a sort of glow-worm glitter, but will always be a routine man, a drudge and an automaton in his work.

Then along with a good equipment, a young man must have pluck, courage, hope, faith and an intelligent appreciation of opportunities. Possessing these elements, he can hardly fail. His reward will be commensurate to his deserts. There may be exceptional cases, but they will generally be found not attributable to the man so much as to those contingencies that like tropical storms suddenly come and give no warning, and destroy the work of a life-time in an hour. But such squalls are rare. And then the plucky young man cannot be wrecked by any ordinary gale. He is equal to the emergencies. We learn from the Santa Rosa Democrat that two well-dressed young men recently passed through that place en route to Mendocino county, where they intended to take up and pre-empt a homestead. Through no fault of theirs, but owing to dull times, they had been discharged from lucrative positions in San Francisco, and after seeking employment for a few days concluded to strike out and make a situation. This kind of pluck is sure to win in the struggle of life. It is safe to predict that within a few years these young men will be independent and prosperous, while the great majority of those who hang about large towns and cities, content to be book-keepers and clerks, will be dependent upon the caprice of employers and as helpless as a fish out of water if thrown out of employment. And yet, we regret to say, but few young men of the present generation are amply endowed with this kind of pluck and energy. Many of them prefer to be duds and ladies' poodles, counter-jumpers and lackeys in the city than strong, independent and valiant men in the country, and verily, they have their reward.

## The Cattle Plague.

Upon another page of this issue we give an important article by Dr. Clausen, a leading veterinarian of this city, on the symptoms, treatment and pathology of pleuro-pneumonia. The points presented by Dr. Clausen will be received with much interest by our readers on this coast, because of the foothold which the disease is unfortunately obtaining east of the Rocky mountains. We have trouble enough in this State with black-leg and other minor cattle diseases, and all should be on the alert lest something more grievous should gain access. No doubt the matter will be brought to the attention of the coming Legislature, and it should be the duty of all interested to inform themselves so as to aid in the intelligent handling of the subject by the legislators. We notice that our Nevada neighbors are awake to the dangers of the situation. At the Reno State Fair last week an address was delivered by Mr. Mercer, of Cheyenne, in which we find this paragraph:

Hundreds of years ago there was developed in the high mountains of Central Europe an insidious and fatal bovine disease known as pleuro-pneumonia. Confined to this high plateau, whence the cattle could not descend to the plains or settlements below, and where each farmer had but a few head of cattle and them under fence, the disease slowly spread until every herd was infected. About this time war was going on in the plains below, and the supply of beef being exhausted, a requisition was made on the mountain country. In this way diseased animals were brought into the channels of commerce, and from the disease center thus created, animals have been carried to nearly all parts of the globe and the fatal infection given off. The disease is carried, not developed. The source whence came each new outbreak can be as easily traced as a white line on a blackboard. From this and other contagious diseases more cattle have died than to-day exist on the face of the earth. And this disease is now safely anchored in six of the Atlantic States—New York, New Jersey, Pennsylvania, Delaware, Maryland and Virginia—and recently it has broken out in Illinois. This disease is bad enough in the old States, where each farmer has his cattle inclosed, so as to prevent their coming in contact. But on the open plains there are no fences, and nothing to prevent the general mixing of herds. Hence, one sick animal turned loose on the plains would inoculate the entire cattle country, and in a few months reduce to poverty all of our present wealthy stockmen. The constant western movement of high-grade cattle for the purpose of improving our herds renders it impossible to tell the day or the hour when an infected animal will be shipped among us. Under these circumstances the only safety lies in absolute quarantine against all States or counties where bovine diseases exist. Old Mexico on the south and British Columbia on the north are without sanitary laws, and almost the entire west coast of the Pacific ocean is lined with sick cattle. Under the circumstances, it behooves every citizen of the State of Nevada to see to it that the next Legislature takes action on this subject.

We hardly understand the allusion to the "west coast of the Pacific ocean." This must be the east coast of Asia and Australia. There is no cattle movement this way from Asia. Some cattle are being brought from Australia and New Zealand, but we have not heard of trouble there of late. However, it is important to guard against the introduction of such a disease from any quarter, and therefore there should be suitable regulations adopted by the State concerning the introduction of animals and the treatment of any dangerous disease which might break out. The U. S. quarantine arrests imported animals, but the quarantine is not carefully enough guarded to prevent distribution of infection should any attend the animals. The subject is worthy of attention.

The latest telegrams from the seat of the disease in Chicago bring the statement of Dr. Salmon, Chief of the Bureau of Animal Industry, that investigations of the past week show that pleuro-pneumonia is widely scattered among the cattle at Chicago. He is perfecting arrangements to secure the quarantine of exposed animals and to slaughter diseased ones. In this work he has the hearty support and co-operation of the State Cattle Commission of Illinois. A new quarantine notice has been issued, in which the penalties provided by the national law are set forth. The experience of the last few weeks is inciting Commissioner Colman to claim again from Congress the powers which he asked for last winter. He advocates the passage of a law by Congress that will give the Department authority to slaughter diseased and exposed animals, and appropriate a fund sufficient to at least partially indemnify the owners.

## California Poultry Association.

The fall meeting of the California Poultry Association was held Wednesday, Oct. 13th, at the rooms of the State Board of Horticulture, No. 40 California street, S. F., President Geo. B. Bayley in the chair. There were present Secretary Geo. T. Marsh and Messrs. Cousens, Crowell, Everett, Lund, McBirney, McFarling, Newhall and Waite.

Owing to receipts having fallen short of expenditures connected with the exhibition last winter, a deficit of somewhat over \$130 was reported, the difference having been advanced by President Bayley. After some informal discussion of the ways and means question, measures were taken toward making good the deficiency.

Mr. Crowell, from the Committee on Amending the Constitution, gave notice that, at the annual meeting in April next, they would recommend that the offices of recording secretary and treasurer be consolidated; that the annual meeting for election of officers be held in January, during or immediately after the exhibition, or in case no exhibition be had, on the second Wednesday of the year; and that the number of the Executive Committee be increased from 12 to 15.

M. W. Parker, of Biggs, and H. R. Bowie, G. H. De Mamiel and Frank J. Warren, of San Francisco, were elected members, and Chas. M. Chase and H. N. Stevens honorary members.

The question of having a show the coming winter was earnestly debated. In view of the lack of attendance at the last, the prevailing dullness of the times, and the experience of societies in Eastern cities, who have found it expedient to skip a year and thus regain the charm of novelty, it was finally voted to hold no exhibition until January, 1888. Adjourned.

**SECRET OF SUCCESS.**—That great and shining example of success as a workingman, Benjamin Franklin, has left to the workingman of the present day, in the following valuable sentiment, the key to the secret of his advancement in life: "If any one tells you that a workman can become rich otherwise than by labor and saving, do not listen to him; he is a poisoner." In the first place, it is necessary to labor with judgment, intelligence, patience, perseverance and constancy. In the second place, it is necessary to save. Save what? To save both time and money. Franklin saved the wages of his toil and purchased books; made good use of his leisure time, studied those books and mastered their contents. Thus, by simply persevering, strictly and firmly, in this, the guiding rule of his life, he became rich in purse and eminent in knowledge. By industry and frugality at all times and in all things, he became a master workman, a philosopher, a statesman and a sage, and beloved and respected by all men within the bounds of civilization. The course pursued by Franklin is open to every workman in America; the key to success is in every workman's hand. If it fails to admit him to the enjoyment of at least a reasonable competency, it is because it is rusted in the lock for want of use.

**WAGONS AND ROADS.**—Are roads made for wagons, or wagons for roads? The municipal authorities of a town in Wisconsin, says the *Carriage Journal*, have been giving this query some consideration and have issued a tire ordinance requiring loads of 3000 pounds to be carried in wagons having tires not less than two and a half inches wide. Manufacturers may be inclined to regard this mandate as an interference with their right to make or change the styles of wagons. One thing is certain—our roads would be a great deal better if all heavy loads were drawn on wagons with four-inch tire, instead of one and one-half or one and five-eighths inch tire.

## Please Send in Your Subscriptions.

We are grateful to all subscribers who, when called upon by one of our agents, pay promptly and in full whatever is due us on account. We thank even more heartily those who never allow themselves to run behind, but without waiting to be called upon, remit to us, whenever they find their subscription due. Beside the financial aid they thus afford in carrying on the paper, such patrons cheer us with a very practical assurance that our labors in their behalf are at once successful and appreciated.

## Political Education.

Among the many admirable suggestions in Senator Stanford's address to the trustees of the Leland Stanford, Junior, University, the following is especially worthy of note:

It should be the aim of the institution to entertain and inculcate broad and general ideas of progress and of the capacity of mankind for advancement in civilization. It is clear that to insure the steady advancement of civilization great care must be exercised in the matter of the general development of the great body of the people. They need education in the fundamental principles of government, and we know of no text so plain and so suggestive as that clause in our Declaration of Independence which declares that "among the inalienable rights of man are life, liberty, and the pursuit of happiness, and that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed."

We sincerely hope a professorship may be instituted in this institution, when it takes shape, for the special development of this idea. Political instruction should form a liberal feature of every high-school and academic course. An intelligent understanding of our political system, the history of its origin, the ideas it represents, and the mission it is destined to fulfill, are essential qualities of intelligent citizenship. It is a kind of knowledge that is absolutely necessary to preserve the tranquillity and stability of free government. Proudly as we may boast of our free schools and the general diffusion of knowledge, there is more danger to be apprehended from ignorance of and indifference to the mechanism and working of our system than from any other quarter.

General Grant never said a better thing than the following, in his speech to the Army of the Tennessee: "In a republic like ours, where the citizen is the sovereign and the official the servant, where no power is exercised except by the will of the people, it is important that the sovereign, the people, should foster intelligence—that intelligence which is to preserve us as a free nation. If we are to have another contest in the near future of our national existence, we predict that the dividing line will not be Mason and Dixon, but between patriotism and intelligence on one side and superstition and ignorance on the other." We see at every election hundreds marched to the polls led by a few political captains, who fix the slates, dictate the votes, and take the offices. They toss up their caps, set all the old barrels ablaze, and tear campaign odes and songs to tatters for some political leader whose sophistry and tricks of words they have not the skill to detect and unravel. They take their cue from the inflammatory articles of papers that wear the brass collar of some boss or political ring. Now it is the duty of every man to be able to tell wherein his government differs from all other forms of government. He should know when a question is in agitation, wherein it tends to thwart its central idea and hamper the full play of its energies, without asking the itinerant peddler of political nostrums who has a special interest in puffing his wares. We are not talking of a liberal education. That boon is not possible to all. But there is no man so busy or absorbingly occupied who possesses average ability that may not acquire such a practical knowledge of political affairs if he cares to and is economical of his time.

And then, just in proportion as men apprehend the nature of the truths and principles which underlie our system of government, and are richly furnished in the political literature of the day, will be their ability to break away from party yokes, caucus management, the drill of cliques and rings, and assert the right to think and act from the standpoint of their own manhood and individuality. Of course, party organization in some shape may to a certain extent be necessary, in order to gather up and focalize the will of the people; but when they become, as they are apt to, a sort of strait-jacket, cut and made in advance of the sovereign action of the people, rectilinear flumes in which their votes must run, then they are an incubus that should not be tolerated. It is quite rare nowadays to see a man nominated to any judicial or legislative position who is the spontaneous choice of the people. Their will is so dyked and hedged by party drill and management that it is rarely gratified. Now, knowledge is power, and political knowledge especially makes a man conscious of his worth, and just so far as he is firmly seated upon the

throne of his reason will he claim the right to hold the scepter that guides his actions. And in the language of Senator Stanford, "With these principles fairly recognized, agrarianism and communism can have only an ephemeral existence." For these and many other reasons that could be given, we hope that his magnificent endowment may give prominence to this feature of education.

## The Heroic Remedy.

It must be acknowledged that the codlin moth is becoming most painfully oppressive, and unless something effective is done by the growers, several of our leading fruits will be well-nigh rendered valueless. We notice that some people are advocating the "heroic remedy," which consists in picking and destroying all the fruit as soon as it reaches size enough to gather, and before the worm has time to mature. It does not appear how all the growers in any district, or in the State, can be induced, not only to sacrifice their crop, but also to foot the heavy bills for picking it clean from the trees. It is not possible, so far, to get growers to agree on any proposition relating to the destruction of insects, and how they can be made to do this immense work is beyond our powers of penetration. We notice that some writers are commending the heroic treatment in destroying the crop of apples and pears, as though that would be sufficient. This would not do. If there are no apples and pears, quinces will suit the moth just as well, and they will destroy peaches also. We bought a box of peaches last week which were badly infested. We do not mean with the larvae of the peach moth, but with the codlin moth larvae. This pest will take one fruit if another is not handy, and it is hard to tell what it will not accept on a pinch. We consider the heroic remedy quite impracticable both on account of the disposition of the people and the disposition of the insect, and it seems to us that time occupied in talking in favor of it is wasted. Let us devise something more practicable.

## Silk Culture at the Fairs.

We intended to have alluded sooner to the exhibits made by the State Board of Silk Culture at the State and Mechanics' Institute Fairs. The silk exhibits for the last few years have been very fine at both these fairs, and have been made in such a way that the public has had an actual demonstration of the reeling process and many hints of the methods of rearing the worms and securing the cocoons. There has also been a profusion of resultant products shown, and the result has been a wide extension of the interest in the industry, which bids fair to become of great importance as a household avocation, employing the spare time of the women and children to advantage during a portion of the year.

The display at the State Fair, which we had opportunity to study best, was a most satisfactory one. It was planned and carried out by Mrs. Renzi, secretary of the Board, and she was indefatigable in her efforts to please and instruct the throngs of people who visited the exhibit. The new machinery ordered by the Board from Italy did not arrive in time for use at this year's fair; but one of the old steam reels was used and it did very well for popular demonstration. Two of the ladies from the State Filature in this city were at the fair and did their parts well. There were also glass cases filled with raw silk of earlier reelings, cocoons, manufactured silk and specimens of almost the whole paraphernalia of silk-growing. Interesting publications were distributed. The exhibit was given a high award by the judges, and the popular verdict approved the decision.

DON'T LEAVE THE END STICKING OUT.—A Yolo man, the *Democrat* says, lately lost a valuable horse in an unexpected and peculiar manner. A bolt projected through the door about an inch into the shed where the horses were stabled. In a difficulty between the animals, one ran against the bolt, severed his jugular vein, and died in a short time. The horse was valued at \$250.

OVER 15,500,000 pounds of fruit have been shipped over the Vaca Valley Railroad during the present season.

## Flax Manufactures.

There is little gained from the flax crop in this State but the seed, and the seed returns do not lead to large growth of the crop. The local oil mills have to get a large part of their seed abroad. The crop is a hard one on the land, but if more could be realized out of it, the grower could afford to restore fertility. There has been from time to time agitation to establish linen factories, etc., with a view of utilizing the flax fiber, but no great progress has been made in this direction. Growing flax for fiber is less exhausting to the land than growing for the seed, and if a good market could be found for the fiber, the beautiful plant could be used to advantage in diversifying our productions. The improvement in fiber-extracting machines promises to reduce the difficulty which has existed in this branch of the production. In view of the possibility of a demand for flax either for seed or fiber, the College of Agriculture obtained last year seed of the several prominent varieties of flax grown in European countries, and grew them this summer on the experimental grounds at Berkeley. The results of the experiment will no doubt be made known ere long, and samples of seed offered to those who desire to experiment for themselves.

These facts were brought to mind by a statement which we find in an Eastern exchange concerning a new use for the fiber of the flax plant, which promises to consume considerable quantities of it. The enterprise has been established at Mankato, Minnesota, in a district which has been producing considerable flax for seed, but had no way of gaining anything from the fiber. It seems that large, substantial buildings have been erected at Mankato by the Standard Fiber-ware Company, an incorporation. The following are the leading items in the description given of the establishment:

The buildings are brick, all two stories except engine and boiler-house and water-proof house. The latter is 14x25, the former 20x58. The main factory is 40x150, with wing 30x36; the finishing building 38x70, all built in the most substantial manner. They have 150-horse power Butman Furnace Company's boiler, 60-horse power Westinghouse engine; equalized system of steam heating both buildings and dry-rooms; two beating engines and one finishing engine for preparing the fiber, which is chiefly flax—tow; one board machine to make the fiber into board for pail and other bottoms and pressed ware; one pail machine by which the fiber is wound into pail bodies; one pail press and five other presses chiefly for pressing board into wash-basins, mats and other articles; one steam board and one steam pail calender, hoop-cutters, hoop-formers, bottomer, etc., machinery necessary to complete the goods. All are thoroughly water-proofed, and then baked in special ovens at a heat of 300°, sandpapered, painted, japanned, varnished, enameled, etc., as the case may be, and paints all baked on at heat of 150° to 175°.

From the above we infer that flax fiber is to be made into a host of useful things, including domestic utensils and possibly furniture. It is to take the place of wood, tin and crockery to a certain extent. There can be no doubt of the lightness and durability of the manufactures if well made. The company seems to have control of 10 patents which are employed in their manufactures and to own the territory west of the Mississippi. We see no reason, if the initial establishment proves profitable, why there should not be such a factory in this State to supply this coast and the countries bordering upon the Pacific ocean. In many of them lumber is scarce and high, and manufactured metals costly also. This may be one of the coming industries.

HOME WINERIES.—There has been rather more of an issue this year than usual between the grape-growers and the grape-buyers, and difficulty of agreeing as to what is a fair price for wine grapes. In the South there seemed no market at all for part, at least, of the wine grapes, and the growers formed an association, leased Mr. Rose's establishment and are making up their own grapes. In Sonoma there is an effort in another direction, and the members of the Grape-growers' Association of Santa Rosa are investigating the subject of home wineries. At the last meeting a resolution was adopted, asking the Board of Supervisors to appoint a special committee to investigate the cost to individual grape-growers of building and operating home wineries for the purpose of making their own crops into wine, and ascertain such other information in regard to the subject as may be proper and judicious.

## ENTOMOLOGICAL.

## The Hessian Fly and Resistant Grains.

University Experiment Station Bulletin, No. 58.

The Hessian fly (*Cecidomyia destructor*) appeared in the grain growing on the Experimental Grounds of the University of California in the spring of 1885. The visitation was so serious that it vitiated a number of experiments which were under way to ascertain the comparative values of different methods of culture and the application of different fertilizers. At the same time it was noticed that the work of the pest was much more destructive on some varieties of wheat than others, and it was decided to make the best possible use of the infested fields by a careful experiment in the season of 1886 to ascertain if any varieties could be found to be practically resistant. The experiment, owing to the peculiar character of the season, was conducted in such a way as to give the fullest advantage to the insect and the greatest disadvantage to the grain. The plots were sown late (February 25) and no doubt some of the varieties experimented with were ruined which would have only been partially destroyed had they been earlier sown and thus have reached a more advanced condition when the fly appeared. It is, however, quite as well, perhaps, because it made the test very severe, and the more useful, since, in the counties most afflicted by this pest, it is very often necessary to sow grain late because of the danger of water-killing during heavy winters.

Seed was taken from the collection which has been secured with much care from different grain-growing countries of the world. There were in all 170 plots sown, with upward of 100 varieties of wheat, 25 barleys, 35 oats and the balance ryes. The grain was sown in drills, was well cultivated and given every chance to make a good growth. The soil is the upland adobe, somewhat ameliorated by application of lime and other fertilizers during previous years. Careful notes were taken of the behavior of each variety, and frequent examinations made to ascertain the presence of the fly both in the larval and the "flaxseed" stages. A full account of these observations will be given in the report of the College of Agriculture, for 1886, which will be issued during the coming winter. At this time it is merely intended to present the results of the experiment in condensed form.

Of the 100 varieties of wheat sown, about 25 were destroyed. The plant was so weakened that no effort was made to throw out heads, and the stems were found to harbor in some cases as many as 30 larvae and "flaxseeds." About 35 other varieties made a little better struggle and bore a few heads of grain, although in all cases the stems were found to be infested. About 20 varieties bore a fair crop of grain, although in all cases there were insects found on the stems; sometimes but few, and they in the upper joints (as high as the fourth); and in others quite a number were found. Of the whole collection there were but six varieties in which no larva nor pupa of the fly were found, and they were as follows:

1. Bearded wheat from Missojeu. 2. Palestine. 3. Petali. 4. Volo. 5. Greek wheat from Atlanti. 6. Forelle.

These wheats all have solid stems, the straw being filled with pith. They all belong to the hard wheat type (*Triticum durum*), having rather long pointed grains, almost translucent, and a horny consistency, owing to their richness in gluten—though when grown in this State they rapidly change in this respect and become starchy. These wheats are chiefly grown in the countries bordering upon the Mediterranean and the Black sea. They do not succeed in the north of Europe, nor are they of much account even in the middle of France. They are, however, quite hardy and productive in California, and with the change in their character noted above, promise to be of considerable value.

Besides the experiment in which the large grain collection was used, as described above, there were larger areas sown on January 8th, with those varieties which had been observed as resisting the fly during the experiments of 1885, with the following result:

Variety.	Rate of yield per acre.
Volo.....	31 1/4 bush.
Bearded Missojeu.....	39 1/2 "
Greek Atlanti.....	9 1/4 "

The seed of the last variety, Greek Atlanti, was very old, being taken from the museum specimen, and it was therefore slow in germination, weak in growth, and deficient in yield. It showed, however, its immunity from the fly as none could be discovered by repeated examination. Now that fresh seed has been secured, it may be expected to yield as well as the others named above, which it closely resembles. These three wheats are of Greek origin. Samples of the grain were submitted to experts in milling and shipping wheats and pronounced good, merchantable wheat, and saleable in the market at about 2 1/2 cents per cental less than No. 1 shipping wheat. As they are naturally of strong growth and productive, it is expected that they will be

found valuable in those localities where other varieties are rendered unprofitable because of the Hessian fly, and there will be small lots of the seed furnished by the College of Agriculture to those who desire to experiment with them in fields known to be infested with the fly. Their success both when sown on January 8th and on February 25th shows that their immunity from the fly was in some peculiarity of their own and not in the time of sowing. The soil on which they were grown during the experiment here is quite poor and intractable, and better yields may be expected in more favorable situations.

It is a matter of some importance to determine whether a time for sowing can be selected so as to successfully circumvent the fly. In our own experiments it appears that Pringle's Defiance wheat sown on January 8th made a good growth, and bore at the rate of 11½ bushels per acre although attacked by the fly, while the same variety sown February 25th was practically a failure. The same was true of Nepal barley, which, sown January 8th, yielded at the rate of 20 bushels to the acre, while that sown on February 25th was destroyed. On some lands now infested by Hessian fly it is impracticable to sow grain until the heavy water of winter has disappeared from the soil, and it is, therefore, of more importance to have a variety which will succeed at any time of sowing than to have a safe time of sowing determined upon, which will come when the land is seldom in condition to receive the seed.

We expect during the coming season to repeat some parts, at least, of our experiments, to determine the fly-resisting ability of different wheat varieties, and also to secure testimony from our correspondents who will conduct experiments in other districts infested by the fly. We have a decided advantage in this work in California, because we can grow wheats from all latitudes.

The barleys grown beside the wheats seemed much less vulnerable to the attacks of the fly. Of the 25 varieties sown, about 20 bore from fair to good crops, although in most cases the larvae and pupae of the fly were found on the stems—sometimes few, sometimes many. Some escaped the fly entirely: the Guymalaya, a dark naked grain; the Manchurian, a small white grain; the Four-rowed black and the Six-rowed black, had no traces of the fly. The Large Naked Two-rowed had a few flaxseeds in the upper nodes. On the other hand, other varieties were nearly destroyed. Full details will be given in the forthcoming report.

The ryes were generally a failure in this year's sowings—in some cases traceable to the fly, but generally the result of other unfavorable conditions. There was no trace of the fly found in the oats.

During the last spring and summer many samples of grain supposed to be infested with the Hessian fly were received from wheat-growers in different parts of the State, extending as far south as Tulare and Ventura counties. In every case the pest was found to be the grain louse or aphid (*aphis avenae*), a much less serious enemy than the Hessian fly. A distinction between these pests can be coarsely made in this way: The Hessian fly does not appear congregated in great numbers upon the growing grain. When it is abundant it may be seen, especially in the morning and evening, hovering over the wheat fields in vast numbers. The fly merely descends upon the plant to deposit its eggs. It is exceedingly small, its whole length being but about one-tenth of an inch. On the other hand, the grain aphid is found collected in vast numbers on the grain, generally near the base of the stem, some individuals having wings, but the greater number wingless. The Hessian fly always has wings except in the larval state, when it is a white, semi-transparent maggot, rather spindle-shaped and about one-sixth of an inch in length. Under its transparent skin may be seen greenish stripes extending around the body. This maggot changes when mature into a bright chestnut color. When in this state it much resembles a flaxseed, and the recognition of these "flaxseeds" wedged in between the leaf and the stem, near the joints, is demonstration that the grain is infested with the Hessian fly. There are other whitish maggots infesting the stems of grain, but they do not assume a likeness to a flaxseed.

The Hessian fly has but recently been demonstrated to have secured a lodgment in California, and its ravages have thus far been confined to valleys adjacent to the San Francisco bay and its tributaries. It is a question how far its area may extend, but it is highly doubtful if it can thrive in the dry and hot interior valleys. It has been claimed that the practice of burning off the stubble is to be credited with the long freedom of California from the pest. Such practice is certainly to be commended as at least likely to reduce the infestation. In badly-infested localities this will not, however, accomplish the dislodgment of the insect, and it may be that the growing of resistant varieties will be of great advantage.

Berkeley, Oct. 9, 1886. E. J. WICKSON.

The celebrated orchid "Vandilowii," which was purchased by William S. Kimball at the great Morgan sale in New York, is now in bloom at his gardens in Rochester, N. Y. The orchid is the only one of the variety ever brought to this country, and cost Mr. Kimball \$12,500. It has been in bloom only once before, at the botanical gardens in London, where Mrs. Morgan purchased it.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Alameda.

**EASTERN APPLES.**—Haywards Journal, Oct. 9: We were shown two unusually fine apples last week, raised by D. C. Kennedy, known as the Eastern Fall Pippin. The grafts were brought to this valley by David Smalley on returning from his last visit to York State, and he gave them to Isaac Collins, of Castro Valley, to introduce in this section. David has also a number of other varieties of Eastern apples growing in his orchard near town.

#### Contra Costa.

**ST. JOHN'S BREAD.**—Gazette: Among the exhibits at the late Contra Costa Fair was a branch of the Algaroba or St. John's bread tree, which is being cultivated by Dr. J. Strentzel. The fruit of the Algaroba is a long, thick pod; the leaves are similar in appearance to the leaves of the apricot. This is extensively raised in Asia Minor, and in the islands of Minorica and Majorica, where it is extensively used as food for horses and cattle, and also exported in considerable quantities to England and France. The tree will grow and thrive in very dry places, where other trees will fail for want of moisture. It is somewhat sensitive to frost and should be planted where the orange and lemon will thrive. It is said that a single tree will bear a ton of rich food, and that it is considered very valuable for all kinds of stock. It ought to be planted in the warm belt, or if planted in the valley there should be some little protection during the first year or two, after which none will be needed. At the Horticultural Fair recently held in San Jose, W. G. Klee, the State inspector of fruit pests, had a sample of ripe and dried fruit. The whole substance of the pod, which was of a rich brown color, seemed to consist of a pulp dried down to a firm consistency and which tasted very rich and sweet.

#### Lassen.

**HONEY LAKE VALLEY.**—Lassen Advocate: There is land in this county that would be worth \$100 an acre if it was situated in some of the valley counties. What this valley needs most is water for irrigation and a railroad to market. Tap Eagle lake so that our farmers can irrigate their lands, and the county will undergo a boom—immigration will head this way, a railroad will be built up the valley, capital will find investment, and a few years will see Susanville a city of 5000 souls. There are thousands of acres of land in our county lying idle, which, if irrigated, would produce wheat and barley of as good quality as can be raised anywhere on the globe, and 20 or 30 bushels to the acre could be raised with ease. Persons seeking homes will do well to give our county a trial. The climate is all that could be desired. It is never very warm in summer, nor extremely cold in winter.

**ARTESIAN WELL.**—Red Bluff Cause: An artesian well is being bored near Bieber, Lassen county. After sinking it to a depth of 250 feet a stream of hot water was struck. The borers have gone down 150 feet further, but cannot tell what formation they are in, as the stream of hot water washes away the chips from the auger as fast as it is brought up. They have run out of pipe and will have to get more in order to close off the hot water. They have gone through several streams. In some places the auger would drop a number of inches, showing that it had passed through a hollow in the earth. It is believed that a supply of water will be obtained before very long. If this proves a success it will be a great thing for the sagebrush lands of Modoc county, and the dry ranches which now do not amount to anything can be made to produce with the best, for all that is needed is water.

#### Los Angeles.

**GUM GROVE.**—Anaheim Gazette: The gum trees on the 40-acre grove of R. D. Curtis and J. W. Roach, east of town, are growing finely. The trees that were replanted this spring are also making a good growth; but owing to the ravages of jack-rabbits and the sheep of a neighboring camp tramping through the grove, many young trees were destroyed. The trees on this ranch are irrigated but once a year, in the winter, when there is an abundance of waste water in the river a few miles east. It is led to the grove in the old Fairview ditch. Some of the land is comparatively worthless, but the eucalyptus trees seem to grow thriftily. There are thousands of acres of cactus land in that vicinity which will, no doubt, be planted to gum trees at some future time. Water can be had in the winter-time when it is running to waste down the river.

**THE TUSTIN DRIER.**—Santa Ana Herald, Oct. 9: The big drier of the Tustin Company steamed up last week, and will dry about 100 tons of grapes this season. A large pipe is being connected with their steam apparatus so as to dry raisins by natural draft. A new furnace has been purchased. The raisins manufactured by this company sold last year for a good price. Some of the last season's crop which we sampled were excellent. The drier has a capacity of eight tons at a time. The grapes the company are now curing were partially dried by the sun, and require only three or four days to finish them into excellent raisins. The green grapes put into the machine take seven or eight days to make into perfect raisins. We hope this enterprising company

will meet with good success this season. They turned out a large quantity of splendidly cured apricots last year.

**FRUIT SHEARS.**—Valley Echo: L. H. Titus, of San Gabriel, has applied for a patent for fruit-cutting shears. They enable the operator to reach out at full arm's length while at work, and as he cuts the stem the fruit is grasped by the hand. The levers work on a fulcrum secured by rings on the right forefinger, while the thumb-rest works the shears, the shear-points being inward toward the palm. After a short practice the operator can cut fruit very rapidly with these shears. Mr. Titus is a fruit-grower and has given the subject a great deal of study, and he feels confident they will be a benefit generally.

#### Mendocino.

**CHAMPION HOP-PICKERS.**—Hopland Cor. Cloverdale Reville: Having heard it said that T. S. Parsons had the best crew of hop-pickers ever brought together in Mendocino county—that they not only did the best work, but were the fastest pickers—I resolved, during my visits to the hop-fields, to ascertain the truth of this statement. Although the majority of the hops were picked and saved very clean, Mr. Parsons' hands had, undoubtedly, done him far the best job. His crew consisted of about 80 white hands of all ages, from the lisping child to those tottering with age. Upon taking an average for a single day for the entire number of pickers, I found it to be 113 pounds. The largest half-day's picking for a single person was 104 pounds, and the largest average for the season was 140 pounds, while others reached 130. If any crew of pickers has ever eclipsed this record it has not been my fortune to see them.

#### Napa.

**SWINE PEST.**—Reporter: A most disastrous disease has prevailed among the hogs in Berryessa valley this summer. Almost every farmer has lost a number. It is called cholera by some, but others do not think it resembles that disease, and are at a loss to know how to prevent its spread and what would be an effectual remedy. Among those who have lost by it are Messrs. Coleman, Scribner, A. and A. C. Clark and others. Abraham Clark has lost about 250 head, and the disease is still extending up the valley.

#### Plumas.

**INDIAN VALLEY.**—Cor. Plumas National: Between Quincy and Greenville are some very grand mountain scenes, and we tried to persuade ourselves that we were traveling in Switzerland. We spent one night in Indian valley. The farmers were busy thrashing their grain. The farmhouses show that the farmers are prosperous. Vegetables are raised to supply the mines, and fine butter and fat cattle are sent to the lower valley. Fine horses are plenty, but one young man told me confidentially that girls were very scarce, which is a great drawback to the future development of the valley.

#### San Benito.

**FINE GRAPES.**—Free Lance, Oct. 8: The magnificent bunches of grapes exhibited in the window of this office were grown on the estate of Mr. N. Hawkins, on West street. Though the soil is that adobe so common throughout this valley, these grapes, grown without irrigation, demonstrate what can be done in the way of viticulture in San Benito county. Grapes like these have a ready sale at five cents a pound. Those brought us by Mr. Hawkins were of the Rose de Peru, Hamburg and Muscat varieties.

#### San Bernardino.

**GUAVAS.**—Press and Hort., Oct. 9: Mr. Garcelon has a strawberry-guava tree that is this year loaded with fruit. The people of San Diego have planted this fruit extensively, but our fruit-growers have paid but little attention to it. The fruit is good for table use, and as a jelly the guava beats the world. More of these trees should be planted in this county.

#### San Luis Obispo.

**TRAMONTANE GRAIN.**—Tribune, Oct. 1: Mr. Findley, of Paso Robles, has been for some weeks in the eastern part of the county purchasing wheat for the San Luis flour mill. He estimates the yield of the region east of the mountains at 300,000 sacks, of 130 pounds each, or 650,000 bushels. The quality is the nearest to perfection of any such quantity in the State. That called second-class would be plus first-class in any other section. Of the 20,000 sacks in the warehouse, one-tenth could be taken as they stand as perfect samples for exhibition, in glass or paper bags, at any fair or agency in the world. This wheat is sold in this market at from \$1.22 to \$1.27 per cental. The barley crop of the same region is estimated at 100,000 sacks, and is selling at about 75 cents per cental.

**ADELAIDA ITEMS.**—Simmonds Bros., the lessees of Edward Smith's ranch, had about 3000 sacks, of 130 pounds each, principally wheat. But this is an extra good ranch for wheat-raising, and would make a paradise for the culture of the vine. Mr. Smith is also largely engaged in the raising of thoroughbred horses, and now has a fine lot of young stock ready for market. Louis Neergaard and Paul Bunker have bought a lot of 40 acres on the Paso Robles ranch and intend to engage in the culture of the vine. Sydney and Clifford Neergaard have bought William Smith's claim of 160 acres, and are making arrangements for raising chickens on an extensive scale. The chicken department will be under the charge of Sydney, who has imported an incubator from the East, capable of

containing 2000 eggs at a time. He also has a bone mill to crush bones for chicken feed. It is a pity we have not a few more with the enterprise of the Neergaard boys. Clifford has purchased the thoroughbred stallion of Sam Smith, and will devote his attention to horse-raising. The Brian brothers are cutting up their ranch of 4000 acres to sell to purchasers in lots to suit. There is some fine vine land on the ranch.

#### Sonoma.

**QUINCES.**—Index-Tribune, Oct. 9: Robt. Howe, of the Eden Dale farm, made another shipment of quinces to Chicago this week, consisting of one carload of 500 boxes. This excellent fruit for preserving brings \$1.75 per box in the above city, and as the picking, transportation, etc., costs 60 cents, there is a profit of \$1.15 per box, or \$575 per carload. This makes the fifth carload sent East this season by Mr. Howe.

**GRAPE STORIES.**—There is on exhibition at the Union hotel, in this place, a bunch of grapes of the Rose of Peru variety that weighs 16 pounds. It is as large as an ordinary water-bucket. It was grown on unirrigated ground in the vineyard of Geo. H. Cornelius at the edge of town, and is but another of the many proofs that we have produced this season of the productiveness of our soil.

**Democrat, Oct. 9:** Our cotemporary brags somewhat about a bunch of Muscats weighing three pounds. Press Hall lays over this with a bunch of Rose of Peru that weighs eight pounds, and a bunch of Flame Tokay weighing six pounds. Not to be outdone, George F. King has on exhibition a small bunch of Tokay grapes, not weighing over one and a half pounds, but each individual grape on the stem measures larger than a common Damson plum. These are Sonoma county grape stories and are based on facts, while the following grape story that has found its way over here from Napa county might be regarded in the light of fiction: A bunch of Flame Tokay grapes, grown in a vineyard not far from Napa city, weighed 29½ pounds. The stem, after being shorn of the fruit, was used for a walking stick. The bearer of this tale is still in this city, and ready to vouch for the truth of this statement.

#### Sonoma.

**WINDSOR CANNERY.**—Telegram: The Windsor cannery closed Oct. 9th for the season. It has put up a total pack of 6000 cases. The entire pack is sold.

#### Tulare.

**ALILA THRIVING.**—Register, Oct. 1: People in the neighborhood of Alila express unlimited confidence in the future of their section. There is some land which has had the name of being too dry for farming and fruit-raising, but this bugbear is fast losing its terrors. A young man who holds a claim near Alila was in Tulare the first of the week. He says that any land in the driest sections, where properly cultivated, remains damp enough to mature a crop in the driest seasons. Where corn has been raised this season without any irrigation, and removed this fall, suckers are sprouting up with vigor. Young trees set out in the spring have grown finely, although receiving no moisture beyond that in the soil. The theory is that there is a liberal quantity of gypsum in the soil, and this accumulates and retains moisture for a long time. This appears reasonable.

#### Ventura.

**FALL IN REAL ESTATE.**—Free Press, Oct. 14 and 16: F. Hartman's ranch one day last week. It occurred in a field that had been in barley. We have not visited the spot, but we presume it is the result of internal fire consuming the bituminous matter so abundant in this county.

#### Yolo.

**WHAT A WHOPPER!**—Mail, Oct. 9: Mr. A. Q. Powell, of Madison, brought into the Mail Monday morning a pear measuring 16 inches in circumference equatorially and 19½ inches longitudinally, and weighing two pounds and 13 ounces. The specimen grew upon a tree three years old from the seed, and the tree grew in Shasta county, three miles north of Cottonwood. There were six similar prodigious pieces of fruit borne this season on this tree. It was of the Winter Bartlett variety. Mr. Powell owns a section of Shasta county land, and considers that portion of the State destined to become famous as a fruit country.

#### Yuba.

**WILD GRAPES.**—Wheatland Graphic: Wild grapes grow plentifully in the river bottom near town, and the boys do a rushing business gathering them. They are used to make jelly and are considered much better than any other variety of grape for that purpose.

### OREGON.

**GOOSE LAKE VALLEY.**—Cor. Reno Gazette, Sept. 28: Lake View has nearly doubled its population in the last year, and is still growing. A two-thirds crop was cut in Goose Lake valley, which gives the farmers an over-average price for their grain, which is marketed as follows at the mills: Wheat \$1.25, barley \$1.50 per 100. Nearly enough apples and plums were raised this season in the valley for home consumption, and in the course of two years there will be as good orchards of fruit here as in Honey Lake valley. It was thought a few years ago that this country was not adapted to fruit-raising. One farmer had 2½ acres of melons which he sold for 25 cents each; still they say this is only a stock country.

## San Jose Fair Premiums.

Following are awards at the Fair of the Santa Clara Valley Agricultural Society. We condense from reports in San Jose Times. The plan of giving the number of competing entries is a good one.

## Horses.

Thoroughbred stallions—Four years old, Wm. Boots, Milpitas, Nathan Combs. Three-year-olds, Thos. Gault, San Jose, Wild-eye.

Mares—Four years old, Wm. Boots, Milpitas, Mollie H. Three-year-olds, Wm. Boots, Leda.

Stallions other than thoroughbreds, with five colts; dams other than thoroughbreds, with three colts, E. Younger, San Jose, Addie and three colts.

Norman stallions—Four years old, E. J. Turner, San Felipe, Milo. Three-year-old, J. E. Wright, New Almaden, Keno; mares, four-year-olds, N. B. Edwards, San Jose, Chub.

Graded draft horses—Four years old, D. J. Murphy, San Jose, Prince Albert, J. Three years, H. McGee, Warm Springs, Pat. Two years, J. G. Meyersmith, Milpitas, Sampson, Jr. One year, G. P. Bull, San Jose, Monte. Sucking colts, D. J. Murphy, Brierwood, Jr.; mares, four years old, G. P. Bull, Chubby. Three years, Mrs. J. Lendrum, San Jose, Black Bess. Two years old, G. P. Bull, Dora. One-year-old, O. Boiteau, San Jose, Not Named; families three colts, G. P. Bull, Nora and three colts.

Roadsters, stallions—Four years, J. Boyd, Milpitas, Grosvenor (ten entries). Three years, Ed. Younger, San Jose, Electric Light (six entries). Two years, J. K. Buffington, San Jose, Linwood (four entries). One year, J. Weatherhead, San Jose (three entries); mares, four years, H. G. Cox, Pleasanton, Maud (eight entries). Three years, Massey Thomas, Gilroy, Anna M. (two entries). Two years, G. H. Bragg, San Jose, Rose (two entries). One year, E. Topham, Milpitas, Lady Grosvenor (four entries); Ed. Younger, Whisper (seven entries).

Carriage horses, matched pairs—L. R. Miller, San Jose, Jim and Frank (four entries).

Horses of all work—Stallions, four years, H. Pierce, Evergreen, Alonzo Hayward (five entries). Two years, R. D. Fox, San Jose, Bismarck. One year, J. S. Ballard, San Jose, Frank. Mares, four years, R. D. Fox, San Jose, Lizzie (six entries). Two years, Ed. Younger, Sweet Secret (two entries). Sucking colts, Ed. Younger, No Name.

Jacks—Three years, J. Boyd, Milpitas, Wellington.

Grosvenor colts—Special premiums offered by Mr. Boyd for best colts from his horse Grosvenor, one awarded to E. Topham, Milpitas, for colt Lady Grosvenor, three entries. The other to P. C. Walenbaugh, Livermore, for a sucking colt (two entries).

## Cattle.

Durham—Three-year-old bulls, C. Younger, San Jose, Forest King (six entries). Two-year-old bulls: Kirk Livingston 3d, of Forest Home (two entries). One-year-old bulls, R. Ashburner, Baden, Baden Duke 17th (five entries). Under one year, C. Younger, Kirk Livingston 13th (five entries). Cow and calf, Wm. Quinn, San Jose, Mary A. and calf, Mary C. (four entries). Cows, three-year-old,

C. Younger, San Jose, Red Dolly 14th; also took premiums for two-year-old cow, Amelia 11th, one year, Red Dolly, 21st, and heifer and calf Bonnie Bell, 8th (entries being two, seven and three respectively).

Ayrshire Bulls—Tyler Beach, San Jose, took all the premiums. (There were two entries for three years old and only his own for others.)

Jersey Bulls—Three years old, J. S. Connor, Santa Clara, Billy R. (two entries). Two-year-olds, C. B. Polhemus, San Jose, Rajah. One year, J. B. Briggs, San Jose, Black Prince (three entries). Bull calf, C. P. Polhemus, Orphan Boy (four entries). Cow and calf, Polhemus, Jersey Maid and calf Beauty. Cows, C. P. Polhemus, all premiums (entries being six, three, five and two for each class). Three years, Charlotte; two years, Edith; one year, Caddy Felton; heifer calf, Pinky.

Hereford—Williams & Saxe, San Francisco, all premiums. Bulls, three-year-olds, Poverty (no competitor). Two-year-olds, Rocket (seven entries). One-year-old, Pleasant Wilton (two entries).

Holstein Bulls—Three-year-old, E. D. Knott, San Mateo, Ansonio. S. H. Burke, Menlo Park, all other prizes excepting heifer calf and cow and calf. Two years, Pedro, 3168. One year, Kingsbury, 1033. Bull calf, El Aquila, 3230. Cow and calf, Wm. Farrington, Rebekah Egmont and bull calf (no competitors for three-year-old bull; two entries for two-year-old, six for one-year-old, one for bull calf, and one for the cow and calf). Cows, three years old, Neenah Wilt, 1469 (three entries). Two years, Kentucky Gem, 6490. One year, Edna of Troy (two entries). All owned by F. H. Blake.

Heifer calf, W. Farrington, Amy (four entries). Galloway—No premium provided for these, but premium recommended. Leonard Bros., Mt. Leonard, Mo., exhibited three-year-old bull, Hopeful, of Lyons; two-year-old, The Badger; one-year-old, The Boss; bull calf, Bruce, of Mt. Leonard; three-year-old cow, Cressus Mynnychon; two-year-old, Blossom, of Newtonbirds; one-year-old cow, Flustra 2d (two entries for two and three-year-old bulls and bull calf; for three-year-old cow, three entries; others entered only by Leonard Bros.).

Graded—Cows three years old, R. Ashburner, Baden Station, Music (three entries). Two-year-old, A. Smith, Daisy (three entries). Fat cow and steer, H. Able, Milpitas, Duke of Milpitas (one entry). Thoroughbred herd for beef purposes, C. Younger, San Jose, Forest King, cow and four calves (three entries). Thoroughbred herd for dairy, C. B. Polhemus, San Jose, Jersey Boy, and five cows (four entries).

Herd of any breed or age—C. Younger, Forest King, and four cows, same as thoroughbred herd above (two entries).

Sweepstakes, bull, any breed or age—R. Ashburner, Baden Station, Baden 7th (seven entries). Cow, of same, Ashburner, Minstrel Gwynne (eight entries).

## Sheep.

Southdown—R. H. Crane, Petaluma, Long John (three entries).

Cotswold, ram, ewe and pen of five ewe lambs: C. Younger (one entry).

## Swine.

Berkshire—Boar, one year old, A. Smith, Red-

wood City, Redwood Duke (three entries). Under one year, A. Smith, Grover (five entries). Sows under one year, J. S. Connor, Santa Clara, Dora 3d (five entries).

Essex—T. Beach, only exhibitor, took premiums for boar; one year old, Tarbox; under one year, Sweep. Sow, one year old, Blonde; under one year, Blonde 2.

Poland China—All premiums, W. D. Rucker, San Jose, only exhibitor. Boars, one year old, Ginnis Converse, 3149; under one year, Jumbo. Sows, one year old, Anna P, 6588; under one year, Anna T. 2d.

Chester white, boar—One year, W. B. Rodgers, San Jose, Garfield B. Sow, one year, Jersey Lily. Pen of five pigs, under six months, any breed—W. D. Rucker, San Jose (three entries).

Finest and fattest hog—T. Beach, Bruiser (three entries).

## Poultry.

E. H. Freeman, Santa Clara, took premiums on Light Brahmas, Plymouth Rocks, Partridge Cochins, Langshans, Wyandottes, Black-breasted red game Bantams, Houdans, Brown Leghorns (fowls only), Buff-laced Polish (chickens only). D. J. Murphy, San Jose, premiums on White Leghorn fowls, Sumatra game chicks, Minochi game chicks (Japanese), Wyandotte chicks, White Cochins fowls, Black-breasted red game chicks and on a trio of Bronze turkeys. Wm. Fisher, San Jose, on one pair Black-breasted red game fowls and Seabright Bantam chicks. Adam Smith, Redwood City, on Brown Leghorn chicks.

## Agricultural Machines, Etc.

Best display of agricultural machines by one person or firm, San Jose Agricultural Works; best cider or wine mill and press, and best horse hay-rake, Farmers' Union; hay and straw cutter, W. F. Babcock; hay press, San Jose Agricultural Works; hand corn-sheller, Farmers' Union.

Broadcast grain sowing machine, W. F. Babcock; best display reaping and mowing machines, Farmers' Union; harrow, cultivator and horse hoe or weed cutter, San Jose Agricultural Works; double shovel plow, W. F. Babcock.

Fanning mill, Farmers' Union; windmill, Geo. J. Bently.

Scraper, W. F. Babcock.

Gang plow, Boyce & Topham; sulky plow and side-hill plow, Farmers' Union; one-horse plow, W. F. Babcock; Mole or blind ditch plow, and open ditching plow, San Jose Agricultural Works; plow for all purposes, W. F. Babcock.

Two-horse family carriage and one-horse family carriage, Chas. Bradley; top buggy, open buggy, two-seated open carriage and spring cart, W. M. Hollenbeck; Farm wagon, W. F. Babcock; four-horse spring wagon, San Jose Agricultural Works; ladies' phaeton, W. M. Hollenbeck; delivery wagon, W. F. Babcock; farm gear and two-seated, four-spring wagon, San Jose Agricultural Works; combined plow and weed cultivator, Wm. Forbes.

## Medals.

The gold medal for the best exhibit in any department was awarded to Col. C. Younger for the best display of Durhams; a special gold medal was awarded to Leonard Bros., for their display of black

Galloway cattle; a special silver medal to J. Bean, Los Gatos, for his spray air pump.

Awards for exhibits at the Fifth District Fair (in Horticultural hall), in the line of agricultural and related industries, were as follows:

## Agricultural Products.

Silk—Pacific Silk Factory, best exhibit of a silk business, from the mulberry tree to the silk cocoon. (H. X. Van de Castele was also awarded premium for best exhibit of silk goods by one factory.)

Flour and grain—D. B. Moody, millers' products; T. M. Tenny, buckwheat and corn; A. R. Woodham, barley, beans and wheat.

Vegetables, roots, etc.—T. M. Tenny, squashes, pumpkins and sugar beets; best table of general varieties vegetables.

Plants and flowers—E. Bourguignon, collection of greenhouse plants; flower plants in bloom; hanging baskets of plants; cut flowers; two vases bouquets; two parlor bouquets; collection fern and leaf plants; special premium for floral display. J. Rock, collection of ornamental plants; cut roses and dahlias—most meritorious display in pavilion; Mrs. O. J. Albee, best exhibit flowers by amateurs.

Butter, bread, etc.—Mrs. O. J. Albee, soda biscuit, corn, rye, brown and wheat bread.

## Horticulture.

Green fruit—J. Rock, collections of apples, pears, peaches and plums; three varieties plums; three varieties prunes; collection quinces; best general display green fruit; Mrs. O. J. Albee, six varieties apples; three varieties apples; collection raspberries; T. M. Tenny, six varieties pears; single variety pears.

Canned fruits, etc.—Mrs. O. J. Albee, pickles, sweet pickles, jellies.

Nuts—J. Rock, soft-shell almonds, black walnuts; Mrs. O. J. Albee, paper-shell almonds; A. E. Gish, seedling, hard-shell almonds, Italian chestnuts; Mrs. D. B. Moody, English walnuts.

Evaporated fruits—H. B. Bristol, apricots, plums, prunes, peaches; general display of dried fruits. Sun-dried fruits—Mrs. O. J. Albee.

Glaze fruits—A. Damonte. Grapes, wines, brandies, etc.—P. O. Burns & Co., red dry wines, white wine, port and sherry; general display of wine; general display of brandy; D. C. Feely, Angelica wine, display wine grapes, table grapes.

## Miscellaneous.

C. H. Green & Bidwell, mowing machine; A. Steiger & Son, drain tiles, pottery and stoneware; Messing & Son, saddles and harness, single-buggy harness, saddle-trees, saddle and bridle; Kaiser & Koch, double-buggy harness; Hatman & Normandin, best one-horse family carriage, top buggy, open buggy, two-seated open carriage; Kaiser & Koch, best two-horse family carriage; best ladies' phaeton; Mrs. Teresa Zingg, best collection illustrating the ornithology of California.

## Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. \*\*

SAN FRANCISCO:  
Junction Market, Pine and  
Davis Streets.

# BAKER & HAMILTON.

SACRAMENTO:  
Nos. 9, 11, 13, and 15  
J Street.

MANUFACTORY: Benicia Agricultural Works, Benicia, Cal.

EASTERN OFFICE: 88 Wall Street, New York.

IMPORTERS, MANUFACTURERS, AND DEALERS IN

## Hardware and Agricultural Implements.

# "PERFECT" GANG PLOWS,

Manufactured by the BENICIA AGRICULTURAL WORKS,

Are the only Successful BENCH BEAM GANG PLOWS made with STEEL BEAMS, STEEL BOTTOMS and CAST CAST-STEEL SHARES. They have HIGH BEAMS, WIDE TIRE, WROUGHT IRON CARRYING WHEELS.

They are so constructed that there is ample space under the beams and between the bottoms to let the stubble and weeds freely pass through. "Perfect" Gang Plows are made with either three or four bottoms or plows, each cutting eight or ten inches, securely ganged together, making a Gang Plow which is unequalled for Lightness of Draft, strength, durability, and Good Plowing Qualities, and is in reality a "Perfect" Gang Plow.

LANDSIDE VIEW OF "PERFECT" GANG PLOW.

Hubs and Boxes of carrying wheels are detachable, and when worn out can easily be removed to put new ones in their place.

Each carrying wheel is provided with its own Regulating Lever by which the driver can easily adjust either side of the plow to make it run level and true.

The Regulating Levers are very long and securely bolted to the steel frame of the plow, and coupled to the crank axles by a heavy piece of round iron, which is adjustable to the regulating levers at three different holes, enabling the driver to adjust his plow so that he can handle it with the greatest ease.

The "Perfect" Gang Plow is also provided with a long Land Gauge Lever, by which the driver can adjust his plow to take more or less land as he may desire.

There is no danger of breaking the crank axle of the "Perfect" Gang Plows, as they are made of heavy 1½-inch round iron, and are fastened to the frame by wrought iron brackets.

If you contemplate purchasing a Gang Plow, don't fail to call and see the "Perfect" Gang before you purchase.

MOLDBOARD VIEW OF "PERFECT" GANG PLOW.

The "Perfect" Gang Plow will plow in any soil, as the bottoms are shaped after patterns that have been found to work equally well in adobe and free soils. The moldboards are made of the best iron center steel, chemically hardened, and well polished.

## PRICE LIST.

No. 1—3 Gang, 8-inch, with set of extra shares.....	\$75 00
No. 2—3 Gang, 10 inch, with set of extra shares.....	80 00
No. 3—4 Gang, 8-inch, with set of extra shares.....	80 00
No. 4—4 Gang, 10-inch, with set of extra shares.....	90 00

The "Perfect" Gang Plows are lighter draft, stronger, more durable, and do better plowing than any wood frame Bench Beam (commonly called "Stockton Gangs") Gang Plow ever manufactured.

## Lands For Sale and To Let.

### FOR LEASE AND FOR SALE,

40,000 ACRES

Of good land in Fresno, near the County Seat. Some of this land is already irrigated, and all can be easily irrigated. It is adapted not only to grain, but also to Alfalfa, Fruit and Vines.

1000 ACRES

Of the above land for sale at the low price of \$20 per acre. Apply to

E. B. PERRIN,  
402 Kearny St., San Francisco.

\$10.00 PER ACRE.

On the C. P. R. R., in Placer county; one half mile from Applegate; one-half hour from Auburn; fine climate; plenty of water; school, postoffice and telegraph near; easy terms; title perfect. Apply to

S. C. OSBORN,  
Applegate, Placer Co., Cal.

## CHEAP LANDS FOR SALE.

**5680 Acres** of rolling adobe hills, situated in Tehama County. Well watered by numerous springs, etc. Several thousand acres suitable for cultivation. Good two-story House, Barn and other out-buildings. Seven miles of fine wire fence.

**FIRST-CLASS CATTLE OR SHEEP RANGE.** The Cheapest tract of land in Tehama County. Price, \$6.00 per acre. Fair time and interest.

Also, a tract of 20,000 acres adjoining, can be bought at a great bargain. Title, U. S. Patent. For terms, etc., apply to

J. E. OROOKS, Benicia, Cal.

N. B.—Upon timely notice, intending purchasers will be taken from Cottonwood to the land and returned free.

## A NEW COLONY

On the new extension of Southern Pacific Railroad, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Sa ta Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to L. s Alamos, thence by stage to the Colony. **20,000 acres** of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. **INTERNATIONAL IMMIGRANT UNION**, 401 California St., San Francisco.

## FRESNO COUNTY.

## BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being 2½ times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

For further particulars call on or address

O. J. WOODWARD, FRESNO, CAL.

Corner Clay, SAN FRANCISCO

Hours: 9:30 A. M. to 3:30 P. M.

The world-renowned 60 acre POULTRY FARM OF FANNY FIELD, that pays her a profit of \$1,000 annually, is having an immediate sale. Tells about houses, runs, incubators, brooder, chickens and capons. Every man, woman and child should read it. Price 25c. Steps taken. R. B. Mitchell, 69 Dearborn St., Chicago.

TO OWNERS OF HORSES, COWS, ETC.

Convince yourself by trial that the most speedy and effective cures are made by the use of Homoeopathic Medicines, and that this is by far the CHEAPEST treatment. Horse-car companies in New York who have adopted this treatment have found their losses by sickness and death very materially diminished. We can give the highest references in this State to prove the superiority of this treatment over any other. Send for our "Guide" and "Veterinary Index," pamphlets of 64 and 42 pages, respectively, containing most valuable information. Sent FREE by mail upon application to

BOERICKE & SCHRECK,

## THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

TITLE, U. S. PATENT.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,

West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map.

## LIGHTNING HAY KNIVES

WEYMOUTH'S PATENT.

This Knife is the BEST IN USE for cutting down hay and straw in mow and stack, cutting fine feed from bale, corn stalks for feed, cutting post and ditching marshes. The blade is Best Cast Steel, spring temper, easily sharpened, and is giving UNIVERSAL SATISFACTION.

A few moments' trial will show its merits, and parties once using it are unwilling to do without it. Its sales are fast increasing for export as well as home trade; and it seems destined to take the place of all other Hay Knives. They are nicely packed in boxes, 1 dozen each of 60 pounds weight, suitable for shipping to any part of the world. Manufactured only by

HIRAM HOLT & CO.

EAST WILTON,  
Franklin Co., MAINE.

For sale by the Hardware trade generally.

Warning of our rights, and the public are cautioned against purchasing any Hay Knives made as described above, which are not of our manufacture.  
EAST WILTON, Sept. 1, 1886.

CAUTION.

We are informed that various parties are infringing upon the widely-known Letters Patent granted originally to GEORGE F. WEYMOUTH for an improved Hay Knife. The invention patented by him is a sword-shaped blade provided with operating handles, the edge of the sword-blade being furnished with knife-edged serrations or teeth. It is our purpose to PROSECUTE ALL INFRINGEMENTS, and to hold responsible to the full extent of our ability and of the law, all parties who manufacture any knife infringing upon the patent, or who deal in the same. Several suits are now pending in the U. S. Courts. All manufacturers and dealers are hereby

warned of our rights, and the public are cautioned against purchasing any Hay Knives made as described above, which are not of our manufacture.

## Patrons of Husbandry.

(Continued from page 321.)

## A Pleasing Finale.

## Dairy Improvements.

About 20 Patrons and Matrons from Yuba City and distant Granges met at Bro. B. F. Walton's dairy farm, near Yuba City, last Saturday afternoon, to witness the first operations of his new De Laval cream-separator. The machine was operated by horse-power, and within a few minutes after the warm, foaming and luscious-seeming milk was fed into the rapidly-revolving centrifugal operating manipulator, thoroughly skimmed, a current of milk flowed from the lower spout, soon followed by a more delicate streamlet of pure, uniformly rich cream. The operation was so speedy, quiet, continuous and uniform as to appear magical in effect to all upon first witnessing the operation of this wonderful improvement in the work of rich butter-making. About one in eight parts pours out in cream. All present were certainly pleased with the perfect operation of the separator.

Most of the visiting Patrons present had been delightfully entertained, during the day, with rides about the rich surrounding country and homes of their entertainers, including such genial and prosperous patrons as Bros. B. F. Walton, B. F. Frisbie, H. O. Jones, and others. We dare say none have visited any richer farming district of equal breadth and uniform good quality of soil. Its capabilities for diversified farming products, without irrigation, are certainly remarkable, and as yet but very limitedly appreciated. Some day, when the lands in these districts—saved from the destroying debris elements by the vigilance, hand work and levees of their pioneer owners—are sold in small tracts, at hundreds of dollars per acre, and in some cases perhaps by the thousand dollars, their real merits and capabilities will become fully apparent.

These rides about the country, closing with this lingering gathering of brothers and sisters, seemed the one thing only needed to cap the princely entertainment accorded to their visiting friends by the generous hosts of Yuba City Grange. The whole week will be long and pleasantly remembered by both guests and entertainers.

## The National Grange at Philadelphia.

The following notice has been addressed to the Worthy Masters of State Granges:

NATIONAL GRANGE, P. of H.,

Office of the Secretary,

WASHINGTON, D. C., Oct. 1, 1886.

DEAR SIR AND BROTHER:—In accordance with the provisions of its constitution and the resolution adopted at the session of 1885, the Twentieth Session of the National Grange, Patrons of Husbandry, will be held in the city of Philadelphia, Penn., commencing on "the Wednesday after the second Monday in November," 10th proximo, at 11 o'clock A. M.

The sessions of the Grange will be held in Musical Fund hall, Locust street, between Eighth and Ninth streets.

Accommodations for the National Grange have been secured at the Girard house, corner of Ninth and Chestnut streets, two and one-half squares from Musical Fund hall, at the rate of \$2.50 per day or \$3 per day, including heating of rooms.

By order of the Executive Committee,

JOHN TRIMBLE,

Secretary National Grange.

## Grange Items.

[Condensed from the Patron.]

PLACERVILLE GRANGE numbers over 140 members, and there are more coming. At their first September meeting, four sisters and three brothers took the fourth degree.

ENTERPRISE GRANGE conferred the fourth degree upon a class of five, the 23d ult., and then sat down to a fine harvest feast with visitors from Sacramento and American River.

PLUMAS GRANGE survives her short-lived neighbors, and although somewhat lonesome, is dear to her members, has grown and done good work in Sierra valley.

ALHAMBRA GRANGE now counts 109, and has lost but two of her 22 charter members.

DELIGHTFUL.—One of the pleasantest features enjoyed by some of the attendants at the State Grange at Marysville were the charming drives tendered them by members living in the vicinity and those who had come from abroad with their own teams. Among the latter was Bro. M. Sprague, P. M. of Sacramento Grange, who took more than one jolly load to delightfully enjoy the country around. Bro. S. was the happy guest, during the session, of his daughter, Hattie Sprague Jones, well and brightly remembered by old members of the State Grange.

STATE FAIR PREMIUMS—ERRATA.—Mr. J. J. Jones, of Martinez, hands us the following corrections in the State Fair poultry awards, as published on page 286 of the RURAL, Oct. 2d: Langshans—Best breeding pen. Buff Cochins—Best breeding pen. Houdans—Best pair. All, J. J. Jones. We are glad to make the correction.

## Stockton Notes.

[Written for the RURAL PRESS by Mrs. W. D. A.]

The fair was a decided success at the track and pavilion. The district show of cattle was highly commended, even to the great fat steer led by Farmer Grupe, and the Lockeford ox seven feet high, weighing 2376 pounds.

By electric light, the pavilion, with its mingled and varied whole, was entrancing. Its magnificent display of grapes, fine apples and other fruits and vegetables, its rich combinations and tasteful arrangement of store goods, laces (Feist imported a \$550 Duchess lace set, hand-made, for the fair), millinery, machine-work, paintings, embroidery and bric-a-brac were never equaled here before. Ten crazy-quilts lent their commingled colors, stitchings and paintings. A large one, bright with small, silvery beads, with "Althea" worked in the center, surrounded by painting and etching designs, held the premium, though many thought the joining and tracery of figures on Mrs. Dr. Grattan's quilt the neatest.

Unique and charming was a banner of white bolting silk with graceful clusters of single scarlet geraniums in very fine silk embroidery, by Miss O. Marsh, which held the blue ribbon, as did a chenille-embroidered sofa pillow with golden lining by Miss J. Fanning, who had two booths of painting on velvet and satin, point-lace, Kensington and silkwork, and lovely bric-a-brac. Mrs. J. R. Williams had a very large show of almost everything in beautiful fancy work, with paintings by Mrs. Waterman, in a large case (glass doors). Mrs. Boisselier's case was noticeable for a silk-embroidered sofa pillow on which the premium was being tied, a luster-painted parrot, limb and sprag, a lace-bordered white flannel toilet set, with pink, sweet wild roses painted thereon, and bronze-velvet table-scarf chenille-embroidered. Miss Hickman had four luster paintings, crimson satin banner with splendid peacock (premium), black velvet banner, tiger lilies, with the regal grace of the fields, another with azaleas and roses. Mrs. Dr. Grattan's show-case contained stalagmite specimens from the Mammoth Cave, Calaveras county, lovely chenille, silk and Kensington embroidery, painting on velvet and satin by Miss Mollie Grattan, and a fancy grain shovel painted by Miss Maud Southworth, from which hung the blue ribbon.

Mrs. T. H. Bond had a booth of tasteful embroideries, macramé and crochet-work; Miss Marshall, silk-embroidered white flannel skirt for Ethel Sperry, soon to become the bride of Charles Crocker's second son, Will.

On a post a set of pillow and sheet shams etched with red cotton held the premium.

Mrs. Utt and daughter made an amateur silk show of 15 pounds cocoons, carded reels, and fluffy orange and white bunches of silk and silk flowers, showing that silkworms are a success here, if understood. They have a rich point-lace parasol-cover, and many other delicately-worked pieces with drawn work, knitting and worsted robe. This exhibit of cocoons received the first premium—\$8.

Mrs. Fairbanks had a table of assorted cocoons, two small skeins of silk, and shreds of silk with a flower pyramid of cut cocoons, all for sale; a showcase of fancy work, several worsted carriage robes and a large crocheted picture-frame. Near were some crocheted work-baskets, strong as willow, by Mrs. Myres. Spread on the wall was a serviceable beauty of an afghan by Mrs. Oulahan, with the blue knot on it, and over it paintings in oil by Mrs. Alard, who is said to be the best flower painter in water colors in Stockton. Near, hung oil-paintings much admired, by Lena Bidwell; then a fine screen and art-work for house decoration by Mrs. Dorr.

T. Oxley Miller, Stockton's best artist, had some fine pieces in different places.

Crayon sketches by "Ione" Carr were considered very life-like, especially the sketch of the Presbyterian minister and Congressman Budd, and "The King Listens," "The King Triumphs." Higher up were Mrs. Louise de Horan's, from the Mechanics' Institute. Comment is unnecessary. She had the gold medal at New Orleans, and six of her pictures were marked sold here.

J. Marsh Ladd, a young artist, had fine paintings of floods and streams, mountains and waterfalls. Fidelity to nature characterized all of his work. His picture of a mill on a mountain stream, bordered by forest trees, won the first prize for sketches of nature. Miss Reep and Mr. Peters made a large show of portraits painted in oil. I beg pardon if I should make a mistake in all this maze of art work. Under a dome drooped a snowy wax chapel.

Mrs. C. W. Dohrman showed great success in teaching little ones to think, do and take pleasure in doing, by her Kindergarten exhibit, a marvel of loving patience in its varied collection. Fine etchings, drawings and paintings evinced skill. A good feature of the district was show-cases of children's work and cute little letters.

Knots of ladies gathered around the "Jewel," in Jackson & Earle's show of stoves—safest of all vapor stoves. One gallon of gasoline will last a family two days to cook, wash and iron.

One of the most useful shows was the Buhach, by the Buhach Co.—death to insects; also, the White Adriatic fig—best for curing and market. They showed fan palms, too.

The Peerless incubator—Biven & Co., Stock-

ton—is the cheapest and best I have seen. One hatching 100 eggs costs \$30.

In a large booth near, Mrs. Hoers showed knitted goods and home-made linens 140 years old, with lovely worked sheets.

Near the center, W. Bidwell, Stockton, has his model mower, with some new principles.

Chained to the post was a "self-car coupler," patented by S. A. Killmer and R. A. Ford, Binghamton, N. Y. Agent for Pacific Coast, R. A. Ashley. A long list of society and donated premiums were bestowed on the exquisite floral designs, Miss Marshall winning the first, \$20, and \$12 for chair and sickle. Mrs. Bates, five prizes. "Ladies' Relief Corps," fourth prize (barrel of flour). Eddie Adams, first donated prize, Duchess lace handkerchief, for flower basket.

The two large scrollwork cabinets inlaid with different woods were much praised. There price was \$70 and \$60.

The annual address was wanting in the usual adulation bestowed on farmers, but sensible and listened to.

Pomona exhibit has been ably described in the RURAL. I will only say that we had more room (60x36) to show our cerealia in jars and all our varied products, that "San Joaquin county" in letters of wheat were faultless, and that the perseverance of W. M. Fiske, Sisters Beecher and McIntosh, and Brother and Sister Williams, Brothers Elliot, D. J. Hoffman and others, is beyond all praise.

## Vacaville Notes.

EDITORS PRESS:—The fruit season is pretty well over here for this year. There are some grapes yet and will be until the rains spoil them. Five or six cars are sent East weekly from Vacaville now. We had quite a shower of rain yesterday, but not enough to damage green fruit unless it turns cold, which will cause grapes to crack.

Many have been so busy as not to be able to summer prune their trees at the proper time, and are doing it now. Generally, trees here are pruned twice a year; many prune apricot trees in September or earlier, which causes the fruit buds to set thicker than they would if the pruning is not done until spring. Several of our orchardists are putting in drain tiles; they are put in the ground from 14 to 30 inches deep. Some put the dirt on the pipe, while others put a layer of straw or fine brush next to the pipe; I think a layer of gravel or brush would be better than dirt. Five-inch tiles are usual for the main lines and three-inch for side ditches.

Stock are looking well generally, and feed is plenty; but this is not much of a stock country now. Hogs are low, being worth only 2½ cents per pound.

Vacaville, Oct. 10th.

## County Awards at the Mechanics' Fair.

Although we have alluded to the awards for the county exhibits at the Mechanics' Fair, we have not published the full list. Sonoma county was awarded a gold medal and \$250 for the best, most extensive and most varied display of farm products. Placer county came second, with a grand silver medal and a cash prize of \$150; Shasta county third, with a silver medal and \$100; and Contra Costa fourth, with the bronze medal and \$75. The honors in the display of fruit were divided pretty equally between Placer and Sonoma. Placer carried away the prize for the best display of table grapes, Vacaville gaining the second place, while Sonoma was awarded the premium for the best wine grapes.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Montana.  
FRANK W. SMITH—Nevada and California.  
GEO. McDOWELL—Fresno and Tulare Cos.  
O. F. BERGMAN—Tehama and Colusa Cos.  
S. S. LANYON—Nevada, Sierra and Plumas Cos.  
JEANNETTE HOUGHTON—San Mateo Co.

DELICIOUS.—There came to us a day or two since a 20-pound box, tagged "Non-irrigated grapes; compliments of C. H. Leggett & Son, Oroville." Opening it, we found choice clusters of Tokay, Muscat, Black Prince and Bishop, that could hardly be surpassed in delighting the sense, whether of sight or taste. We can assure the friends who thus kindly remembered us that none of those Muscats will keep till next March.

WORKINGWOMEN in London cover and embroider sunshades at three-quarters of a penny apiece, and, if work can be got, skilled workers do two dozen sunshades a day.

Address, **WILLIAM NILES**, Los Angeles, Cal.

**SHEEP AND SHEEPWASH.**

**Italian Sheep Wash.**

EXTRACT OF TOBACCO

Free from Poison.

Cures thoroughly the SCAB OF THE SHEEP. The BEST remedy known. Costs less than 1 cent per head for dipping. Reliable testimonials at our office. For particulars apply to

**CHAS. DUISENBERG & CO., Sole Agents,**  
No. 314 Sacramento St., San Francisco.

Calvert's Carbolic

**SHEEP WASH**

\$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast.

**LITTLE'S CHEMICAL SHEEP DIP.**

Price Reduced to

**\$1.25**

PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for SCAB in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

**FALKNER, BELL & CO.,**  
San Francisco, Cal.

Recommended by Professors Hilgard, Cooke, etc.

N. B.—A large line of Poultry Appliances, such as Wire Netting, Bone Mills, Chopping Machines, etc., for sale at the lowest rates. The Pacific Coast Poultryers' Hand Book and Guide; price 40c.

The Halsted Incubator Co. 1011 Broadway, Oakland, - Cal. Price from \$20 up. Model Brooder from \$5 up. Thoroughbred Poultry and Eggs. Send for new Circulars containing much valuable information.

DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 28-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished. We ask you to give our mills a trial. We guarantee that you will find them precisely as represented. For full particulars, apply to

DANIEL BEST, San Leandro, Cal.

IRRIGATION.

The Law of Water for Irrigation in Colorado.

By S. W. CARPENTER.

This book is intended to present in a clear and concise way the Colorado law of this very important subject at the present time, with all the latest decisions. It also contains many suggestions of the greatest value to those interested in securing and preserving water rights in Colorado.

The information will be found of great value to those who are interested in irrigation laws for California.

We append, by permission, a notice of the book from Hon. H. P. H. Bromwell, of Denver, a member of the State Constitutional Convention, and of the General Assembly at the time much of the legislation on the subject of irrigation was framed, and later referee in the establishment of priorities in Water District No. 3, Cache la Poudre river, and a well recognized authority in such matters.

DENVER, COLO., June 2, 1886.

S. W. CARPENTER, Esq.—Dear Sir: I have examined the digest and compilation entitled "The Law of Water for Irrigation in Colorado," which you have prepared, and beg leave to say that in my opinion it will prove to be of much use and value to the community. The work so much needed has been done by you remarkably well, considering the brevity necessary in preparing a book for the use of all parties interested in irrigation, as well as of members of the bar. Respectfully and truly,

H. P. H. BROMWELL.

Price, \$1.25, Post-paid.

## S. F. MARKET REPORT

NOTE: Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 13, 1886.

The past week has been uneventful, outside of a glut in the grape market. In cereals there has been a more active inquiry, with sales restricted, owing to lighter offerings. Eastern telegrams gave lower wheat markets up to Tuesday, when a turn for the better was noted, resulting in quite an advance today. Foreign cables were of an unfavorable character up to yesterday, when a better tone was noted. To-day's cables gave an advance in quotations, as the following shows:

LONDON, Oct. 13.—Cargoes off coast, firmer; held higher; the continental demand continues. Cargoes on passage and for shipment, firmer. California wheat, off coast, 33s 6d to 34s. California wheat just shipped, 34s 3d. California wheat, nearly due, 33s 6d. English country market, steady. French country market, firm. Liverpool wheat, spot, firmer. Liverpool wheat, Cal. 6s 6d to 6s 9d. Weather in England, unsettled.

## Foreign Review.

LONDON, Oct. 11.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: There is a steadier feeling both in London and the provincial markets. Dealings are firm at a slight advance. Sales of English wheat during the past week were 67,462 quarters at 30s, against 75,264 quarters at 30s 7d during the corresponding week of last year. There were large receipts of Indian wheat, and lower prices were accepted ex ship. Three cargoes were withdrawn and eight remained, four of which were Chilean, two Californian, one Walla Walla, and one Calcutta. At to-day's market there was a quiet and steadier tone. Wheat was slow of sale. American brands of flour were 3d 6d lower. Corn and oats were dull and unchanged. Beans were 6d lower. Peas were 1s cheaper. Linseed was 6d dearer.

## Eastern Wool Markets.

NEW YORK, Oct. 9.—Wool has been steady, under fair inquiry, though manufacturers are not buying so freely as last week. Holders, however, remain firm and speculators look for high prices. The sales of the week included 50 bales of spring California at 25c; 6000 pounds scoured California at 60c; 7000 pounds California and Texas scoured at 56c; 40,000 California spring greasy at 19c; 24c; 40,000 Eastern Oregon at 24c; 25,000 Utah at 25c.

BOSTON, Oct. 9.—The market has been fairly active the past week and prices have been firm and tending upward. The sales for the week have been 4,794,000 pounds foreign and domestic. The situation is as strong as ever. Holders feel confident that wool is good property. The demand for the past week has been almost wholly from manufacturers, but a few lots changed hands on speculation here. We look for no easing off in values, although the demand may not be so active. Large purchases for some time past have given manufacturers good supplies to work on. It will be no surprise to the trade to find a considerable falling off in the demand during the next few weeks. California wool has been in good demand. Sales have been made of 20,000 pounds spring at 24c; 100,000 pounds spring at 21c; 100,000 pounds spring at 20c; and 324,000 pounds on private terms. Oregon wools have been active. The sales embrace 125,000 pounds Eastern at 24c; 15,000 pounds at 25c, and 200,000 pounds on private terms. Receipts of domestic have been 14,066 bales, against 6675 bales in 1885. The imports of foreign for the same time have been 4510 bales, against 2298 bales in 1885.

## New York Wheat Market.

NEW YORK, Oct. 10.—A rapid increase in the visible supply of wheat, a light export demand, with continued reports of weaker foreign markets, have caused a material decline in prices. The market ruled dull and weak throughout the week. Spot closed 2c lower, and final figures were off seven-eighths of a cent for all options, except September, which is down three-fourths of a cent. Closing figures were as follows: October, 82; November, 83½; December, 85½; January, 86½; May, 92½c.

## New York Hop Market.

NEW YORK, Oct. 10.—There has been no change whatever in the situation of the hop market. Really first-class stock remains firm, while poor stock is freely offered with no buyers. Pacific Coast crop of 1886, good to choice is quoted at 30c; 35c; do 1885, 15c; 20c. New York State, 1886, common and medium, 25c; 30c; do 1885, prime to choice, 20c; 25c; do, common and medium, 12c; 17c.

NEW YORK, Oct. 11.—The almost absolute failure of the hop crop in this State has not affected brewers so seriously as at first expected. This is in a measure due to the large crops abroad and heavy competition among importers in this country. Good imported hops have been sold as low as 25 cents per pound in this city, and although the tendency is upward, the market is unsettled and quotations range all the way from 25 to 40 cents.

## California Products at the East.

NEW YORK, Oct. 10.—Beans—Choice stock meets with a steady demand, but low grades are dull and weak. California lima, \$1.70.

Seeds—California yellow mustard, 4½c; inferior quality offered on wharf, 3½c; quoted at 4½c. Canned Goods—Salmon is in better demand and firm. Fruits are quiet. California canned peaches, \$2.25; pears, \$2.10; plums, \$1.85 and \$2; grapes, \$2; apricots, \$2.15; salmon, \$1.55.

Honey—Extracted, 5c. Green Fruit—California pears, \$2 and \$4 per box; quinces, \$1 to \$1.50 per box; grapes, \$1 to \$5 per 40 lb case.

## New York Fruit Market.

NEW YORK, Oct. 11.—The *Times* says: There will be few peaches in the markets of this city this week, and they will come from many parts of the United States. Perhaps the largest and most attractive in appearance will come from California.

That State has been contributing a few peaches to the market since June last. The grapes now here come from the Mediterranean, California, Central New York and elsewhere. New York is the great distributing center for not only the Eastern States, but also all the leading cities of the South. Choice stock is moving freely and at remunerative prices. The purple Tokay from California has the preference, and sells for 10 to 12 cents per pound; Muscatel, from \$3.50 to \$4.50 per case, and Black Ferrara about the same. Almeria, from the Mediterranean, is plenty and sells for about 8 cents per pound. White Niagaras bring about 10c, Delawares 10c and Concord from 3 to 4c.

## Local Markets.

BAGS—A fair inquiry is reported for both bean and potato bags, at unchanged quotations. Grain bags are lifeless.

BARLEY—Receipts have only been fair, with steady but strong buyers concentrated stocks, allowing the demanding of an advance. The market to-day for sample parcels was strong at an advance. On call to-day there was more activity, with transactions reported as follows: Buyer season—200 tons, \$1.00½; 100, \$1.07½; 300, \$1.08; 200, \$1.08½; 100, \$1.08½; 200, \$1.07½. Seller 1886—100 tons, 95½c; 200, 95½c; 500, 97c. No. 1 Brewing, buyer season—100 tons, \$1.27½ c. Buyer season—100 tons, \$1.08½; 500, \$1.07½; 100, \$1.07½. Buyer 1886—100 tons, \$1.00½. Seller 1886—100 tons, 97c; 300, 96½c c. c.

BEANS—Under strong buying on Eastern orders, the market is strong at an advance. It is also improved on a report that the crop in one or two of the southern counties was damaged to a considerable extent by a heavy frost on Sunday night last.

DAIRY PRODUCT—Butter is reported weak, with a slack demand for fresh roll. Pickled is steady, with the supply large. Cheese is stronger and higher, with a good demand at the advance.

DRIED FRUITS—Receipts are coming in more liberally, with a ready market for all received at full quotations.

EGGS—Fresh laid eggs are higher and very strong at the advance. It is claimed that 37½ to 40 cts is readily obtained. Receipts of Californian are light.

FEED—Bran and middlings are higher. Ground barley is stronger. Other ground feed is unchanged. Hay is in good demand, with an advance obtainable for good to extra choice, owing to receipts only being fair. The following is the range for hay: Barley, \$7.00 to \$10; oats, \$6.00 to \$12; wheat, \$10.00 to \$13.50; with something extra selling slightly higher.

WHEAT—The market for sample parcels has ruled very strong throughout the week. Yesterday a schooner load of good shipping was sold at \$1.35, delivered alongside here. A large parcel was sold at \$1.33½. Port Costa delivery; the grade was good shipping. To-day it is claimed that holders are asking more money with very few offerings to sell. On call transactions were made at higher prices, as follows: Morning Session: Buyer season—600 tons, \$1.43½; 1800, \$1.43½; 300, \$1.43½; 500, \$1.43½; 100, \$1.43. Buyer 1886—100 tons, \$1.37½; 500, \$1.38; 100, \$1.38½ c. c. Afternoon Session: Buyer season—700 tons, \$1.43½; 200, \$1.43½; 200, \$1.44; 1000, \$1.43½. Buyer 1886—100 tons, \$1.38½; 100, \$1.38½; 100, \$1.38½; 300, \$1.38½; 100, \$1.38½; 100, \$1.38½ c. c.

HOPS—The market has a firmer, stronger tone, with freer sales reported the past week. One consignment of 150 bales of good to choice from Rogue river, Oregon, was placed with an Eastern buyer at 32½ cents per lb.

HONEY—Receipts are barely up to requirements for shipping to the East, but buyers do not bid higher prices, claiming that the market does not justify it. Holders are not pressing the market, consequently there is a firm, strong tone.

[COMMUNICATED.]

## Market Information.

## Cereals.

The International Corn Market, at Vienna, was held at the end of August this year, as usual since 1873. As in the previous 14 years, so in the present year, experts and others submitted their reports respecting the results of this year's produce in the different countries of Europe, which reports are usually regarded as a basis for speculation. According to these statements the output of wheat—taking 100 as an average crop—is as follows compared with the two preceding years:

	1886.	1885.	1884.
Austria.....	92½	104	103
Hungary.....	87	117	104
Prussia.....	95	94	97
Saxony.....	95	100	110
Bavaria, Franconia and Su-ba	101	100	107
Bavaria, Upper and Lower Ba-			
varia.....	95	105	105
Bavaria, Palatinate and Wet-			
terau.....	88	100	90
Baden.....	85	97	90
Wurtemberg.....	97	96	99
Mecklenberg.....	98	100	105
Dennmark.....	100	110	100
Norway and Sweden.....	90	105	105
Italy, south.....	89	85	78
Italy, upper.....	125	70	80
Italy, east.....	100	80	100
Italy, middle.....	80	78	80
Switzerland.....	100	125	80
The Netherlands.....	90	95	95
France.....	85	95	95

Roumania, Moldavia.....	85	115	125
Roumania, Wallachia.....	87	82	112
Servia.....	90	110	150

It will be seen that the falling off in the estimated yield is very considerably below either 1885 or 1884. From the same source the rye crop is as far below an average as the wheat crop, and rye is

used very extensively in parts of Europe as a substitute for wheat.

The official report of the United States Agricultural Department places the wheat crop of this country at 450,000,000 bushels, an increase over last year of 93,000,000 bushels. When the difference in the carryover from the season of 1884-5 (755,000,000 bushels) into that of 1885-6, is considered in comparison with the carryover from 1885-86 (75,000,000 bushels) into 1886-87, it is quite likely this country can spare for export 120,000,000 bushels this season, against 95,000,000 bushels exported the season of 1885-86, provided the consumption is not largely increased. Many believe in a larger consumption owing to the failure of crops in Texas, a shortage of 250,000,000 bushels in corn and a lighter potato crop than known since 1881.

The local wheat market has ruled exceedingly strong throughout the week, with \$1.32½ to \$1.33½ quickly paid at Port Costa for fair to good white shipping, and an advance on this figure for a large, straight parcel, or a grade running from good to choice white shipping. It is claimed that interior dealers were free sellers, but now they are either holding back or else they have been cleaned up. Farmers are reported not disposed to sell, as they have their grain warehoused, and will await future developments. The engaged tonnage in port to load is very heavy, with more vessels under charter, to arrive, as is the disengaged tonnage here and to arrive.

The barley market has ruled strong and active during the week, with buyers' necessities compelling them to pay a slight advance each day. It is reported that considerable dark stock has been taken for seed, by farmers who have sold their bright barley. The shipping demand continues free, while the consumption does not appear to slacken.

Choice oats are very hard to get, owing to the bulk of receipts being composed of poorer grades. The market has ruled exceedingly strong with higher prices obtained for all grades, owing to receipts barely being up to requirements.

In both rye and buckwheat there is light trading, with quotations more or less nominal. Nebraska corn continues in liberal supply, with prices favoring buyers; but California is in light supply. The crop in this State, it is now claimed, will be larger than estimated the forepart of September.

## Dairy Product.

Eastern eggs have come in quite freely, but they have not had any visible effect on Californian, which are very strong under light receipts and a good demand. Fresh-laid, near-by ranch eggs continue to fetch from 35 to 37½ cts per dozen, with occasional sales at a slight advance.

Cheese has ruled steady but firm, with a fair trade reported. Receipts are barely up to trade requirements.

Butter is very much as reported last week. The trade is running chiefly on pickled, which continues in liberal supply, although the stock is being rapidly depleted. Considerable solid butter in kegs has gone out on distant orders. Fresh roll butter is in good supply, with prices barely maintained, except for a few favored brands.

## Feedstuff.

Bran and middlings are not only higher, but very strong at the advance. Ground barley is firmer, but other ground feeds are unchanged.

In hay there is nothing new to report since last week's issue. The market continues very strong, with receipts barely meeting the consumptive demand. It is claimed that many farmers are holding until the character of the winter is determined.

## Fruits.

Table grapes have come in in such heavy quantities that there was a decided break in values, with much difficulty reported to get over 40 cts for the very best varieties. One canner took 2000 boxes of Muscats, choice, at 22½ cts to 25 cts per box, after which they withdrew from the market. Wine grapes also receded slightly in value.

Berries are about out of market, as are peaches. Plums are steady under fair receipts, as are figs and quinces.

Poor apples and poor pears continue a drag, but choice are steady with a strong tone.

Cantaloupes are very hard to sell, owing to the cooler weather and heavy receipts.

## Hops.

European mail advices give a shorter crop than heretofore claimed. Germany's total crop is 126,000 cwt (about 25 per cent) short of last year's, while Great Britain is placed at 742,000 cwt against 960,000 cwt last year. In our market there is a strong tone, with buyers a little more anxious. Several fair sized sales were made the past week at 30 to 32½ for good to choice, with an advance bid for something extra.

## Live-stock.

Mutton sheep are weak. Beef cattle are barely steady, although the consumption is increasing. Hogs are very weak, with a heavy selling pressure. Receipts last month were over 30,000. Packers and slaughterers report receipts in excess of the demand. Carriage horses and also roadsters continue to be inquired for, at prices heretofore paid.

The following are to-day's meat prices: Beef—Stall-fed, 6½¢ to 7½¢ lb; grass-fed, extra, 6¢ to 6½¢; first quality, 5½¢ to 5¢; second, 4½¢ to 5¢; third, 4¢ to 4½¢. Calves, small, 9¢ to 10¢; larger, 7¢ to 8¢ lb. Mutton—Ewes, 4½¢; wethers 5c. Lamb—Spring, 6½¢ to 7c lb. Pork—Live hogs on foot, 2½¢ to 3½¢ for grain and dairy feed; 2½¢ to 2½¢ for soft; dressed, 5¢ to 5½¢ for hard, and 4½¢ to 4½¢ for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Raisins.

G. W. Meade & Co. report a very strong and active demand at the East, with heavier sales than ever before known. Reports of lower prices for California raisins are not credited by dealers; on the contrary, Meade & Co. and one or two other large firms report a stronger market at the East, owing to higher prices ruling for foreign. This year's California raisins show to a better advantage than last year's.

## Vegetables.

Potatoes have ruled dull and weak throughout the week. Receipts have not been large, but the demand was light. The bulk of potatoes coming in are poor to fair, which are sold only at low prices;

good to something very choice have moved off fairly well, but to clean up concessions were necessary. Sweet potatoes have a wide range, owing to the great difference in the quality. The demand has been and continues to be good, allowing dealers to clean up without any marked concessions.

Onions have been creeping up under moderate receipts and an increased demand. On Tuesday of last week it was hard to get 65 cts for choice, but yesterday it was hard for buyers to get choice at 90 cts.

The season for green corn is about over, causing a weak, dull and lower market notwithstanding light receipts.

Tomatoes have moved off quickly at full quotations, with an advance in some instances. The demand is from canners who are packing heavily, owing to the short pack at the East, where early frosts in this month did large damage to the crop.

In other vegetables the low, dull and weak market reported last week prevails this week.

## Wool.

The market is exceedingly strong in sympathy with higher prices at the close. Although the Eastern market is higher, yet prices there are not as high as they are in England where there is no duty on imported wools. The stocks of wool in Europe are very light, not more than one-quarter of what they were last year at this date. Last month's wool sales in London were 50,000 bales short, while it is claimed that the sales in next month will be from 75,000 to 100,000 bales short.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	253,482	229,193
In port, disengaged.....	79,896	86,317
In port, engaged.....	86,360	32,768
Totals.....	419,738	348,278

The above gives a carrying capacity as follows: 1886, 670,580 short tons; 1885, 557,244 short tons; increase over last year, 113,336.

The poultry market is almost bare of choice fowls, but is overstocked with poor, which sell slowly. Large fat fowls are quickly taken at an advance on top quotations.

In seeds there is more inquiry, with some farmers buying.

Hams are from ¼ to 1c lb lower.

San Francisco, Oct. 13, 1886.

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

Fruits and Vegetables.

Table with 2 columns: Item and Price. Includes various fruits like Apples, Bananas, and vegetables like Potatoes, Cabbages, etc.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it.

By the Way.

The Smiling Cyclone advertisement appears again in our columns. It is different from that of last week.

CHAMBERLIN AUTOMATIC

Cartridges. Shot-Gun. Sold by all Dealers in Ammunition.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal.

Farmers and Travelers

Sojourning in Marysville will find the Western Hotel the best in the city, being clean, quiet, comfortable and reasonable in prices.

ACME BANJO METHOD.

By N. P. B. CURTISS. Price, \$1.25. Mr. Curtiss, whose Guitar Method has long been a standard, does real service to the lovers of good music at home, by this thoroughly good and entertaining instructor.

THE ROYAL SINGER

Holds the field against all comers as the chief book for singing classes in 1886-7. Good music, sacred and secular. Improved instructions. L. O. Emerson. 60 cents; \$6 per dozen.

Song Greeting (60 cents) for High Schools; Song Bells (50 cents) or Song Reader (Book 1, 50 cents; Book II, 60 cents) for Common Schools, and Gems for Little Singers (30 cents; \$3 per dozen) form a complete set for music teaching in schools.

SONGS OF PROMISE

(35 cents). Tenney and Hoffman, is the newest book for Sunday Schools. Superior collection.

In press and nearly ready—Anthems of Praise.

PIANO CLASSICS

(\$1.00) is a great favorite with good pianists.

Books mailed for retail price.

OLIVER DITSON & CO., Boston.

C. H. DITSON & CO., 867 Broadway, NEW YORK.

THE GREAT REGULATOR!

No medicine is so universally used as Simmons Liver Regulator. It won its way into every home by pure, sterling merit.

WORKING PEOPLE

Can take Simmons Liver Regulator without loss of time or danger from exposure, and the system will be built up and invigorated by it.

The BEST Family Medicine.

If a child has the colic it is a sure and safe remedy. It will restore strength to the over-worked father and relieve the wife from low spirits, headache, dyspepsia, constipation and like ills.

J. H. ZELIN & CO., Philadelphia, Pa.

HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties.

J. R. CATES & CO. PROPRIETORS,

417 Sansome St. San Francisco

Dewey & Co. 252 Market St. Patent Ag'ts

PRICE LIST OF MYROBOLAN NURSERY,

Haywards, Alameda Co., Cal.

AUTUMN OF 1886-7.

APPLES.

Table with 3 columns: Apple variety, Price per 100, Price per 1000. Includes varieties like Yellow Newtown Pippin, White Winter Pearmain, etc.

APRICOT ON MYROBOLAN.

Table with 3 columns: Apricot variety, Price per 100, Price per 1000. Includes varieties like Blenheim, Large Early, etc.

CHERRIES.

Table with 3 columns: Cherry variety, Price per 100, Price per 1000. Includes varieties like Black Tartarian, Royal Ann, etc.

PEARS.

Table with 3 columns: Pear variety, Price per 100, Price per 1000. Includes varieties like Howell, Beurre Clairgeau, etc.

PLUMS and PRUNES on MYROBOLAN.

Table with 3 columns: Fruit variety, Price per 100, Price per 1000. Includes varieties like Kelsey's Japan Plum, Kelsey's Japan Plum, etc.

PEACHES ON MYROBOLAN.

Table with 3 columns: Peach variety, Price per 100, Price per 1000. Includes varieties like Early Crawford, Foster, etc.

ALMONDS ON MYROBOLAN.

Table with 3 columns: Almond variety, Price per 100, Price per 1000. Includes varieties like Soft Shell, etc.

QUINCE.

Table with 3 columns: Quince variety, Price per 100, Price per 1000. Includes varieties like Apple Quince, Pear.

CURRENTS.

Table with 3 columns: Current variety, Price per 100, Price per 1000. Includes varieties like Red Cherry, Red Cherry Cuttings.

GOOSEBERRY.

Table with 3 columns: Gooseberry variety, Price per 100, Price per 1000. Includes varieties like Dwarf (extra early), Houghton Seedling, etc.

RASPBERRY.

Table with 3 columns: Raspberry variety, Price per 100, Price per 1000. Includes varieties like Cutbert, Red Antwerp.

My Cherries are on the Mazard Root, My Peach, Apricot, Plum, Prune and Almond are on the true Myrobolan. All my trees are true to name, raised without irrigation and free from insect pests.

JAMES O'NEILL,

Haywards, Alameda Co., Cal.

WHO SMILES THIS WEEK?

Well, Amongst Others,

THE MAN IN THE MOON!

When you come to San Francisco on the Ferry Boat from Oakland, you will see him just as the boat enters slip on this side, and what he is laughing at, too. He says there is nothing like it.

PATENTED.

PATENTED.

Table with 2 columns: Mill size and Price. Includes 12-Foot Mills, 14-Foot Mills, 16-Foot A Mills, etc.

The BEST, STRONGEST, LIGHTEST Mill, and a Complete SELF-REGULATOR.

SEND FOR CIRCULAR TO

PACIFIC MANUFACTURING CO.

934 & 936 Mission St., S. F.

## Seeds, Plants, Etc.

## BULBS. SEED.

Hyacinths, \$1.25 per dozen, colors separate; named varieties, \$2.00 per dozen; Tulips, 40 cents; Crocus, 20 cents; Anemones, double and single, 40 cents; Snow Drops, single, 30 cents, double, 50 cents per dozen—all flowering bulbs.

## PANSIES.

Our strain is the very finest grown. Giant Odier, 50 cents per pkt. French Monstre, 25 cents. Giant Timardeau, 25 cents. Fourteen other fine sorts, colors separate, for \$1.

The above Bulbs and Seed sent free by mail on receipt of price, but orders for Bulbs must amount to \$1.00.

Address

W. A. T. STRATTON,  
Petaluma, Cal.

## San Leandro Nursery.

FINE ASSORTMENT OF THE LEADING VARIETIES

## FRUIT AND ORNAMENTAL TREES.

The Hardy White Tuscan, Hardy Yellow Tuscan, Clingstone Peaches.

LARGEST PEACHES IN CALIFORNIA. Splendid flavor; good shippers; excellent for canning.

Cypress, Gum and Pepper Trees in boxes. Flowers and Shrubs.

All trees grown on new, rich soil, without irrigation, and are positively free from insect pests.

G. TOSETTI,

San Leandro, Alameda Co., Cal.

## H. H. BERGER &amp; CO.

Established 1878.]

import directly from Japan,

Plants, Bulbs &amp; Seeds

Persimmon, Mammoth Chestnut, Plum, Pear and Orange Trees.

Choice Camellias, Azaleas, Conifers, Magnolias and Bamboos.

First shipment will arrive in November. Send for Catalogue for Fall, 1886. P. O. Box 1501.

Depot, 317 Washington St.,  
SAN FRANCISCO.

## PEPPER'S NURSERIES.

ESTABLISHED IN 1858.

Apricot, Plum, Prune and Peach on Myrobalan Plum stocks. Bartlett, Winter Nelis, B. Clairgeau, B. Hardy and other varieties, 1 and 2 years. A full stock of 1 and 2-year-old Apple Trees, Peach on Peach, Nectarine, Quince, Fig, Grape, Currants, Gooseberries, Almonds, Walnuts, Chestnuts, etc. Prices reasonably low. No scale bug. Also Myrobalan Plum and Pear Seedlings, home grown. Address W. H. PEPPER, Petaluma, Cal.

## ORIENTAL FRUITS

Le Conte and Kieffer Pears on their own roots; Bartlett and other Pears on Le Conte roots; Prunus Simon and Japanese Plums; Peen To & Honey Peaches; Russian Apricots. A large and general assortment of Fruit Trees. Catalogue with facts Free. Address W. F. HEIKES, Manager, Huntsville Nurseries, Huntsville, Ala.

## 850,000 GRAPE VINES

100 Varieties. Also Small Fruits. Quantities packed. Warranted true. Very cheap. 3 Sample vines in box for 15c. Descriptive price list free. LEWIS ROESCH, Fredonia, N. Y.

THOMAS POWELL,  
General Commission and  
PURCHASING AGENT.

Office with Hawley Bros. Hardware Co.,  
301 Market St., San Francisco.

Will fill orders for Farm Machinery and Extras, and choice varieties of Seed Wheat and Barley. Wheat and Barley sold on sample.

CHICAGO  
VETERINARY COLLEGE,

INCORPORATED 1883.

Regular session begins Friday, October 1, 1886, and runs six months. For annual announcement, giving all particulars, address the Secretary,

IS THE FINEST AND LARGEST IN THE STATE.

New Catalogue, containing full descriptions and guide for Amateur Rose-Growers now ready. Address

GUSTAV EISEN,

FRESNO, - - - CALIFORNIA.

If You Want to Save Money and avoid a life of trouble, buy Trees Free from Scale.

Send Direct to Nursery and Save 20 per cent on your order.

W. M. WILLIAMS'  
SEMI-TROPICAL and GENERAL NURSERIES.

300,000 TREES. 1,000,000 ROOTED VINES.

FOR THE SEASON OF 1886-7.

Apples, Pears, Peaches, Apricots, Nectarines, French and Hungarian Prunes, Plums, Figs and Cherries. Cypress, Gums, Acacias, Ornamental Shrubs, Greenhouse Plants.  
8,000 WHITE ADRIATIC FIGS—The fig of commerce, home grown, for sale the coming season. Sixty varieties of Grapes, rooted and cuttings, including all the best Wine and Raisin varieties. Catalogue free.

P. O. BOX 175.

W. M. WILLIAMS,

Fresno, California.

Kieffer's Hybrid, Le Conte and P. Barry Pears, at Reasonable Prices.

33d } STOCKTON NURSERY. { 33d  
YEAR.

## WHITE ADRIATIC,

## SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Proparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobalan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

## NAPA VALLEY NURSERIES.

LEONARD COATES, Proprietor.

(Successor to COATES &amp; TOOL.)

General Nursery Stock. Headquarters for Centennial Cherry, Muir Peach, Love-all Peach, Glaister Plum, Etc.

All Stock Unirrigated and free from disease. One Centennial Cherry Tree given away with every order amounting to \$10 and over.

LEONARD COATES, P. O. Box 2, Napa City, Cal.

## COMMERCIAL HOTEL.

A. &amp; J. HAHN, Prop'rs,

Nos. 273, 275, 277 and 2 Main Street, STOCKTON, CAL.  
Rates, \$1.25 to \$2 Per Day.

Stage offices for Collegeville and Oakdale, Roberts and Union Islands, and (a.e.s) Mineral Springs stages. The most desirable location in the city. Refurnished and refitted in the best style for the accommodation of the public.

## NURSERYMEN, ATTENTION!

WANTED, a man well up in the propagation of Evergreens and Ornamental Shrubbery, to put his time against land and material for a nursery in a good location. Address, Box 88, PASA DENA, CAL.

AGENTS

WANTED

to sell the

MISSOURI

STEAM

WASHER

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]

MARY J. TAPPAN, Reynolds, N.C.: They excel all other washers I ever saw. JOHN R. DODGE, JR., Normal, Ill.: The best machine ever invented by man. H. H. DURANT, Cottageville, S. C.: Everybody likes them and everybody wants them.

S. B. ADAMS, Ashton, D. T.: My wife would not take a quarter section (90 acres) of land for her machine, if she could not get another. MRS. JOSEPH SWIFT, State Center, Iowa: The most useful article about the kitchen. ANNA RAMSEY, Midway, Tex.: Have thoroughly tested it on articles from lace collars to bed quilts; gives entire satisfaction.

ST. CLAIR INKSTER, JR., Egypt, Washington Ter.: Self and I have not spoken of too highly. JOHN DETTON, Brigham City, Utah: Have given it several severe tests and it came out triumphant every time. JNO. B. WHEELER, Kansas City, Mo.: They have proved treasures to the families who secured them. A. P. SHIPLEY, Toano, Nev.: Gives entire satisfaction. Rather handle the Washer than anything I have seen.

E. M. MASSEY, Lockport, Tenn.: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, Stoutland, Mo.: If you will get up any instrument that will take as much labor off of men as this Washer takes off of the women, and cost no more, I could sell one at every house.

MRS. M. C. DOBBS, Caldwell, N. J.: Gives perfect satisfaction. I do my washing alone in some time I used to wash with help. MRS. M. MOORE, Newfane, Vt.: Will do more than it says, especially washing flannels.

MRS. F. G. SINDEN, Sherman, N. Y.: Would not take \$50 for mine if I could not get another. Washer quicker and better than it can be done by hand. MRS. FRED. H. HARRIS, Battledore, Vt.: Is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. POND, Jewettville, Conn.: Have used it nearly four months. Am perfectly satisfied. I feel I can recommend it to all housekeepers. MRS. MARY E. VAIL, Patoka, Ill.: Saved me \$50 (10) per year for 18 months I've had it.

MRS. C. W. TAKAYOT, Northport, Conn.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, Stanton, Mich.: I had rather give up my duster coat than part with my Washer.

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand percent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

**DEWEY & CO.'S SCIENTIFIC PRESS PATENT**  
AGENCY is the oldest established and most successful on the Pacific Coast. No. 269 Market St. Elevator 12 Front St., S. F.

## The Great Statue.

Before another issue of the RURAL reaches its readers the great statue "Liberty Enlightening the World" will have been formally presented to the American people and dedicated to its work of sending forth radiance which shall symbolize to the world the light of liberty. The statue is a gift to the greatest Republic of the world from the greatest Republic in Europe—a tribute of honor and esteem to the oldest popular government from a sister nearly a century younger. The gift and its formal acceptance, with all the sentiments involved therein, may be looked upon as constituting one of the greatest events in the history of the world's progress.

On Thursday, October 28th, the formal dedication of the statue will take place. The cable dispatches announce that distinguished Frenchmen sent by the President of the French Republic are now crossing the ocean to attend the ceremonies as representatives of the French people. The venerable De Lesseps, General Grevy, brother of the French President, and Senator Lafayette, great-grandson of the Lafayette whose name will live beside that of Washington, are among those who will be present next Thursday. There will also be a French fleet present, commanded by Admiral De Vigne. On the part of the United States it is expected that President Cleveland and his Cabinet will participate in the ceremonies.

From the many allusions made to the statue in our columns, our readers may be considered informed upon the general facts of the origin of the statue and many things about its progress from its inception to its completion. Suffice it to remind them that the money for the statue was collected by small voluntary contributions from the liberty-loving citizens of France. The task of embodying the sentiments of the contributors in fitting form was intrusted to the sculptor, Bartholdi. He came to this country to confer with Americans concerning his work. On his arrival he was struck with the beauty of New York harbor, and seeing Bedloe's island conceived the idea of a colossal statue which should be much larger than any hitherto erected. As Liberty has reached its highest estate in this country, it seemed right that the statue should represent "Liberty Enlightening the World." This would be a lasting acknowledgment of France's good-will and at the same time light up the harbor at night, embodying a lofty sentiment and conferring a practical benefit.

After he returned home the plan was put into execution, the money raised, and work commenced on the statue. It has occupied eight years of Bartholdi's time and the greater part of his fortune to complete the work.

The engravings on this page will be studied with great interest because the occurrence of the dedicatory ceremonies makes their appearance timely. There are many standards set up by which to estimate all efforts. Possibly allusions to the immensity of the figure are not the highest tribute which can be paid to it, and yet they are the most easily grasped. The statue is the largest in the world, and higher than any of the colossal statues of antiquity. The Colossus of Rhodes was only 105 feet high; this is 151.5 feet high. The height of the pedestal will be 91 feet and that of the foundation 52.1 feet. In position it will loom up 305 feet above tide-water. Its weight is 440,000 pounds, of which

176,000 pounds are copper and the remainder wrought iron. While it was being built 40 men found standing-room within the head, and men jumped with ease in and out of the tip of the nose. A six-foot man, standing on the level of the lips, just reaches the eyebrow. Ten people can stand with comfort inside the torch and 15 people may sit around its flame. This elevation can be reached by a staircase within the outstretched arm. The width of the eye is 28 inches, the length of the nose 3 feet 9 inches and the forefinger 7 feet 11 inches long.

This imposing statue, higher than the enormous towers of the great Brooklyn bridge or the steeple of Trinity

will add another to the wonders of the world. A word should be said of its artistic merit. The pose, stride and gesture, with its classic face, are pronounced perfect. The drapery is both massive and fine, and in some parts it is as delicate and silky in effect as if wrought with a fine chisel on the smallest scale. It stands on Bedloe's island (hereafter to be known as Liberty island), in New York harbor. It is one of the most accessible, as well as one of the most pleasant, breathing spots around New York. The solid granite walls of the old fort, which are in good condition, balance well the height of the statue and contrast nicely with the beautiful grass and

BARTHOLDI.

LIBERTY ENLIGHTENING THE WORLD.—Bartholdi.

church, which is the loftiest in the city of New York, by its rare artistic proportions, as well as by its stupendous dimensions, shade trees with which the island is covered. The telegraph announced that the exterior of the statue was finished October 14th.

Another week was occupied in putting in the apparatus for the electric lights. It was decided to put up eight 6000-candle-power lamps at equal intervals on the balcony about the torch. Reflectors will be placed behind each lamp to intensify the light. The four on the south side, with a combined power of 20,000 candles, will be visible from 30 to 40 miles off. Besides the eight lamps on the torch, there will be four lamps, each of 6000-candle-power, at the base of the pedestal. These will be placed behind the parapets, out of view on the water, for the purpose of lighting the outside of the statue. By obscuring the lights at the base, the outlines of the statue will be clearly visible on the darkest nights.

The day of the dedicatory ceremonies will be a general holiday in New York City, having been thus proclaimed by the mayor. Congress appropriated \$56,000 to pay the expenses of unveiling the statue, with the proviso that none of the money should be used for wines or liquors. Gen. Schofield has formulated a program for the occasion. President Cleveland and his Cabinet, Governor Hill and his staff, the Governors of the neighboring States and other prominent men have been invited. A part of the North Atlantic squadron will be on hand with a French fleet under Admirable De Vigne. Senator Evarts will turn over the statue to the Government in behalf of the American committee, and Chauncey M. Depew will make the commemorative address.

Auguste Frederic Bartholdi, the most distinguished living sculptor of colossal statuary, was born at Colmar, in 1833. He started life as a painter, but soon turned his attention to sculpture. At the age of 19 he produced a notable bas-relief of Francesca da Rimini, which won him his first laurels. During the Franco-German war he fought as a volunteer. In 1878 he produced the "Lion of Belfort," a colossal monument to the heroism of a beleaguered garrison, carved in solid rock. In recognition of this brilliant work the Government bestowed on him the Cross of the Legion of Honor. Among his other important work may be mentioned "Vercingetorix," the old Gallic patriot, and the graceful statue of "Lafayette" in Union Square, New York. At the Centennial Exhibition he was awarded the medal for bronze sculpture.

PROF. AND MRS. J. G. LEMMON have returned from the Sierras, where they have been busy studying pines and evergreens and taking notes for the Government report. Mrs. Lemmon has made water-color drawings, illustrating the *coniferae*, which are singularly accurate and beautiful, and which we hope will be reproduced and published by the Department. They were glad to see new growth of trees upspringing thriftily in the track of the devastating saw-mill, and aver that if the laws relative to fires were rigorously enforced the greatest enemy to the young forest would be vanquished, and in a few years the now-denuded mountain-sides would be clad with dense and varied woods. We have no doubt their work will inure to the advance of forestry.

COUNTY AND DISTRICT FAIRS.—We had in readiness for this week's issue reports of several of the county and district fairs which have been held recently, but have been obliged by the pressure of other matter to put off their publication.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Hop-Growing in Pajaro Valley.

EDITORS PRESS:—In the Pajaro valley, about one mile east of Watsonville, C. H. Rogers is engaged in hop-growing, and informs us that there are about 80 acres in this valley grown to hops. He has under cultivation 10 acres of the Hungarian variety, four years old last spring. The plants are in rows, nine feet apart each way, and one plant staminate to 64 pistillate. His poles are nine feet long and set in the ground one foot. From the tops of poles vines run on to strings, six to the pole; thus strings run with the regular rows both ways, and across rows diagonally one way.

In January, if not too wet, or in any event as soon thereafter as at all practicable, he opens the hill and cuts away the crown and the surplus runners. In May he opens the second time and cuts off all surplus shoots or vines after each cutting, covering over again. It is thought that by pruning thus the life of the plant is prolonged. Mr. Owen Tuttle, his neighbor, has hop roots 18 years old, annually pruned much after the same fashion, and they yet seem to be just as good as ever. After plowing in the spring the plants are hilled up with a hoe. In May or June the vines that fail to run up the poles or on to the strings are trained. Picking commences in September. Mr. R. has always paid for picking 90 cents to \$1 per day. Mr. Tuttle, we understand, has usually paid 80 cents per 100 pounds.

For his 10 acres, Mr. Rogers has a kiln 20x32 feet, built of redwood and plastered inside with lime plaster. The kiln is provided with openings at bottom for fresh air, and with openings at top for escape of steam. In drying, the thermometer in kiln ranges from 138° to 160°. The process of drying is continued day and night, any one lot being completed in 12 hours. After sufficiently dried, the hops are spread out in cooling-room and allowed to cool. They are then pushed back into piles and let lay from one to four weeks before baling. During the process they go through a sweat. It requires attention and considerable skill to dry sufficiently and not injure. If not dried enough, or slack-dried, they heat, turn brown and spoil. If over-dried, the little globules of lupuline burst, the valuable properties escape through process of evaporation, and the hops are rendered worthless. When drying is complete the hops are baled, being covered with 24 ounce burlap, each bale weighing from 180 to 205 pounds. In selling, seven pounds per bale are thrown off, to cover weight of baling material—such as burlap and rope.

The cost of production here is generally estimated at about 10 cents per pound. A ton per acre is, in this valley, considered about an average crop. The soil where hops are grown is a sandy loam, here known as willow land. It is loose, rich and easily cultivated.

Messrs. Owen Tuttle and Morris Tuttle, of the same neighborhood, on separate farms, are hop-growers, and prefer the English Cluster to the Hungarian. The last-named variety comes up earlier and very evenly, but is nearly a month longer than the English Cluster in perfecting its growth, and ripens later. A vine grows till it blooms, and then ceases to grow. The additional month of growth gives to the Hungarian much more vine; but Mr. Morris Tuttle, with whom we talked on the subject, prefers the English Cluster, because the same quantity of vine produces more hops. It grows more in clusters, while the Hungarian is scattering.

In the matter of cultivation, Mr. T. cuts away all the runners and also cuts stub back so as to leave three or four buds at winter. Between the 1st of May and the 1st of July, this pruning is repeated and all runners but four cut off. He prefers four runners to six because six make too dense a shade, and hops should have sunlight. Too much shade makes light color, light weight and lack of strength. The four lines from tops of poles run with the rows. Mr. Rogers' method of six lines to hill may give room for more hops to grow, but Mr. T.'s objection to this would take into consideration the loss of light and the cost of additional strings and extra training. His old yard of hops, 18 years old, yields better than any hops more recently planted. The arms are taken off in summer, about the 1st of July, for four feet up from ground. The arms are not valuable as bearers while the main vine runs up, and the cutting off gives air and light to the plants below. The cut places bleed, but soon cease to do so, and the same seems not to interfere with the general growth of the vine. The slight loss of strength that may result from the bleeding is more than compensated by the non-support of the arms.

The successful picking of hops requires close application to the business in hand. We would not discourage children and others from the city having little to do, and who may seek employment as hop-pickers when the proper season may come around; but they may well weigh the above remark. Mr. T. says he has not succeeded in finding white men who were willing to pick and stay in the work season after season. In order to get persons who will stick to the work he is forced to employ Chinamen. When hops are ready for picking, the

work should be done promptly—say between two certain dates—and it is found to be very hard to get enough help to do it at the proper time. If hops are picked at the proper time and in good condition, the work must be completed within 20 days from the time they are first ready. MCD.

Santa Cruz Co.

## Crazy Animals.

EDITORS PRESS:—A few weeks ago the blacksmith that shoes the animals at Jersey Farm Milk Depot, in this city, was proceeding with his usual daily examination of the horses' and mules' shoes, and when examining a front foot of one of the oldest and gentlest mules, that he had shod previously and regularly for years, he was violently kicked out of the stall.

The animal at the time and directly afterward seemed to be terrorized and all in a tremor of great fright, and the matter has been one of great surprise to all that knew the animal until to-day.

On inquiry, I found that the blacksmith had just left a butcher-shop, where he had been handling bloody scraps of fresh beef, the odor of which, no doubt, being fresh on him when he entered the mule's stall, and which caused the craziness of the mule.

The like has happened before on the farm, and my son George diagnosed the case at the time, that something like blood must have been on the blacksmith's clothes, or he would not have got kicked, and so it turns out.

A mule's sense of smell is perhaps as acute as that of the dog, which can smell the filth of a regular tramp 400 yards or more.

Our men on the ranch that do the slaughtering, give the mules and horses a wide berth.

R. G. SNEATH.

## THE FIELD.

## Dodder on Alfalfa.

EDITORS PRESS:—Can any reader of the RURAL inform me through its columns how to destroy a vine known as "love-vine"? It has a small yellow stem without leaves, small white blossoms, and seed resembling alfalfa or clover. It has no root in the ground, but draws its sustenance from the plant it grows on. It has taken all over my alfalfa like magic, and I believe will entirely destroy it if not stopped. I send by this mail some alfalfa with this love-vine (or whatever the name may be) growing on it. Any information in regard to it will be thankfully received, even if it is best to plow the alfalfa under. Stock will not eat it, but scatter it, as every limb broken off starts a new vine if it falls on anything green.—J. I. MORGAN, Delano, Kern Co., Cal.

This parasite is our old familiar enemy, the dodder—*Cuscuta Gronovii*. It has been often referred to and more than once illustrated in the PRESS of former years; but newcomers in the State have still to make its unwelcome acquaintance and learn to deal with the nuisance.

It is often propagated by foul seed, in which, however, its presence is easily detected by a common magnifying glass—the seed of alfalfa being shaped like a flat bean, while that of the dodder is roundish and not half so large. It is apt not to show itself while the clover is young, but waits for the plant to develop largely before it comes forth to suck and steal its life-juices.

One February W. G. Pennebaker, of Farmersville, Tulare county, seeded 12 acres to alfalfa, and in May cut the first crop. Toward the middle of July, on cutting it the second time, "I found," he says, "about 50 patches of dodder, covering from one yard to one rod square, mixed with wild morning-glory. I concluded to try an experiment, and on the 28th of August, when it was quite hot, put all my stock on that field, fed it off quite short, and left the sheep and hogs to graze it off very close to the ground, so that the heat of the sun would have full power on the crown of the growth. I left my stock to graze it until the following February, when I removed them and let it grow up." After cutting a second crop from it that season, he found not a rod square of dodder or morning-glory in the field, and was perfectly satisfied that it can be annihilated by permitting sheep to graze it close in August and September.

In France, too, M. Majou freed his lucerne from dodder by leaving uncut at mowing time the parts of the field affected. He then inclosed sheep on these spots till the lucerne was eaten down, without, however, injuring the crowns of the plant; if some of these should be destroyed, however, the luxuriant growth of what remains would prove an ample compensation.

Though the seed of the dodder germinates in the soil, the young plant hastens to fix itself upon any victim within reach, sucks its juices, and allows its own root in the earth to die. If at this time, after the original root is dead and before the parasite can ripen and drop its seed, dry straw be forked in among the clover and set on fire, the sudden flame will fatally scorch the dodder without seriously harming the alfalfa. The latter will take a new start from the roots and stems that escape serious injury.

To prevent the pest from spreading, great care must be taken to put in nothing but clean seed. Never cut any infested crop for seed, but mow it before the dodder can mature, and burn it.

We shall be pleased to learn the result of our correspondent's efforts.

## THE GARDEN.

## Seasonable Suggestions.

EDITORS PRESS:—Now is the time to begin our garden operations for the coming year. We should get our ground cleared up and plowed, if not already done. Harrow down smooth, haul out manure and work it over or spread on the ground that has just been plowed. Plow again, so as to turn under the manure, and harrow down again. This gives the manure a chance to rot, if it is fresh right from the barn, as no vegetable does as well on fresh manure as on older, well-rotted manure. After the manure is plowed under, and has stood awhile, give the ground a good harrowing over a few times at intervals, to kill the weeds that may start; and when planting-time comes, plow again, and the ground will be in good condition to receive the seed.

## What Seed Shall I Plant First?

Some one may ask. Turnips may still be sown and make a fair crop, and the best kind is purple top strap-leaf. Turnips sown now will last way into spring, and be tender and crisp. Sow lettuce now, and we can have fine heads in January—crisp and tender, if ground is made rich. Cabbage may still be sown, and will make fine heads early in the spring. Spinach and kale may be sown any time this month and next.

If hot-beds are to be used to force vegetables early, as soon as the leaves fall rake up a good supply and save them, and when the time comes to make the beds, fork in the leaves with the manure and we have a more gentle heat, and a hot-bed that will retain the heat a much greater length of time than when all manure is used. For early vegetables, everything depends on getting ready in time.

## Cantaloupes.

In our talks about the garden some time ago we spoke about the Montreal green citron cantaloupe melon that we were trying. They are certainly the finest cantaloupe that we ever raised—large, sweet and luscious, and they command a ready sale in the market and remunerative prices. Those who have never raised this melon will find it to be the best melon they can raise for home use or the market.

## Asparagus.

A neighbor asked me a few days ago, when is the time to cover the asparagus bed with manure? Well, said I, if your asparagus bed is clear of weeds, give it a good salting first of all, and as soon as the tops are dead apply the manure, and in the spring fork it well in and salt again, would be my method of doing it.

## Onions.

"How about your onion crop?" said a neighbor to me yesterday. The crop was good for what I had in, said I. Now, why he asked me this question was this: late last spring he came into the garden where we were setting out young onions, and after looking at us awhile made the remark: Onions set out so late as this won't do anything, or in other words, won't make a crop; but nevertheless, we had a pretty fair crop of onions, and I am inclined to believe late-sown onions make the best keepers for winter use. Onions sown in February will make good onions before the season is over and will keep well, especially if Yellow Globe Danvers' seed is used.

## Lettuce.

The Hanson lettuce is the largest-headed lettuce we have ever grown. It heads up solid and is like little cabbage, crisp and tender, and stands a long time before running up to seed, which makes it a valuable variety. In connection with this we are going to try the Deacon lettuce this coming season for forcing extra early, said to be better than the Early Tennis Ball.

## Manuring.

One thing is certain, if we want fine, large, crisp and handsome vegetables we must manure highly. About one cord of good stable manure to every 30 square feet of land (a cord of manure would be about a good two-horse load) will bring garden crops along in good shape. Our mangrel-wurzel beets were a partial failure, so we set cabbage where the seed failed to come, and they, like the beets, showed the land to be poor and worn out. As a Chinaman said to me, "Too much poor ground; work hard all the time and get nothing; makee ground heap fat, get too much big crop."

## Good Seed.

The first step toward a good garden is good seed, true to name and not mixed up with a dozen different varieties in one package. Fresh seed, too, is of the greatest importance, and when one sows his seeds there is nothing so vexing as not to have the seeds germinate. This season I had a piece of ground prepared for turnips, purchased my seed and sowed them, waited 10 or 12 days, and not a turnip showed itself. What was the cause? Simply the seed was old. A seedman that will send out old seeds, of which the vitality is all lost, ought to lose his trade and patronage; so it is of the greatest importance that we look well to our seeds, try them and see if they are good before sowing them, that there may be no failure, for it often happens that 10 or 12 days' delay in a crop will make a good many dollars difference in the sale of the crop; so it would be well to secure our seeds early and test them in advance.

of seeding time. No matter how well our ground is prepared or how highly it is manured, if the seeds are not good there will be a failure. Too many seedmen practice mixing old seeds with their fresh ones and put them on the market for good seeds, when, the truth is, not over one-third of the seeds come and a partial failure results. "None but good seeds" should be the motto of every one that makes a garden. I. L. DICKINSON.

Lone Oak Farm, Sonoma, Cal.

## THE DAIRY.

## The Largest Milk Record Ever Made.

We have received from Smiths, Powell & Lamb, of Syracuse, N. Y., a printed statement of the milk record of the Holstein-Friesian cow Clothilde (H. H. B. 1308). Calved March, 1879. Milk record, 26,021 lbs. 2 ozs. in one year, commencing at six years five months old. We quote as follows:

Clothilde was selected by us in person in North Holland as an unusually fine specimen of the breed, and imported in October, 1880. She dropped her first calf on January 24, 1881, when but 22 months old and just out of quarantine, and gave that year 8964 lbs. 2 ozs. in 11½ months.

This cow, as a three-year-old, was first brought prominently before the public by her record of 15,622 lbs. 2 ozs., surpassing all former records of cows of that age.

As a four-year-old she again made a high mark by giving in one year 17,930 lbs. 3 ozs., or, by omitting two days when sick and adding two at the end of the year, she gave 18,004 lbs. 4 ozs. in 365 days, far surpassing all previous records for that age.

Her six-year-old record, 26,021 lbs. 2 ozs., this year, surpasses that of Echo, much the highest record before known, by 2245 lbs. 10 ozs., and excelling all other records that we have seen published by over 5000 lbs.

Clothilde is a cow of unusual vigor, constitution and substance, with remarkable digestive organs, a capacious chest, very large barrel, and has the broadest and straightest back and hips we have ever seen on a Holstein-Friesian cow. Her head is long and clean, her neck is lengthy, clean-cut and fine, her coat soft and silky, skin mellow, her veins and udder large and well developed. Even as a heifer we were very strongly impressed with the remarkable qualities of this animal, believing that she was a cow of great capacity, possessing many desirable, marked characteristics.

Clothilde was awarded the first prize at the New York State Fair in 1883 in a class of 21 very fine Holstein-Friesians.

Clothilde dropped her last calf August 17, 1885, and has made the following record for each month inclusive and the year:

	lbs.	ozs.
Aug. 18, 1885, to Sept. 17, 1885.....	2312	4
Sept. 18, 1885, to Oct. 17, 1885.....	2311	6
Oct. 18, 1885, to Nov. 17, 1885.....	2218	11
Nov. 18, 1885, to Dec. 17, 1885.....	2091	8
Dec. 18, 1885, to Jan. 17, 1886.....	2238	7
Jan. 18, 1886, to Feb. 17, 1886.....	2237	7
Feb. 18, 1886, to Mar. 17, 1886.....	1967	4
Mar. 18, 1886, to Apr. 17, 1886.....	2110	1
Apr. 18, 1886, to May 17, 1886.....	2195	15
May 18, 1886, to June 17, 1886.....	2222	3
June 18, 1886, to July 17, 1886.....	2180	5
July 18, 1886, to Aug. 17, 1886.....	2045	11
Total.....	26,021	82

Average per day for the whole year, 71 lbs. 4¾ ozs. Highest day's yield, 88 lbs. 4 ozs. on her second month in milk.

Smallest day's yield, 57 lbs. 14 ozs. on the third day in milk.

The next lowest day, 58 lbs. 12 ozs. on the fourth day before the close of the year.

## AVERAGE YIELD PER DAY FOR EACH MONTH.

Month.	lbs.	ozs.	Month.	lbs.	ozs.
1st.....	74	4	7th.....	70	4
2d.....	77	8	8th.....	68	1
3d.....	71	9	9th.....	75	3
4th.....	69	11	10th.....	71	10
5th.....	72	3	11th.....	69	5
6th.....	72	2	12th.....	65	15

Her record for the whole time has been carefully and accurately kept, each milking being carefully weighed and recorded at the time. We have spared neither time nor expense in having this record carefully verified by gentlemen who are known by all breeders of dairy stock in the United States as experts in all matters pertaining to the testing of cows. The high standing of all these gentlemen will satisfy all parties of the fairness and accuracy of the record.

OLEOMARGARINE LAW.—The Acting Secretary of the Treasury has asked the Attorney General for an opinion as to whether the oleomargarine law imposes a tax on the different ingredients used in the manufacture of oleomargarine, and also a tax on the article when finished and placed on the market, or whether the law contemplates a tax only upon the finished article. The question has been raised by the opponents of the measure, and its determination will make considerable difference in one way or the other to persons dealing in oleomargarine. Commissioner Miller has received proofs of the new oleomargarine stamps, and announces that the stamps will be ready for shipment to collectors about the 15th inst.

## THE IRRIGATOR.

## The Water Question Again.

EDITORS PRESS:—In your issue of Sept. 18th Mr. Webster criticises my article in the PRESS of Aug. 21st. In the heat of argument we are apt to forget the circumstances which called for the discussion. Although I used Mr. Webster's name rather freely in my former article, it was not from any personal proclivities, but rather because from the position Mr. Webster had held he might well be looked to as a representative man and his ideas as the embodiment of those of a considerable number of his fellow-men. His nomination since that time as Lieutenant-Governor shows that I rightly judged.

I will not stop to discuss the question of "perversion" of Mr. Webster's arguments, as this is not a war of words or any contest for superiority of argument, but will just leave it for your readers to judge. I frankly admit that I have not read the judge's opinion in the case of *Lux et al. vs. Haggin et al.*, but when I saw how much paper it covered I felt like using the language of an old writer, wherein he says, "Who is this that darkeneth counsel by multitude of words without knowledge?" However, I find, judging from Mr. Webster's analysis of it, that I had not misjudged its purport.

I will correct Mr. Webster where he disputes my statement that the Constitution of the State (and the laws also for that matter) makes it mandatory on the part of Boards of Supervisors of the several counties to annually fix the rates to be paid for water for the ensuing year. In my statement I am supported by the Superior Courts of Los Angeles and San Bernardino counties. The political code on the duties of supervisors in defining their powers and duties uses exactly the words used in Section 1 of Article 14 of our Constitution. The members of the Constitutional Convention, in their address to the people of the State of California on submitting the new Constitution for their action, also say in regard to their action about water: "The peculiarities of our climate necessitated the adoption of stringent provisions for the use and control of water." But whether Mr. Webster's opinion or the opinion of the Superior Courts of Los Angeles and San Bernardino counties be the correct rendering of the provisions of the Constitution, the present method will stand until set aside by a higher court. Riverside, according to the new rendering, will stand as it is until the Constitution is changed, all of its cultivated lands being in the city limits. Los Angeles occupies a nearly similar position.

Section 2, Article 17, of the Constitution, which I am charged with misquoting, I quote with the misquoted word in brackets:

"The holding of large tracts of land, uncultivated and unimproved by individuals [and] or corporations is against the public interest, and should be discouraged by all means not inconsistent with the rights of private property."

Mr. Webster calls the attention of the State Board of Equalization to the discrepancy between the assessors' and the owners' valuation of property in Riverside. In reply I would say that action on that matter would be entirely satisfactory to us down here, providing that they will apply the same ruling throughout the State. Considering its area of less than 6000 acres and its assessed valuation of over \$1,500,000, it is safe to say that no 6000 acres in the State which is entirely dependent on its own resources carries any such high valuation.

If owners' views as to the value of their property should be the basis of the assessors' estimates both in city and country, Riverside would be benefited by the change. Vacant lots in towns and large ranches in the country would be less common than under the present system. Indeed, had this rule prevailed in the past, it is doubtful whether we would have ever heard of the suit of *Lux vs. Haggin*.

If the Supreme Court had been at all unanimous, or nearly so, in the matter of riparian rights, we might have had much less to say; but considering that four are for, and three against, it should not by any be considered as a settled question, and, under the circumstances, an appeal to the people as to the question of the reorganization of the Supreme Court and an amendment to the Constitution in this regard was far from an unreasonable proposition. One of the fundamental principles of both National and State Constitutions is that "all political power is inherent in the people," and when laws fail to benefit the people it is their "right to alter or reform the same."

Excepting the proposition to reorganize the Supreme Court, all of the leading measures talked of in the late session of the Legislature were well discussed at its first session, and nothing seemed in the way of passing them but lack of time. The newspapers of the State also were almost all in favor of the proposed amendments recommended by the State Irrigation Convention. It was felt all along that such proposed action in favor of irrigation was important and necessary, but not as imperatively requiring immediate action. Until the decision of the Supreme Court, there was no need for Haggin & Carr to supply any incentives to action in their favor, for no one down this way doubted that we would have all necessary legal action in the near future. We would like to ask Mr. Webster or the advocates of riparianism why this sudden change on the part of

some of the leading newspapers of the State? We would further ask riparianists what do they mean by State ownership and control of water? Does it mean that the State shall buy out all riparian owners? Do the advocates of State ownership know that it would take from \$5,000,000 to \$10,000,000 to buy up the waters of the Santa Ana alone? The waters of the irrigated portions of the State practically represent the total value of all lands which are irrigated with improvements thereon—towns included.

There are some propositions on the water question that it might be well to submit for the consideration of your readers which apply to Southern California as things are now conducted.

1st. That the users of water are also the supposed owners of the same—in other words, the people own and control the waters in Southern California.

2d. That rates for water are fixed by Boards of Supervisors or other governing bodies.

3d. That in Riverside every member of the Board of City Trustees is a stockholder in the Riverside Water Co.

4th. That up to this time no corporation has made any money by appropriating water, making ditches to lands and afterward selling the lands.

5th. That every court in Southern California, to the present time has recognized the custom of appropriation of water and decided in accordance with usage and custom.

6th. That general custom makes law that cannot be ignored.

7th. That until the recent decision of the Supreme Court no riparian claim was ever made in Southern California.

8th. That under the custom of appropriation riparian owners have always had the same rights as appropriators—no more, no less.

9th. That such a custom is right, justice and common sense.

JAMES BOYD.

Riverside, Cal., Oct. 8, 1886.

## HORTICULTURE.

## Fig-Growing in Los Angeles County.

Several excellent horticultural essays were read at the last meeting of the Los Angeles Pomological Society, and we expect to find space for all of them. At this time we give a brief essay on the fig by James Stewart, of Downey:

I have been for the last 15 years in the experimenting and the testing of different varieties of figs and the soil best suited to their growth. My observations have been that they do well on almost any kind of soil. I have some growing on high, dry, sandy soil, where it is 20 feet down to water; also some on a rich sandy loam, about 10 feet to water. Again, I have them growing on stiff adobe, not more than five or six feet to water, and they all grew vigorously and well. In starting the fig to make a tree its head as high as that of an apple or peach tree, say three feet from the ground, be careful to keep off all sprouts that may start from the root, and especially as much so in clipping off all limbs that may put out on the under side of the first limbs that you let start for the head of your tree. Should they be allowed to grow they would soon, after commencing to fruit, have the most of the tree spread out on the ground. Young trees, well cared for, will commence to ripen fruit the second year, and will begin to pay the third year. They will increase in value yearly without failure for a period I am not able to say.

My trees are 12 years old. They increase in quantity of fruit as they grow older. No blight, no scale nor insects of any kind interfere with the figs. There are many kind of figs now being placed on the market, the most of which are turning out to be worthless. The true fig of commerce of all countries has always been credited to the White Smyrna variety, which we have in Southern California. It is further acknowledged, and has been proven, to be superior to the imported fig, for the following reasons: 1. Its thinner skin; 2. Its finer seeds; and, therefore, it is more sought for and brings a much better price in all Eastern markets than the figs imported from the old country.

In curing and packing I gather my figs when fully ripe, just as I would other fruit, leaving all the stem on the fig, and being careful to soil the skin as little as possible. When gathered, I place them on trays similar to those which are used for raisins. I then place one tray above another in my fumigator, and let them remain one hour. I then remove them to a place in the sunshine, placing the trays at an angle of about 45 degrees, facing the sun, with the blossom end pointing to the upper end of the tray, and leave them in that position for six or eight days, when, if the weather has been favorable, they will be ready for the sweat-box, using sugar barrels or boxes for the occasion. In case of foggy mornings it may take 10 days or two weeks for them to dry. When in the sweat-box I let them remain until such time as I am ready to pack them for the market. I use 2½-pound, 5-pound and 25 pound boxes. The Brown Ischia dries as readily as the Smyrna, and is much more sought for than the other varieties before being packed, and is preferred by a great many to any other when packed.

The New Pacific is a choice fig, before being

packed and after. It will dry in less time than any fig of which I have any knowledge. Why not grow figs in preference to any other fruit? One company in this county fell short this season 200 tons of getting as many figs as they advertised for.

## SHEEP AND WOOL.

## Angora Goat-Breeders' Meeting.

The second annual meeting of the Angora Goat-breeders' Association was held in Sacramento, on Thursday, Sept. 16, 1886. The chairman of the last meeting being absent, Mr. C. P. Bailey was called to the chair, Julius Weyand to act as secretary. The minutes of meeting of Sept. 15, 1885, were read and approved.

The committee report on reduction of freight rate of mohair to Eastern points was presented and accepted.

On motion, a constitution for this association was presented and adopted, and signed by the members present, and

Resolved, That the secretary shall enter the names and postoffices of new members paying to him the fee of \$2.50.

The following is the Constitution of the Angora Goat-breeders' Association of California, adopted Sept. 16, 1886:

1. This association shall be called "The Angora Goat-breeders' Association of California."

2. The object of this association shall be to advance the interests of Angora goat-breeders in this State, to exchange information on the breeding and handling of goats, the marketing of mohair, and to secure and maintain, through proper legislation, a protective tariff thereon.

3. Every person residing in this State, or engaged in the mohair industry in the United States, may become a member of this association by paying the sum of two dollars and fifty cents, entrance fee, as member, and signing his name to this constitution.

4. The annual meeting of this association shall be held on the last Thursday of the State Fair at the city of Sacramento, when the annual reports of the officers of the association shall be presented by them, and the officers for the incoming year shall be elected.

5. The officers shall be a president, a vice-president, a secretary and treasurer.

6. The duty of the president shall be to preside at all meetings of the association, to consult with the secretary, call meetings of the association when directed to do so, upon request of a majority of the members of the association.

7. The duty of the vice-president shall be to take the president's place during his absence at all meetings.

8. The secretary shall keep a roll of the members of the association and their postoffice address, keep the minutes of all the meetings and proceedings of the association, and shall act as treasurer, receiving all moneys, keep accounts of necessary expenses, conduct all correspondence and publish all information to the members of the association tending to advance their interests.

9. Order of business adopted: 1, calling of the roll of members by names or counties; 2, reading of the minutes; 3, payment of dues by members; 4, election of officers; 5, report of officers and committees; 6, unfinished business; 7, other business; 8, adjournment.

Proceeding with the election of officers, Mr. C. P. Bailey, of San Jose, was elected President; T. H. Harland, of Venado, Colusa Co., Vice-president; Julius Weyand, of Colusa, Cal., Secretary and Treasurer; to serve one year and until their successors are elected.

Mr. Bailey, on taking the chair, addressed the members in an instructive and interesting manner.

Address of C. P. Bailey.

Gentlemen of the Angora Goat-breeders' Association of California: I thank you for the honor you have conferred in making me your president. It affords me particular pleasure in meeting you here to-night organized as a body for the promotion of the industry I have so many years given my best efforts to establish as one of the leading branches of stock-raising.

It is a time-honored custom among men in all generations to band themselves together to maintain and protect their own interests. Our friends, the cattle, sheep and horse men, have long had their associations, and owe much of their success to the deliberations of their national gatherings.

At first many, perhaps the most of us, invested in goats as a side issue, because they were pretty or as pets for our wives or children; but as they increased and a good goat was readily sold and brought as much as a cow or a horse, we began to get more in earnest in the matter. When our goats had so increased that we had some mohair to sell, and our own factories sent us their circulars soliciting our consignments and admitting their preference for our fleeces when compared with imported mohair, then we commenced to wake up, and the butcher got our surplus cattle and the salesyards got our surplus horses, and the more honorable goat got a better division of the farm products and did not have to climb quite so high among the rocks to gain a living.

We found that though a goat could sustain life on as little and in as rough and poor a range as any living animal, yet when we wanted pounds of mohair and good large percentages of kids, it paid, when necessary, to feed the goats well on hay and grain, and to provide dry sheds for them on rainy nights after shearing and when they had young kids.

We found that we could raise a pound of mohair very nearly as cheap as we could a

pound of wool, and that it would bring nearly three times as much in the market.

The first factories in the United States that used mohair made it into dress goods, and we were paid from 80 cents to \$1 per pound for it. But fickle dame fashion suddenly decreed that only soft, lusterless goods should be worn by ladies. Then for two years there was no sale for mohair at any price, and we goatmen had sorry times. Many failed, sold their flocks, and gave up the business disgusted. The accumulated mohair attracted the attention of plush manufacturers, and several good establishments were started and have continued to run with profit to their stockholders and satisfaction to consumers.

Now fine mohair robes and the best quality of upholsterers' plushes are to be found in all our markets. Our ladies of leisure fashioned beautiful scarfs, hoods and shawls from Angora knitting yarn, and the demand for it was so great that a dozen different factories are now making knitting yarns.

Considerable mohair is now mixed with silk in the manufacture of fringes and in the goods for traveling dresses and wraps so popular the past year. The result is that now America does not produce a tenth part enough mohair for the consumption of our own factories, and a good article is in demand the moment it arrives in market.

Experience has proved that goats will do well and can be profitably raised in any locality where sheep thrive; but the best results have been obtained in the dryer, more elevated sections. The low foothill valleys of the Sierras of California, for winter, and high mountain ranges, for summer, cannot be excelled in any part of the world for excellence of pasturage and natural adaptability to the goat. But the steady advance of the agriculturist and fruit-raiser has so appreciated the value of these foothill valleys that goats have had to go farther toward the frontier.

All the Territories are raising goats, and grown goats do well in all; but larger percentages of kids are raised in the southern sections, on account of the milder climate.

It is now nearly 30 years since we first commenced experimenting with Angora goats in the United States. For the first 20 years very little progress was made. Foremost among the causes were the excessively high prices that were paid for pure-bred bucks, and the exaggerated profit that we were led to believe there was in the business. Some of the earliest importations cost us from \$400 to \$500 per head. A report issued by the Agricultural Department at Washington, in 1863, quoted mohair at eight dollars per pound.

The process of breeding up tired out many of us. We thought we were pretty well started in the business when we had gotten together a few hundred Mexican does and enough pure-bred bucks for their service; but when we found from experience that it took six or eight years of this breeding up before we got any grades that would shear a four-pound fleece, then we were again disappointed.

At the Cape of Good Hope, the first Angora goats were imported in 1866, just 20 years ago, and last year they exported half as much mohair as Asia Minor. Instead of commencing the business with a couple of bucks led across the plains as we did in California, they commenced with a shipload of the best pure breeds that could be found in Angora, and men of money and energy took hold of them to make a business of it, and not as playthings or pets. Such men as I. B. Evans, H. Masdorf, W. Edwards, and the two Lees, not only raised pure breeds, but grade flocks as well, showing their faith in the business; and some of these men have made fortunes as rapidly as did the early cattle-dealers in Wyoming. They did not deal in pure breeds only, and when a customer came give him a pamphlet full of glowing exaggerations and untried theories, but they took them out and showed their own flocks of grades, and told them how long it took to raise such a flock, how much wool they sheared, etc. This knowledge from experience, instead of from theory, started their purchasers in the right way. And as years rolled on, and they were able to accomplish what they had expected, they were satisfied and the business prospered.

I do not think we have nearly reached perfection in the goat business on this coast, but we have made some progress. Those of us who have kept and taken good care of our flocks are in a fair way now to make an independent living out of them in time to come.

Again I thank you for your kind attention, and hope our society may be largely increased in numbers and much good accomplished during the ensuing year.

The question of joining the American Mohair Growers' Association of Texas, to establish a standard for a pure-blood Angora goat or a system of registry, was discussed and resolved that action on this subject be laid over until next annual meeting.

It was also resolved that it will be desirable to arouse a spirited competition among breeders to exhibit, by offer of larger premiums at the State Fair, and that a committee be appointed by the chairman to confer with the directors of the State Agricultural Society prior to their April meeting, and urging them to offer more liberal premiums on goats for the fair of 1887 than heretofore. The president appointed T. H. Harland a committee of one to attend to the foregoing. Adjourned.

JULIUS WEYAND, Secretary.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

### The Farmers in Council.

#### THE STATE GRANGE MEETING.

##### Fourteenth Annual Session.

[CONTINUED.]

We give this week some matter in addition to what we have already published, to complete our record of proceedings.

##### Report of Memorial Committee.

*Worthy Master, Sisters and Brothers of the State Grange:*—We, your Memorial Committee submit the following report:

Since our last meeting, Death has been in our midst, taking some of our brightest and best. Vacant chairs are sad mementoes of past presences, and painfully silent though they be, are most effective signs of that change that awaiteth us all.

Sister T. T. Hooper, of Montezuma Grange, who served so well and acceptably for one term as Lady Assistant Steward of the State Grange, and one of our oldest as well as most faithful members, and Sister Lou H. Blackmer, of National Grange, have answered the call of our Divine Master. The presence of Sister Blackmer in State Grange has not been one of our privileges, yet her life has left footprints not easily effaced. Through the *Patron* and the press generally has her mind left its impress upon every Grange heart, and her last written words, which we quote in full, are injunctions that should make us strive to attain the truly beautiful:

##### STRIVE FOR THE BEAUTIFUL.

Strive for the beautiful! though clouds arise  
To dim the brightness of the coming day.  
Look far beyond, where clearer, brighter skies  
Shine ever radiant in the far away.  
Strive for the beautiful.

Strive for the beautiful, the true, the brave,  
Bid useless doubts of God's great plan depart;  
To tyrant custom be no more a slave,  
Let love to all mankind possess the heart,  
Strive for the beautiful.

So live the beautiful, who walk the earth  
As ministers to man bowed down with care,  
Whose souls transplanted by immortal birth  
Shall bloom anew with richer sweetness there,  
Strive for the beautiful.

Strive for the beautiful by works of love,  
And bearing each day's sorrows as they come;  
Nor leave thy duties, lest they burdens prove,  
If thou wouldst win a happy spirit home,  
Strive for the beautiful.

The crown is not for him who knows no thorns,  
The sun shines not for him who knows no night;  
The glow of noble purpose never warms  
The heart that knows, yet fears to do the right;  
Thus saith the beautiful.

Thus has her quiet, unassuming and suffering life left words of living light, which admonish us that living aright and performing well the little duties that daily fall to us, or, in other words, in striving to live a beautiful life, is our highest duty.

The passing away of these sisters is not only a home loss, but as well a sundering of the family ties of the Grange household; therefore be it

*Resolved*, That the sympathy of our brotherhood at large is tendered these stricken families, and midst and back of these funeral drapings throb hearts that are with them in prayers, hopes and regrets. These death strokes are vital clippings from our body, and only the Divine Healer to whom we are commended can temper His goodness and mercy to the one great refrain of renunciation and reliance and to which we hope all respond: *All is well, rest thou in peace; therefore be it*

*Resolved*, That this report be spread upon the minutes of the State Grange, and that copies be sent the families of the deceased, also to the *California Patron* and *RURAL PRESS*.

Bro. B. R. SPILMAN,  
Sister A. T. DEWEY,  
Sister MARIA B. LANDER,  
Sister W. L. OVERHISER,  
Sister A. P. ROACHE,  
Sister N. MERKES,  
Sister MINNIE PLUMMER.  
Memorial Committee.

##### Resolution Adopted on the Heath Amendment

Inasmuch as the so-called "Heath Amendment" is in the interest of and partial to the railroad corporations of the State, and as, in case of its adoption, the railroad people would virtually be their own assessors, and contribute to the State's expenses what they are "minded to pay," or in other words, two and one-half per cent on their gross earnings, according to their own accounts; therefore, it was

*Resolved*, That we advise all Patrons and farmers to vote against said amendment.

##### Pomona Grange Delegates.

The committee recommended that delegates of Pomona Granges be admitted under the same regulation that delegates of subordinate Granges are, viz.: That their dues shall be paid to the same date as is required of sub-Granges, and where they have elected alternates they shall be the accepted delegates in the absence of the regular delegates, provided that no delegate shall represent both a subordinate and Pomona Grange at the same session; and that when the

same person is Master of a Pomona and subordinate Grange at the same time, said person shall be required to represent the Pomona Grange, and the subordinate Grange shall elect a delegate. It was further recommended that the Master call the attention of the National Grange to this matter.

The report was adopted.

##### Poisonous Adulterations.

The following preamble and resolutions, introduced by Bro. Frank Dunn, Master of San Jose Grange, having been considered by the Committee on the Good of the Order, were referred to the Committee on Legislation, who reported upon them favorably and they were adopted:

WHEREAS, The crime of adulterating of food and drink with poisonous substances is carried to such an extent and practiced with such impunity, that if not put a stop to by the most stringent legislation it will become a recognized branch of business and will, in the near future, defy all efforts to suppress it; therefore be it

*Resolved*, That the State Grange of California be respectfully requested to exert its influence in favor of the passage of the bill now pending before the National Congress and known as the Wine Bill.

*Resolved*, That State legislation on the same subject is absolutely necessary and that the State Grange use its influence with the incoming Legislature in support of the measure.

*Resolved*, That a large proportion of the drunkenness with which the country is now cursed is directly attributable to the poisonous adulteration of liquor.

##### Representatives Present at the Session.

Alhambra—Dr. J. Strentzel, Master; H. Raap and wife, alternates.  
American River—J. E. Beach, Master.  
Antelope—H. A. Logan, Master.  
Bennett Valley—Don Mills, alternate.  
Ceres—Vital E. Bange, Master.  
Danville—D. M. Sherburne, Master.  
Eden—O. Dennis and wife, alternates.  
Elk Grove—Dr. Caples, alternate.  
Enterprise—A. A. Krull, Master.  
Florin—C. Towle, Master.  
Franklin—Wm. Johnston and wife.  
Grand Island—J. R. Totman, Master.  
Grass Valley—J. W. DeGolia, Master.  
Lodi—A. J. Woods, Master; J. D. Huffman, alternate.  
Magnolia—W. Cunningham, Master.  
Montezuma—T. T. Hooper, Master.  
North Butte—W. T. Lam, Master.  
Pescadero—L. C. Steele, Master.  
Plumas—R. G. Hamlin, alternate.  
Placerville—J. C. Marsh, Master.  
Roseville—N. Mertes, Master; J. C. Cross and wife, alternates.  
Sacramento—G. W. Hack, Master, and wife.  
Santa Rosa—E. W. Davis, Master, and wife.  
S. T. Coulter and wife, alternates.  
San Jose—Frank Dunn, Master; H. G. Keeling, alternate.  
South Sutter—Mrs. M. L. Jones, alternate.  
Social—Wm. H. Atkinson, Master, and wife.  
Stockton—Mr. Bowman and Mrs. Ashley, alternates.  
Temescal—A. T. Dewey, Master, and wife; Mrs. Renwick, alternate.  
Two Rock—W. D. Freeman and wife, alternates.  
Valley—G. P. Loucks, Master.  
Vallejo—J. F. Deming, Master, and wife.  
Walnut Creek—N. Jones, Master.  
Watsonville—J. D. Pagnall, Master; A. P. Roache and wife, alternates.  
Wheatland—D. A. Ostrom, Master, and wife.  
Woodbridge—G. N. Ashley, Master.  
Yuba City—B. F. Walton, Master, and wife.  
Sutter Mill—Wm. Nichols, alternate.  
Including alternates, Past Masters and their wives (who are honorary members), members of Pomona and subordinate Granges who were accorded the privileges of the floor, it is estimated that over 300 Patrons were present at different meetings.

### The Lieutenant-Governorship.

Letter from J. V. Webster.

EDITORS PRESS:—Hoping that some solution of the difficulties surrounding the "Farmers' Ticket" would be reached by the leaders of the movement, I have remained silent since the meeting of the convention at Sacramento, last September. It is true, I have received no official notice of my nomination for Lieutenant-Governor by said convention; nevertheless, since the fact has appeared in the public prints, and since the date of the election is so near at hand, I feel constrained to define my position.

First, I will say that I have ever been opposed to independent political nominations by the farmers of the State—not because I do not fully indorse the reforms demanded by them, which appear impossible of attainment under the old party management, but because it is manifest to me that nothing substantial can be accomplished by the farmers of the State, in their present disorganized condition, by putting forward an independent State ticket.

The time, in my opinion, will surely come when the emergencies of the case will demand an organization in the rural districts sufficiently strong to direct and control political action, and the making of men and measures. That time has not yet come, and it appears to me inopportune to waste our energies in a fruitless endeavor, which must be barren of practical results. To continue our State ticket in the field, with the affinity of the farmers substantially divided between the old parties, will witness our inevitable crushing between the

"upper and nether millstone." A few hundred votes for the ticket will falsify our actual strength, consequently bring contempt and ridicule upon our ill-advised efforts.

Until such time, when the farmers' organization shall be in a measure complete, with its ramifications in every county and town in the State, I have advocated their holding the balance of power between the political parties, by meeting in convention and indorsing the least objectionable nominees of the existing parties. By such a course, it occurs to me, the farmers can easily gain sufficient political influence to virtually control the whole field; for in such a movement a few hundred, or at most a few thousand, votes would give us control of men and measures and virtually break down the trickery and party machinery under and by the direction of which improper men are nominated and elected to responsible positions.

While sincerely thanking the members of the Farmers' Convention for the honor conferred in mentioning my name in connection with the position of Lieutenant-Governor of this great State, I respectfully beg leave to withdraw my name from said ticket, for the foregoing reasons.

J. V. WEBSTER.

East Oakland, July 20, 1886.

### The Heath Amendment.

EDITORS PRESS:—There seems to be an idea prevalent in the minds of many fruit-growers that the adoption of the Heath amendment would conduce to a more equitable assessment of orchards and vineyards than is obtained by the present system of assessment. Granting that it would, the question arises, in the event that the Heath amendment should be rejected by the vote of the people, cannot the law of assessment of property be so amended, under the Constitution as it is, as to secure an equally equitable assessment as could be had under the Heath amendment?

The Constitution now directs that cultivated and uncultivated lands of the same quality and similarly situated shall be assessed at the same valuation, and that improvements shall be separately assessed. The idea pervading the minds of the framers of the New Constitution was to provide for the equal assessment of like value and situation, whether improved or otherwise, and to such a valuation the value of the improvements was to be added to such lands as were improved. There is not a line or word in the Constitution looking to dividing up the term "improvements" into classes, listing buildings, fences, etc., in one class, and orchards, vineyards and shrubbery in another class, and fixing to each class a separate valuation.

The assessor is required by law to assess all assessable property at its true cash value. To do this he is in duty bound to affix a cash valuation on every distinct parcel of land not exceeding 640 acres, and valuation must include the value of the improvements; but the value of the land and improvements must not together exceed the cash value of the property, and of that the assessor is the sole and proper judge, subject to review by the county Board of Equalization. The Heath amendment does not change this rule of value in the least. If an orchard or vineyard on a man's farm has increased the value of the farm, the assessor, in estimating the value of the farm, under the Heath amendment, must make a mental note of its increased value by reason of such orchard or vineyard located thereon, but always fixing the total value of the land, orchard, vineyard and other improvements thereon, at a reasonably fair cash valuation. That, and neither more nor less, is the assessor required to do under the Constitution as it now is.

An honest, intelligent assessor, acquainted with the values of lands in his district, cannot go far amiss in making the valuation, whether improved lands or otherwise. Complaint is sometimes made that valuable timber tracts are assessed at a nominal valuation, while improved properties are assessed for all that they are worth. If such is the fact the assessor is derelict in his duty. Timber tracts are usually valued for the timber standing thereon, and have cash market values, which may be rated by the section, half or quarter section, and for taxable purposes should be assessed at such market cash valuation, the same as other lands are.

The whole trouble and complaint in the minds of fruitmen touching the assessment of their fruit trees, I apprehend, has grown out of this habit of assessing in some counties; following too literally the wording of the revenue act, which seems to look to the separate listing of fruit and ornamental trees and vines, separate and distinct from other improvements, instead of classing them in the general category of improvements, as contemplated in the Constitution.

Those who fancy that any rebate will or could honestly be made in the amount of the assessed valuation of their properties under a law like that proposed by the Heath amendment, are greatly in error. The assessor must still list all properties on his assessment rate at their actual cash values, the same as now. The Heath amendment was not devised for the benefit of orchardists or vineyardists, neither would its adoption profit them any. So far as the orchardist and vineyardist are concerned, it is, as I set forth in my article published in the *RURAL PRESS*, April 25, 1885, a delusion and a snare.

WM. C. BLACKWOOD.

Haywards, Oct. 18th.

### Stockton at Marysville.

[Written for the *RURAL PRESS* by Mrs. W. D. A.]

I must speak of my delightful visit to Marysville. Looking from the beautiful farm of H. W. Jones, two miles from Yuba City, where I stayed the first night, I saw a level, fertile valley, 60 miles wide by 100 long, divided into fine farms with good dwellings and orchards that need no irrigation. A new idea to me was fields of fall feed for cows and hogs, of Egyptian corn interspersed with sorghum.

I saw clearly the round, steep Marysville Buttes, bathed in purple light; but otherwise the lands were level, and a mellow loam, held from high water by broad, high levees along the Feather river. Land here in Sutter county ranges from \$60 to \$100, and in Yuba county from \$30 to \$80 per acre. Eucalyptus flourishes and orange trees bear finely, though the crop was late this year.

At the long, covered double-track bridge on the Feather river, where it mingles with the Yuba, a strange scene lay before us. The Feather, now low and partly clear since the act of Congress, rolls into the turbid Yuba, with on either side great flats of white sand, three or four feet higher than the river-bed (which is filled up five or six feet), glittering in barren desolation. Through this expanse of sand, with stubborn growth, willows and brush have forced a stand where homes of promise stood. On the Marysville side a freight boat was moored a mile below the harbor, where gold-hunters in early days landed for points above, and who afterward with monitors and hydraulic pressure rolled the hills down these streams; but they could not crush a plucky people who stood up against enormous taxes to push back incoming debris till the strong arm of national law was made to come to their aid. The mighty floods this people have had to levee against are shown by high-water marks near the roof of the freight sheds 25 feet on the Marysville side, and on the Yuba, above the city, even 70 feet—compelling people to move from their buried homes. Crossing the half-mile bridge over the Yuba, a wider waste of infertile flats, studded with small timber, covered the alluvial lands. It seemed that this white sand might be sent by rail for hard-finish or glass-making. It is said that only the tops of the great Briggs orchard, 25 miles above Marysville, known in pioneer days, are now visible. The large one of Briggs Bros., on the Feather, is nearly dead.

At the head of navigation of the Feather, whose channel it is thought the scour will clear; with the Yuba circling on the other side; with water near the surface and a wide valley at her feet, sheltered from high winds by hills so that the orange grows in every yard; with a substantial people, large and durable buildings, tasteful homes and wide streets shaded with native walnuts—Marysville is beautiful, with a bright future outlook.

The kindness shown the State Grange, as a body, will make this fourteenth session memorable. Mayor Greeley's wife sent a lovely basket of flowers with the compliments of the city government. Young ladies, whose names I did not learn, sent floral pieces on behalf of the citizens—delicate offerings of good-will. We all appreciated the convenient Masonic hall—80x40 feet, elegantly finished—as the finest hall that we had ever had, and the best to hear in. The hotels were near, and board excellent at \$1.25 per day. One could go from Stockton Tuesday and stay till Saturday for \$10. The Good Templars sent greetings to us, and Yuba City Grange was so kind that words cannot repay it—only hard work for the Order by each and all throughout the State.

The session was one of the best I ever attended, not because of the silence of the sisters, but because the brothers expressed their views with spirit and courtesy and lifted the organ they believe to be their life and voice on to firm ground. The W. M. and his officers deserve especial thanks.

Pomona's Feast, from the initiation of candidates to partaking of delicious late fruits and admiring the tasteful distribution of the many beautiful flowers, was the most complete I have ever seen. H. W. Jones, of Yuba City Grange, suggested and carried out the idea of a high-backed floral chair, in which was seated Pomona, dressed in corn color, at the head of the table, with attendants in light attire around.

Enlivening strains of the Yuba City band led us, with invited guests, in a procession of three blocks in length, to the pavilion, 160x80 feet, built in the form of a cross, brilliant with lights, fruits, flowers and happy faces; plates of cake, alternated with late plums, peaches, apples and nuts. The odor of a "Snow apple" or "Detroit Red" reached me, and I was presented with one brought from Grand Rapids, Mich., by C. O. Scott, M. D. This spicy, delicate apple does not thrive in this State. Perhaps it would on the Santa Cruz mountains.

The open meeting was full Thursday evening to hear the entertainment given by Yuba City Grange. Singing by the whole and the quartet was excellent, also the piano duets and solos; but the best number was the "Break in the Dike," by Mattie Walton, only seven years of age. It was so perfectly rendered that I feared the strain on one so young as I looked at the sweet face and heard the baby voice. Very large grapes were abundant from the counties of Placer, Sutter and Yuba, particularly Muscats. Fine orchards grew on both sides of Bear river. Fruit is not irrigated.

## We Have Been to State Grange.

EDITORS PRESS:—Not far beyond the confines of Central California sat the 14th session of the State Grange, and the pilgrims there assembled were made conscious that our great State boasted a northern section as fitting balance to the lately much-quoted southern portion. Marysville was the Patrons' objective point, and the result is proof positive that it was a point well taken.

Left Martinez in the early morning via Benicia, Suisun, Davisville, Dixon, Sacramento, Roseville and Wheatland, reaching our destination at 7 o'clock in the evening, though two hours late owing to a detention down South. On stepping off the cars we were literally waylaid by Grangers, both brothers and sisters; in a twinkling were in hacks filled to overflowing. Hotels also ran over into private houses. This city of slickens and levee fame was now in the hands of Grangers, and quietly, as well as trustfully, succumbed to the power at hand.

Warnings had been numerous of Marysville heat, therefore grumbling and fears on this score were near the surface. We from Alhambra were among the fortunate, falling into the hands of Bro. and Sister Walton and again into those of Bro. and Sister Jones, thus enjoying pleasant rides both in Butte and Sutter counties. At the latter home we thought San Francisco had sent some of her cooling draughts, for, in addition to a plentiful breakfast, was a glowing fire in a good old-fashioned fireplace, said fire not far amies in comfort, though not strictly needed. From both these pleasant, cordial homes we were driven the longest way around to view the country, and were gladdened with fine views of North and South Butte. Dame Nature is capricious, and I wonder of what she was thinking when she set this little string of mountains in the midst of an otherwise unbroken valley, said chain beginning and ending with a Butte and christened North and South after their compass-tending points, one reaching into the sky about 200 feet higher than the other, and each to the other connected by smaller wave-like heights. Thus, sentinel-like, stands this striking Butte cluster, as sole monitors of a grand survey. Surely, in the years ere the paleface became masters of these mountain ranges and valley basins, did these "delectable hills" in scriptural words clap their hands in unquestioned supremacy, whether in sunshine or in flood, and to-day their outlines alone of all these enchanting distances of water, valley and mountain are not marred by the inroads of the gold-hunter, but, imposing and beautiful as of yore, they stand catching the clouds as they fly hither and thither, only to tangle them with the heated sunbeams and weave them into misty veils whose fleecy folds soften those glaring heat rays that otherwise would beat upon these plains with scorching, unbroken force.

Past fields sped we that told of tons upon tons of grain and hay stored away and young growing orchards not yet in the slickens track, interspersed with acres upon acres of devastation and ruin from the hydraulic debris that ranges from 45 feet to fewer in depth—spots upon which not long since flourished and bloomed the grape and orange, now a desert, worthless and perhaps irreclaimable. Hydraulic mining and agriculture, sisters standing as strong opposing exponents of California's wealth—one was gold to the other's ruin, and now the ruined in the farmer's crucible of labor, light, and water has in turn become the destroyer; yet in the Grangeroom Patrons from the hydraulic regions clasp the hand of the valley plowman, and the tiller of the soil from bay districts nudges his mountain and valley neighbor's elbow, asking their combined sympathy for their slickens spoiling streams and harbors, while all wrap their sectional differences with the sheath of Grange obligations and council in harmony "for the greatest good to the greatest number." Always in perfect temper? Of course not; the millennium has not come, and it is too much to expect Grangers, after failure of numberless other organizations for centuries past, to bring about a heavenly atmosphere in little more than a decade.

Yuba City Grange, with her neighboring Granges, were our hosts, and royally did they entertain. A good choir sat patiently from Tuesday morning till 12 or 1 o'clock Friday night ever ready to respond to call, "music," and on Thursday evening, with children and friends, gave an entertainment of recitations, music—both vocal and instrumental—and all of a superior quality. Large hall crowded to its utmost capacity showed their appreciation by perfect silence and loud applause.

Deliberations ranged from governmental through business to social relations; and if sometimes soaring to heights hardly yet fully surveyed, judge not hastily, for perfection cometh not without thought and turmoil; this is but the beginning, and the end is afar off.

On Friday evening the 5th or Pomona degree was given a class of 57, this being, I believe, the smallest class on record; cause: District or Pomona Granges now confer said degree, where formerly it was given only in State Grange. Ten o'clock, left the hall in marching order, with a brass band, passing in couples to the pavilion—a very large hall, brilliantly lighted with Chinese lanterns, beautifully trimmed with flags, flowers and evergreens. Five tables, each 75 feet, all loaded with every fruit,

grain, nut, flower, vegetable and cake that California can boast—the historic Bidwell and Hock farms furnishing their quota. At the head of one of these tables was a raised, flower-clad chair for Pomona Sister Roache, who was priestess of this degree, and who, with her attendants Ceres, Sister Cross, and Flora, Sister Plummer, welcomed—said the *Sutter Farmer*—2000 persons. Flower-artists had cunningly devised bud, flower and leaf into every conceivable form—flower-clad wagons drawing the stately vegetable world into fragrant realms studded and fitted with crosses, pillows, cushions, horseshoes—in fact, it was hard to tell where the poetical and fragrant gems left off and the more staid and, perhaps, more necessary vegetable world began, so fascinatingly was the poetical and useful blended.

From this festal scene of friendly greeting, eating and dancing, pass we to the work-hall for the closing labors of the day, though they had now reached into the long hours of the night. Resolutions, speeches, music and farewell greetings were now in order; morning hours were creeping apace ere the last word and hand-clasp was given. Saturday morning, 8 o'clock, found visitors and hosts at the depot—strangers, save in name, but a week since, now giving the friendly hand of parting to brothers and sisters, with promises and wishes of happy fraternal greetings, one year hence, in the beautiful city of Santa Rosa.

Marysville, the most northern point yet visited by the State Grange, has made a fine record; and the (perhaps) 300 visiting Patrons go to their several homes saying of her, "Well and nobly done!"

MRS. MARIA B. LANDER.

Martinez, Oct. 15, 1886.

## Publications at Headquarters.

The publishers having forwarded files of this paper to the secretary of the National Grange, received the following cordial acknowledgment:

NATIONAL GRANGE, P. OF H.  
Office of Secretary,  
WASHINGTON, D. C., Sept. 10, 1886.

Messrs. Dewey & Co., S. F., Cal.:—DEAR SIRS: Your kind note of September 1st, together with the files of the *RURAL PRESS*, are received. I am under many obligations to you for this generous gift to the office, which is highly appreciated. Faithfully yours,  
JOHN TRIMBLE,  
Sec. N. G.

It is very desirable to have at the National headquarters of our Order a reading-room, supplied with all the Grange and farmers' papers, together with a reference library of bound periodicals and various other works of interest to agriculturists. Bro. Trimble, by his courteous correspondence, is plainly paving the way to such a useful institution.

## The Farmers' Ticket.

At a meeting of the Farmers' Committee, held in San Francisco last week, vacancies by resignation and otherwise in the list of candidates nominated by the Farmers' Convention were finally filled, and the completed ticket stands as follows, viz.:

For Governor, Joel Russell; Lieutenant-Governor, R. W. Waterman; Secretary of State, Frank E. Kellogg; Attorney-General, W. H. H. Hart; Justices Supreme Court, Jackson Temple, Thos. B. McFarland, Wm. H. Patterson; Controller, John P. Dunn; Treasurer, H. S. Graves; Superintendent of Public Instruction, Ira G. Hoitt; Clerk of Supreme Court, J. D. Spencer; Surveyor-General, Geo. B. Tolman; Members of Congress—1st District, L. W. Simmons; 2d District, Geo. Ohleyer; 3d District, W. W. Smith; 4th District, W. W. Morrow; 5th District, Frank J. Sullivan; 6th District, Wm. A. Harris; Board of Equalization, C. E. Wilcoxson, John Beatty, L. D. Moorhouse, M. D. Hamilton; Railroad Commissioners, W. W. Foote, J. A. Filcher, J. W. H. Campbell.

BRO. WM. JOHNSTON, Master of the State Grange, was in town last week in attendance upon the Grand Lodge of the Masonic Order. Bro. Johnston is busy with preparations for his journey to the National Grange in Philadelphia, and will soon start eastward.

V. E. BANGS, a prominent farmer of this county, and Master of Ceres Grange, has been appointed Chairman of the Committee on Irrigation by the State Grange in session at Marysville. Mr. Bangs' views on the subject are sound.—*Modesto News*.

THE SACRAMENTO CITRUS FAIR.—The Executive Board of the Central California Citrus Fair Association held a meeting at the Board of Trade rooms last Saturday, Mr. Gallatin presiding. The subject of arranging for and holding the second citrus fair in Sacramento was considered at length, and much enthusiasm was manifested. The time for holding it was, after full discussion, placed at the third week in December, commencing Monday, the 13th, and closing the Saturday following. It will be remembered that when the citrus fair was opened here on the 11th of January last most of the orange crop was gone. Taking this fact into consideration, and the present condition of the maturing citrus fruits, it was believed that the middle of December would afford the best exhibits to be had of the season's products.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Alameda.

A HORTICULTURAL CURIO.—Haywards *Journal*, Oct. 16: Clint King, of San Lorenzo, one of our most enthusiastic horticulturists and solid fruit-growers, has quite a curiosity on his place in the tree line. The original stock came from a peach root, and was then grafted with an Imperial Gage and Bradshaw plum. After this had made good growth he grafted on two kinds of prunes (Gross and Silver), two of peaches (early and late), almonds, two of apricots, white and black cherries, and two varieties of plums. All the grafts are growing finely, and when they are in bearing, all on one tree, the sight will be well worth witnessing.

TULE FOR TREE-PACKING.—Jas. O'Neill, the Haywards nurseryman, has been engaged for a number of weeks with a force of men cutting tules below Barron's Landing and at other places. They are in great demand for placing around trees in shipping.

#### Butte.

PLANTING ORANGE TREES.—Oroville *Register*, Oct. 14: It is evident that the boom in planting orange trees last winter in this vicinity was the beginning of a lasting movement, and not a sudden impulse that will soon die out. Two agents for nurseries have met with encouraging orders. While it is possible that no large orange groves will be set out, yet almost every person that has room in his yard or grounds about town will increase the number of his orange and lemon trees. Also many farmers through the foothills and down along Feather river are making preparations to set out all the way from 10 to 300 trees apiece.

#### Colusa.

ALMONDS.—Sun, Oct. 16: A. M. Newland has just completed gathering his almond crop. He averaged 30 sacks to the acre—300 sacks for the 10 acres. This, at the present wholesale prices for almonds, will net him \$80 an acre.

#### Napa.

GRAPE CROP.—Reporter, Oct. 15: Now that the grapes in most of the vineyards throughout the valley have been picked, it is seen that the estimates of the grape-yield made some time before the picking-season began were not quite true as to the probable yield. Very early in the season a very small yield, hardly half a crop, was predicted. But now it is known from reports around the valley that this year's crop is fully up to the average, if not a little above it. Taken as a whole, the quality of the grapes is excellent.

#### Sacramento.

HAY PLENTY.—Record-Union, Oct. 15: The immense amount of hay brought to the city from Yolo county, lately, has attracted a great deal of attention. Most of it is oat hay, raised on lands lying in the vicinity of Davisville, and between there and Woodland. The ranchers, having no other use for their teams at present, find it cheaper to bring it to the city by wagon—each team hauling two wagons, bearing two and a half tons—than to ship to market by rail. There has also been a large quantity of alfalfa brought to town from the river ranches, but the crop was short this year, owing to so much land having been drowned out last winter and spring. Good alfalfa is bringing a better price than average oat hay.

#### San Joaquin.

FORTIFYING THE DIKES.—Stockton *Independent*, Oct. 17: Andy Willows has entered into a contract with the owners of the Moss tract, west of the city, to repair and strengthen the levee. A new floodgate will be put in near the point where Sister slough empties into Stockton channel. It was at this point that the water broke into the tract last winter. The break in the Roberts Island levee opposite the Moss tract has been repaired and tule farmers predict that the pressure against the levees during the approaching winter will be fully as great as any time last year.

#### Sonoma.

VINTAGE.—Napa *Reporter*, Oct. 15: The vintage in upper Sonoma county is much greater than was expected. Nearly all of the grapes will be crushed by the 15th, many of the cellars finishing this week. The wine made this season will be as good as any made in the State, while fermentation, without a single exception, was easily handled and the grapes went through without any trouble whatever.

#### Stanislaus.

GOOD SERVANT BUT BAD MASTER.—Oakdale *Graphic*: Mr. C. L. Nelson set fire to a stubble field on Mrs. M. A. Lovell's place, some five miles easterly from Oakdale. The fire got beyond his control, and consumed 50 tons of hay, owned jointly by H. Heckman, of Oakdale, and Geo. Holdsworth, of Stockton. The hay was valued at \$300, and the insurance expired September 28th. Mr. John Chambers also lost a hay press, valued at \$400. Mr. Nelson will do his best to make good the loss.

#### Tehama.

TEHAMA HORTICULTURAL SOCIETY.—Sentinel, Oct. 1: The society met in the lodgeroom of United Workmen last Saturday evening, Geo. M. Stoll, presiding. John Clements, secretary, read the minutes of the previous meeting, which were approved. Geo. H. Flournoy addressed the meeting at considerable length, and presented the secretary with samples of Hun-

garian prunes, Bartlett pears, Wager peaches in jars, apples, etc. He also exhibited a hybrid preserving melon grown from a cross between the Colorado preserving and Cuban Queen. It was a very fine specimen, large and well flavored. It was christened the "Tehama." A can of Wager peaches was opened and tested, and proved to be as delicious as any peach we ever sampled. The Wager is a seedling and is true to the pit. Mr. Flournoy says he thinks they are as fine a canning peach as can be found anywhere. Mr. Flournoy next exhibited samples of branches cut from trees grown in his orchard without irrigation, as follows: Limb from apple tree, 8½ feet long, grown since the 15th of April; apricot limb, 8 feet long; cherry tree limb, 6 feet long; branch from Winter Nellis, 8 feet long. He also exhibited evergreen millet, second growth, 8½ feet long; four stalks Egyptian corn, ripe, from one seed, 8½ feet long, planted 8th of June, and irrigated only once. Mr. Flournoy said that he paid no attention to season when he wanted to prune his trees. He always pruned them when they needed it. Mr. Stoll spoke of pruning so as to have four branches and a leader or center branch, if possible, and then cut those branches so as to get four each, about 18 inches above the first fork of body of the tree. A new theory as to the cause of the loss of so many fruit trees last winter was advanced by Mr. Flournoy. He said he believed it was because the ground around the trees was so low that water collected there and stood a long time, saturating the roots so that they were scalded. He threw the dirt in the fall around the trees, so that the water would flow away from the trees during long-continued storms. Much other valuable information was given as to the cultivation, pruning and growth of fruit trees. The society then adjourned to meet again the first Monday in November.

#### Tulare.

THRASHING ALFALFA.—Delta, Oct. 14: Alfalfa seed is now being thrashed; in some places it is turning out well, and in others does not yield quite up to the average. The total amount thrashed will probably be considerably larger than any previous year, and it will be some time yet before the work of thrashing is completed.

PORK-PACKING.—Register, Oct. 15: A number of persons have formed something in the nature of a close corporation and have commenced the erection of a pork-packing establishment near the brick kilns. Mr. Jas. Morton will probably manage the enterprise. The business will not be started in a very large way, but if success crowns their efforts those who have it in charge will incorporate next season, put up a larger building, and do a much larger business. This is a movement in the right direction, and we hope it will become a great industry. It is not profitable for a county to sell hogs and buy ham and bacon.

#### Yolo.

RECLAMATION PROJECT.—Democrat, Oct. 14: G. W. Woodard, who has 1000 acres or more of land at the sink of Cache creek, is attempting to reclaim it by means of extensive levees. A large force of men and teams is working on the south side of the creek raising the bank, and at the same time opening out the channel. The object of this is to prevent the creek from overflowing the Hennigan tract, a large open field of 200 acres, which is well set with alfalfa. Southeast of this farm the levee is being extended so as to prevent the waters from backing in from the tule. When completed the levee will be over five miles in extent, and will vary from three to eight feet in height. Besides this work, the digging of a canal or channel to carry off the surplus water into the old tule canal is a great work. The superintendent is pushing the work with vigor, hoping to get it in good shape before the rains come on. One can scarcely form an idea of the magnitude of this work unless he visits the scene and sees the 75 men, teams, plows and scrapers which are employed. The land is of the best sediment soil, made by the washings of Cache creek. Its richness is fully attested by the alfalfa, vegetables and melons growing on the Hennigan place. The melons grow so prolifically that the ground is now literally covered with them, although hundreds of loads have been hauled away this season. If Mr. Woodard succeeds in his enterprise, he will have done a good act, largely beneficial to himself, and profitable to the county in general.

HONEY SCANT.—Mr. Ibes, who lives near the sink of Cache creek, devotes much of his time to the bee industry. He has 300 stands, and up to the present has marketed about 2600 pounds of honey. The season has been a poor one for bees, and the honey produced much below the usual amount.

SLAUGHTERING THE CHICAGO CATTLE.—It is announced by telegraph from Chicago that the slaughter of the distillery cattle is in progress. The edict of the Health Commissioner prohibiting the sale of distillery milk has discouraged distillery milkmen, and they will dispose of their cows to the best possible advantage. There are nearly 10,000 such cows in the city, and many of them have been fattened for the slaughter-house.

THE PACIFIC FRUIT CO. have removed their constantly increasing business to more commodious quarters at Nos. 316 and 318 Washington street, S. F. Justi, Root & Co., the well-known fruit and produce dealers, are their managers.

### A Pair of Old Boots.

Dedicated to the Corner.

[Written for the RURAL PRESS by MALLIE STAFFORD.]

Look at them! as they stand in the corner,  
With an expression appealing but mute;  
There is nothing could look more forlorn-er  
Than this pair of empty old boots,

Brown and wrinkled, and rusty and faded,  
Silent and still, and void of all stir,  
Yet these boots that are now worn and jaded  
Once belonged to a gay cavalier,

Twirled the waltz or the "german" fantastic,  
And with sole that beat high to the sound  
Of sweet music, with proud feet elastic,  
Kept time to the heart's joyous bound.

'Twas the youth of their happy existence—  
Every step seemed a shout or a cheer;  
In ebony splendor they glistened  
In the light of the gay chandelier.

Ah well, we all have our seasons  
Of youth and sweet hope and pleasure,  
And these boots, by their owner, with reason  
Long ago, were considered a treasure.

For nothing in art or all nature  
Could quite answer or fit in their place;  
They comprised, in their way, quite a feature,  
Indispensable—a wardrobe to grace.

But look at them now, as they idly  
Stand there in the corner alone,  
Run down at the heel, and half sidling  
Seem to sigh, but are dumb as a stone.

Their expression is serio-pathetic,  
A look that is shabby-genteel,  
With a stare that is bland but magnetic,  
From the toe to the turn of the heel.

Their toes are turned in—like a wizard  
They searchingly look in my face  
As if saying "Pon my sole and my gizzard  
[Don't laugh] I haven't the courage to brace."

Well, I did laugh, but somehow the laugh faded  
Into a sort of respect for their age,  
Their expression so weary and jaded,  
So steadfastly wise and so sage;

And what they *had* been, and who carried,  
Where wandered, in places of fame,  
Sighed at funerals, perhaps had been married,  
On their owner was, which amounts to the same.

They really seemed almost to be human,  
Their expression so faded and worn,  
Just like an old man or old woman  
In the corner, alone and forlorn.

And what in humanity's forlorn-er  
Than a man or a woman too old  
To be useful? They, too, are consigned to a corner,  
Alone with their sorrowful souls.

Brown and wrinkled, and rusty and battered,  
By the storms and the tempests long past,  
Old boots and humanity shattered  
Find a rest in the corner at last.

Arcadian Heights, Napa Co., Oct. 4, 1886.

### Woman's Kingdom.

Mrs. Livermore's Review of "Ouida's" Article on Woman Suffrage.

In the current *North American Review* Mrs. Livermore sharply replies to Mme. de la Rame's article on Woman Suffrage in a previous number of that magazine. She begins by scathingly denouncing the immoral tendency of Ouida's novels and says her essay "betrays the same literary characteristics and immoral tendencies that have made both her name and her books an offense."

Concerning Ouida's objections to government by the masses, with no discrimination of the fittest class to rule, the writer says:

"For thousands of years the great heart of the world, groaning under the tyranny of autocrats, has throbbled with prophetic desire for its realization in a government of the people. At last the day has dawned for which millions have prayed, and fought, and died, and the reign of the people is beginning. That there are evils inseparable from popular government, no one can deny, nor that some of them are of alarming portent. The pessimist, who leaves out of his calculations that divine spirit which works for righteousness, and which is abroad in the earth, can easily manufacture from them a prediction of swift coming national ruin. But the same may be said of every government under the sun."

Mrs. Livermore's Opinion

Is, however, that words are wasted in discussing the possibilities of woman suffrage, since in some measure it is an accomplished fact. A limited franchise is granted to women in England, Scotland, the Isle of Man, Canada, and Sweden. In the United States, full suffrage is given to women in two Territories—Washington and Wyoming, and partial suffrage in a number of States.

Twelve States of the American Union have given women school suffrage, which limits them to a vote for school committee, and in others

gives them the right to vote on all matters relating to the public schools, and makes them eligible to the offices of State and county superintendent. The capacity of women for public affairs receives large recognition in the United States. They are elected, or appointed, to such offices as those of county clerk, register of deeds, pension agent, prison commissioner, State librarian, overseer of the poor, school supervisor, school superintendent, executors and administrators of estates, trustees and guardians, engrossing clerks of State Legislatures, superintendents of women's State prisons, college principals and professors, and members of boards of State charities, lunacy and correction. And in all these positions women serve with men, who acknowledge most graciously the practical wisdom and virtue they bring to their duties.

Women act as accountants and book-keepers, physicians and surgeons, painters, sculptors and architects, authors and journalists, clergywomen and lawyers, and when admitted to practice law at the bar of their own States,

### Have the Right to Practice

At the bar of the Supreme Court of the United States. President Grant appointed over 5000 women to the office of postmistress. "And although many women have been appointed to positions in departments of government, and to important employments and trusts," said Senator Blair, of New Hampshire, from his seat in Congress, "as far as your committee are aware, no charge of incompetence or malfeasance in office has ever been sustained against a woman."

"On the other hand," says the Hon. William F. Bowditch, of Massachusetts, "five times as many boys as girls are in reformatories. More than five times as many men as women are prison convicts. More than twice as many men as women are paupers, and about 70 times as many men as women are engaged in the manufacture and sale of liquor—the nurse of pauperism and crime. \* \* \* Men drink and women suffer. With manhood suffrage we spend for drink six times as much as we do for education every year. Cannot we prudently call on women to help us by their votes, so that we may at least expend as much for education as we do for dissipation?"

The fairness of man in legislating for women Mrs. Livermore asserts to be a recent development, and quotes Gibbon, who wrote over 100 years ago:

"In every age and country the stronger of the two sexes has usurped the powers of the State, and confined the other to the cares and pleasures of domestic life." This injustice, backed by the teachings of the medieval church, not yet entirely obsolete, has perpetuated the contempt for women, begun in barbarous times, when every woman was the slave of some man. It succeeded at last in the breaking down of women, and leading them, as Michelet has observed, "to distrust and despise themselves, and to look upon themselves as inferior and half-cursed beings." Out of this subject and abject condition they are lifting themselves today, aided by men who have attained almost divine development in justice and manliness.

Ouida's oft-repeated assertion that woman is inferior to man stripped of all verbiage means only she is unlike man. This we frankly admit, and upon this very difference between the sexes base an argument for the enfranchisement of woman. It has been the error of the past, as it is yet too largely the blunder of the present, to assume that man is the standard, and that the civilization which he has created embodies whatever is best and most permanent in human excellence. But man is only one-half the integer we call humanity. Woman is the other half, possessing a more complex organism and a larger total of functional powers. One is the masculine half and the other the feminine half. Each is endowed with aptitudes and capacities that the other, in some measure, lacks. Each is the complement and supplement of the other.

LADY RIDERS.—Austin Reville: One of the most attractive features of the Nevada State Fair is the contest of the lady riders. A dozen or more ladies, who ride like centaurs, compete, and the skill displayed is great. This writer has witnessed a number of them and been surprised at the grace and ability displayed. The riding of Miss McKissick, of Sierra valley, is well worth going far to see. Mounted on a coal-black horse which she broke from a colt and which she fully understands, she is simply superb. To see her coming down the homestretch on an easy gallop is the poetry of motion, but to see her jumping fences, whirling like a flash, dancing, cavorting and plunging with no saddle and always firmly seated and as graceful as a fairy, is simply wonderful. Good a rider as she is, she finds keen competitors, and the judges often find difficulty in deciding who shall have the first prize.

CARRIAGES IN YE OLDEN TIME.—In the early part of this century, in London and Westminster, carts were not permitted to carry more than 12 sacks of meal, 750 bricks, 36 bushels of coal, etc., on pain of forfeiting one of the horses. By the laws of the city, cartmen were forbidden to ride either on their carts or horses; they were to lead or drive them on foot through the streets under the penalty of 16s for each violation of the statute. By a statute of George III there was a duty of £1 4s a year to be paid on all carts or carriages with less

than four wheels, to be drawn by one horse, without any other than a titled covering, and without any lining, springs, or ornament whatever, except a paint of dark color, with the words, "a taxed cart," and also the owner's name, written upon it; and the price of such a cart was not to exceed £12. In the light of the present day it seems curious to revert to the old-time custom of doing things in London about the beginning of the present century. The ways of the world have made considerable progress and many changes since then. The drivers of the present day not only sit on their carts, but they load them for all they can carry.

### A Forest Idyl.

[Written for the RURAL PRESS by MELO.]

An October morn, dreamy, golden and warm as summer's balmy breath. A purple haze like a fleecy veil envelops the distant mountains, which stand like giant sentinels in grand and rugged beauty, and encircle a lovely mountain valley beautiful as a dream of Arcadia. The autumn sun shines warm and the air is bland and gently kisses cheek and brow.

"The wandering breeze through the forest trees,  
A dream of a perished glory brings."

Bountiful Mother Nature is donning her autumn robes, and already here and there bright gorgeous tints are seen, now a cluster of flaming scarlet leaves and yonder a bunch of yellow ones. The graceful fern is taking on more somber tints, while the red seedpods of the wild rose and the snow-white waxberry lend their beauty to the scene. The air is laden with the mingled perfume of the dark-green towering redwood, pine and fir, and the ground underneath the pines is thickly strewn with the needles and cones. The comic cry of the quail is heard in the woods, and the monotonous drum of the woodpecker tapping some distant forest tree, while ever and anon some bright bird wings its way from tree to tree, pouring forth its melody of song. Overhead, the sky is one grand meadow of azure, not a cloud in the horizon as far as the eye can reach. A winding mountain road, romantic as any novelist could wish, bordered with pines, redwoods and the beautiful manzinitas and madroñas, and fringed with wild roses, ferns and the poetical "golden rod," winds its way up the sides of the mountain till suddenly, at length, a little brown, vine-covered cottage bursts upon your view, perched far above, as if ambitious to look down from its exalted position on all this beauty and glory below—as an eagle from his lofty perch.

Three ladies come tripping down a lovely woodland path, and enter the heart of the forest. One is laden with fruit and flowers, one has a volume of her favorite poet, while the other has a bundle of papers and the latest magazine. They are, evidently, ladies of culture, refinement and taste, seeking to charm away the hours. They enter a romantic, shady glade of the forest, and selecting a spot under a giant pine tree, where the ground is thickly carpeted with leaves and moss, they recline in sweet abandonment and give themselves up to the witching influence of this dreamy morn. It is a time for idleness and ease, a time for poetry and song; and they while away the long golden hours in conversation, in eating the luscious fruit, and sometimes one reads aloud from her favorite poet. One, too, is nature's own true poet, who now and then quotes some glowing sentence, or weaves sweet melody of rhyme. One exclaims, "Oh, what were life unless such moments threw bright gleams, like angels' visits, over its gloom!" while the poet sings from the recesses of her own heart:

How oft, when far in distant lands I roam,  
My heart will turn to thee, my own loved mountain home.  
Each green and flowery nook, each shady glade and dell,  
I love ye, dear familiar haunts, oh, passing well!  
The vine-clad hills, the orchard and the fern-fringed spring;  
The garden and the ruined house, 'round which the vine doth cling;  
The winding road through forest dim, down to the waterfall;  
The hum of bees, the flower-scents and the sweet wild-bird's call;  
The cottage porch, o'erhung with fragrant flower and vine;  
And best of all, the warm, true hearts which are forever mine.

Lidell, Oct. 4th.

MRS. STOWE'S HEALTH.—It is hardly surprising, in view of the many reports circulated of late concerning the present health of Mrs. Harriet Beecher Stowe, that many of her friends should feel some anxiety to learn whether the statements as regards her "shattered health" are true. For the benefit of those of her friends who have written asking to corroborate or deny these reports, the Brooklyn Magazine takes pleasure in printing the following extract from a personal letter to the editor, written by Mrs. Stowe only a few days ago: "Concerning the repeated reports of my ill health, let me say that, as I am now in my seventy-fifth year, and as, after a year of lingering and painful illness, I have seen my husband laid to his final earthly rest, it is not surprising that I should feel that an interval of rest is required. I do not consider my health as 'shattered' by any means, but only enfeebled and requiring care. I am now seeking restoration by daily open-air exercise."

### A Choir Member's Death.

[Written for the RURAL PRESS by JET.]

One Friday evening the little choir assembled, as usual, to rehearse the sacred songs for the following Sabbath. The dark-haired, brown-eyed girl who sung alto, the blue-eyed, blushing fairy who occupied the second soprano's chair, the young man who sung tenor, and the middle-aged man who chanted the low bass—all were there. The leader rose to open the exercises; books were handed around, and all were ready to begin.

"Where is Emma?" This was anxiously asked by the second soprano, who was always shy when compelled to sing alone, and who found the seat beside her vacant.

Emma was the first soprano. When there was a solo of difficult execution to be sung, nobody but Emma could sing it. Was the organist sometimes perplexed, Emma always kindly volunteered to help her over the difficult passage. In all, Emma was the good spirit of the choir, and was fondly loved by all.

But where was she now?

A young man hurriedly entered the half-open door, and going to the leader, whispered in his ear. The music-teacher turned pale, and, with a startled whisper, said to the visitor: "Is it, then, so bad?"

"So bad!" solemnly answered the man, and left the church.

We all crowded around our leader and involuntarily whispered: "It's Emma!"

"Emma is very ill," began the leader slowly, and pausing to steady his voice. "She was taken down suddenly to-day, and to-night is dangerously ill. She wants us to meet with her instead of here. Shall we go?"

"Yes, yes!" we all exclaimed; "but the excitement may make her worse," said somebody.

"No; dear friends," said the leader, "she can never grow worse, but will be better soon—in heaven! The messenger says she cannot live until to-morrow."

We said no more. On the way to the place where Emma lived, not many words were said. As we passed up the walk from the gate to the door, odor of roses and heliotrope was wafted by the gentle breeze, and we thought of how she loved her flowers which she had cared for so tenderly, and now they would be laid upon her silent bosom and perfume her cold and narrow bed. Silence reigned supreme in the cottage, as if the inmates were afraid to stir, lest the darling of the household should move her lips but once and they might not catch the passing word.

Our entrance aroused her from a lethargy into which she had deeply fallen.

She smiled upon us all—a smile of inexpressible sweetness which God places upon the dying lips to mutely testify of the glory which beams upon the dying Christian.

We one by one went to her bedside. The first to go was the second soprano.

"My dear," whispered the dying girl, "I will never sing with you again on earth; but when you come to heaven I will have been there long enough to know all the sweetest music, and will teach it to you. We will then be so happy. When I am in my coffin, please have the choir sing the sweet old hymn, 'Asleep in Jesus.' It is only sleep, dear, from which I shall awake in the morning beyond the reach of sorrow. Meet me there—there." She lifted her trembling hand, and with her closing eyes gazing upward, she pointed toward heaven.

We all gathered around her bedside to watch the last struggle. Soon she roused herself slightly and said:

"I am soon to go. I can hear music sweeter than we ever sang or heard; it sounds like the murmur of many purling streams flowing over shining beds of pearls. When you carry my body to the little graveyard behind the church and leave it there alone, through the sunny summer and the cold winter, with no companions but the chirping cricket in the summer and the meek little rabbit in the winter, do not think of me as being there; I will be in heaven, and be very, very happy. My chair in the choir will be vacant. You will look at it and sigh for one who was taken away from those who loved her in the springtime of her life; you will gather to practice the hymns, but I will be in heaven singing the 'new song.' I want to kiss you all before I die. Gather around me quick, for I feel the cold tide slowly creeping toward my heart."

We all tenderly clasped her cold hand, and kissed the lips that were now growing, oh, so cold! She smiled faintly, raised her arms toward heaven in happy anticipation, and then sank to rest, even as an innocent child sleeps on its mother's bosom.

Sad, and was the funeral! When the choir arose to sing "Asleep in Jesus," they gathered around the coffin and could only sob aloud. No eyes were dry as they were turned toward the gray-haired preacher when he said: "God, in His wisdom, has called our beloved Emma from her preparatory lessons here on earth to the choir of golden angels in heaven. We will meet her there. Some time you, dear members of the choir, will all meet over yonder, and Emma will then have her usual place by the side of the soprano who now feels her loss so greatly; some time we shall all enter into that heavenly rest, to go out no more forever."

We laid her away in a flower-lined grave. The cypress grows at her head, and upon the lit-

the mound the rose and heliotrope bloom in the summer; and the snows are gently removed from it in winter, that fresh flowers may be strewn upon her last resting-place.

### Darning Stockings.

I.  
A pretty girl sits in a rocker at ease,  
And sways to and fro;  
Now fast and now slow,  
While her thoughts wander far as they please.

II.  
She holds in one slim hand her needle and thread;  
It flies in and out,  
You'll see what about,  
As her thoughts fly within her bent head.

III.  
A romance I tell, and don't think it shocking;  
She smiles, then she sighs,  
Soft shine her sweet eyes,  
As she daintily darts on her stocking.

IV.  
Each stitch holds a dream of the future so sweet,  
As they back and forth wend  
In the stocking they mend,  
Go to the rhyme of her heart's happy beat.

V.  
What story is weft in the swift-flying thread?  
As weaves her bright dreams  
Of the future, it seems  
Both to weave them with hand and with head.

VI.  
Ah! sweet, dainty form, so gayly you're rocking!  
Is your dream at an end?  
Or does it depend  
On the last threads weft in the stocking?

### A Judge's Estimate of Rumsellers.

Hon. F. M. Hubbard, Judge of the Eighth Judicial District of Iowa, in passing sentence upon some liquor-dealers for violation of the prohibitory law of the State, said: "While there are greater crimes known to the law, which are punishable with greater severity, there are none which involve more of those qualities, known as despicable meanness and audacity, than the selling of intoxicating liquors. There is something in the taking of human life instantaneously that shocks and terrifies the minds of all; and yet we look upon the man who takes human life quite as surely, but by a slow, lingering process, if not without condemnation, at least without horror. You, who stand before the court for sentence, are in every moral sense murderers, and you are within the spirit, if not within the letter, guilty of manslaughter; for the law says that whoever accelerates the death of a human being unlawfully is guilty of the crime. Your bloated victims upon the witness-stand, who undoubtedly committed perjury to screen you from the law, not only abundantly testify that you are accelerating death, but that you are inducing men to commit still greater crimes than your own. You still maintain the appearance of respectability, but how morally leprous and scrofulous you are inwardly. The ruin, poverty and idleness which you are inflicting upon this community declares, as from the housetops, that you are living in idleness and eating the bread of the orphan, watered with widows' tears; you are stealthily killing your victims, and murdering the peace and industry of the community, and thereby converting happy, industrious homes into misery, poverty and rags. Anxious wives and mothers watch and pray in tears nightly, with desolate hearts, for the coming home of your victims, whom you are luring with the wiles and smiles of the devil into midnight debauchery.

"One can have no adequate conception of a cataract until he has seen Niagara, nor of the terrible fury and grandeur of a storm at mid-ocean till he has witnessed one; so no one can know the utter degradation and total depravity to which his species can be brought until he looks upon the desolate ruin caused by your hellish traffic. You are persistent, defiant law-breakers, and shamelessly boast that, in defiance of the law and moral sense of the community, you will continue in your wicked and criminal practice. It has, therefore, now become the imperative duty of this court to let fall upon you so heavily the arm of the law that you shall either be driven from your nefarious traffic or ruined in your fortunes, or wicked prosperity. You have become a stench in the nostrils of the community, and all good men are praying that you may be speedily reformed or summarily destroyed. By the providence of God and the favor of this court, their prayers shall be speedily answered, by signal and exact justice for your crime. And, finally, let me entreat you, if you are not lost to every sentiment of humanity, to desist from your criminal vagabond traffic, and betake yourselves to some honest calling for a livelihood, that you may yet become virtuous, useful citizens, and entitled to the respect of a Christian community. If you persist in this way, your ruin is certain, and you will receive, as you deserve, the execution of mankind. You may think that the sentence of the court is harsh and unjustly severe, but the court assures you that, compared with your crimes and the desolation you have already brought upon the community, it is mild in the extreme."

### YOUNG FOLKS' COLUMN.

#### Mr. Tungken Tell.

Katie's baby brow was puckered under her golden bangs in a deep study.

"Please, Brother Tom," she said presently—"don't you know pretty near everything?"

"Yes, pretty near," said humble Tom.

"Can you tell me who Mr. Tungken Tell is?"

"Tungken Tell!" repeated Tom. "Don't know the old chap—who is he?"

"Why, he is the one who loves every one so much," answered Katie.

"I'm sure I don't know what you are talking about," said this big brother.

"Why, you know when we want to say we love any one very much, we say we love them more than 'Tungken Tell,'" explained Katie.

Tom stared for a moment at his little sister, then broke into his loud, boy's laugh, and rolled over on to the lounge with his head in a pillow in his excess of merriment.

"What is the matter?" asked Katie in a pained tone; "isn't he a good man?"

"Good enough sometimes," answered Tom, trying to smother his laugh, "and bad enough sometimes, and makes an awful lot of mischief."

"Where does he live?" persisted Katie.

Tom laughed again in a way that tired the patience of his sweet-tempered little sister.

"Oh! he lives in a little red house with a white gate to it," and away went Tom to join his twin companion, Bob Wilson, who had just called him.

These were trying days for Katie; her mamma had gone to the city and left her in charge of nurse.

"She is very good, but it is so different from your own yelations," said Katie, who still had a little trouble with her r's.

And, to-day, cook was cross, and wouldn't give her a little piece of dough to make bread with; and nurse had a dreadful face-ache, and she flew at Katie that afternoon, and told her if she made any more noise all her teeth would jump out of her mouth into the fire.

And Katie trembled as she thought how dreadful it would be to look at poor nurse without a tooth in her head, and know she had done it by being naughty.

And now Tom had laughed at her, and the world looked very dreary.

"I'm going for a long walk, all by myself," she resolved, "and maybe they'll think I'm lost and feel sorry at the way I've been 'bused.'"

No one saw the little figure, wrapped in mamma's camel-hair shawl.

"It will make me look poor and distressed," thought Katie, as she pinned it under her dimpled chin.

She ran a square, then walked on, and on.

"I'm miles and miles away," she said, with a quiver of her lips, as it was beginning to snow, and her hands were cold without the accustomed mittens.

Poor, bewildered little girl, in the fast-falling snow, and the dark coming down like a great curtain.

She looked timidly at the houses all around her; just then she caught sight of a small, red, brick house, standing back, a yard, and—

"Yes! there is a white gate, and it's just where Mr. Tungken Tell lives, and I'm going in and ask him to take me home. I feel most acquainted with him," and Katie walked bravely down the path and rang the bell. A trim, little housemaid answered it.

"Please say to Mr. Tell I want to see him," said the little snow-covered figure at the door.

"Mr. Tell doesn't live here. Such a little mite ye are to be out sich a night," said the girl, kindly.

"Who is it, Nannie?" asked a pleasant voice in the hall. Then a lady came to the door and told Nannie to take the poor child to the kitchen and give her some supper.

But when the little beggar was led into the house, and the camel-hair shawl was taken off the golden head, the lady exclaimed:

"Oh, Alfred! come see, it is a lost child!"

Then Katie buried her tearful face in the kind arms open to her. But I need not tell you how she was petted and undressed and put into a soft flannel gown, and held in the kind lady's arms before the fire, nor how they all laughed—"Just like Tom"—when she told them why she thought Mr. Tungken Tell lived there.

And word was sent to the station that a lost child was at 23 Langley avenue.

And one hour later Mr. Somers burst into the cozy parlor and held his darling to his thankful heart.

And a muffled sound was heard in the hall, and it was poor Tom, with his hat pulled down over his eyes, and "crying like a baby," he said, as he kissed his dear little sister over and over again.

And father, brother, sister truly felt they loved one another more than tongue can tell.

Mary L. Pratt.

RENEWING ITS VIGOR.—Vesuvius furnishes an example of a volcano whose activity has been increasing instead of diminishing during the last 2000 years. At the beginning of the Christian era the mountain's fires seemed to have been long burned out forever, and the eruption which buried Pompeii and Herculaneum in the year 79 was the first known. The next outbreak was not until 1036, and thereafter several came at intervals of a century or more, but since 1631 the eruptions have been very numerous.

### GOOD HEALTH.

#### A Word to the Wise.

[Written for the RURAL PRESS by JEWELL.]

For the foolish will not heed my words; they are wise in their own estimation already. This is the season when sickness prevails, because the people do not take the precaution to keep warm. A sudden change in the temperature demands a change in the clothing also, so as to keep up a normal action of the skin. Fires should be kept also in sitting-rooms, and no member of the family be allowed to sit with cold feet or to go to bed chilled. If the pores of the skin are allowed to become closed, making "goose flesh," as the old saying is, there is likely to be a determination of blood to the lungs or to the bowels, causing an attack of pneumonia or bilious fever, or other sickness, which could have been avoided by care and warmth. Then, too, when a cold snap comes, after weeks of warm weather, and all are used to the breathing of pure, fresh air, if no fires are started to warm the living-room every door and window is of necessity closed, and all are obliged to breathe confined, unoxygenized air, thus vitiating the blood and so weakening the lung tissues, making them less able to resist disease germs that are floating in the atmosphere ready to be absorbed by just such organizations as described. Mothers should look to their young children, especially those liable to throat-ailings and croup. See that they are warmly clad and go to bed with warm feet, and are happy, not cross or peevish, which is a sign of ailing. If they are going to school, see that their lunches are composed of solid, wholesome food; cake and pie are bad food to study on. Sweet bread and butter, with a taste of jam or jelly, eggs, or some cold meat or oysters for a change, are all easily digested, greatly enjoyed and easily prepared. Adding an apple or pear or grapes to the bill of fare gives the meal a hearty relish if it is cold, supplying good brain food and requiring but a simple supper of bread and milk perhaps at early bedtime. Children should never be allowed to eat later than five or half-past at night, and always a light meal. Any parent or guardian can test the truth of this by trying to sleep with a child after it has been eating a late, hearty supper.

It is the duty of every teacher, school trustee or parent to see that there is a stove in the school-room, ready for a fire on cold days. All danger of sickness is thus averted, by keeping the room agreeably warm, and having the door or windows open. No child old enough to go to school is too young to understand a few of the simple laws of their being necessary for health, and all teachers, parents or guardians are culpable if they are not thus instructed.

Indeed it is a grave mistake of our State Normal schools that there is no "Chair of Hygiene." What wonder that so many of the brightest and best of the classes receive their closing honors and diplomas, either physical wrecks of their former selves or else go home to die of diseases the seeds of which were most surely implanted in their systems during the years they were so earnestly striving for the pearl of great price, an education, and losing their life in its attainment?

Is this necessary, think you? Parents, are you willing to sacrifice your girls and boys on the altar of an education? Do you not believe God's physical laws equally as important and binding upon us as His moral laws? Who is to be the one to demand of the faculty that the students intrusted to their care be instructed in all that pertains to their physical welfare?

Physiology does not teach it, anatomy does not teach these laws. Hygiene alone, practically studied and obeyed, will reach these living questions.

Los Gatos.

POISONOUS PLANTS.—It is very important for people to know which plants are poisonous and dangerous. One of the most popular groups of plants is the buttercup, but many of these are sufficiently acrid to produce blisters when applied to the skin. The poisonous sumac is probably the most dangerous of all our native plants which poison through contact. Avoid all sumac which has not red berries, and you will be safe from poison. The common horse-chestnut is used in Europe as food for horses and cattle, and yet the small horse-chestnut of the South, "Buckeye," is claimed to be poisonous. The laburnum or gold chain, a common garden plant, has roots that taste like licorice and which thus tempt children to chew it. It is, however, a dangerous poison to eat. Water hemlock, fox-glove or digitalis, aconite, Jamestown weed or stramonium, common poke weed, skunk cabbage, poison ivy, and various other common weeds or shrubs, including some mushrooms, are rankly poisonous and should be avoided.

A PROFITABLE DENTAL PRACTICE.—The enormous wealth of the famous Parisian dentist Evans—not less than \$10,000,000 he is said to be worth—has been acquired not so much in the course of his regular practice as from the huge fees given him by distinguished personages in various parts of Europe who request his services from time to time. Thus he is always flying about from capital to capital, pulling a tooth from one crowned head and filling a "cavity" in another.

### DOMESTIC ECONOMY.

#### "Death in the Pot."

EDITORS PRESS:—Kate Field has just issued the following bulletin: "Let our women leave off talking nonsense and learn to cook." It is about time the despised art of cookery had its turn at glorification. What's the use of aesthetics in the parlor when dyspepsia rules the dining-room? The Greeks we so much admire were athletes before they were aesthetes, and don't any of you ladies forget it!

A man or woman with a sickly stomach is going to be a poor, miserable, unserviceable creature just so long as the stomach's condition is unchanged. The old feminine satire, that "a man's heart is reached through his stomach," is, after all, no such terribly biting innuendo. What enters the stomach debilitates or nourishes not only the heart, but the brain.

#### Food Makes or Mars the Man.

The science of feeding (if you want a long-tailed word, call it "gastronomy") is the foundation of all science, biological or otherwise; and, as some one remarked in your columns a week or two ago about sanitation in general, why don't the doctors preach thereupon? Fact is, they are not paid to! They live on people's follies! Educate humanity aright and the doctor's occupation is gone! Parents who are so solicitous that their offspring should be trained in all the 'ologies forget to apply the most obvious and needful 'ology to their own children's stomachs, and permit their ruination by candy. Fetid breath, rotten teeth and lifelong dyspepsia be my witnesses! Now I'll allow the doctors—the really philanthropic doctors—to enlarge on my text in your ensuing numbers.

EDWARD BERWICK.

WASHING FLANNELS.—If flannels are not properly washed they very soon lose their delicate softness and become so shrunken that they are almost useless. There are so many methods given for washing flannels that one might well become puzzled in trying to decide which to follow. After trying the various ways recommended, I have now fixed upon one which is quite satisfactory to myself. This is my way: Have plenty of clean, soft water, hot, but not scalding; make a strong suds with nice bar soap. Put in flannels, let them soak a few minutes; then begin with the cleaner, and wash and squeeze with the hands. Do not put soap on the garments, or rub on a board, as this fuls them. If, after washing in the first water, the flannels are not clean, make another suds and wash as before. Then rinse well in clean water and wring very dry. It is desirable to dry flannels very quickly, as it is the long dampness that shrinks them. To hasten the drying, lay each article separately in a strong white towel and wring again. By this means they become nearly dry. While damp they should be ironed on the wrong side until quite dry. If flannels have become yellow and stiff by bad usage, dissolve a little borax in the rinsing water, but never use blueing, as this makes them harsh and unsightly. After washing knit articles, such as shawls, clouds, babies' shirts and socks, spread a folded sheet on the table and arrange the things on it in the shape they are desired to be when dry. If served in this way, they will neither stretch nor shrink. Choose a good drying day for washing flannels which must be hung out of doors, and be careful to bring them in when still a little damp, and iron immediately until they are quite dry.

EGG BISCUITS.—One quart of prepared flour, a tablespoonful of lard and twice as much butter, a teaspoonful of salt, two cups of milk, the yolks of two eggs, beaten light. Salt the flour and sift it twice in a bowl, rub in the shortening thoroughly and lightly; mix yolks and milk together, and pour into a hole in the flour; work into paste with as little handling as possible; roll into a sheet half an inch thick; cut into round cakes and bake in a floured pan. Eat hot.

CORN FRITTERS.—Cut the corn from the cob and mince with a keen chopper, bruising as little as may be; allow two eggs to a heaping cupful of the minced grains, a half-cupful of milk, a tablespoonful of prepared flour, a salt-spoonful of salt and a teaspoonful of melted butter. Beat the eggs light, add the milk, butter, salt, finally the flour. Bake on a griddle and send in very hot.

CELERY SAUCE FOR TURKEY.—Boil a head of celery until quite tender, then put it through a sieve, put the yolk of an egg in a basin, and beat it well with the strained juice of a lemon, add the celery, and a couple of spoonfuls of liquor in which the turkey was boiled; salt and pepper to taste.

QUINCE MARMALADE.—Take the quinces that you have boiled for jelly and mash them with a spoon; to a pound of quinces take a pound of sugar; boil them together until they are well softened; then strain through a coarse sieve and put in a small jar.

LUNCH CAKES.—One cup of green corn pulp, one tablespoonful of sugar and enough fine oatmeal to make the mixture sufficiently stiff to drop it in spoonfuls on the pan. Bake for 15 minutes and serve cold.

## The Week.

Since our last issue there has been a general rain, the first which has brought an appreciable amount of water over a wide area of the State. In some parts the rain of Friday and Saturday last amounted to a thorough drenching, and is reported by residents as exceptionally wet and heavy. The north end of the State was, as usual, best soaked, and the counties just north of the bay had a good share. On the east shore of the bay loose soil was moistened to a depth of four inches. We have not heard of the effect upon the portion of the grape crop still out. There was rain enough even in some of the raisin districts to show raisin driers that their safety requires some artificial arrangements for sheltering and drying to supplement the deeds the sun does for them. So far as we have heard there was not much grain out in the wet. The rather short crop has enabled growers generally to sell or get to warehouses with their product. Since the rain there have been lurking northers, though not of great force or small temperature. We have had a clear air, bright sunshine and dustless roads, which usually combine to make the autumn the most delightful season out of doors in California—if, indeed, there be any

best season where the whole rounded year is so delightful.

Political matters are becoming more and more complex. Fortunately there is but one whole week remaining before election. The style of warfare being waged is demoralizing, and the return of quiet and a milder disposition as to one another's political throats will be very acceptable.

## Take Care of the Senses.

It may seem quite commonplace to remark that the senses are the special avenues of communication between the mind and the outside world. And yet the importance of these organs is strangely overlooked. Their constant misuse proves that their full value is not appreciated. The windows of the house are kept clean and transparent, but the windows of the soul are often dim and soiled. Every one knows that the sense of touch is dulled by misuse, but it is diffused over so wide a surface that few are much inconvenienced thereby. Only those engaged in some special walk of life—physicians, for instance—need extreme delicacy of touch. But the senses of sight and hearing demand special care. They are not only more important than others but are more easily deranged, as they depend on more complicated mechanism. That this care is not given is proved by statistics. A very large proportion of mankind have more or less defective hearing, a still larger and constantly-increasing proportion possess eyesight below the normal standard. And yet it has been ascertained that a majority of this class came into the world with the organs of vision and hearing perfect. Some have lost the acuteness of these delicate organs by disease, some by accident, but the larger part from misuse and neglect. The alarming increase of myopia among school-children and the prevalence of astigmatism have caused some attention to be given of late years by teachers and school boards to the eyes of the young. Schoolrooms are now arranged so as to give each child as good a light as possible, and some endeavor is being made to have the rays of light come from such a direction that it may fall upon the work instead of the eye. Still there exist, even in this State, many schools in which no attention is paid to what political or conservative school boards and teachers regard as a trivial matter. But there is a movement in the right direction, and it is gaining so much force that we may hope it will continue, and in succeeding generations spectacled boys and girls will be less and the number greatly increased that can perceive the beauty of a landscape or picture.

Our attention is called to this point from recently seeing a statement in a Philadelphia paper, that out of 1874 applicants for a position on the police force in that city the last two years, 420 failed to reach the normal standard of vision. As no blind or one-eyed persons would apply, and as men consciously dim-sighted would not be likely to offer their services, the average of defective sights must be greater than these figures indicate. While the number of deaf-mutes, persons born unable to hear sounds, is comparatively small, the number of persons who are more or less hard of hearing is very large. A little observation will verify this statement. Notice how often you have to repeat your words to one who is listening to you. Ask the man or woman sitting next to you in the theater what the audience is laughing at and the chances are he does not know. It is only very recently that attention has been called to the hearing of children. In some French schools it has been shown that many children regarded as stupid were really hard of hearing. They seemed stupid for the simple reason they did not hear fully or correctly the explanations of the teacher. A similar examination among our own schools would most likely develop some cases of the same kind. It might be found that some of our stupid boys were dull through no fault of their brains, but from defective hearing. Then many children and adults are a little hard of hearing without being conscious of the fact, and the consequence is that many an admonition or piece of information has been given and incorrectly heard, when both speaker and hearer believed it was heard and rightly apprehended.

The RURAL commends this subject to the attention of our schoolteachers, and any observations they make we would be glad to learn.

## The Advance of Science.

Sir John Lubbock, in an address before the British Association for the Advancement of Science, not long ago, attempted to show how discoveries in physical science are gradually changing the whole aspect of civilized society. The subject is a profoundly interesting one, and would require a volume instead of a newspaper article. Still we are assured it will be agreeable to our readers to glance at a few salient points.

In no field of research has science made greater progress than in that of biology. Fifty years ago nothing was more surely believed than the immutability of species. The hypothesis of Lamarck, which traced all species, including man, to creatures of lower organization, was regarded as little better than a craze which no one having respect for his reputation would heed. But the heaven was at work, and since the publication of Darwin's "Origin of Species" a complete change has taken place, and now few having any claim to be considered authorities venture to uphold the ancient doctrine of separate creation and immutability of species. "Natural selection" and the "struggle for existence" are phrases which have become as familiar as household words, and even those who hesitate to accept the evolutionary theory as promulgated by Darwin and his followers do not hesitate to acknowledge that it is more in harmony with ascertained facts than the opinions regarding the permanence of species which it has so rapidly displaced. There can be little doubt that the progress of the science of embryology and the results of careful investigations made into the relations between plants and insects have contributed greatly to recommend the views of Darwin to scientific experts. Another branch in which great strides have been made is that which deals with the ancient condition of man, not so much as to the period when he first appeared on the earth as to his antiquity and material condition in prehistoric times.

Geology as a science has only taken shape within recent times. Many can remember when the received opinion was that the phenomena of geology could only be explained by violent convulsions and a higher intensity of energy, culminating in frequent catastrophes. To Sir Charles Lyell belongs the honor of convincing geologists that the forces now in silent operation are powerful enough to produce those results which were at first attributed to violent interferences with the established order of things. In the meantime we have learned much of the wonderful part played by glacial action in forming of mountains and valleys and deposit of rocks on the surface of the globe.

The advance made in the practical sciences within recent times strikes the popular fancy more readily than the results of purely theoretical investigation. It is not every one who can appreciate the wonderful extra-telluric discoveries that have been made by means of the spectroscope, or estimate at its proper value what is meant by the liquefaction of oxygen and the solidification of hydrogen; but all can form some idea of the advantages which have been derived from the practical application of science. Recent investigations have shown that many old principles have a far wider application than was suspected by those who discovered them. For instance, the formula of the law of gravitation, it is now known, applies to electricity, and probably to other modes of force. It is by the discovery of a vast number of new combinations and applications of force that the science of this century will be remembered. The invention of dynamite and the other nitrogen compounds as a destructive force promises to play an important part in the history of civilization. Chemistry has yielded a large number of compounds to prevent disease and alleviate pain, and for the use of the arts. In connection with the sciences of heat, light and sound, much has become known, the application of which has greatly increased the comforts and pleasures of life. It is to electricity, however, that we owe the largest number of useful inventions. It is the marvel of the age. To it we are indebted for telegraphic communication with Europe and the whole world, that 50 years ago would have been laughed at as an idle dream, and the deprivation of which to-day would be regarded as an irreparable calamity.

The telephone is a thing of yesterday, but

has already become an inseparable part of the furniture of every business house and office. The microphone and the phonograph possess amazing possibilities that as yet sleep in prophecy. In the appliances of electricity to purposes of illumination, science has achieved a startling triumph, and the electric light will certainly be the light of the future. And yet we may confidently look for greater things. As Sir John Lubbock has said, "By the electric transmission of power we may hope some day to utilize at a distance such natural sources of energy as the Falls of Niagara, and to work our cranes, lifts and machinery of every description by means of sources of power arranged at convenient centers."

## Alien Land-Owners.

There was a deal of talk last winter in Congress concerning the forfeiture of certain unearned railroad lands, but nothing of any moment came of it. Some time since the Secretary of the Interior Department decided that no land-grant road had earned its grant until it had filed the completed plat of its whole road and the land donated. Under this ruling it is reported that the general land office is preparing a case against the Northern Pacific road. However this may be, the question of alien land ownership has come to the front, and is just now exciting considerable attention. It is not a new question. For a dozen years or more observing people have been talking about it. The great cattle industry came into existence soon after the close of the civil war, and furnished a fine opportunity for profitable investment. Enterprising foreigners were not slow in taking advantage of the opportunity, and have purchased vast tracts of land at extremely low prices. According to a report of a Congressional committee appointed to investigate the matter, it appears that about 20,000,000 acres of land are now owned by aliens—an area more than equal to one-third of the State of Kansas. It is alleged that one-eighth of Texas and one-sixth of Colorado are owned by aliens. Most of the large tracts of alien lands lie in that part of the domain we acquired from Mexico, and were originally Spanish or Mexican grants. Change of national allegiance does not affect vested rights. Hence all the lands owned by private citizens before the treaty of Guadalupe Hidalgo transferred them to the United States never became public lands. The government acquired no proprietary right to them, and they could be sold by their owners. In this way was laid the foundation of that great monopoly of land that has seriously crippled the prosperity of the country. It is a serious problem, and its solution is not apparent.

The chief objection to alien ownership of lands is that a foreign system of management is implanted in our midst—something not in harmony with our political institutions and not in sympathy with our habits and ways. This is a very large country we are in; it has a North where the snow never melts and a South where the snow never falls; lakes into which a European Kingdom might be flung and drowned; but, large as it is, there is not room enough for the transplanting of foreign customs. Large land holdings are objectionable in the hands of citizens, but in that case we have no fear of anything not American being planted here; but when men owing allegiance to other governments come into possession of large bodies of land and begin to lay the foundation of a system of foreign landlordism, the matter becomes far more serious. The majority of these alien owners do not live on the lands and have no intention of ever becoming citizens of the United States. Many of them do not even admire the system of government that protects their property. It certainly is not desirable that any considerable tracts of land should pass into the hands of persons more interested in the welfare of another country than the one that gives them the hospitality of a home and shelter—that owe allegiance abroad and never care to participate in advancing the glory and prosperity of our country.

**SUFFERERS FROM EARTHQUAKES IN SOUTH CAROLINA.**—We have received from Fayette, Miss., a printed circular respecting measures for the relief of sufferers by the late Southern earthquakes. We presume it is genuine; yet, in the absence of anything like official verification, feel obliged to withhold it until we can make further inquiries.

### The State Schoolbooks.

A part of the new series of schoolbooks published by the State and furnished to public-school pupils at the cost of publication are now ready for distribution. The first order for these books has been sent in by the trustees of the school at Los Gatos, and it may be said that the enterprise provided for by the Legislature of 1885 is now bearing its first fruits. Such being the fact, we deem it timely to present the subject to our readers.

The legislative act (approved Feb. 26, 1885,) stated how the books shall be prepared and sold by the State. It also appropriated \$170,000 to carry out the work. Of this, \$150,000 was to equip the State Printing Office with suitable machinery and printing material and to pay the wages of those employed in this work; the balance (\$20,000) was devoted to the literary work of compiling the books, by persons employed by the State Board of Education.

The law requires the State Board of Education to compile, or cause to be compiled, (1) a series of three Readers, (2) one Speller, (3) one Arithmetic, (4) one Grammar, (5) one History of the United States, (6) one Geography.

The Board very wisely decided to proceed first with the Readers and Speller, the money expended for these books by the patrons of schools being more than double that expended for any other series, and nearly equal to that expended for all the others combined. The largest saving, by State publication, is, therefore, in this series.

The series of Readers is to comprise three, denominated first, second and third, and the three combined contain 928 pages. The First Reader has 128 pages, and we will give our youngest readers a sight of the book which will soon be in their hands, by using a few sample pages in our Young Folks' Column next week. The Second Reader is not quite finished yet. The Third Reader, of which we give sample pages herewith, prescribed by the Legislature as the highest book of the series, is necessarily graded to occupy about the field of the Fourth and Fifth Readers in series heretofore in use. The reading matter of this book embraces selections from more than 100 standard authors, being such selections as experience has shown to be best adapted for use in school Readers. The limited number of specimen pages which can be given here cannot properly represent the variety and quality of these selections. Their character may be inferred from the names of some of the authors. Representing writers of the sixteenth century, we have Shakespeare; from the seventeenth century, Milton and Addison; from the eighteenth, Pitt, Dr. Johnson, Gray, Goldsmith, Beattie, Barbauld, Grattan, Aikin and others; from the nineteenth, Scott, Hogg, Webster, Southey, Irving, Campbell, Story, De Quincey, Poe, Pierpont, Drake, Sprague, Mitford, Byron, Halleck, Sigourney, Hemans, Everett, Bryant, Holland, Mitchell, Dickens, Tennyson, and some 50 more of the most distinguished literary names in England and America.

We select sample pages to reproduce in our columns not with a view to show the quality of the selections, but to display some of the new features embodied in the work. Page 14 will be seen to open a treatise on elocution, and page 59 introduces drawing as an aid to description by the pupil. Other pages, if we had

of the Readers, the selections for which were made by H. C. Kinne, of San Francisco, and donated to the Board. The preparation of a Speller was also assigned to Superintendent

### CALIFORNIA SERIES.

## THIRD READER.

### 1. AMERICA—NATIONAL HYMN.

S. F. SMITH—1808—\* \*. MASSACHUSETTS.

#### PREPARATORY EXERCISES.

[See opposite page.]

Questions. What do you know of this author? Was he a lawyer? A clergyman? [See Cyclopaedia.] Can you ascertain who wrote the following lines in relation to him?

"And there's a nice youngster of excellent pith,  
Fate tried to conceal him by naming him Smith,  
But he shouted a song for the brave and the free,  
Just read on his medal, 'My country—of thee.'"

Where is Massachusetts? V. 1. Who were the pilgrims? V. 2. "Templed hills"—who wrote the line: "The groves were God's first Temples?"

Words often Mispronounced. Răpt ūre (răpt'yūr); sŏng; ěv'ēr y.

\*Articulation Drill. (2) Sī'lence; (4) freedom's | holy; rocks | and | rills; freedom's | sŏng; templed | hills.

For Definition. Rapture; templed hills.

1. My country! 'tis of thee,  
Sweet land of liberty,  
Of thee I sing;  
Land where my fathers died,  
Land of the pilgrims' pride;  
From every mountain side,  
Let freedom ring.

2. My native country! thee,  
Land of the noble free,  
Thy name I love:

\*It will be noticed that the letters likely to be dropped, or incorrectly sounded, are printed in a distinctive type. Care should be taken that, while they are adequately sounded, they be not made prominent. Unless this is done the object of these drills will be defeated. The teacher should be vigilant lest, while leading the child to avoid the fault of a careless articulation, he force him into a labored preciseness in the utterance of obscure sounds.

### CALIFORNIA SERIES.

### ELEMENTS OF ELOCUTION.

#### CHAPTER I.—ARTICULATION.

Articulation is the act of uttering the elementary sounds of the language in words and syllables.

Good articulation is the distinct utterance of these sounds.

Perfect articulation may be described as the delivery of words "from the lips as beautiful coins are issued from the mint, deeply and accurately impressed, neatly struck by the proper organs, distinct, sharp, perfectly finished."

Untiring attention to this element of good reading is the price of perfect articulation, but the pupil is urged to be content with nothing less.

Imperfect articulation arises, chiefly, from errors, or carelessness in the following particulars:

#### 1. Omitting the vowel sound in an unaccented syllable; as,

'nd for and;  
wel't'ring for wel't'er-ing;  
ev'ry for ev'er-y;  
Sat'ur-d'y for Sat'ur-day;  
no't'cing for no't'ic-ing;  
re-mark'ble for re-mark'a-ble;

ev'dently for ev't-dent-ly;  
clam'rous for clam'or-ous;  
mur'm'ring for mur'mur-ing;  
miz'rable for mis'er-a-ble;  
neigh'b'ring for neigh'bor-ing;  
con'sid'rable for con-sid'er-a-ble.

These sounds are sometimes called *obscure*. They should not be given so fully as the vocals in accented syllables, but care should be taken that they be not dropped.

#### 2. Giving an unaccented vowel the sound of another vowel, improperly; as,

pock'it for pock'et;  
ea'glits for ea'glets;  
work'mūn for work'men;  
har'vist for har'vest;  
ear'nist for ear'nest;

wūz for was;  
si'lunt for si'lent;  
cur'runt for cur'rent;  
de-pend'ūnce for de-pend'ence;  
jack'its for jackets.

### SPECIMEN PAGES OF THIRD READER JUST PUBLISHED BY THE STATE OF CALIFORNIA.

space for them, would show excellent biographical sketches of authors in connection with the selections from their writings, etc. The Third Reader contains 512 pages.

At a meeting of the State Board of Education, Oct. 1, 1885, there was assigned to State Superintendent W. T. Welcker the preparation

of the Readers, the selections for which were made by H. C. Kinne, of San Francisco, and donated to the Board. The preparation of a Speller was also assigned to Superintendent

the series; W. L. Willis was employed by Prof. Welcker upon the compilation of the Speller; and Frank Morton is employed by Prof. Moore in the compilation of the Arithmetic.

The books now complete are the First and Third Readers, to which we have alluded, and the Speller, a book of 200 pages, of which we will give specimen pages at another time. The other books of the series are in various stages of preparation, some almost ready and others will occupy some time yet. Of the Third Reader, an edition of 25,000 was printed.

The law provides for the sale of the new schoolbooks in this way: The county superintendents make requisition upon the State Superintendent for such books as the schools in their district require, and the State Superintendent shall make requisition upon the Superintendent of State Printing, who shall ship the books to their destination. The State will not do a credit business, and orders the money to be sent with the requisition in every case. For this purpose it is necessary that the county superintendent shall be in funds, and we notice that Superintendent Moulder, of this city, has called for the laying by of \$10,000, subject to his order, when he wishes to make a purchase from the State. There is other information on the subject of the State schoolbooks which we will give, in connection with the sample pages of the Speller, at another time.

THE CAUSES OF HARD TIMES.—Col. Carroll D. Wright, in his last report on labor, says that no less than 134 separate and distinct causes have been assigned for the present depression in business and "hard times." Among them are given the following: Causes which induce money-lenders to refuse loans, change of administration, failure of banks, aggressiveness of capital, attitude of capital versus labor, timidity of capital, competition, want of confidence, corners, creation and monopoly of large corporations, the credit system, decrease of gold, dishonest currency, decrease of home demand, presidential elections, investments in unproductive enterprises,

want of confidence in the government, enforced idleness, immorality, importation of what should be manufactured at home, erroneous industrial system, high rates of interest charged the producing classes, attitude of labor versus capital, foreign contract labor, prison labor, surplus of labor, extravagant living, labor-saving machinery, dealing in margins, want of foreign markets, increase of manufactures, overproduction, importation of paupers, inflation of prices, reduction of prices to cost of production, decreased building of railroads, overbuilding of railroads, too much capital invested in railroads, higher rents, strikes, high protective tariff, low rate of tariff, want of proper tariff protection, enormous taxation, unequal taxation, the overdoing of trading, the liquor traffic, underconsumption, reduction of wages, failure of the wage system, war, consolidation of wealth, etc. These ought to be

enough to satisfy the inquiries of every one, and are sufficient to prove that a Bureau of Industry, Statistics, etc., is the best authority in such matters.

An ocean steamer left Boston, the other day, for Liverpool with 10,000 barrels of apples.

### 1. As seen, and told in writing, by a second grade pupil.

I see, on a hill, a farm house, a little way back, a dairy house. A mill is just in front, and near by, on the left, a river, crossed by a bridge, flows into a pond, beside which is a mill. Over a rock above the bridge falls a cataract.

### 2. As seen, and told in diagram, by a first grade pupil.

### 3. As seen, and told in picture, by a first grade pupil.

## FRUIT MARKETING.

### California Fruit at the East.—No. 4.

How Mediterranean and Florida Fruits are Sold—A Plan Proposed.

(Special Correspondence RURAL PRESS.)

"How do you explain the present unsatisfactory condition of the Eastern market for California fruits, and what, in your judgment, is the remedy?" This question was addressed by your correspondent while in Chicago not long ago to Mr. Hixson, an old and experienced California commission merchant. He replied by saying: "The present unsatisfactory condition is brought about by California fruits being in the hands of too few. This idea of trying to make a monopoly of California fruits won't do, and the sooner the growers find it out the better it will be for their interests. The remedy lies in free trade. If you can get the railroad companies to accept fruit shipments of any size, so that anybody West may ship any quantity to anybody East, the difficulty will be solved. You want to get your fruits into the greatest possible number of hands and channels, and until you do that your market will be choked and limited."

The same question being asked Mr. Washington Porter, of the firm of Porter Brothers' Company, agents for the California Fruit Union, his answer was as follows: "The present unsatisfactory conditions are the result of California fruits being placed in too many hands. When the Fruit Union was organized it was done with the idea of concentrating all California fruits into one hand, so that they could be evenly distributed through the country as you would distribute butter over bread, and so that the fruit being brought into competition with itself might be prevented. Unforeseen circumstances have, however, arisen since the union was organized that, for the present, destroyed this idea of concentration, and hence the unsatisfactory results. Until Eastern shipments of California fruits can be placed in the hands of one house who will have supreme control, there is a likelihood of the present conditions continuing to exist. In proportion as the fruit is sent to more houses, so in proportion is the competition likely to grow keener and keener, and, of course, always at the expense of the shipper or grower. There are also other reasons for the present unfavorable conditions. Much inferior fruit has been shipped that has arrived in bad shape, and that realized but little more than freight charges. Beside, the crop of native fruits has been very large and has come into the market earlier than usual, and was strong competition to California fruits. It is a mistake on the part of California fruit-growers to think they have an unlimited market in the East for any and all fruits which they may send here." Continuing his remarks, Mr. Porter said: "My judgment is that the Eastern market for California fruits is limited, and anything that is sent here beyond that limit must depress prices and bring unfavorable returns. The best evidence of my sincerity in the belief that the Eastern market for California fruits is limited is in the fact that while I have made very large investments in Chicago real estate I have made none in California fruit lands. Had I faith in the idea that the East can consume all the fruit California can raise, you may rest assured that I would long ago have made liberal investments in California fruit lands."

Mr. Dudley, of the firm of Dudley, Clapp & Doe, who were appointed by Porter Brothers' Company, of Chicago, as their agents for New York City, was asked by your correspondent how much California fruit the New York market could stand. Here is his reply: "This is a peculiar and deceptive market. It would appear that a city the size and magnitude of New York could use unlimited quantities of stuff. But this is not so, at least so far as my experience with California fruit would show. We find that there is an exceedingly limited demand for California fruits, and the moment the supply exceeds this limited demand, down go your prices."

"What have been the average weekly receipts of California fruits in the city of New York?"

"Not over a carload a week."

"Then I am to understand that in your judgment the city of New York and vicinity cannot use more than a carload of California fruits a week?"

"No, sir; not to advantage."

"But supposing that California fruits could be laid down in the city of New York at a cost to the retailer not to exceed 10 cents a pound, enabling him to sell them, with a fair profit, at 15 cents a pound, would not the consumption be very largely increased?"

"I don't think the fruit can be brought here so as to retail at 15 cents a pound with a profit to all concerned. You must remember that thus far we have not been able to bring carloads of California fruit to New York in good condition. There has always been a large percentage of loss by decay while in transit, and, therefore, what good fruit reaches New York must bring a high price to compensate for that which is lost."

Mr. Merritt, President of the Merritt Fruit Company, of New York City, who are among the largest fruit commission houses in the

trade, said: "There is an unlimited market here for first-class California fruits. Thus far the amount sent us is, but a drop in the ocean. There is no reason in the world why carloads of fruit, and if need be trainloads, cannot be sent direct from California to the city of New York and sold at prices that must insure satisfactory returns to the grower. This idea of one carload of California fruit a week being as much as New York City can stand is absurd. Why, this market has used as many as 500 carloads of peaches in one week, as well as millions of boxes and vast shiploads of Mediterranean fruits and grapes; and to think that a market of this sort would stagger under more than one carload of California fruit a week, is laughable. The difficulty thus far has been that the California fruit has been concentrated into the hands of a few whose interest it is to keep the market bare and to sell small quantities at high prices, instead of large quantities at moderate prices. You cannot hope to market the vast fruit yields of California in that way any more than you can hope to force an ocean of water through a one-inch pipe. Once get your fruits down to a price within the reach of the thousands and you need never fear of overloading a market like that of the city of New York."

A New York Retailer.

"How much a pound are those California grapes?" asked your correspondent of a Broadway retail dealer in fine fruits.

"Thirty cents a pound, or \$1.25 for that five-pound basket."

"Is not that rather high?"

"No; we have sold them as high as 40 cents a pound."

"Do you find the demand for California fruits on the increase?"

"We can sell all the good California grapes that we can get. The trouble has been to get a sufficient supply. But why do you ask these questions?"

"Because I am a California fruit-grower, and am deeply interested in the future of California fruits in the East."

"Well, you just send plenty of good fruit, and we will find no trouble in disposing of it."

"You are in an excellent location and seem to be doing a thriving business; now, about how many crates of California grapes do you sell, on an average, a week?"

"About 20 crates a week, though I could use more if I could get them as needed."

"What if they could be brought to this market so that you could retail them, with a fair profit, at 15 cents a pound, how many more could you sell?"

"Not very many. While it is a good plan to send plenty of first-class fruit to this market, I don't think it would be well to send so much of it as to force the retail price down to anything like 15 cents a pound."

"Why not?"

"Because, if you send too much of it, it will get into the hands of all the fruit-stands and fruit-hucksters and will become common and cheapened, and will lose caste among the finer trade who buy it now at a fancy price because it is kept only in first-class places."

"But, so far as the grower is concerned, don't you think it is for his interest that the fruit shall become, as you choose to call it, 'common'? Will not ten pounds be eaten where one is now consumed?"

"I think not. My opinion is that it is better for you to send as much as the market can use at a high price and to stop right there. It seems to me better for the grower to get a good, round sum for a reasonable quantity than a very low price for a great quantity."

A Brooklyn Retailer.

"Do you find much demand for California grapes?" said the writer to one of the largest retail and wholesale fruit dealers in the city of Brooklyn.

"Yes; the demand this season has been fair, and I might say on the increase."

"Have you sold very many this season?"

"About 34 crates."

"I should judge, then, that you are the largest dealer in California fruits in the city of Brooklyn, because I have canvassed the city and have found but two others who have handled any California fruits this year, and between them they have only used 16 crates this season—making, together with yours, a consumption of 50 crates for the entire city of Brooklyn. Now, why is it that a city of this magnitude cannot use more California grapes?"

"First, because we have not always been able to get them; secondly, because at the price we must charge the demand is limited."

"What do you get for good California grapes?"

"Twenty-five to thirty cents a pound; sometimes we sell a five-pound basket as low as one dollar."

"Well, do you call that a high price?"

"No, when the superiority of the California grape is considered; but you know the people of Brooklyn are not, as a rule, extravagant, and will not pay fancy prices—more especially if they can buy good native fruits at from five to ten cents per pound."

"Do you sell many Mediterranean or Malaga grapes?"

"Yes, a great many, more especially during the holiday season, when they are in great demand."

"At what price do the Mediterranean grapes retail?"

"At about 15 cents a pound, although we sometimes get as high as 20 and 25."

"If California grapes were sold at the same price as the Mediterranean or Malaga grapes, which would be in greater demand?"

"California grapes, by all means, as they are better, sweeter and much handsomer in appearance."

"If I could furnish you first-class California grapes at 10 cents a pound, could you afford to sell them at retail for 15 cents a pound?"

"Yes, because I do a popular trade, and with the volume of business I do here I should consider five cents a pound a very fair profit."

"Now, if you could retail them at 15 cents a pound, how many could you use?"

"I cannot answer that question with figures. I can only say that I could sell a great many—many more than I have thus far sold."

"Do you think that at that price the city of Brooklyn, as a whole, could use on an average half a carload a day?"

"I should consider that a very low estimate. I have no doubt the city would consume a carload a day, and possibly more."

A Boston Retailer.

"What is your price for California grapes?" The question this time was asked of a prominent Boston retailer.

"Thirty-five cents a pound."

"Have you been able to get all the California grapes that you could use this season?"

"No, not always. To-day, for instance, there are none to be had in the market, nor were there any here yesterday, though I have orders on my book from several customers."

"Have they been arriving here in good condition?"

"As a rule, yes, though I have known of some lots coming here in very bad condition, and were sold as low as \$1 a crate."

"I am informed that you are the principal dealer in California fruits, and use more than any other house in town."

"Yes, I have made a specialty of it and have worked up a nice trade."

"Do you keep posted on the receipts of California fruits in Boston?"

"Yes, I don't think any man in this city is better posted upon that subject than myself."

"How many grapes, so far as you know, have been received in Boston per week?"

"I should say about half a carload."

"Can you explain why it is that the city of Chicago consumes two and a half to three carloads a day and Boston only half a carload a week?"

"It must be a matter of price. I presume California grapes in Chicago are sold very much cheaper than here."

"Yes; they have been retailed there at 10 cents a pound this season."

"Well, there lies the explanation. Supposing grapes were retailed in Boston at 15 cents a pound, what then?"

"That, of course, would make a wonderful difference; however, I would rather not see that condition of affairs."

"Why not?"

"Because, doing a first-class business, I should prefer to handle limited quantities at a large profit rather than large quantities at a small profit. Beyond that, I am free to admit that if the retail price was reduced to 12½ or 15 cents a pound, the consumption would be very much greater than now."

The Fruit not Popularized.

Mr. Snow, of Snow & Co., Boston, said: "I was present at a meeting of the fruit-growers, held in Sacramento, last winter, and from the discussions that then took place I inferred it was the purpose of the California fruit-growers to popularize their fruits in the East and to distribute them into the greatest number of hands possible. Thus far this has certainly not been done. The Chicago agents of the California Fruit Union have in my judgment failed to carry out that part of the fruit-growers' program, at least so far as Boston is concerned. California fruits are no nearer being popularized this season in Boston than they ever were, and never will be unless radical changes are made in the policy now being pursued."

"I am informed that early in the season you received a cargo of apricots from Porter Bros. Co., the returns for which were very unsatisfactory."

"Yes, we unexpectedly received a carload of apricots, which are not a popular fruit in this part of the country. That carload should not have been sent us at that time. It is true there were some peaches in the car, but by the time they reached Boston they were nearly all rotten. The freight charges also were over \$1200 on that carload to Boston, which appeared very excessive, but we could get no explanation concerning it from the R. E. Co. or Porter Bros. The car realized about \$1300, which, after the commissions were deducted, left nothing for the grower. But if the charges had not been over \$500, the returns would have been about 75 cents a box to the grower. I believe there is a field in Boston for carload lots of fruit, provided you can get concessions in freight rates and in the time of transit, and provided you ship none but first-class stock."

"Is it true that the receipts in Boston for California grapes have not exceeded half a carload a week?"

"So far as I know that is about all that has been received here this season."

These Views Representative.

Your correspondent has selected the above interviews from among a great number that he has held during the past few weeks with very many of the wholesale and retail fruit dealers

in the leading Eastern cities. The opinions expressed fairly represent the views of two opposite elements. The careful reader will note that there is a class of wholesale and retail dealers whose interest it seems to be to limit the Eastern market for California fruits, and who are opposed to any plan that will bring California fruits within the reach of the masses. Whatever plan may be adopted to popularize California fruits is sure to meet with strong opposition from this element, who dread the loss of fancy profits and an exclusive trade. A feature that was very noticeable to the writer, and that forced itself upon his attention in all the cities that he has thus far visited, was the

Thorough Distribution of Mediterranean Fruits.

It seemed strange that fruits coming from a foreign country, laboring under the disadvantage of 20 per cent duty and inferior in appearance and quality, should have become so popular and should have found its way into so many hands. The question presented itself, how was this brought about, and what method for marketing their fruits in this country do the Mediterranean growers and shippers follow that evidently is so successful? Why not trace out their methods, and if found practicable, why may they not be applied to the marketing of California fruits?

Accordingly, your correspondent devoted considerable time to finding out the manner in which Mediterranean fruits are handled, and he discovered that evidently the growers and shippers of Spain had undergone California's present experience. It would seem that in the early history of their experience they had consigned small lots to a few houses on this side of the water, giving them exclusive control. This plan not proving satisfactory, they enlarged the number of houses and consigned their fruits to a great many. This likewise proved unsatisfactory until finally they hit upon a plan which has worked admirably and which has developed for them one of the finest markets in the world, and has given them millions of consumers for customers.

On further investigation it was found that the Florida orange-growers had likewise undergone California's present experience; that they had also tried the plan first, of consigning their products to a few, then to a great many, but always with unsatisfactory results, and finally, they adopted the plan first introduced by the Mediterranean growers. It now remains for the growers and shippers of California to follow in their footsteps. I cannot think of any better way of illustrating and explaining this most successful method of marketing foreign fruits in the East than to take extracts from a letter of a New York correspondent to a Florida paper, who, it seems, was performing a work similar to that in which your correspondent is now engaged:

A New York Fruit Auction.

New York, February 23, 1886.

By ———  
AUCTIONEERS AND COMMISSION MERCHANTS,  
Store, ——— Street,  
THIS DAY,

At 12 o'clock, within the Salesroom, Fresh Messias, Palermo and Naples  
ORANGES AND LEMONS.

15,182 boxes Oranges.  
13,764 do Lemons.  
Cargo B. S. Russell, Landing, and may be examined at Pier 41, N. R.

ALSO,  
FRESH ALMERIA GRAPES.

9000 barrels, halves and qrs. Ex. S. S. Celtic.

This is an advertisement which met my eyes upon looking over the *Journal of Commerce* the other morning. The quantity of fruit to be sold was large, and it seemed to me that this sale afforded a good opportunity for finding out something of a branch of trade which is becoming more and more important. It occurred to me that I might learn most by figuring in the character of a buyer at Pier 41, North River. A smart walk through the crowded thoroughfares soon brought me to the pier, where the great Mediterranean fruit steamers were discharging their fragrant cargoes of oranges and lemons by steam, and working at both hatchways. As I entered the wide doors I could look down the length of the dock through a long vista of oranges and lemons in boxes, piled regularly in piles of eight and ten, with the brands exposed. There were long avenues lengthwise of the dock so that buyers could examine the fruit. Catalogue in hand, the clerks and porters of the importers were chalking the lot number on the fruit belonging to each, and opening the boxes to show the quality. Colored boys furnished each buyer as he arrived with a catalogue. The catalogue gave the lot number, the brand and the quantity of each. This would give about 20 lots on each page, making 960 lots of various brands, no two alike, of oranges and lemons to be sold. The quantity in each lot varied and ranged from 100 boxes down to one box, with an average of about 30 boxes.

The avenues between these huge piles of fruit were thronged with busy men of all ages, each with a catalogue and pencil in hand, scrutinizing the lots and marking their critical comments upon their soundness and value. There was no time for conversation or loitering. The fruit had been discharged from the steamer all the night previous, and before the sale there were only four hours in which to examine the boxes covering a dock 80 feet wide by 600 feet long. It was a busy scene. Men climbed over boxes and about them; hardly a word was spoken. At 11 o'clock the dock was so full that the steamer stopped discharging. Buyer after buyer rolled up his catalogue and took the elevated railway for the down-town place of sale. The salesroom is near the Battery, the lower point of New York, where are the exchanges for produce, oil, cotton, stocks, and where all the elevated railways converge. The salesroom is at the corner of the

busiest business street in New York. About 50 persons were waiting for the sale to begin. Five minutes before the hour three clerks brought in the books and took their seats upon the platform. A bell summoned the buyers, still below. When they had ascended there were seen 300 men of all ages and conditions present. Just before noon the auctioneer mounts the platform; the hum of conversation ceases; every buyer settles himself for the closest work of purchasing what he noted for his own wants. In a clear, strong, quick voice the auctioneer says: "We will offer you the cargo of the *Burswell*." Opening the catalogue, he calls out the lot numbers of such fruit on these pages as were in the docks, as only such as was discharged was sold. He offers the choice of fruit on these two pages to the highest bidder, and with great rapidity the auctioneer knocks off the lots to such bidder. Not a word is spoken by the company. The auctioneer knows his bidders and they him so well that a nod, a wink, an attitude of the body, is sufficiently understood. Soon as the lots on two pages are sold the next two are taken up. In one hour 300 lots of oranges were disposed of. Two bookkeepers took down the prices and the names of the purchasers, and not an error was made as to either. The auctioneer stepped from the platform, and his partner, taking his place, sold the lemons in the same way. This occupied another hour and the business was over. The buyers folded their catalogues and walked down-stairs in groups to buy grapes.

There is a prevalent impression that the auction in green fruit means a last resort of those who have not been able to dispose of it at private sale—in fact that bidders buy for mere nothing in the "Cheap John" way and sellers are sacrificed. No mistake could be greater. Whatever may be the character of auction sales of furniture, dry goods, etc., fruit sales are something very different. But for these trade sales, fruit arriving in New York could not be disposed of. Prices at private sales would not, by 20 per cent, net as much as they do at auction, for the reason that it would stop the competition of the large and small buyers and of the wholesale and retail buyers, the out-of-town shippers and peddlers.

This competition is the very life and soul of the business. Fruit held for private sale would rot on the dock before finding a purchaser. There are months in which 300,000 boxes are brought to the city of New York alone. There have been weeks in which 100,000 boxes were landed—16,000 boxes per day. The very profuseness of the crop of oranges would tend to hold buyers back and frighten sellers into sacrificing the fruit to save cartage and storage. When, in 1850, the full crop amounted to about 150,000 boxes for the year, it was then found impossible to dispose of it at private sale. Now, when the annual crop amounts to 2,500,000 boxes, any man attempting to sell it at private sale would be laughed at. The word "auction" in the green fruit sales really means regular trade sales, and something very different from auction of furniture and pictures. In the dry goods or furniture auction-houses the goods are sold down in regular order, beginning with lot 1, then lot 2, and so on. In fruit sales the cargo is open for the choice of any lot to the highest bidder. This fact in itself stimulates competition, for 200 bidders may mark 200 different lots of fruit as the best, according to their judgment, and not knowing but somebody else is intending to buy the lot he wants, each one bids against the other—no bidder, as I have said, being sure what the choice will be. This makes the entire sale a competition between all the buyers, who, with their different needs and views, keep the price up and benefit the seller.

The fruit in the hands of the auctioneer does not pass out of the control of the seller. At any time he can withdraw it if the price does not please him. If Florida fruit is to be handled advantageously to the shipper, the true course would seem to be to consign it to some good parties, put it on the dock and then sell it by auction, just as the Mediterranean fruit is sold. It will then bring more money, and the competition at the sale will more than reimburse the charges. Sales and returns will be quick and the fruit go into consumption instead of sinking into somebody's cellar to rot away at the expense of the unfortunate man who shipped it. As matters now stand, the Florida fruit being received and stored by commission men, fresh consignments being received by every steamer, while the old ones are decaying, the receiver is naturally anxious to sell at any price and especially to undersell his competitor in the same business, while, by buying at auction, the jobbers and commission-men supply their own want at the sale and thus stimulate competition. Again, good fruit always sells for all or more than it is worth, and this helps the sale of fruit of inferior quality. There is a class of buyers for decaying fruit for which there is no market at private sale. For this the peddlers and wagon boys compete in the auction-room. I was told by the auctioneers that sometimes the bidding has been so spirited that the price has steadily advanced as the sale progressed, so that the fruit at the end of the catalogue brought more than at the beginning. Moreover, there is in the fruit trade an element of speculation among the large buyers, and a desire to control all the best. Fruit is sold, when a lot consists of 200 boxes of one brand, in lots of 20 boxes or the multiple of 20. Thus a buyer can take 20 or 40, or 60, or 80, or 100 boxes, or he can take the whole line. Receivers who have made big commissions are the only men who now oppose the auction system for Florida fruit. They will soon find out that trade must run in the regular channels marked out by custom. No man and no set of men can oppose the inevitable.

Since the above letter (from which these extracts were taken) was written, the Florida Fruit Exchange have adopted the method of selling their oranges by auction. Last year they tried it in Boston with great success. This year they have made arrangements to have the oranges that will be sent to New York also sold by auction, with every prospect of getting more satisfactory returns than in the past.

#### Can California Do the Same?

The question that presented itself to your correspondent was: Can this plan of selling fruit by auction be successfully applied to California green fruits? Careful inquiry and reflection, together with many discussions upon

the matter with competent judges of the question in the East, has led the writer to the conclusion that the plan is entirely practicable, and, in fact, is the only solution for the question of "How shall we best market our fruits in the East?"

Among the many that were interviewed on this question was Mr. Day, of the firm of Scobell & Day, the largest New York consignees of Mediterranean fruits and the New York agents for the Florida Fruit Exchange. Here is what he said:

"Regarding Malaga grapes, imports from Spain have steadily grown until we have had in one season 112,000 barrels—50 pounds net—arrive in this city. Last year and the year before, owing to the serious rains in Almeria, Spain, during September, which utterly ruined the half crop left on the vines, the receipts here were only about 50,000 to 60,000 barrels; but this season's crop being early and no rain at all up to the 26th inst., as per our cable from the American Consul at Almeria, we believe receipts will run over 125,000 barrels, if not 150,000.

"This, of course, is provided no rains come up to, say October 15th, when crop will be a gathered. Boston receives about one-eighth of what comes here, and Philadelphia and Baltimore, say one-eighth between them.

"This fruit is always packed in barrels made of oak sent out from the Southwest via New Orleans, and packed in fine cork-dust, which preserves it. We have kept Almeria or Malaga grapes in our storehouses, in fine order, from October until May. It is sent here for account of the growers in Almeria and vicinity, each man having his own mark, and dealing with us here direct without the intervention of anybody. We have now over 115 different parties shipping to us from Almeria, Spain. Prices, in the past two seasons, on prime fruits ranged from \$6 to \$8 per barrel, and \$4 to \$5 on common to fairly good. Fifty pounds of grapes net to a barrel. Duty is 20 per cent on value in Almeria, and freight is about 50 cents per barrel; so the shippers have had returned to them say about 10 to 12 cents per pound on the finest, and 6 to 7 cents on common quality. We know that our returns have been most satisfactory to the shippers, and more will come each year. Still, the more we receive the larger grows the demand, and every grocer in every little town this side of Chicago has a few barrels Almeria grapes always on hand to supply the constantly-increasing demand.

"We are just at the commencement of the new season. First arrivals of any consequence are here to-day, say about 7000 bbls. Arrivals will continue until Jan. 1st, so the whole campaign covers but three months.

"All this fruit is sold at auction here immediately on arrival, and we have buyers come from all points within 100 miles to bid; competition among them does the rest.

"Our buyers scatter the fruit all over the country and they seem never to be full, always willing to bid for more. The auction is the only way to dispose of perishable fruit. We always get the full market value because we have from 100 to 300 of the sharpest fruit dealers daily at our sales, and as we have sold all of our importations in this auction-room for the past 17 years, we think we may venture an opinion of its worth.

"In our opinion the prices will be somewhat lower here this season, because it is probable that we shall have steady and large arrivals all of prime quality, and if our market is glutted the good prices of past two seasons will not be had.

"However, you tell me that notwithstanding California grapes are retailed at from 25 to 35 cents a pound in New York City and elsewhere east of Chicago, the grower will not net over two and a half or three cents a pound. If this is so, then, even with probable lower prices, our Mediterranean shippers will surely realize more than double these figures. Regarding the application of this method to California fruits, I see no good reason why it cannot be done. Of course you must send us good fruits and at the right time, and if you can get reasonable freight rates it is sure to pay. The same trade that buy our foreign fruits stand ready to buy your California fruits. The latter would be sold to the same people, in the same manner, and under the same conditions as the former."

#### The Application to California.

The plan of selling California fruit by auction embraces the benefits of all systems that have hitherto been tried, and avoids the evils attached to past and present methods. It sends fruit through one channel, and in doing so carries out the idea expressed by Mr. Porter; and, again, the fruit is distributed into the greatest possible number of hands, and thus embraces the point dwelt on by Mr. Hixson. It brings about the keenest competition among buyers, and thereby insures the grower or shipper the highest market price. As the fruit is quickly distributed into a great number of retail hands, it destroys the exclusiveness hitherto existing in the retail handling of California fruits, and likewise brings about keen competition among retail dealers which must soon place California fruits within the reach of the masses. Your correspondent would therefore strongly advocate that the following things be done and the following plan adopted:

First—That a State convention of all growers raising fruit for Eastern shipment be held some time the coming month of November.

Second—That all persons engaged in shipping

fruit East, whether growers or otherwise, be invited to be present and to take part in the deliberations of the convention.

Third—That the present by-laws of the California Fruit Union be amended so as to admit on a par all persons engaged in shipping fruits East, whether growers or otherwise.

Fourth—That the combined influence of all growers and shippers be used to gain concessions in rates, in time and in facilities from transportation companies. That the number of cars to a train should not exceed 10, and, if possible, even less. That the kind of fruit cars used shall be adapted to the purpose, and that the time of transit shall be much nearer passenger time than has been made this season. The rates from California to New York and Boston must be reduced so as not to exceed \$350 or \$400 per car, which is equal to the present rate (\$300) per car from California to Chicago.

Fifth—A thoroughly competent and fearless fruit inspector shall be appointed, whose duty it shall be to examine all fruits submitted for Eastern shipments and to reject without fear or favor all fruits that do not come up to the standard in quality or packing.

Sixth—A reliable house to be selected in each of the following cities: Denver, Omaha, Chicago, New York, Boston, and possibly Philadelphia and Baltimore, to whom as many carloads shall be shipped weekly, semi-weekly, tri-weekly or daily, as the market and other conditions may demand, with instructions that all fruits be sold by auction to the highest bidders.

Seventh—That the privilege be allowed growers or shippers to name the destination of their fruits; but all fruits must be sold by auction and in no other way.

The purpose of calling a State convention is to submit to the judgment of the growers and shippers of California this and such other plans for remedying existing evils as may be offered, and in order that their combined influence may be used to back whatever plan may be adopted.

The reason for extending an invitation to shippers who are not growers to take part in the convention and to join the California Fruit Union is because there is an ample field in the Eastern market for both—as much so as for the Mediterranean shipper and grower, whose consignments to this market stand side by side, and who do business in perfect harmony. While there are many California growers who prefer to do their own shipping and to take their own risks, there are others who are not prepared to do this, who cannot afford to take risks nor wait several weeks for their returns, and would rather sell at a fixed price for ready cash; to such as these the buyer and shipper is a benefit and ought therefore to be encouraged. The question of reducing trains from 15 to 10 cars lies entirely with the Southern Pacific Railroad Co. The transportation companies beyond Ogden who have been interviewed by the writer have verbally signified their willingness to agree to such concessions, and have explained that the matter lies entirely with the Southern Pacific Railroad Co.

It is of the highest importance that the services of a competent fruit inspector be secured, and that he rigidly reject all improperly-packed or inferior fruits offered for Eastern shipment. This should be done in the interest of the very grower who submits such fruits for shipment, in order to save him from the loss he would inevitably incur if such fruit was allowed to go East, and further, for the protection of shippers of good fruit as well as to maintain the good name of California fruits in the East.

It may appear paradoxical that in aiming to distribute California fruits as thoroughly as possible and into the greatest number of hands, your correspondent should name but six or seven cities to which fruits should be sent; but the experience in Florida and foreign fruits has demonstrated that the fewer points at which such fruits are sold, the better. It brings many buyers to these central points and creates keen competition between the city and the out-of-town buyers.

The reason why all fruits should be sold at auction and not at private sale is because if both plans are followed simultaneously, some sold at auction and others at private sale, the fruit will be brought into competition with itself, while it is yet the property of the grower or shipper, but if it is all sold by auction the competition is between the buyers and must therefore be of benefit to the growers and shippers. If the fruit is brought into competition with itself at all it is only after the buyers have bought their goods, and paid for them with their own money; competition then is not apt to be so reckless as it has been in the recent past when the fruit was the property of the grower or shipper. Finally, the fruit in this manner finding its way into the hands of very many retailers, the competition among them must reduce the retail price to a figure that will bring our fruits within the reach of the masses. This has been the experience in Chicago this season, and this will likewise be the experience in all Eastern cities.

In conclusion, the writer would say he firmly believes that if the above plan is adopted and carried out in the proper spirit the years of adversity for the California fruit-growers will be a thing of the past, and that a new era will open out which will bring with it a state of progress and prosperity unparalleled in the past history of California fruit culture.

H. WEINSTOCK.

New York, Oct. 2d.

It is said that some Sonoma grape-pickers gather as much as 5000 pounds each per day.

## ANOTHER IMPORTATION!

THEODORE SKILLMAN,

PIONEER IMPORTER OF

Norman and French Coach Horses,

IS NOW IN FRANCE

Selecting the Best Horses for the California Market, and will land them in PETA-LUMA about the 1st of December, 1886. HE WILL BRING THE BEST.

### TO OWNERS OF HORSES, COWS, ETC.

Convince yourself by trial that the most speedy and effective cures are made by the use of **Homeopathic Medicines**, and that this is by far the CHEAPEST treatment. Horse-car companies in New York who have adopted this treatment have found their losses by sickness and death very materially diminished. We can give the highest references in this State to prove the superiority of this treatment over any other. Send for our "Guide" and "Veterinary Index," pamphlets of 64 and 42 pages, respectively, containing most valuable information. Sent FREE by mail upon application to  
**BOERICKE & SCHRECK,**  
234 Sutter St., San Francisco 'Cal.

## Lands For Sale and To Let.

### CHEAP LANDS FOR SALE.

**5680 Acres** of rolling adobe hills, situated in Tehama County. Well watered by numerous springs, etc. Several thousand acres suitable for cultivation. Good two-story House, Barn and other out-buildings. Seven miles of fine wire fence.

**FIRST-CLASS CATTLE OR SHEEP RANGE.** The Cheapest tract of land in Tehama County. Price, \$6.00 per acre. Fair time and interest.

Also, a tract of 20,000 acres adjoining, can be bought at a great bargain. Title, U. S. Patent.

For terms, etc., apply to

J. E. CROOKS, Benicia, Cal.

N. B.—Upon timely notice, intending purchasers will be taken from Cottonwood to the land and returned free.

### A NEW COLONY

On the new extension of Southern Pacific Railroads, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. 20,000 acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. **INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.**

### \$10.00 PER ACRE.

On the C. P. R. R., in Placer county; one half mile from Applegate; one-half hour from Auburn; fine climate; plenty of water; school, postoffice and telegraph near; easy terms; title perfect. Apply to

S. C. OSBORN,  
Applegate, Placer Co., Cal.

## WEST COAST LAND CO.

SAN LUIS OBISPO, CAL.

### THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

### TITLE, U. S. PATENT.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,

West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map.

## FRESNO COUNTY.

## BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being  $2\frac{1}{2}$  times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

### BONDS' ECONOMY WINDMILL

Is the cheapest ever offered to the trade, and as efficient and durable as the most elaborate self-regulators. It is intended to run constantly, and turns on the stand facing the wind, from whatever direction.

The wearing parts are few and cheaply replaced. Requires little or no attention. Will raise 25 per cent more water than any "self-regulator" of same diameter of wheel. Anyone can put it up.

BYRON JACKSON 625 6TH STREET SAN FRANCISCO.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING OCTOBER 12, 1886.

350,667.—COMBINED HARVESTER—J. P. Descalzo, Peters, Cal.

350,494.—ROCK CRUSHER—Joel B. Low, S. F.  
350,831.—CLOD CHOPPER, ETC.—David Lubin, Sacto.

350,832.—CLOD CRUSHER—David Lubin, Sacto.  
350,597.—LIFTING JACK—M. C. Meeker, Occidental, Cal.

350,763.—STEAM PUMP—H. J. Oliver, S. F.  
350,600.—FLOUR CHEST—J. Ozenberger, Middletown, Cal.

350,602.—WRENCH—W. J. Pulliam, Chico, Cal.  
350,507.—NEWSPAPER FILE—W. Schulz, S. F.  
350,897.—TAP AND FAUCET—Shaw & Davis, S. F.

350,902.—AWNING FRAME—Toulouse & Delorieux, S. F.

350,791.—KNITTING MACHINE—Frank Wilcomb, S. F.

350,792.—KNITTING MACHINE—Frank Wilcomb, S. F.

350,793.—KNITTING MACHINE—Frank Wilcomb, S. F.

350,794.—KNITTING MACHINE—Frank Wilcomb, S. F.

350,795.—KNITTING MACHINE—Frank Wilcomb, S. F.

13,720.—TRADE MARK—J. J. Mack & Co., S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## Poultry Premiums at San Jose Fair.

We are informed that the list of poultry premiums at San Jose Fair, which we copied from a local paper, was incorrect, and that the following is a correct list:

E. H. Freeman, Santa Clara, took first premiums on Light Brahma fowls and chicks, Partridges Cochins fowls and chicks, Langshan fowls and chicks, Plymouth Rock fowls and chicks, Black Breasted red Game Bantam fowls and chicks; Wyandotte fowls, Houdan fowls, Brown Leghorn chicks and Buff Laced Polish chicks, also the sweepstake prize for the largest and best collection of poultry.

D. J. Murphy, San Jose, took first prizes on White Leghorn fowls, Minoschi Game chicks, Sumatra Game chicks, Black Breasted red Game chicks, Wyandotte chicks, White Cochins chicks and a trio of Bronze turkeys.

William Fisher, San Jose, Black Breasted red Game fowls and Seabright Bantam chicks.

Adam Smith, Redwood City, was awarded the premium for Brown Leghorn fowls.

## The Fruit-Growers' Convention.

To the Fruit-growers of California: The Sixth Annual State Convention of Fruit-growers will meet in the Assembly chamber, at Sacramento, on Monday, Nov. 15th, at 11 o'clock A. M.

Every arrangement will be made to render this the most important and successful gathering of fruit-growers ever held in the State.

In order to advance the interests of horticulture and with the desire that the convention may be largely attended, the State Board of Horticulture cordially invites all those interested to be present, and participate in its deliberations.

San Francisco, Oct. 21st. A. H. WEBB,  
Secretary State Board of Horticulture.

## Jones' Land-Roller.

An improved land-roller, invented by K. W. Jones, of Lemoore, was patented through Dewey & Co.'s agency, in May, 1884. We are told that it has given satisfaction wherever used, whether in crushing clods on adobe land or for compacting looser soils. As may be seen by turning to the illustration in our advertising pages this week, the machine consists of three rollers, two of which are mounted some distance apart in a wide frame, while the third is pivoted in a peculiar manner in front of the wide frame, and secured to the pole by which it is drawn. The object of the invention is to provide an implement for rolling purposes, which can be readily turned without leaving any of the ground unrolled, and which is at the same time light of draft and simple in construction. The box between the rear rollers serves to carry weight if necessary. The space between them is narrower than the front roller, and thus no land is left unrolled. The advantages of this arrangement will be clear to practical farmers.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

LOWELL BUSINESS WAGONS.—In the advertisement of the Lowell Manufacturing Company, on page 336 of last week's RURAL, the numbers and descriptions of the pictures of "Plain Body" and "Panel Body" business wagons were accidentally transposed.

HON. W. W. SMITH, OF VACAVILLE.

(Photo by Taber.)

## [ADVERTISEMENT.]

We take pleasure in presenting our readers this week with a portrait of Mr. W. W. Smith, of Vacaville, Solano county, who is pretty generally known by this time as a candidate on the Farmers' ticket for Congress in the Third Congressional district. He was also nominated by the Prohibitionists at their convention in Sacramento last June, and endorsed by the People's Party at their convention in San Francisco. He is a faithful member of the Patrons of Husbandry, and one who has been ready and willing to do his duty as seemed best to him for the good of the whole Order.

Mr. Smith came to California about 21 years ago a poor man, but by energy, industry and perseverance has accumulated considerable property, and is now owner of one of the finest fruit farms in the State, or for that matter, perhaps, in the United States. He is conservative, cool and calculating, of very decided character—one of those men who always looks before he leaps—and does not often make a mistake. Mr. Smith is a man of good, hard common sense—one who, when he hears both sides of a question discussed, can readily make up his mind which is right; and also a man of firmness enough to vote for the right and let consequences take care of themselves. Like many others of the present day, he has become tired and disgusted with the corruption of the two dominant parties, and is now working for a change in our political affairs. He has never sought office of any kind in his life, but at the urgent request of some of his friends, and also of some of the best men in our State, has consented to accept nominations on the tickets above mentioned. If he is not elected we shall always believe he ought to have been. The Democratic and Republican parties both have lawyers on their tickets for the same office, but we are strong in the conviction that a farmer should represent us from the Third district in our next Congress. We would here call attention to the singular fact that we are represented in Congress by something over 300 lawyers, but by only 12 farmers. Farmers, you pay about 62½ per cent of all the taxes of this Govern-

ment. Who, then, has a better right to assist in making our laws than one of your own class? And while the farmers pay so much money toward the expense of running the Government, they certainly have within themselves the power, if they will only exercise it, to secure a majority of representatives in Congress to look after their interests. Mr. Smith thinks it high time that the shackles of the old parties be thrown off, and the people—the farmers and the working classes—begin to think and act for themselves, and that a new party, or new parties, be formed of the honest, industrious, sober-thinking people; and to this end he will work until election.

## An Indorsement at Home.

The Vacaville Reporter, published at Mr. Smith's home and where he is, of course best known, has the following allusions to his candidacy:

When the State convention assembled at Sacramento, June 12, for the nomination of a State ticket, in casting about for a candidate for Congress from the Third District, the convention in its wisdom selected our fellow-citizen, W. W. Smith, as the Prohibition standard-bearer.

In making the selection the convention acted wisely in our opinion, as we consider him to be a conscientious, upright gentleman, whose acts in public and private will bear the closest scrutiny. He is highly esteemed wherever known, and as an evidence of his popularity in the State, we cite the fact with pleasure, that, at the recent convention of the farmers, he received the nomination for the same position at the hands of that body of representative men and tax-payers and more recently was indorsed by the People's Party at their convention in San Francisco, and with the two nominations and the indorsement alluded to, if Mr. Smith is not elected, we shall always think that he ought to have been. \* \* \*

Mr. Smith has been a resident of California for the past 21 years, and of this immediate locality 13 years, and by dint of hard, persistent work, has developed one of the largest and finest fruit ranches in the State. He is a progressive, safe man, and has the best interests not only of this section, but California as well at heart; and while he may be condemned by some because he is supposed to be in favor of the Chinese, yet we are assured that no man would more cheerfully hail the deliverance of our State from their presence than he—though like every other law-abiding citizen, he wishes them to go as they came, legally.

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Fy., foggy; — indicates too small to measure. Temperature Wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours.

ORANGE-GROWERS' PROTECTIVE UNION.—The directors of the Orange-growers' Protective Union recently held a meeting in Los Angeles. Present—Directors Rose, Dobbins and Chapman, of San Gabriel; H. K. Snow, of Tustin; Congar, of Pasadena; Loop, of Pomona; Bettner, of Riverside; and Secretary Rice. The report of the officers for the season's work was adopted. It was moved and unanimously carried that a vote of thanks be given the President, Mr. L. J. Rose; the Executive Manager, Mr. J. R. Dobbins, and Mr. George Rice, the Secretary of the Orange-growers' Protective Union of Southern California, for their untiring efforts in and their very efficient management of the Union's interest on behalf of the orange-growers connected therewith. It was determined upon to declare a dividend, after paying all the stockholders the amount of money they had paid in, in favor of all members of the Union, in proportion to their several shipments of oranges, under the regulations of the management. With the experience they have had during the past year, the growers have determined on a new policy for the coming season, which will be completely formulated and laid before a mass meeting of the growers, to be held at the association's office Wednesday, November 10th, at 10 o'clock. It is considered by the directors that the expense of attending to the business can be reduced from 2½ cents a box to 1¼ cents a box for the coming season, and that as large a dividend may still be declared as the one of the present season. It is also believed from reliable information that the coming crop can be sold f. o. b.—Los Angeles Herald.

## A Hard Fate

It is indeed, to always remain in poverty and obscurity; be enterprising, reader, and avoid this. No matter in what part you are located, you should write to Hallett & Co., Portland, Maine, and receive free full particulars about work that you can do and live at home, at a profit of at least \$5 to \$25 and upward daily. Some have earned over \$50 in a day. All is new. Capital not required. You are started free. Either sex. All ages. Better not delay.

## Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellow-men. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. Noyes, 149 Powers' Block, Rochester, N. Y.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGLELL—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Montana.  
Geo. McDOWELL—Fresno and Tulare Cos.  
O. F. BERGMAN—Tehama and Colusa Cos.  
J. H. SMITH—Plumas and Sierra Cos.  
J. C. SWEENEY—Sonoma and Mendocino Cos.

## Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. \*\*

## HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

J. R. CATES & CO. PROPRIETORS,  
417 Sansome St. San Francisco

## NAPA VALLEY NURSERIES.

Leading Specialties for Season of 1886-87:  
CENTENNIAL CHERRY,  
MUIR PEACH,  
LOVE-ALL PEACH.  
LEONARD COATES  
(Successor to COATES & TOOL),  
P. O. Box 2, Napa City, Cal.

## Japan Clover Seed.

(Lupedega Striata.)

Clean seed of this valuable pasture plant. Unequaled in dry sections. Bears heavy grazing. \$2.00 per pound, prepaid. W. STITH, COLLIERSVILLE, TENNESSEE.

## FOR SALE OR RENT.

A Dairy of 100 choice Cows, with Pasture, Dairy Fixtures, etc. For particulars apply to ROSS & HEWLETT, 300 Davis St.

## Farmers and Travelers

Sojourning in Marysville will find the Western Hotel the best in the city, being clean, quiet, comfortable and reasonable in prices. Geo. Wappel, proprietor.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

### SHEEP AND SHEEPWASH.

Italian Sheep Wash.

EXTRACT OF TOBACCO

Free from Poison.

Cures thoroughly the SCAB OF THE SHEEP. The BEST remedy known. Costs less than 1 cent per head for dipping. Reliable testimonials at our office. For particulars apply to

CHAS. DUSENBERG & CO., Sole Agents,  
No. 314 Sacramento St., San Francisco.

Calvert's Carbolic

SHEEP WASH

\$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast.

LITTLE'S CHEMICAL SHEEP DIP.

Price Reduced to

\$1.25

PER GALLON.

It is superior to all Dips and Dressings for Scabs in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (in internal and external) sheep are subject to.

FALKNER, BELL & CO.,

San Francisco, Cal.

Recommended by Professors Hilgard, Cooke, etc.  
Powdered Potash & Caustic Soda  
KILLS GOPHERS, INSECTS, Etc.

Makes a pure Soap at a cost of \$1 per 125 lbs. Send for directions to T. W. JACKSON & CO.,  
304 California St., S. F.

BROWNE'S  
SQUIRREL and GOPHER  
SMOKER.

\$100 Reward to any one who will produce one of equal merit at the same expense.

It is the Cheapest,

By more than one-half, of any other in the market.

ENTERPRISE

Self-Regulating

WINDMILL

is recognized as

THE BEST.

Always gives satisfaction. SIMPLE, STRONG and DURABLE in all parts. Solid Wrought-Iron Crank Shaft with DOUBLE BEARINGS for the Crank to work in, all turned and run in adjustable babbitted boxes.

Positively Self-Regulating.

With no co springs, or springs of any kind. No little rods, joints, levers, or anything of the kind to get out of order, as such things do. Mills in use 6 to 12 years in good order now, that have never cost one cent for repairs. All genuine Enterprise Mills for the Pacific Coast trade come only through this agency, and none, whether of the old or latest pattern, are genuine except those bearing the "Enterprise Co." stamp. Look out for this, as inferior mills are being offered with testimonials applied to them which were given for ours. Prices to suit the times. Full particulars free. Best Pumps, Feed Mills, etc., kept in stock. Address,

HORTON & KENNEDY,  
GENERAL OFFICE AND SUPPLIES (as always before)  
LIVERMORE, ALAMEDA CO., CAL.

San Francisco Agency—JAMES LINFORTH  
120 Front St., San Francisco.

ACME BANJO METHOD.

By N. P. B. CURTISS. Price, \$1.25.

Mr. Curtiss, whose Guitar Method has long been a standard, does real service to the lovers of good music at home, by this thoroughly good and entertaining instructor. No less than 75 diagrams illustrate the positions of the fingers. Simple explanations and very sweet vocal and instrumental music fill a book, which is destined to make the elegant modern Banjo still more appreciated and popular.

THE ROYAL SINGER

Holds the field against all comers as the chief book for singing classes in 1886-7. Good music, sacred and secular. Improved instructions. L. O. Emerson. 60 cents; \$6 per dozen.

Song Greeting (60 cents) for High Schools; Song Bells (50 cents) or Song Reader (Book 1, 50 cents; Book II, 60 cents) for Common Schools, and Gems for Little Singers (30 cents; \$3 per dozen) form a complete set for music teaching in schools.

SONGS OF PROMISE

(35 cents), Tenney and Hoffman, is the newest book for Sunday Schools. Superior collection.

In press and nearly ready—Anthems of Praise.

PIANO CLASSICS

(\$1 00) is a great favorite with good pianists.

Best Books mailed for retail price.

San Francisco, Jan. 15, 1882.

## DANIEL BEST'S HAND SEPARATOR.

Our IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 28-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished.

We ask you to give our mills a trial. We guarantee that you will find them precisely as represented. For full particulars, apply to

DANIEL BEST,  
San Leandro, Cal.

**LIGHTNING WELL SINKING MACHINERY.** Our Artesian Well Encyclopedia contains near 700 engravings, illustrating and describing all the practical tools and appliances used in the art of well sinking; diamond prospecting machinery, windmills, artesian engines, pumps, etc. Edited by the "American Well Works," the largest manufacturers in the world of this class of machinery. We will send this book to any party on receipt of 25 cents for mailing. Export well drillers and agents wanted. Address, The American Well Works, Aurora, Ill., U. S. A.

## STENCIL PLATES.

We have an arrangement by which we can furnish our readers with Stencil Plates for marking boxes, bales, and sacks of produce, at greatly reduced rates during the continuance of this notice in our columns. Address

DEWEY & CO.,  
252 Market St., S. F.

## GRANGERS' BUSINESS ASSOCIATION, SHIPPING AND COMMISSION HOUSE.

OFFICE, 108 DAVIS STREET, SAN FRANCISCO, CAL.

Warehouse and Wharf at Port Costa.

CONSIGNMENTS OF GRAIN, WOOL, AND ALL KINDS OF PRODUCE SOLICITED.

Money advanced on Grain in Store at lowest possible rates of interest. Full Cargoes of Wheat furnished Shippers at short notice.

ALSO ORDERS FOR GRAIN BAGS, Agricultural Implements, Wagons, Groceries and Merchandise of every description solicited.

E. VAN EVERY, Manager.

A. M. BELT, Assistant Manager.

The Scientific Kit of Tools for Farmers, Planters, Stockmen & Machinists, consists of

Positively cured in 60 days by Dr. Horne's Electric-Magnetic Belt. Traces combined. Guaranteed the only one in the world generating a continuous Electric & Magnetic current. Scientific, Powerful, Durable, Comfortable and Effective. Avoid frauds. Over 9,000 cured. Send Stamp for pamphlet. ALSO ELECTRIC BELTS FOR DISEASES.  
DR. HORNE, INVENTOR, 702 MARKET ST., SAN FRANCISCO.

Are you using Wellington's Improved Egg Food for Poultry? If not, why not? Every Grocer, Druggist and Merchant Sells this Egg Food.

## S. F. MARKET REPORT

NOTE. Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 20, 1886.

Showery rainy weather on Saturday last, followed by a day or two of cloudy weather, had its effect on the produce market, while a heavy frost on Sunday night had a still further effect on seasonal vegetables and fruits in Alameda and neighboring counties. Under appropriate heads elsewhere, the condition of and influences on each leading article are fully set forth. The English wheat market has been gaining in strength, with a strong tone reported to-day. The following is to-day's semi-public cable:

LONDON, Oct. 20.—Cargoes off coast, firm. Cargoes on passage and for shipment, firm. California wheat off coast, 33s 9d. California wheat just shipped, 34s 9d. California wheat, nearly due, 33s 6d. English country market, firm. French country market, steady. Liverpool wheat, spot, firm. Liverpool wheat, Cal, 6s 6d to 6s 9d. Weather in England, fair.

## Foreign Review.

LONDON, Oct. 18.—The *Mark Lane Express*, in its weekly review of the British grain markets, says: Values of wheat have hardened slightly for good samples. Native average has fallen 4d during the week, and now stands only 3d above the lowest point of last year. Sales of English wheat during the week were 58,348 quarters at 29s 8d per quarter, against 76,092 quarters at 30s 11d during the corresponding period of last year. The barley trade is in its full season, and the finest picked is getting dearer, but the rest is cheaper. Business in foreign wheat is slow, but values are steady. Flour maintains its prices, excepting some American brands, which are lower on account of inferior quality. Three cargoes of wheat arrived, six were sold, three were withdrawn and two remain. At to-day's market values of wheat were very firm for all kinds; buying was limited. Fine malting barley was 2d higher.

## New York Wheat Market.

NEW YORK, Oct. 17.—Wheat opened on Monday heavy and depressed, and continued so down to Wednesday, when a decided reaction took place on reports from Eastern Europe of a warlike character. The low prices stimulated purchases for export, and the bulk party took fresh courage. A quick rise of 2c a bushel was the result, but the advance checked exports, as foreign markets did not respond. The large visible supply impaired confidence, and under moderate sales about half of the advance was lost. Spot closed steady at 1/4c to higher. Options, after narrow fluctuations, closed steady, as follows: October, 83 1/4; November, 84; December, 85 1/4; January, 87 1/4; May, 93 1/4 cents.

## Eastern Wool Markets.

NEW YORK, Oct. 17.—There has been no radical change in business. Holders in nearly all cases maintain a confident bearing, with no open or direct offering of goods under the least modification of prices, and in some cases there is a tendency to mark up rates slightly. Manufacturers are contesting every fraction, and the majority of dealers complain of dull trade. Among sales were 20,000 pounds Spring California at 22 1/2c, 50,000 pounds Eastern Oregon at 24c. The Philadelphia market has ruled comparatively quiet. There has been fair inquiry, but the stiffening views of sellers have blocked business. Dealers having straight lines of desirable wools are generally holding for higher rates; manufacturers are in market at old prices, but generally refuse to submit to any advance. Among sales were 2000 pounds scoured California, at 49 cents; 55,000 pounds California, at 29 cents; 2000 pounds California, at 22 1/2c; 2000 pounds unwashed Territory dead, at 18 cents; 18,000 pounds Nevada fine, at 19 cents; 5000 pounds Nevada medium, at 20 cents. The Boston market has ruled less active. Sales are lighter than for five weeks, but influences have been strong to keep manufacturers out of the market, and some of the sales represent purchases made in previous weeks, but only reported now when deliveries have been made. The feature of the week has been the pressure by St. Louis and Chicago houses of their holdings of Territory wools, and while dealers have not bought any, this has made them weaken in regard to their own holdings. One offer was of 200,000 pounds Montana wool at 24 cents (now in St. Louis) laid down in Boston. Among the sales were 270,000 pounds California Spring and Oregon, at 20 1/2c, and 282,500 pounds Territory, at 22 1/2c.

NEW YORK, Oct. 19.—The wool market is firm and moderately active; domestic fleeces are quotable at from 30c to 38c; pulled wool, 14c to 35c; Texas, 9c to 25c.

## New York Hop Market.

NEW YORK, Oct. 17.—Quite liberal quantities of German hops are arriving, and sufficient stock goes forward in delivery on contracts to keep brewers fairly supplied. The new business is of very moderate proportions. English hops move off very slowly here. In the new crop of Pacifics there is a steady trade with brewers, and prices remain very steady. There is not enough doing in new or old States to make a market. Coast, crop of 1886, good to choice, 30c to 35c. Coast, crop of 1885, good to choice, 17c to 20c.

NEW YORK, Oct. 20.—The failure of the hop firm of Barremore & Co. is not likely to affect the market. The firm is known to have had a large stock on hand, but some of it will not materially affect the present state of the market. The liabilities of the company have not yet been estimated. It is thought they will reach \$170,000. The assets are known to slightly exceed that amount.

## California Products at the East.

NEW YORK, Oct. 17.—Beans—California Lima, \$1.70. California raisins are expected to arrive before the close of the month. The demand has been active and large sales have been completed on samples shown in the market during the past week. Quotations of raisins are \$2 for loose Muscat and \$2.25 for London layers.

Canned Goods—The market is steady, though with no appearance of activity except in the way of deliveries upon back orders. Good grades of tomatoes are scarce and firm, and the same may be said of corn. Other descriptions are without special change. California canned peaches, \$2.50; pears, \$2.25 to \$2.50; plums, \$1.80 to \$2; grapes, \$1.80 to \$2; apricots, \$2.15 to \$2.25; Columbia river salmon, \$1.55; do, Alaska, \$1.45.

## California Fruit at the East.

CHICAGO, Oct. 16.—The receipts of grapes by passenger trains have been large since our last report, and the demand for Tokay and Muscat grapes has been good at \$2.75 to \$3 per 40-pound crate for Tokays and \$2.25 to \$2.75 for Muscats. Some Verdel grapes have been received, mostly in bad order. Quinces have been received in large supply, some full carloads coming direct from San Francisco, and as New York and Michigan quinces are so plentiful they are selling slowly at \$1 per box. Pears are very scarce and firm at \$2.75 to \$3.50 per box, as to variety and condition. Dried fruits remain firm.

NEW YORK, Oct. 17.—Grapes, Muscatels and Tokays, \$2 to \$5 per box; quinces, California, \$1.50 per box.

[Telegram to the Fruit Union.]

CHICAGO, Oct. 19.—Fruits selling fairly, all in good order, and supply ample. Fall pears range from \$3 to \$3.25; grapes, choice Muscat, 20-lb crate, \$1.25 to \$1.50; choice Tokay, 40-lb crate, \$2.75 to \$3.50; choice Emperor, 40-lb crate, \$3.25 to \$3.50; choice Cornichon, 40-lb crate, \$3 to \$4; quinces, per box, \$1.50 to \$1.75.

## The Visible Supply of Grain.

NEW YORK, Oct. 18.—The following is an official statement of the visible supply of grain in store and afloat on October 16th, as issued by the Produce Exchange: Wheat, 53,828,539 bushels; increase, 1,041,104 bushels; corn, 13,755,674; increase, 178,032; oats, 5,135,901; increase, 140,455; rye, 514,215; decrease, 25,433; barley, 2,075,730; increase, 26,009.

## Local Markets.

BAGS—Potato gunnies are stronger at from 9 1/2 to 10 cents. Bean bags continue slow.

BARLEY—Heavier daily receipts, and buyers holding off caused some shading in the prices. The market closed stronger to-day. On call only a moderate business has been done. The following are to-day's Call board sales: Morning Session: Buyer season—200 tons, \$1.04 1/4; 100, \$1.03 1/4 per cwt. Afternoon Session: Spot—100 tons, 94c. Buyer season—100 tons, \$1.05; 400, \$1.05 1/4; 300, \$1.05 1/2; 200, \$1.05 1/2; 200, \$1.05 1/2; 100, \$1.05 1/4. Seller season—100 tons, 93 1/2c; 100, 94c; 100, 94 1/2c; 100, 94 3/4c. Seller 1886—200 tons, 94 1/4; 300, 95c per cwt.

BEANS—It is now conceded that the crop is not half of an average, which causes dealers to remain firm. It is claimed that prices now ruling at the East will not admit of shipping if higher values obtain here.

DAIRY PRODUCT—Butter is weak, but dealers do not press the market except on parcels that will keep. Receipts of fresh roll are light, but the supply of pickled is large. Cheese is very firm at a slight advance.

DRIED FRUITS—Receipts are freer, with a good demand ruling at strong prices for all kind except prunes and plums, which are very weak. Apricots are wanted and an advance obtainable. It is thought that apples will be slightly lower when receipts increase.

EGGS—California eggs are very strong owing to light receipt and a good demand. Eastern eggs are in liberal supply at quotations. There is a heavy supply of pickled, which are almost unsalable.

FEED—The market is strong for all kinds of ground feed except barley, which is weaker. Extra choice hay is more inquired after, and if fairly situated, fetches an advance on quotations. The following is the range for hay: Barley, \$8 to \$11; oats, \$9 to \$12; wheat, \$10 to \$14; with something extra selling slightly higher.

HONEY—The market is very strong, with receipts growing lighter, owing to farmers having marketed the bulk of the crop. There is a strong, steady demand, but it is difficult to get an advance in quotations.

HOPS—The market is quiet but strong, as holders express confidence in future prices.

WHEAT—The sample market has ruled strong throughout the week, owing to light offerings and buyers' necessities causing them to bid up for parcels for stiffening or topping off. The market closed very strong to-day. For a parcel of strictly No. 1 shipping at \$1.36 1/4 at the Nevada dock, Port Costa, \$1.36 1/4 cash was bid to-day. This is equal to \$1.38 1/4 delivered here. The holder expects to get all of the latter figure, if not more, at Port Costa before a fortnight, owing to the lay days of a large number of vessels now on berth expiring soon. On call transactions have been fair throughout the week. The following are to-day's transactions: Morning Session: Buyer season—200 tons, \$1.44. Buyer 1886—300 tons, \$1.38 1/4 per cwt. Afternoon Session: Buyer season—300 tons, \$1.43 1/4; 1700, \$1.43 1/4. Buyer 1886—400 tons, \$1.38 1/4; 800, \$1.38 1/4 per cwt.

[COMMUNICATED.]

## Market Information.

## Cereals.

Immediately following the last review of the market, wheat was advanced fully 1 1/4 to 2 1/4 cts per cental; even the daily press, that play into the hands of exporters, quoted higher prices, but, as usual, did not give full prices paid. The large number of vessels under charter in port to load, together with a large short interest on call, cause holders to remain very strong in asking from 2 1/2 to 5 cts above buyers' bids. The shortage is said to be fully 60,000 tons. The wheat exports in September from all American ports (flour reduced to wheat) aggregated 17,845,000 bushels, which, added to the July and August exports, make a grand total of 45,495,403 bushels, against 18,979,647 bushels for the first three months in the crop season of 1885-86. There never was a season when there were so many influences brought to bear to get farmers to sell, and this, too, in the face of remarkable short crops in every country in the Old World, except Italy. Not only are the crops short, but the normal stocks—carry-

overs from season to season—are at a lower point than known for years. It seems that California farmers are not alone in the panic, for there has been an unusual selling pressure at the West and Southwest. Mail advices from England and also on the continent state that farmers are unusually large sellers. In the face of the heavy selling pressure, the European wheat market does not break but remains up, which ought to go to show that the deficit in crops, heretofore claimed, must be correct. It is now said that the French shortage is much larger than claimed in August last, and this accounts for the strong continental demand for wheat. In writing on the strong selling pressure, a Chicago firm makes the charge that "they are due to the combined efforts of the leading grain dealers which have been to depress prices, discourage foreign buying, and encourage farmers (already in panicky haste to sell) to rush their wheat to market." It is added that "it is one of the curiosities of commerce that such a state of feeling should exist among farmers and speculators in the face of an export movement fully equal to the most sanguine expectations and a state of things in the Old World that justifies the belief that this movement will continue to the extent of all the wheat we have to spare."

Feed barley held up to full and high figures up to Saturday, when a weaker feeling prevailed, resulting in lower prices on Monday, with a weak tone on Tuesday and again to-day. The demand is offish, for buyers expect still lower prices, under the strong selling pressure that prevails. Brewing barley is firm, although the demand does not appear so urgent. Chevalier is without essential change.

Oats, under heavy receipts, weakened off, but toward the close gained in strength with a strong closing at an advance on the lower prices. Choice feed is very scarce and commands higher prices, relatively, than the poorer grades of feed. Choice Surprise are also scarce and high.

Rye and also buckwheat are unchanged. The demand is light, as are the receipts.

Eastern corn is in oversupply, but Californian is in moderate stock. Market for the latter is stiff. It is reported that a vessel has been taken to load feed barley to the West Coast.

## Dairy Product.

Eastern eggs continue to arrive freely, yet they meet with a good market owing to the great scarcity of Californian. Dealers report lighter receipts of the latter than ever before known in the month of October. What can be called gilt-edged or strictly choice fresh laid fetch 45 cts per dozen, but still it is hardly safe to expect over 42 1/2, owing to few dealers being willing to pay 45.

Butter is weak, contrary to the general opinion of one month ago that it would improve. The large supply of choice pickled butter pressing the market is the prime factor in keeping values down. The stock of pickled, it is now claimed, is much larger than before estimated. Until stocks work down closer, it is hardly safe to calculate on better prices. Cheese continues to rule strong at full prices, under a good demand and light stocks.

## Feedstuff.

Hay continues to creep up in price, particularly for the more choice grades, which are not in liberal supply. Poorer grades of hay are offering fairly well, fully up to the demand for that kind. Receipts have been increasing.

Ground barley is not quite so strong, yet no concessions are obtainable. Bran and middlings hold strong, with a report of a slight increase in the consumption. Oil cake meal is meeting with a better demand, but prices are reported unchanged.

## Fruits.

Grapes ruled at the low demoralized prices reported last week, up to Saturday, when receipts slackened off, causing fresh received to fetch a slight advance; on Monday the advance was fully 10 cts a box, at which price they hold, although the tone of the market is far from strong. Wine grapes also advanced under stronger buying, with a firm market at the close.

Poor pears and poor apples continue a drag, with no reasonable offer refused. Even choice selected are heavy, owing to the large quantity of poor pressing the market.

Very few plums and figs are to be seen, causing quotations to be more or less nominal.

A few straggling lots of raspberries come in, but owing to the lateness of the season do not fetch fancy prices. Strawberries have held steady at from \$5 to 7 a chest. Huckleberries have moved slowly. Watermelons are of the past, and canteloupes are also going out. Although receipts of the latter are light, yet prices are no higher, owing to the limited demand.

On Saturday last, Wittland & Frederickson received the first consignment of new crop oranges. The quality was not good, but they sold at \$2.50 to \$3 per box.

## Live-stock.

Mutton sheep are firmer, with a less selling pressure. Beef cattle have a stronger tone, but slaughterers resist any advance as yet, owing to the consumption not being as large as it should be. Hogs continue to be offered freely, in excess of requirements. Farmers, it is claimed, will do well by keeping their stock back until cooler weather sets in. Draft horses are very dull, particularly light weight, owing to the fear that a large number will be thrown on the market soon by the Southern Railway. Roadsters and carriage horses are in good demand.

The following are to-day's meat prices: Beef—Stall fed, 6 1/4 to 7 1/4 cts per lb; grass-fed, extra, 6 to 6 1/4 cts; first quality, 5 1/2 to 5 3/4 cts; second, 4 1/2 to 5 cts; third, 4 to 4 1/4 cts. Calves, small, 9 to 10c; larger, 7 to 8c per lb. Mutton—Ewes, 4 1/2 cts; wethers, 5c. Lamb—Spring, 6 1/2 to 7c per lb. Pork—Live hogs on foot, 2 1/2 to 3 1/4 cts for grain and dairy fed; 2 1/4 to 2 1/2 cts for soft; dressed, 5 to 5 1/2 cts for hard, and 4 1/4 to 4 1/2 cts for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Vegetables.

Receipts of potatoes the past week have been light, barely up to the trade requirements, yet buyers would not bid up, consequently sellers were forced to sell at unchanged prices, although at the close a stronger tone is manifested and an advance is looked for. The crop in the counties is said to be below an average. Market to-day is about 10 cts higher. Sweet potatoes advanced fully 40 cts per 100 lbs, but yesterday (Tuesday) fell back fully 30 cts. The

advance was due to lighter receipts and a good demand.

Onions have ruled very strong throughout the week, owing to receipts barely meeting the demand. Market closed higher.

On Sunday night a heavy frost killed the large proportion of the tomato, cucumber and bean vines in Alameda county, which caused an advance in prices. Tomatoes, after going up to \$1, fell back to 75 cts. String beans, Lima beans and peas also advanced sharply, but cucumbers were marked up only a little, owing to picklers not being in the market.

Green corn is hard to get, as the frost of Sunday night killed the young stalks.

## Hops.

The market is reported dull, with buyers not showing the anxiety looked for by dealers. It is still claimed that brewers both on this coast and at the East are lightly stocked, and as the supply is short, it is only a question of time when higher prices will rule; yet hops deteriorate in value by age.

## Raisins.

The market has a stronger tone, with a better inquiry from the home trade, and also from the East, owing to the near approach of the Holiday season. Samples of new crop raisins show well, and ought to sell better than they did last year. The Eastern market is reported by private telegrams to be very strong.

## Wool.

The market continues to rule strong, with buyers bidding well up for the more desirable; sales have been made at fully 1/4 to 1c per lb on last week's prices. Cross-bred wools appear to be the favorite. The English market continues to be reported extremely strong for the better grades, with no lower prices looked for. At the East, manufacturers dispute every advance, but it is claimed that higher prices will be seen there before the next season opens.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	243,708	229,193
In port, disengaged.....	85,115	89,497
In port, engaged.....	82,975	25,080
Totals.....	411,799	343,770

The above gives a carrying capacity as follows: 1886, 658,875 short tons; 1885, 549,984 short tons; increase over last year, 108,894.

Poultry has ruled exceedingly strong throughout the week, with choice fowls scarce and fetching an advance on top quotations.

Game has come in more sparingly, causing a steady and strong market for good conditioned.

San Francisco, Oct. 20, 1886.

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations while very poor grades sell less than the lower

TRY THE PERSIAN MULBERRY.

NO SCALE I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

## CLEAR YOUR LAND WITH JUDSON POWDER.

**RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE,** by practical experience, found that the **JUDSON POWDER** especially, is the best adapted to **REMOVE STUMPS AND TREES.**

**FROM 5 TO 20 POUNDS OF THIS POWDER** will always bring any sized stump or tree with roots clear out of the ground. The **EXPENSE IS LESS THAN ONE-HALF** the cost of Grubbing.

In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder of strong enough.

## PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

**Pacific Barley Crushing Roller Mill**  
WITH SHAKING SCREEN.

These Mills are constructed in the least complicated and most substantial manner possible, with rigid iron frame, long bearings, adjustable boxes, with coil springs to allow any chance obstruction, such as nails, screws, etc., to pass through without injury to the rolls. This feature is found on no other roll made on this Coast. Send for prices to

## DESCRIPTION OF OUR CALIFORNIA STANDARD BUGGIES.

We designate our regular trade work as **CALIFORNIA STANDARD**, and claim that it meets the demand of the trade, for good, substantial vehicles at a moderate cost—better than any other work on the market.

**WOOD WORK.**—Select and thoroughly seasoned material, strongly put together, and primed with best oil and lead.

**IRON WORK.**—Made of best brands of iron.

**SPRINGS.**—Warranted, tempered, best steel.

**AXLES.**—Double Collar, Steel.

**WHEELS.**—Standard Wheel Co.'s "Superior."

**FINISH AND TRIMMING.**—Neat and serviceable.

Tops of Extra California Grade Buggies have Steel Bows, Leather Quarters and Back Stays, Rubber Center and Side and Back Curtains. (Boot on all Piano Box Buggies.)

To meet the demand of the trade for a substantial, low-priced buggy, we offer our **CALIFORNIA STANDARD**.

We are finishing for the better class of trade, to meet a growing demand for a finer grade of work, a style that will satisfy the demands of the most exacting. Double Collar Steel Axle, Steel Tire, Extra Painting, Top, Full Leather (Rubber Side Curtains). Full length Brussels Carpets in bottom. Carpet Toe Piece. Boot Apron. Oroide Lined Hub Bands. Oroide Plated Seat Handles. Dark Green Leather Cushions and Lazy Back—unless cloth, or some other color of leather is ordered.

## EXTRA CALIFORNIA STANDARD.

**NOTICE.**—Why our California Standard Buggies are Superior to all others. Beware of Imitators.

Wheels are dipped in a bath of hot oil as soon as inspected, filling every pore of the dry, seasoned hickory before it is subjected to the moisture of the atmosphere, and preventing possibility of swelling and shrinking, causing loosening of tire and breaking down of best wheels. These wheels could be safely used if paint should be entirely removed, so thoroughly are the pores filled with oil.

**GUARANTEE.**—We guarantee according to capacity, with fair usage, for **ONE YEAR** from DATE of purchase. We agree if Axle, Wheel, or Spring break, caused by imperfect material or workmanship (and the same is returned to us by freight), to return a new one, we paying freight one way on same.

## END SPRING. ALWAYS POPULAR.

No. 503.—Piano Box, End Spring Buggy, with double perch, \$125.

Front View.

By the use of the "Fisher Fifth Wheel" it is hung lower than any other end spring buggy now manufactured.

**Wheels.**— $\frac{3}{4}$ x43x47—"Standard Superior."

**Springs.**—ELLIPTIC, Berlin Head, 36x1 $\frac{1}{2}$ , 3 and 4 leaf.

**Axles.**—1 inch, double collar, steel.

**Tire.**— $\frac{3}{4}$  or 1 inch steel.

**Body.**—Swelled sides, 49 $\frac{1}{2}$ x25x8 $\frac{1}{2}$  inches. Thirty-five inches seat room between rails.

Neatly Trimmed in cloth or leather.

Painted black, with fine line striping.

## THE HORACE FISHER FIFTH WHEEL.

Used in connection with the double straight perch by the Standard Wagon Company on their buggies. No more big repair bills, or aggravating loss of time in case of accident.

No. 512.—Three-Spring Phaeton. \$165.00.

Rear View showing heavy wrought frame.

## THREE-SPRING PHAETONS.

**Springs.**—4 leaf, 1 $\frac{1}{2}$ x36 front, two 3-leaf, 1 $\frac{1}{2}$ x36 inches back.

**Axles, Wheels, Etc.**—Same as two-spring.

Our Phaetons are hung very low, are roomy, neatly trimmed in leather or cloth, handsomely finished, and present an elegant and tasteful appearance, comparable with jobs costing double our price.

THE BEST MEDIUM PRICED BUGGIES IN THE WORLD.—We call attention of the trade to our Extra Grade Work, which is built EXPRESSLY for us, to supply a demand for a good common grade of work of a higher order than the mass of importations, built to SELL ONLY.

This WORK is not an imposition, but is substantial and serviceable, and sold extremely low for cash.

## SIMPLE, NEAT, AND STRONG.

The Fifth Wheel is only 9-inch circle, with ample bearings. The upper wheel has side lips, the head block and axle bed plates are grooved into each other, which together take the strain of the king bolt, besides preventing any sideways slipping. The front guard is an additional safety device.

We are Agents for Biddle, Smart & Co., E. M. Miller & Co., and J. B. Brewster & Co.'s Fine Buggies and Carriages. We have the Finest and Largest Carriage Repository on the Pacific Coast. Send for Catalogue and Prices. All kinds of Agricultural Implements. Agents for David Bradley Manufacturing Company. A full line of Garden City Plows in Stock. Address

TRUMAN, ISHAM & HOOKER, 421 to 427 Market Street, San Francisco, Cal.

# HAWLEY BROS' HARDWARE CO.

WHOLESALE DEALERS IN HARDWARE AND AGRICULTURAL IMPLEMENTS.

## The Celebrated SCHUTTLER Wagons.

THE BEST WAGONS

IN THE

WORLD!

Made expressly for the Western Coast of America. Warranted to withstand dry climates and to wear longer than any other wagon manufactured.

STRONG, DURABLE,

OF

LIGHT DRAFT.

Made of the best material by experienced workmen, in the most approved manner of construction.

THEY ARE THE PIONEER WAGONS of the Pacific Coast, and especially adapted for the hard usage to which wagons are subjected here.

## OUR "SOUTH BEND" CHILLED PLOWS

CANNOT BE EQUALED FOR

Lightness of Draft, Quality of Work, Ease of Handling and Adjustment, and General Construction.

WARRANTED TO GIVE PERFECT SATISFACTION.

Look for the Name, "South Bend Chilled Plow," on the Beam, and take no other.

THIS CUT REPRESENTS OUR Nos. 1 and 1B ONE-HORSE PLOW.

SOLE AGENTS FOR THE "NEW DEAL" GANG PLOW, "KEYSTONE" DISC HARROWS, H. W. DAVIS & CO. BUGGIES, Etc., Etc.

The Celebrated **HOWE SCALES** in all Varieties.

## PERKINS' WIND-MILL.

EVERY MILL WARRANTED.

PRICES GREATLY REDUCED.

The Genuine Perkins' Wind-Mill has earned a reputation for excellence that will be maintained. It is unquestionably the most perfect and beautiful Wind-Mill in the market.

Perfectly noiseless, easy and graceful in all their movements. Positively Self-Regulating, with no coil spring or springs of any kind, no little rods, joints, levers, or balls to get out of order, as such things do. Mills in use six to twelve years in good order now, that have never cost one cent for repairs.

SEND FOR SPECIAL CIRCULAR.

## JOHN DEERE MOLINE PLOWS

THE LEADING PLOWS ON THE PACIFIC COAST.

We take pleasure in calling special attention to our recent improvements in the construction of Plows, which consist of a brace crossing and WELDED SOLIDLY TO THE STANDARD, extending down and bolted to the landside, affording a firm brace to the standard and giving much greater strength than will be found in any other set-up handle plow. It also extends up and bolts to the handle with two T bolts, producing the best braced and finest plow made.

### Loco Weeds.

This State shares with its sisters of the western division of the country the undesirable possession of loco weeds. The species occurring in California are different from those which make the stock-grower trouble in the Rocky mountain region, though the effects are similar. We have in previous issues described the California species, and upon this page we give the species which is found in Colorado and New Mexico, taking the main part of our text and engraving from a recent report by Dr. George Vasey, botanist to the U. S. Department of Agriculture.

Since the development of the stock-raising industry on the great Western plains and in California, it is well known that animals feeding on the wild grasses and other plants have been frequently attacked with symptoms of a peculiar character, which have been attributed to the effect of certain plants. This disease among cattle and other animals is commonly called "loco." Among the symptoms first noticed are loss of flesh, general lassitude and impaired vision; later the animal's brain seems to be affected; it becomes vicious and unmanageable, and rapidly loses both flesh and strength. Frequently, when approaching some small object, it will leap into the air as if to clear a fence. The animal also totters on its limbs and appears as if crazy. After becoming affected the animal may linger many months, or a year or two, but usually dies at last from the effects of the complaint.

This diseased condition has been attributed to various plants, but mainly to a few which belong to the order *Leguminosae*. Of these, two species of *Astragalus* have been ascertained in California, and in Colorado and New Mexico another species of *Astragalus* (*A. mollissimus*) and a closely related species of *Oxytropis* are generally charged with the trouble in question.

Several analyses have been made of the plants which are said to be the cause of this affection, but without satisfactorily ascertaining what is the peculiar poisonous principle. No antidote has been discovered. If the plants can be ascertained and exterminated the trouble should come to an end; but, even if the plants are recognized, their extermination over large tracts of country will be difficult and expensive.

We give on this page an engraving of *Astragalus mollissimus*, one of the loco weeds. It is a perennial herbaceous plant of the region of the great plains from Colorado to New Mexico, Texas and Arkansas. It belongs to the order *Leguminosae*, or pea family. There are usually a great many stalks proceeding from a large, strong root-stock. They are reclining toward the base and erect above. These stalks are so short that the leaves and flower-stalks seem to proceed directly from the root. They are branching at the base and give rise to numerous leaves and long stems bearing the flowers and pods. The leaves are usually from 6 to 10 inches long, composed of 9 to 15 leaflets (in pairs except the upper one). These leaflets are of oval form, one-half to three-fourths of an inch long, of a shining, silvery hue from being clothed with soft, silky hairs. The flower-stalks are about as long, or sometimes longer, than the leaves, naked below and at the upper part (one-fourth to one-half) bearing a rather thick spike of flowers, which are nearly one inch long, narrow and somewhat cylindrical, the corolla of a velvet or purple color, the

calyx half as long as the corolla and softly pubescent. The flower has the general structure of the pea family, and is succeeded by short, oblong, thickish pods one-half to three-fourths inch long, very smooth and with about two seeds in each.

**DANGER IN SWAPPING GUM.**—This reprehensible practice among children should receive a

two younger children were soon ill of the same fatal disease. This is a matter which should be fully explained to all children, and this method of communicating disease would probably become obsolete.

**THE SACRAMENTO CITRUS FAIR.**—Frequent meetings of the managing committee of the Central California Citrus Fair Association are

COLORADO AND NEW MEXICO LOCO WEED—*Astragalus mollissimus*.

firm opposition from parents. An Oakland boy, 15 years of age, asked a companion one day last week for a chunk of his chewing gum. His friend bit off a piece and handed it to him. The boy who gave the gum had just recovered from an attack of diphtheria, and the piece of gum communicated the contagious poison of the disease to the boy who received the gum. He was taken ill of malignant diphtheria and died in a few days. His parents are in very poor circumstances, and being compelled to live in very close quarters his father, brother and

being held in Sacramento, and preparations for the great fair of December 13th are progressing rapidly. It is intended to offer liberal premiums open for competition to growers within the district from Mt. Shasta to the Tehachapi pass. Circulars are being issued urging the forming of local committees to secure exhibits, and everything is apparently being done to draw out a good display from all parts of the district.

**GEESSE and ducks are unusually plentiful in the tule.**

### The Anarchists.

There is something so unreasonable in the conduct of such anarchists as recently gave trouble in Chicago that one can hardly contemplate it with patience. In this broad land there is room enough for every one to make an honest living. There is nothing in the dominant habits and customs that fetters personal ambition and chains a poor man to a servile destiny. Hence there is not the least shadow of an excuse for lawless violence and conspiracies against social order and the established form of government. So utterly uncongenial is the atmosphere to this form of political heresy that it is not strange that some people should talk of extreme measures. For instance, the *St. Louis Republican* says that "some measures, effective to absolute pitilessness, are needed for them, and if Congress and the Legislatures cannot provide them, it may be well to turn the whole matter over to those vigilance committees which the American people are accustomed to resort to when they want to dispose of scoundrels summarily and cheaply." But this appeal to the authority of Judge Lynch is no way to handle this and kindred questions. The anarchist is opposed to law, and the central idea of all good citizenship in this country is obedience to law. It is a poor example to resort to mob law in order to suppress mobs; set aside our own cherished ideas of social order and propriety in order to punish a class of men who would tumble the whole fabric of government into anarchy and chaos. The proper way is to sternly enforce the existing laws, and if they are defective strengthen them to such an extent that lawless violence, the manufacture or keeping of dynamite or other dangerous explosives without good reasons, and incendiary conduct and language, shall be thoroughly repressed. Let these men know that if they desire to live in this country they must obey its laws as the rest of us do.

**FRUIT SELLING AT THE EAST.**—Upon another page may be seen a fifth letter by Mr. Weinstock, giving more of his researches into the marketing of California fruit at the East, and upholding the auction method of selling, which he so heartily approves. We trust readers will study and think over these propositions, and give their conclusions at the Sacramento Convention, beginning on November 15th, at which, no doubt, much time will be given to fruit-marketing problems, if there is a disposition to discuss them. Mr. Weinstock is entitled to the thanks of our readers for the effort he has made to inform himself on this subject during his Eastern visit, and for the very acceptable form in which he has presented his conclusions in our columns. In his last paragraph in this week's letter he states that he is only wedded to his idea until some one can propose something better, and if all will enter the consideration of the subject with the same disposition, good must certainly result from deliberation.

**THE OLEOMARGARINE LAW.**—The act passed during the last session of the National Legislature regulating the sale of oleomargarine will take effect as law on and from Monday next. On and after that date all retail butter dealers who sell "bull" butter will have to pay a duty of \$48 per annum to the Internal Revenue Collector for the privilege of doing so.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## From Lake County.

EDITORS PRESS:—After a four-years' absence from Lake county, I seem joyfully welcomed by the sparkling waters of Clear lake flowing down Cache creek, rippling merrily, undisturbed by irrigation problems, riparian rights, legislative tangles, or Supreme Court decisions. Irrigation is not an absolute necessity here, yet no one will deny its benefit who has seen the wonderful growths of fruits and vegetation.

## Climate.

Traveling north from Napa City, the damp south winds and bay fogs are soon left behind; then comes a belt of the most equable climate in the world, growing dryer and dryer as we proceed into Lake county.

The prevailing wind is now west, dry and crisp, with cloudless skies.

## Agricultural Improvement Association.

This company appears to be an outgrowth of the old Clear Lake Water Co., that raised such a commotion in Lake a few years ago. They are fast changing the brown, sere, September hills to vine-clad robes of green, from which hang rich clusters of luscious fruit.

It is to be regretted that they did not make the cultivation of the raisin grape a specialty, as no evaporators would be needed, as there is no danger from rains or dampness.

## Taxation.

It is probable that the only absolute equality of taxation must be upon income, but under existing society and laws the difficulties to that end would be very great. Now I wish to call attention to the uncertain manner of our State Board of Equalization to arrive at real estate values through the real estate transactions. It is well known that the real estate boom goes in waves; now here, then there. Strangers with money coming into the State are almost sure to pay too much for land, more than any methods of production would justify. I have in mind a number of cases where men would sell for two-thirds or half what they gave. Now the transaction has gone on record and serves as a guide for the board and assessors.

## Travel.

Dust is the great nuisance of California travel, but it is greatly increased by the heavy freight on the roads into Lake county. Only just think! three and a half or four railroads into Lake county all at once. It had gained credence that this enchanted land is so hidden by mountain barriers that the neigh of the iron horse would never reach her placid shores.

C. P. SCRANTON.

Lower Lake, Oct. 10, 1886.

## Santa Cruz County Fair.

[Written for the RURAL PRESS by C. L. A.]

October 6th, 7th, 8th and 9th were as beautiful days at Santa Cruz as the most particular admirer of climate could wish. The barometer stood even 30° and the thermometer ranged from 60° to 75° with a clear sky and gentle breeze.

The pavilion was well filled at the opening on Wednesday evening, the 6th, with the products of Santa Cruz county.

Two fairs each year in Santa Cruz—a flower and rose fair in June and an agricultural fair in October—mean considerable work for somebody; and it is wonderful how well each one has been managed and how fully attended and successful they both have been. The managers have no little trouble and thought to give that variety so necessary to make each exhibit a success. To mention each person who has largely aided would make a long list, so we must omit that.

This fair was distinct from horse-racing, and proves that such things, with their gaming accompaniments, are not necessary to a successful and useful exhibit of agricultural products, including the finest stock in the country.

The display of fruit was well worth seeing. It demonstrates more and more each year the splendid adaptability of the Santa Cruz mountains to fruit-growing. Although a little early for the best show of apples, the tables were magnificently loaded with a large variety. Peaches, pears, figs and quinces were not wanting and of the finest quality. But little effort, however, was manifest in bringing these fruits to the fair. For the best display of apples A. Loomis took the first premium and L. H. Comstock the second.

The show of grapes was astonishing. The season has been favorable, and the many tables loaded with tastefully arranged plates, pyramids and mounds of differently colored clusters of ripe and tempting grapes was a sight long to be remembered. The first premium was awarded to W. W. Waterman, and the second to W. H. Galbraith. For wine grapes, H. Mel took first premium, and John Jarvis second. But there were other exhibits not entered for premiums that seemed equally fine.

The show of dairy products was small but very fine. G. P. Laird took the premium for cheese, and D. D. Wilder for butter.

The poultry show was better than usual. All the most prominent pure breeds were exhibited, and the fine stock showed an increased

interest in this department. But few places are more favorable for poultry raising than Santa Cruz.

One excellent feature of the fair was the Children's Room. Here were exhibited the toys, handiwork, etc., of the boys and girls. There were ships, doll-houses, paintings, dolls and their multiform dresses, needlework, collections in natural history, etc. Such a place should be encouraged in every fair. Miss Susan Tyrrell had charge of this room and made the children happy by the devotion of her time and tact to their welfare.

Mrs. Anna Pope and her assistants took charge of the large room specially intended for the floral display. Here the lovers of ferns, flowers, and garden-plants were made happy by the lovely arrangement of wild and cultivated specimens, as well as the many beautiful artistic designs of flowers.

I cannot do justice to the stockyard. There was not much competition, but a very nice show of Jerseys and other cattle, Percheron and other kinds of horses, Southdown and Cotswold sheep, and the various kinds of swine. The premiums, however, were not an inducement for stockraisers at a distance to incur the expense and time of bringing the many pure-blooded animals owned in this county to the fair.

Although this fair did not bring in large sums toward paying the debt on the pavilion, owned by the Fair Building Association, yet the advantage of bringing together the products at least in part of our county, and comparing notes on fruit, farm, and stock, will well repay all the expense and trouble of the occasion.

Santa Cruz.

## Inyo Has a Fair.

About the middle of September some of the people in Owen's valley concluded, all on a sudden, that they would hold a fair; and they did it the first of this month at Bishop Creek.

Considering that the officers of the Eastern Slope Agricultural Society and the managers of this impromptu exhibition had but two days after the initial move was made in which to arrange a program, and get it published in the first paper issued, they feel that the fair was crowned with remarkable success.

The summons was so short that many of the valley orchardists had no time to do themselves justice—W. T. C. Elliott, for example, picked and packed his fruit on four hours' notice, and other like instances could be named; nevertheless, a display was made which Inyo county folks are very proud of. They claim that the State produces no finer fruits, grains and vegetables than were then and there exhibited.

To prove the excellence of the corn raised in Owen's valley, it is mentioned that an Illinois farmer present as a visitor selected specimens of several varieties shown to take back home and use for seed in that corn-growing State. Louis Munzinger, of Bishop Creek, exhibited large and beautiful Gravenstein apples gathered from trees only two years old. Very fine apples and pears shown by J. L. C. Sherwin grew on the divide between Inyo and Mono counties, at an elevation of 6640 feet above sea level. Prunes of the German and French varieties showed how well suited are the soil and climate to their production. W. T. C. Elliott, of Big Pine, made a nice display of figs and several varieties of premium grapes and apples. Among L. P. Vandell's exhibits were found the best figs and Flame Tokays. J. W. Symmes and John W. Baxter, of Independence, the only exhibitors from the lower end of the valley, both had handsome grapes, apples, pears, peaches and prunes. The Kershaw squash seems to be a favorite vegetable in that region. Cocoons and silkworms were entered by Mrs. J. Arrison. Fruit in glass, jams, jellies, butter, honey, and needle and fancy work were not lacking.

The stock show consisted almost entirely of horses. There were thoroughbreds, Norman Percherons, roadsters, carriage and all-purpose horses, to the number all told of some three-score. The Independent thinks that many of the animals would be ranked as first-class anywhere. During the past few years some of the best horse-blood in the United States has been brought to Bishop Creek, and the result was seen in this display.

Gratified and encouraged at the success of their first attempt, the society hopes to hold annual fairs henceforward.

## Wheats in the Salinas Valley.

EDITORS PRESS:—J. B. Freed, in the lower foothills bordering the Salinas valley on the north side, five miles east of Gonzales, on a coarse, sandy soil, is engaged in wheat-raising and considers the Propo as the best variety for the Salinas valley region. It grows tall, has a large head, bearded; its grain is amber-colored, large and heavy. Its straw is large and coarse, harsh and hard and not good for hay. It does well in dry years because of its early maturity—much earlier than the Chili or Australian, perhaps earlier than any other variety raised here except the Sonora. Chili white is considered the next best raised here. The grain is larger than that of the Chili red; it makes fair hay, but the straw being rather large and stiff prevents its making the best of hay. Australian white does not do so well because of its liability to rust, and because of

the small straw being unable to well support the large head in the strong winds of the valley. It makes good hay, as it is not liable to be blown down before ready to cut for hay.

Monterey Co., Cal.

McD.

## San Diego Fair.

The Second Annual County Fair opened at Armory hall, in San Diego, on the 6th, and continued successfully throughout the 9th. The plan had been to close with Friday, but the time was extended to Saturday night, for the sake of accommodating the toilers who could not attend earlier in the week.

The opening address was delivered by Wm. Burgess, of National City, who lauded the resources of the district and gave good counsel to tillers of its soil.

The society finds it a knotty problem to settle when is the best time to hold their fair. In the coast region and the low-lying valleys things ripen early, while most products of the mountain ranches are at their best as late even as November. In trying to suit both sections a date was fixed too late for many of the coast productions and too early for the best fruits and vegetables of the hill country and the raisins of the Cajon. But while for this and possibly other reasons the displays were somewhat sparing in quantity, there was no questioning their excellent quality.

President Asher, of El Cajon, led off with fresh fruits in varied profusion, about 40 kinds of jellies, half a dozen of canned fruits, eight or ten of raisins, sun-dried fruits in great variety, and most beautiful specimens of crystallized fruits, a cluster of dates crowning the exhibit. Chollas valley showed an abundance of choice fruit and vegetables. Paradise, Sweetwater and Poway were credited with luscious contributions. From the Ballena, 53 varieties of grapes were brought by one exhibitor. The largest grapes at the fair were those brought in by George L. Kimball, of National City. "They are the biggest I ever saw," said Mr. Horton, who knows something about San Diego county grapes. One measured four and one-half inches in circumference. Mesa Grande, though chiefly noted for fine stock (for showing which there is no park, as yet), always makes a fine display of fruit, and raises oranges, tobacco and cotton, though more than 3000 feet in altitude. Julian is a thousand feet higher, but one of the finest exhibits of grapes in the hall came from that neighborhood. Tia Juana was represented by mammoth vegetables, marked "without irrigation."

"L. S. C." writes the *Bulletin* that this last fair has demonstrated yet more surely the peculiar adaptability of the county to the culture of the vine, citrus and olive in the lower valleys and the choicest of apples, pears, plums and cherries in the higher altitudes, with grapes that will ripen in season to supply the market after all those in the lower vineyards have been made into wine or raisins.

## The Fair at Downey.

The Los Angeles County Agricultural Association held its third annual fair at Downey, beginning Oct. 5th and lasting four days. Great numbers of people were present from all parts of the county. In his opening address, Col. E. E. Edwards, of Santa Ana, having spoken of the worthy objects of the association, and shown how valuable it is to the farmers, went on to complain that after the Legislature had appropriated funds for the State Fair at Sacramento, the largest portion of the money had been spent on horse-racing. "Everything was horse. The fair grounds were taken up by gamblers and pool-sellers. The agricultural and horticultural departments were shamefully neglected. We all favor the raising of good horses, but we cannot afford to see our other departments neglected as they have been, and in time the farmers will demand that a goodly portion of the appropriation shall be used exclusively in premiums for the agriculturist and horticulturist." The speech was well received and loudly applauded.

The display of live-stock was not only large (there having been 150 horses and 80 head of cattle stalled upon the grounds), but the quality of the animals was excellent. The swine show was rather meager.

The pavilion was handsomely decorated, wherein the ladies of Downey did themselves much credit, and the display of domestic manufactures and fine arts was highly praised.

While the Anaheim *Gazette* says that the exhibit of horticultural and agricultural products was not so large as at the preceding fair, and fruit-growers claim that this is a poor year for them in Los Angeles county, yet to a tyro reporting for the *Times*, the question naturally arose, as he looked at the fine samples of tree products, "If this is a poor year, what would an extra good year show?"

The biggest pumpkin at the fair was grown by Mr. Lovering, of Orangethorpe, whose 210 pounder measured 7½ feet around and overshadowed all competitors. The largest watermelon exhibited weighed 101 pounds, and the next 98 pounds. An excellent exhibit of grapes in variety was made by E. L. Barnett.

We condense a few of the many items in the *Times*. H. Hood exhibited a number of sound sweet potatoes weighing five pounds each which he dug out of the ground a year ago. They were grown on alkali land, without irri-

gation, a half-mile south of Downey. The older these potatoes get the sweeter they become. We understand that they were kept in sand.

James Stewart's output embraced White Smyrna and Brown Ischia figs, green, ripe, dried and preserved. He has certainly attained success in raising and packing figs.

The displays of apples, peaches, grapes, quinces, pomegranates, bananas, pears and plums, were very creditable. It was too early for citrus fruits, and there were no olives. While the apples were large and sound, they did not appear to have quite as fine a flavor as the mountain-raised, but the peaches and grapes were as nice as could be desired.

Downey makes a specialty of English walnuts. They are large, fine and meaty, the perfection of their kind.

There were cornstalks fully 18 feet high, bearing a goodly number of large ears, full of kernels. Broomcorn, Egyptian corn, and other kinds were numerous. A bale of alfalfa showed what the county is doing in the line of clover-hay.

Of melons there were several fine varieties. The "ice-cream" watermelon was especially admired.

The display of beans was good, the Lima, bayo, butter, horse, and common varieties being represented.

Several fine large bolls of bursting, snowy cotton indicated the possibilities of the region.

There were a few fine tomatoes, drumhead cabbages, some very large Chili peppers, onions, and beets.

The exhibit of cheese was limited, but the production of the Alamitos rancho could hardly be excelled.

The award of premiums was said to be very satisfactory, and the fair was deemed a full success.

## POULTRY YARD.

## A Fair Question, at Fair Time.

EDITORS PRESS:—Just about these times the subject of fairs is fresh in the minds of most of the people on this coast, particularly those of an agricultural turn. To such, and to those who are in the habit of reading this column, I would like to bring up a few points for you to turn over in your minds and see if they are not so; and, if they are, what can be done to better matters, unless perchance all is well as it is. Officers and members of agricultural societies are included among those whose attention I request.

In the first place, I don't think we would disagree as to what an agricultural fair should be, or at least what is implied by the name, viz., a place and time for the gathering together of people interested in agriculture in its different forms, and at this time and place are brought together from a given section of country its agricultural products for two purposes—to show the fine productions and the advancement over the year before. To promote an interest in these things, premiums are offered in different classes.

Now, for the benefit of any officer of an agricultural society who may be reading these lines, I should like to know the reason why the following kinds of prominent exhibits at almost, if not quite all, our fairs, are not classified and premiums offered, viz.: Horse-jockeys, gamblers, gin mills, and to what part of agriculture do they belong?

How careful are the management of each fair to prevent (and justly, too,) any sick animal from coming on the grounds, and yet will turn these agents of perdition loose among the people. How long, oh! how long, will ye who are in authority allow these things to be? Why allow and even bid for the presence of those who are the producers of moral disease? It may be that one of your own family may choose a livelihood in this class from being seen at the fair. How would the calling suit most parents?

Now, I want to call attention to the poultry corners at fairs. I wish no one ill, and shall only use names as an example, and that to bring out a thought or two for farmers, their wives and children to think over, and with the hope that at no distant day a better state of affairs may be had at all agricultural fairs on this coast.

For an example, at the last State fair there were 35 classes for horse-races, and the premium in each class exceeded the value of all the premiums offered for poultry in any way or shape; or, in this way, the smallest premium offered in a single race was \$300, the largest \$1200. The whole amount offered in premiums for poultry was \$290. Why this difference?

Is horse-racing so important a branch of agriculture, and poultry culture so small a one, as to call for this distribution of premiums for excellence? Could not a farmer make a fine living without there ever being a horse-race or a race-horse? But how would it figure if the whole poultry interest were swept out of the farmer's yards? Well, just this: It would sweep out the largest product of the farm, only the beef and dairy interest combined being its near rival; and the race horse does not even enter the list of farmers' products.

Now, I don't pretend to say but what a good, honest trial of speed at a fair is all well enough, but why so much of it and such large premiums, while to a much more valuable industry as

little? Why not divide up, at least a little more evenly, and by it bring out a larger showing in the poultry exhibit?

I think the State Fair Association is quite liberal in its poultry premiums, compared with other fairs held on this coast, and is setting a good example for others to follow; there is room for all to improve.

In a majority of the fairs held on this coast, I honestly doubt if two-thirds of small amounts offered as premiums on poultry are taken each year. Why? Because the individual amount is so small that the exhibitor cannot afford to show his birds and comply with the requirements of the society. Who will be first to make a change for the better? E. C. CLAPP.

South Pasadena, Cal.

## ENTOMOLOGICAL.

### Need of Action and Co-operation Against Insect Pests.

W. G. Klee, State Inspector of Fruit Pests, has issued the following address to the fruit-growers of California:

The question how to prevent the spreading of the various insect pests, which have become established in different sections of the State, is becoming every day a more and more serious question, involving large interests, and unless definite and proper action be taken by parties concerned much ill-feeling between the various fruit-growing sections will be the result. The legislation passed on this subject in 1881 provided for the establishment of County Boards of Horticulture, so as to enable the fruit-growers to protect themselves, by appointing inspectors, whose duty it should be to suppress already existing insect pests, and prevent the importation of new ones. These county boards have only been established in a limited number, and many exist only in name. But a few counties, such as Los Angeles, where the people have awakened to a full sense of their situation, have a complete organization. These boards have accomplished much good, and have done their utmost to stamp out and prevent the further spread of the cottony cushion scale, and to prevent the establishing of new pests, such as the aspidiotus perniciosus, which, in many of the upper and central counties, has made sad havoc with the deciduous fruit trees. This scale, unfortunately too well known in certain sections, invariably manifests itself on the fruit where the red zone around the scale makes it quite conspicuous. The scale will live as long as the fruit is sound, and will even propagate here, and is consequently liable to spread from peelings thrown about carelessly, as well as from fruit boxes. This summer quite a number of boxes of fruit, shipped from the northern part of the State, were found to be infested, and were ordered disinfected by the inspectors of Los Angeles county. It appears now that the Southern Pacific Company has been sued by certain merchants for the injury and loss sustained from this cause. In consequence of this move, the railroad company has refused to allow inspection at the depot, and the inspector now has to take his chances of finding the fruit anywhere throughout the city, making it next to an impossibility to find it at all. Of course, the railroad company has investigated this matter from a point of law, and, no doubt, believe themselves in the right. So do the shippers. Morally, the latter undoubtedly are wrong. The trouble arises chiefly from an underestimation of the danger of spreading these pests and of the value of certain crops to certain regions. There are many people in the northern who do not believe that deciduous fruits can be grown with success in the southern counties, and on the other hand, many Los Angeles people ridicule the idea that any citrus fruits can be grown successfully in any of the central counties. Hence the disregard of any of the consequences of shipping infested fruits from place to place. Los Angeles people have not been altogether above reproach. The red orange scale has been sent on fruit to Ventura county, as well as to San Francisco, where the writer, early this spring, saw it on lemons offered for sale in the streets. The so-called black scale has every year been sent on orange trees from Los Angeles, yet this scale is the most formidable enemy of the olive. Indeed, from this source more than one grove, to my own knowledge, has become infested.

According to the law, the various infested districts should be quarantined by the State Board of Horticulture, but if the law was carried out to its fullest extent, nearly every county in the State would be quarantined, as hardly any are altogether exempt from all the pests that are enumerated among the injurious insects that are to be legislated against. But to succeed in having people submit to this temporary inconvenience, it would be necessary to have quarantine guardians. With the present arrangement it is impossible for the board or the inspector to get efficient men; no man capable of performing these duties will work for two dollars per day, taking his chances on collecting through the courts. Only by having the local inspectors appointed quarantine guardians is it feasible to obtain co-operation. But the county boards must be established by the board of Supervisors, on petition from the fruit-growers only. If the latter do not choose to do anything, the inspector has nobody to co-operate with, and cannot therefore maintain

any quarantine. It will be seen, therefore, that public opinion or the interest of fruit-growers must be thoroughly awakened to the necessity of preventing the constant interchange of infested package of fruits and of plants. Infested fruit should be worked off at home. Every grower should have pride enough not to allow infested fruit to be sent to Eastern markets, there running the risk of being condemned as a nuisance. We have been informed that oranges with the red scale will hereafter be refused in Chicago. Still less should deciduous fruits, infested with scale insects, be permitted to go out to advertise the state of affairs in certain sections.

The point here to be made is: Unless thorough co-operation be established between the various fruit-growing sections, unless they set apart sufficient means to suppress existing pests and prevent the new ones to pass from place to place, we shall have all these pests, now bad in certain sections only, so thoroughly scattered that the question of maintaining a clean orchard anywhere will be impossible without constant spraying.

In my travels for the last four months I have found the aspidiotus perniciosus, as well as the cottony cushion scale, scattered far and wide, and in several counties absolutely no organization for preventing their spread. I trust that in these counties I have succeeded in proving to the fruit-growers of these sections the necessity of establishing active county boards. And steps have been taken in Sonoma, Sacramento, Santa Clara and San Mateo. From actual observation in many different counties, I feel justified that there is no locality or climate where, with thorough work, it has not been proved that the very worst pests could be kept completely under control, but their permanent eradication, of course, cannot be reached save by the utmost exertions by all parties concerned. Without this, no amount of money appropriated for the Horticultural Commission will accomplish the desired results. On November 15th, the Horticultural Convention is to meet in Sacramento. All persons interested in fruit culture should be present. A free exchange of opinions should be had, and a thorough understanding should be established between the representatives of the various fruit-growing sections. The workings of the horticultural laws should be thoroughly elucidated, and their defects pointed out, that we may have time before the session of the Legislature to have necessary revisions pointed out.

I submit these thoughts to the fruit-growers of this State, sincerely hoping that the importance of the subject will be shown by the large number of delegates present at the convention. By a thoughtful provision of the last Fruit-growers' Convention, held under the auspices of the State Board, at Los Angeles, men prominent in the different specialties of fruit culture were appointed to prepare essays bearing on their respective interests, and these contributions will no doubt help to make this gathering one of the most interesting and instructive ever held.

W. G. KLEE,  
Inspector of Fruit Pests.

San Francisco, October 14, 1886.

## THE STOCK YARD.

### Safety in Handling Bulls.

The serious injuries that Superasor Edwards, of San Jose, recently received from an attack by a vicious Jersey bull render timely some hints concerning the management of dangerous bulls. A man who is thoroughly experienced in such matters said to a San Jose Herald reporter: "I had cautioned Mr. Edwards about his bull and told him that a Jersey bull is always dangerous, but he insisted that he had brought up the animal and could easily manage him. Mr. Edwards was in the habit of going into the corral without taking any precautions, and I felt almost sure that something would happen to him. He would undoubtedly have been killed outright had it not been for the fact that he had a chain connecting the tips of the bull's horns. This chain prevented the horns from penetrating his body, and was a good protection as far as it went; but there is a better contrivance than that, and one which will enable a man to keep his bull, no matter how vicious, under complete subjection. This plan is: Put a ring through the bull's nose and attach to both sides of this ring a stout iron rod running up to the tips of the horns and about two inches above them, and then run another iron rod between the tips. When a bull shows fight you can render him perfectly powerless by grasping one of the rods running from the ring to the horns, and the rod is so easily grasped that you can seize it at any moment. When once you get your hand upon it the least struggle made by the bull will hurt his nose and make him desist immediately. The rod is preferred to any other device because it is so easily grasped. The ring alone would be just as good if you could get hold of it, but when a mad bull is coming toward you it is next to impossible to catch the ring. The rods perform another service while the bull is in the act of goring, as the least effort of the kind that he makes causes the rods to push against the ring and inflict pain."

The suggestion is worth heeding, as it has been found to be effective, and it recommends itself to any one's best judgment.

Mr Edwards is seriously hurt. The fracture

of his ribs is doubtless a small item compared with the terrible bruising that he received. A friend who visited him recently says that the bull, after knocking him down, rolled him on the ground for a distance of 25 or 30 feet and stopped only at the fence. Mr. Edwards climbed this fence, and was then taken into the house.

## HORTICULTURE.

### A Model Orchard.

Mrs. R. A. Chadbourne, of Suisun valley, Solano county, has one of the finest orchards we have seen in California. It consists of about 14,000 trees planted on 110 acres of sandy loam made from the deposits of the Suisun creek. The soil and climate are admirably adapted to the production of fruit of the finest quality.

The orchard contains about 1500 cherry trees, 2000 apricot, 2400 plum, 1200 peach, 3000 prune, 2000 Bartlett and 600 Nelis pear trees, besides a few other varieties. Thus it will be seen that the various fruits ripen in such a way as to economize time and labor and give constant employment throughout the entire season.

Mrs. C. has four prominent points in her creed as a fruit-grower, viz.:

1st. Do not put all your eggs in one basket. If one or two kinds of fruit fail any year, there is still something left to fall back upon. Sedition is there a failure of more than one out of five kinds of fruit.

2d. Follow one kind of business. Many have a grain and fruit and stock ranch combined. Fruit-growing has generally proved a failure when so combined, as it will inevitably be neglected in bad years, and one year's neglect of the orchard spoils it for the next; but not so the grain fields. Mrs. C. has set all her place to orchard except about 10 acres reserved for pasture.

3d. Do thorough work. Money must be put into the orchard to get money out. She keeps men in the orchard about every day in the year except Sundays. This orchard shows thorough cultivation, thorough pruning, thorough cleaning. Without waiting for the scale bag, or other pests, the whole orchard is sprayed twice a year (probably in December and again in May) with whale-oil soap and lye, using one pound of lye to the gallon of water. [We should consider this pretty strong for use in May.—EDS. PRESS.]

This settles the question of scale bugs very effectively. Nor is this washing attended with any great expense. Under this treatment the trees shine and thrive wonderfully.

The codlin moth comes in for a large share of attention, and is kept under good subjection. A band is placed around every apple, pear and quince tree early in the season. Every Saturday these bands are lifted carefully, and every worm is hit with a hammer. The band is fastened with a tack. Twice in the early part of the season the trees are gone over, and every wormy apple and pear is picked off. Twice a week all fallen fruit is gathered up, scalded, and fed to the hogs. I call this thorough work, and am glad to add that it is found very effective and profitable.

All apricot trees that split or show signs of splitting are bolted together with one-fourth or three eighths-inch bolts. Some trees have three or four long bolts through them, and it seems to agree with them finely.

4th. Square Dealing. This lady comes of good New England blood, and has a reputation among all her neighbors for uprightness and square dealing. She has no use for speculators, nor jobbers, nor sharp practices of any kind in the fruit business.

She proposes to furnish standard fruit, put up in a standard way, and she wants a fair price for it—and generally gets it. When she has refuse-fruit to sell, she sells it as refuse. She belongs to the Fruit Union, but thought it safest and best, this season, to sell her fruit in the orchard, and she has realized satisfactory returns on all kinds of fruit this year. Her orchard has paid her handsomely, and it is the just reward of thorough work and honest dealing.

It will pay any person who is interested in fruit-culture to visit Mrs. Chadbourne's orchard, when passing that way, and study her method.

Napa, Oct. 13, 1886.

W. C. DAMON.

### A Hill Orchard in Monterey County.

EDITORS PRESS:—L. S. Hutebings, living in the hills near and south of the Pajaro valley, in Monterey county, about 5 miles southeast of Watsonville, on a rich gravelly soil, is engaged in fruit-growing and is experimenting on the capabilities of soil, climate, etc., in the planting and cultivation of many kinds and varieties.

He has found that at this place pears, peaches and plums grow and bear well. Cherries do only fairly and apricots bear only about every other season. On some of his lowest ground, which may be irrigated from a spring higher up the little valley, he raises very fine strawberries. His strawberries are in rows three feet apart,

and 20 to 24 inches in the row. Blackberries and raspberries also succeed quite well in the low ground, moistened by the irrigation. Gooseberries are only a partial success. He has different varieties of grapes set out and growing on trial.

Mr. H. believes in ample room between rows for plowing, and so arranges things as to be able to plow from one end of the field to the other, through even different kinds of plants, as time and much labor can thus be saved in the cultivation. Of course when this cannot be done conveniently, alleys sufficiently wide to turn a horse may be introduced, with only losses of so much land and time and labor spent in turning, to which we add the extra care necessary to prevent injury to plants.

His blackberry and raspberry rows are 8 feet apart and gooseberry 5 feet; his plums and peaches 16 feet, and apples and pears 30 feet. He objects to setting fruit trees or plants of temporary growth between fruit trees designed for a permanent orchard, as such a temporary use of the ground between trees would more or less exhaust the soil of the properties which should in time go to the support of the orchard trees. The growth of the young orchard trees may for a few years be rapid and unimpaired by the temporary growth between rows, but when, in the course of a few years, the trees arrive at the period of high productiveness, their roots would strike into the soil hitherto exhausted or partially exhausted by the temporary growth, and thus for the want of proper nourishment their productiveness and value would be greatly impaired.

Mr. H. also condemns excessive pruning, as much pruning seems to injure the life of the tree and give the woolly aphid places in which to harbor and work. The tree should be kept balanced, but the work done before the limbs become large enough to leave a scar. The cutting off of large limbs should especially be avoided as a ruinous method of pruning. After too many limbs grow large choose the lesser evil and let them remain. McD.

Monterey Co.

### Peach on Myrobolan.

EDITORS PRESS:—In your issue of the 9th inst. there appears a communication from James O'Neill, of Haywards, under the above heading. He says:

The question is asked: Is the myrobolan a good stock for the peach? and I say it is. \* \* \* It has taken years of experience to find out the true mode of propagating and transplanting the peach when on myrobolan, and by careful watchfulness I have found out why a large percentage is lost by transplanting. The reason is, the peach starts before the stock and evaporates sap from the root, and consequently the tree dies, and those that live are partly stunted or injured. This obstacle is easily overcome. The peach, when on myrobolan, must be trimmed close at the time when dug, and when they are reduced to a single cane it takes four weeks for the buds to start, and by that time the root has caught and they start to grow at the same time. They do better when planted four inches below the union, as the stock will thicken sooner, keeps softer and makes roots close to the union. This deep planting is intended only for the peach, and not the plum or prune, as they will root above the graft.

Now, while I agree with Mr. O'Neill in the matter of budding, trimming and transplanting, my experience has been altogether different from his in the matter of peach-growth on myrobolan stock. Three years ago I was of the same opinion on this subject that Mr. O. holds at this time. So impressed, I budded quite a number of different varieties of peach on the best of myrobolan stock—so pronounced by W. B. West, of Stockton. The first year's growth from the bud was good—from three to four feet in length. One year ago last January they were, in common with other fruit trees, carefully taken up with a spade, every limb immediately cut off, the tops cut down, and shipped to my farm in San Luis Obispo county, where they were carefully put out and covered three or four inches below the union with my own hands. Afterward they were measured, and all cut down to about 24 inches—leaving only a straight stem without a single limb.

Last year some of them grew fairly; some scarcely at all; while quite a number of them died outright. Last February most of them started for a second year's growth, but many have since died and the remainder look dwarfed and sickly.

My apricots, plums and prunes, budded on the same stock at the same time the peaches were and transplanted at the same time in the same land, have done remarkably well. Now it will be seen from the foregoing that all the conditions imposed by Mr. O'Neill have been strictly complied with in my case, nevertheless my experience in propagating peach on myrobolan stock is a signal failure. My neighbor, Mr. Wm. Earnst, has had a like experience.

It may be conjectured that our soil and climate are possibly to blame for this failure, but such is not the case; for the reason that peach trees, budded on peach, were put out at the same time and place, and have grown better than anything I have ever seen of like kinds.

It is possible that the peach on myrobolan stock may do well in the central and northern portions of the State, but I beg leave to warn beginners who may be proposing to set out orchards in the southern portion of the State, against peach on plum or myrobolan stock.

East Oakland.

J. V. WEBSTER.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## The Substantial Bank.

[By L. VIRGINIA FRENCH.]

[This poem, which was recited very effectively by Miss Josie M. Roache at the State Grange, appeared some years ago in the *California Agriculturist*, since merged in the *PACIFIC RURAL PRESS*.]

Good-morning, 'Squire. Well, yes, I'm feelin' purty pert today—  
"I guess because the boys are all at home again," you say?  
Well, maybe so. It surely helps a father, now and then,  
To have his children rangin' round the old home place again.  
Them boys of ourn are (as you say) "a mighty spunky set,"  
But "the panic's" on 'em and I've "took 'em in out of the wet."  
And here the old man chuckled till the overflowing gle  
In his kindly, dark eyes dancing was a pretty sight to see.

Thar's our Billy—he's our oldest, and a banker up in town;  
The only one that's married—and he's brought the Madame down;  
She's as pretty as a picher—looks so cheery, too, and bright,  
That "Mother" took to her at once, and I—well, "right on sight."  
Now Billy's mighty spunky—just the proper kind of stuff—  
But that infernal Wall street business used him purty rough;  
He busted up in bankin' and come down home, he said,  
To straighten out, and wait awhile until the dust was laid.

Then thar's Hal—he had the factory, and he still is on his pegs,  
Which is something when so many more is "shaky in the legs."  
The "panic" took him unawares, and though his credit's prime,  
The boy went under bodily—"suspended" for a time.  
But the fellow's tender-hearted, and he said it broke him down  
To see the mournful faces of his "hands" a-bangin' round.  
When he couldn't stir to help 'em; so he come home for a spell,  
As he sadly said this morning, to see mother and get well.

And George? He's our "professional"—smart chap, too, in his way,  
But he says, "No use in working when it won't begin to pay."  
Their ranks are overcrowded now, and George says that the Law  
Is for the fellow who has "cheek," and longest lease of "jaw."  
The lad's somewhat disgusted with his'n over crimes,  
And so come home (he said) to "wait awhile for better times,  
To get his moral nature strung and 'cruited up anew  
With something that is homelike, honest, genuine and true."

Well, last night the boys was talkin' all together round the fire,  
And Tom (he's just from college) listenin' like he'd never tire;  
They lived their troubles o'er again, and, 'Squire, you would have thought  
That every fellow's work was just the meanest ever wrought.  
The banks all bust, the funds gone up, the country sore in need,  
Taxation "playin' thunder"—till at last they all agreed  
That if man could have a business that could be made to pay,  
Why, the trade of the old Granger "was the one thing made to stay!"

Tom (he's powerful military, and high-mighty, as you know,  
Wanted to go to West Point—be a General or so)  
Says Tom, says he, "Old fellows, now you all have said your say—  
I believe I'll take my life-stock in an honest bank of clay!  
You fellows on the quicksands may shift and shuffle round,  
I'll set my "shares" of iron into more substantial ground;  
I'll deal in gold—the gold of grain—and by and by I'll learn  
To mine it out of 'pockets'—big manure-piles at the barn."

Then Billy's wife spoke up alive—whew! she's the cutest thing!  
(Land! sir, you ought to hear how that young nightingale can sing!)  
Says she, with such a sparkle in her laughing, loving eyes,  
"Ha! you've struck it there, my brother—'tis the farmer finds the prize!  
Look! how this dread financial storm has thousands overthrown,  
And father's trade's the only one that stoutly holds its own.  
If I was just a man like you I'd take the safest rank,  
And draw my gold from out The Soil—the Farmer's Mighty Bank!"

Then Mother, she looked up, and in her softly smilin' way—  
(The wimmin, 'Squire, on every theme will always have their say)

Says she: "God bless my children! and believe me when you come  
To seek that shelter from the world that's only found at home,  
Whatever fate may wait you at the turn of Fortune's crank,  
Your father's and your mother's love's your great unbroken bank."  
Then Billy's arms went round her neck, and thro' the fire-lit gloom  
A shout, "Three cheers for mother!" rang around the cheery room.  
I can't tell how it came, my friend—they all around me pressed,  
The little nightingale that sung was sobbing on my breast;  
I'm half ashamed to tell it now—a Granger of my years—  
But something blinded me awhile—I reckon it was tears.

## Meeting of the National Grange.

As announced in the *RURAL* of October 16th, by the official letter from Bro. John Trimble, secretary, the meetings of the Twentieth Session of the National Grange, Patrons of Husbandry, will be held in the city of Philadelphia, Penn., commencing on Wednesday, November 10th, at 11 o'clock A. M. The sessions of the Grange will be held in Musical Fund hall, Locust street, between Eighth and Ninth streets. Accommodations for the National Grange have been secured at the Girard house, corner of Ninth and Chestnut streets, two and one-half squares from Musical Fund hall. There is every reason to expect an unusually important and effective session this year. Questions of great public moment are pending, and as the membership of the National Grange includes representative minds from the great body of the industrialists of the nation, we expect action which shall be incisive and wise and have the true ring in it. California will be represented by Bro. and Sister Wm. Johnston, who will be found *primus inter pares*

tion of every year. The subject of this sketch was thus brought up to a vigorous outdoor life, and thought it no hardship after his morning's work was done to walk three miles to school.  
He graduated at the University of Mississippi at 20 years of age. He selected farming as a business, and was engaged at that when the war broke out. He joined a battery of artillery as a private, was elected lieutenant, and within a year was chosen captain and commanded the company until the close of the war, when he again returned to the plantation. While thus

HON. PUT. DARDEN, OF MISSISSIPPI.

engaged in agriculture, the advantages of the Grange did not fail to attract his attention.

He joined Phoenix Grange as a charter member, and in the fall of 1873 was elected Master. He was elected Overseer of the State Grange in 1874, and Master of that body in 1876, which office he has held with distinguished credit to himself ever since, and his energy, ability and

## The Farmers in Council.

The State Grange Meeting—Fourteenth Annual Session.

[CONTINUED]

We give this week some matter in addition to what we have already published, to complete our record of proceedings.

Co-operation with Rochdale Co-operative Associations.

At the State Grange session of 1885, Bros. I. A. Wilcox, D. Flint and S. P. Sanders were appointed a committee to correspond with the extensive system of Rochdale Co-operative Associations of England, with a view of effecting a large and direct trade with them in the disposal of our contemplated large surplus of preserved fruits, honey and other produce. Alluding to the work of this committee, on Friday afternoon of the present session, Bro. A. T. Dewey called attention to a large collection of printed documents received, for the information of the committee, from England concerning the organization, aims, objects and wonderful success of the Rochdale Co-operative Associations in Great Britain. One volume, containing the report of a single annual session of the Co-operative Congress (having 578 representatives present) contained about the same amount of printed matter as the entire New Testament. Bro. Dewey stated that the committee was not prepared to make a formal report, and moved that Bro. B. F. Walton and Sister W. D. Ashley be added to the committee, and that further time be granted for action and final report. The motion was adopted.

From the Chairman.

The following communication was received by the Worthy Secretary, too late for presentation to the State Grange session:

Worthy Master and Members of the State Grange of California: As chairman of the committee to whom was referred the subject relating to the shipment and sale of fruits to the Rochdale corporations of England, I am sorry to say I have nothing definite to report.

I regret very much that I have not found the time to peruse the various documents relating to co-operation in general, so kindly furnished by Bro. Dewey, who proposed this committee. A glance at these voluminous documents will show the extent to which co-operation is being carried on in the old country, in business mat-

BIRTHPLACE OF THE GRANGE—OFFICE OF WILLIAM SAUNDERS, WASHINGTON, D. C.

and will do the California jurisdiction much credit.

As appropriate to the meeting of the National Grange, we give on this page two engravings—one of the present W. M. of the National Grange, and the other of the birthplace of the Order in the city of Washington. The Master, Bro. Putnam Darden, is, we are sure, handsomer than the portrait we have secured of him, and yet the engraving presents lines of nobility and manliness, by the aid of which the reader can form a conception of the man which will do him more justice than the engraver has.

Captain Darden has been re-elected at four consecutive annual meetings Overseer of the National Grange, and served with distinguished ability. He was born in Jefferson county, Mississippi, March 10, 1836. His father, Jno. D. Darden, also a native of that State, was a man of original views and much force of character. He believed that boys, whatever their station in life, should be trained to manual labor, and, though a man of wealth, he compelled his sons to work on the plantation a por-

indefatigable efforts in behalf of the Order in Mississippi for years past have caused his elevation to the highest office within the gift of the Grange, and conclusively proves that merit is its own reward.

As pertinent to the meeting of the National Grange, we give an engraving of the building in which the idea of organization was first embodied in due form. In John G. Wells' book, "The Grange Illustrated," from which we reproduce the engraving, we take the following paragraph: On the evening of the 4th of December, 1867, at the office of Mr. Saunders, then on Four-and-a-half street, between Missouri avenue and the old canal, there were assembled less than 10 persons, and there and then the National Grange was organized, and officers elected for five years. At this meeting no lady officers were elected, although provision had been made for them in the constitution, but at a subsequent meeting the four officers, Ceres, Pomona, Flora and the Lady Assistant Steward, were elected, as well as the Executive Committee.

ters. Necessity has forced this co-operation.

When one gets the legitimate results of his labor, he gets all that legitimately belongs to him. Nothing short of this should satisfy him.

This subject is but little understood by our people, and there seems to be a general disinclination to practice it. It takes the saddest kind of experience to induce the people to work together for their interest.

We all know that the co-operation of the few at the expense of the many is the prevailing practice. We all know, also, that it is only by co-operation of the many that the united action of the few can be resisted.

My time is just now taken up with other matters, or I would pursue this interesting subject further while I am about it. I will add, however, in conclusion, that all systems of human government, save that of absolute monarchy, are founded on the co-operative principle. Ours is the most completely founded on that system of any. The free suffrage principle, that allows every qualified voter to vote, implies a duty so to do, and to do it in the right

manner, in unison with others for the general good and the welfare of each.

Until this union in action shall prevail, all the efforts of the people at reform in any matter will prove failures only.

Adopt the legitimate principles of co-operation, and by united action all the grievances of the people will vanish like dew before the morning sun. Submitted in F. H. C. & F., I. A. WILCOX.

From the Leading Friend of Co-operation in England.

When Hon. George Jacob Holyoake was visiting the Eastern States, the California State Grange, some two years since, invited him to extend his visit to California, and in the hope that he may yet favor us with his presence and able advocacy of the great cause of co-operation, the following private letter to this office will be read with interest by many:

EASTERN LODGE, BRIGHTON (ENGLAND), }  
September 13, 1886. }

MY DEAR SIR:—Had I not been engaged in writing a series of papers in our *Co-operative News*, which I hope you see, I should have written you earlier. The papers I refer to are an exposition of "social ideas" prevalent "in England 100 years ago," which are more diversified and suggestive than any in the minds of the people now. If our co-operative Congress had attained the sense which it is gradually acquiring of the duties of international propagandism it would have made an appropriation to enable me, or some more suitable person, to visit your fair, study your Grange organization, and discern in what way we could promote your objects and your business. I shall be glad when it does this. For myself, I should have pleasure in visiting California. I am satisfied that America will yet distinguish itself in co-operation. The more I become acquainted with the fertility and energy of social ideas in your country, the more confident I am that it will one day excel us in the application of co-operative principles. We have no counterpart among us of your PACIFIC RURAL PRESS. Yours very truly,

GEORGE JACOB HOLYOAKE.

Bro. Flint now has the printed documents above mentioned, and will show them to any persons interested in the matter. We hope he will write and speak freely of this great subject, which we believe can be made to do good service in the cause of the Grange and the welfare of our entire industrial population.

### An Invitation to California.

Our representative at the National Grange bears with him an invitation to that body to hold its next meeting in Sacramento, the capital of the State of California. At the meeting of the State Grange, held in Marysville during the first week of October, this invitation was formally extended and the hope expressed that it would be accepted. We trust it may be. We can assure the officers and members of the National Grange that they would receive a warm welcome in California. Our subordinate Granges have upheld the principles and standard of the Order for the last 12 years, and have succeeded in developing institutions embodying these principles, which it will no doubt be of much interest to the representatives in other States to examine in their practical operation. The journey across the continent is a long one, it is true, but it is becoming shorter because of faster trains and the reduced rates which are available to excursionists. We sincerely hope the National Grange may see its way clear to accept the proffered welcome and hospitality of California Patrons.

TEMESCAL GRANGE had a comparatively good turnout at its last meeting. Bro. J. V. Webster gave a good report of the State Grange session, and Bros. Kelsey, Goodenough and Dewey, and Sisters Dewey, Kelsey, Renwick, Babcock and Brooks followed with interesting remarks. Bro. W. G. Klee, State Inspector of Fruit Pests, gave valuable information and hints concerning the destructive work of and the remedies for the threatening, noxious insects and other pests. Immediate legislation, strong efforts on the part of individual cultivators and a general co-operation on the part of those interested seem to be now necessary to stop the devastating progress of the numerous pests and secure future ample reward to farmers and fruit-growers for their investments and labors. It is hoped that Bro. Klee may be able to give an open Grange lecture on the subject in Oakland on some future evening. By request of the Lecturer, Sister Paine read a gifted and well-received poem. The subject for discussion on Saturday evening, November 6th, will be, in substance, "How to better provide for accomplishing the will of the people through legislation."

THE ORDER IN NEW ENGLAND.—Maine, seven new Granges; New Hampshire, six new Granges; Vermont, six Granges reorganized; Massachusetts, eight new Granges, and Connecticut, twelve new Granges, are the answers to the rollcall of progress in the New England States since January 1, 1886.—*Willamette Farmer*.

PASTERS ILLEGAL.—One of the peculiarities of California's election laws forbids the pasting of printed slips on the face of ballots. Remember, all changes of names must be made in writing with pen or pencil.

### A Word Before Election.

Manly Independence on the Part of the Farmers.

EDITORS PRESS:—Will you grant me a bit of space in your valuable journal to say a few words to the tillers of the soil? I believe it was Mark Twain who said that New Jersey had more atmosphere to the square inch than any place he had ever seen; and Corporal Tanner declares we have more politics to the acre than any State he ever visited. There is a cause for this lack of confidence in the old order of things. The pernicious policy of working the forces of the government in the interest of the monopolists and capitalists has so pinched and oppressed American labor that it is almost everywhere in a state of angry irritation and revolt. The vacillation of the great political parties, their ambiguous attitude on all questions of vital interest to the masses and the disposition of their leaders to wrangle and snarl, like a pack of hyenas, for the spoils of office, is a spectacle that has no parallel in history since Nero fiddled by the light of burning Rome.

It is strange how slow the farmers are as a class to come up to the standard of manly action and independence, and shake off all the manacles of party and demand that the State and Federal Government shall seek to promote the prosperity and progress of the country upon the basis of the industrial and business interests of the people. That the disposition of the public domain and homesteads, and the growing importance of

#### State and Inter-State Commerce,

Be regulated in such a manner as to protect the productive industries of the country, and kindred matters be allowed to come to the front as special objects of legislation. The fact is, the farmers as a class are not conscious of their importance. Let them remember that in war it is the farmer who comes to the support of the Government with shouldered musket and the supplies necessary to do effective service for the country. That it is the farmer, who, in time of peace, has to bear the burdens of taxation and pay the Government debt. That the product of his toil and sweat is the lifeblood of the nation. He cannot shirk his responsibility if he would. He cannot hide his lands, cows, sheep, horses, cattle and the yield of the fields and orchards from the tax-gatherer, while the monopolist may return only his plant and hide the remainder of his vast property in his pocket. Governor Hill, of New York, said the other day in a speech before the St. Lawrence County Agricultural Fair:

"It is evident to every keen observer that the personal property of the State does not pay its just proportion of taxes. The assessment of personal property should nearly equal that of real, and should be taxed, and thereby the present unjust burdens upon real estate be greatly alleviated. The farm and the workshop should bear their proportion, and so should the bonds, the mortgages, the stock and the capital of the millionaires, the speculators and the money-changers. The theory of our present system of taxation, which permits the indebtedness of the owner of personal property to be deducted from its value, while it permits no such deduction in favor of real estate, even though covered by a mortgage, is neither just nor consistent. This presents a proper subject for our Legislature. There are no arguments for the proposition that real estate should alone be taxed."

The principle here inculcated is applicable over a wider area than the State of New York. In this State there is no question that just now so vitally concerns the welfare of the farmers as reasonable transportation of their products to the Eastern seaboard, or between home producers and consumers. That the operation of our

#### Board of Railroad Commissioners

In this direction has been a failure, no one will deny. Its working has been timid, tentative, and more in the interest of capital than the producers. And yet we have no cause of despair. Failure in the past should teach us to be more careful in selecting our commissioners in the future. There is no office of more importance to the interests of the people of this State and to the farmers as a class, and there should be a special solicitude in securing men of the most established integrity, firmness of purpose and invincibility to wheedling seductions. We feel assured that the two men selected from one of the old parties by the Farmers' Convention for this position possess these requirements. We are not so well assured as to the other set of nominees. We are not opposed to the American movement, but the fact that its leaders in this State are well-known railroad men should cause us to view with distrust the men for this office they favor. So far as the railroad is concerned, this is the only office on the State ticket of any importance. They can afford to merge everything else for victory here. And so far as the producers are concerned, they can afford to take no risks.

The election will be a close one, and let no man in this matter throw away his vote. For years we have opposed the management of any corporation or enterprise so as to oppress the people and evade bearing its just proportion of the burdens of the Government. We have passed resolutions and issued proclamations.

Men and brethren, has not the time come to act? We need no leaders who flourish trumpets and wear badges and uniforms. We want men who will stand or fall for the principles they proclaim, and to that end do not throw away a vote upon any man who is tainted with suspicion. MUDDILL.

MAGNOLIA GRANGE has had a visit from Worthy Lecturer Flint, who reports, in the *Patron*, a good attendance, with representatives from Sacramento, Newcastle and Grass Valley. A brother was initiated in the first degree, and a sister instructed in the third and fourth degrees. They also had a fine harvest-feast, and an open discussion of timely topics, winding up with a little dance by the younger members. Brother Flint credits this Grange with a deal of pluck, and predicts its progress.

RESPECT AND SYMPATHY.—In view of the death of Bro. H. G. Sanborn, Placerville Grange has passed resolutions expressing its respect for his many virtues, intellectual power and sound judgment, and its sincere sympathy for his widow in her affliction.

IMPROVING.—We are glad to learn that Sister J. M. Kerlinger, of West San Joaquin Grange, one of the *RURAL*'s contributors, is recovering from illness and is now in the resting stage which we trust will bring her ere long to full health and strength.

CORRECTION.—The date of Honorable J. V. Webster's letter, in last week's *RURAL PRESS*, should have been Oct. 20th.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Butte.

WINTER WHEAT.—Farmers are sowing more grain this fall without waiting for the rains to come than we have ever before known in the county. Dry sowing on summer fallow never fails to produce a good crop, and our farmers realize that if they want to be certain of the grain getting an early start, and making a good root growth during the winter, they want to sow it without waiting for the first rains to come.

#### Fresno.

EDITORS PRESS:—The absence of rain up to this date has enabled the farmers to harvest and secure their crops, baul straw and store it away for emergencies, thrash beans and Egyptian corn. Shall I tell you more about Mr. Loomis' corn, or what may be said since its maturity? In my note in the *RURAL* of Aug. 7th, its prospective yield was described as enormous. His expectations have been fully realized, as the yield has averaged 60 bushels to the acre, and apparently has not diminished the supply of nutriment to his Muscat cuttings, which were planted in February and seem to have the advantage of a good year's growth. A surprising overestimate has been made of raisin grapes, and the acceptable power of solar heat for curing them. If prices corresponded as favorably, we should try and forget that the "sere and yellow leaf is the emblem of decay." —A. L. A., *Temperance*.

#### Lassen.

MOTH AND SCALE.—Susanville Cor. *Reno Gazette*, Oct. 17: The fruit-growers have commenced gathering the crop of winter apples, which is quite small and badly affected by the codlin moth. Unless the fruit-growers of this county soon commence a determined warfare against the moth and cottony cushion scale, the fruit will soon be worthless.

SHEEP AND CATTLE MOVING.—During the past two weeks a number of large droves of cattle have passed through town on their way to the lower country and a market. The numerous bands of sheep that are driven from below to the mountain valleys of this country during the summer months have nearly all left for their winter ranges.

#### Los Angeles.

ORANGES AND RAISINS.—Santa Ana *Herald*, Oct. 23: All indications point to a very large crop of oranges in the Santa Ana valley this season. The fruit is now quite large, and most trees are heavily loaded. We think the fruit will be as bright and clean as it was last year. The raisins of the valley have been curing finely during the present spell of good weather, and the greater portion of the crop is now beyond all danger of injury from early rains. Quite a large number of boxes of this year's crop have already gone to market, and the work of packing is going on all over the valley at a lively rate.

#### San Diego.

CHAMPION YAMS.—National City *Record*, Oct. 21: We have on our table a hill of sweet potatoes, or yams, weighing 76 pounds 10 ounces—a very fair yield for one vine. This mammoth hill of yams was raised in the Tijuana valley by Mr. A. Titus. When he delivered the same at this office, he only exacted one condition, viz.: "That the editor should eat the whole 'business' at one meal, or pay for the same." We paid for the yams. We would like to hear from some other quarter of the globe, if this hill can be beat. Tijuana valley lays claim to the championship of the world for yams.

#### Santa Clara.

LIVE-STOCK AT AUCTION.—Gilroy *Advocate*, Oct. 16: The great auction sale of Reeves'

cows, horses, hogs and dairy fixtures took place on Tuesday. There was a fair attendance of stockmen and farmers, and the auctioneer made sales aggregating over \$12,000. The chief buyer was Henry Miller, whose bill amounted to more than \$9000. Cows sold in small lots from \$10.50 to \$60 per head. The Reeves Bros. would have made improvements needed for their convenience years ago, but the owner of the ranch, Martin's, habit of leasing from year to year, left them in uncertainty about occupation long enough to warrant expenditure.

#### Tehama.

FOOTHILL PRODUCTS.—Red Bluff *Sentinel*, Oct. 16: Away up on the Champion Mill road, 20 miles east of this place, is W. O. Jennings' farm and stock ranch. It was said before he bought the place that corn and garden "truck" could not be grown there. Mr. Jennings has proved that assertion to be false. He planted corn, melons, potatoes, etc., the 2d day of July. The corn is now ripe—fine, large ears—and has been gathered and put into the barn. He has been using melons and potatoes nearly two months, which were large and well flavored.

### An Opportune Letter to Californians.

L. B. Anway to Wm. H. White.

MY DEAR SIR:—Your open letter in the *California Patron* of Oct. 16th, addressed to the State Central Committee selected by the Farmers' Convention, also to Joel Russell and J. V. Webster, reached me today. Being a member of that committee and in the absence of an opportunity to confer with my colleagues, I take the liberty to make you an answer upon my own individual responsibility and individual opinion.

While I concede to you every inference and opinion as stated in regard to the relations as between Stanford, Swift, the Republican party and the railroad and kindred corporations, I beg to differ with you most emphatically as to your opinion and the policy of your proposition to carry us both soul, and body, and land, within the bosom of the Democratic party, the Farmers' party, the Grangers and other industrial producers, and all for the purpose of showing Congress that the tail is trying to wag the dog. If Stanford is not just as much the dog and the people of California the tail when the Democratic party of California is in power as when the Republican party is in power, I must confess my powers of discrimination are at fault, and if you can discover any difference, you must certainly be the "boss" discriminator.

Your anxiety seems to be a dread or fear that Congress will, if Swift is elected, discover that Stanford owns and runs the politics of California. I would say to you, "my dear sir, that Congress for a long time has known that capital has run the politics and owned the Legislatures of all the States in the Union, and the National Legislature as well;" therefore it is too late to be catching at straws of such character as mentioned in your communication.

You certainly are aware of the excellent character of the anti-monopoly resolutions embodied in the platform of the Democratic party of 1882. You are aware that it swept the State, with one single exception, L. C. Morehouse for State Board of Equalization. You are also aware that the Democratic party had a nice working majority in both branches of the Legislature, and that they never, during their entire regular and extra session, attempted or even showed a disposition to carry out or redeem one single pledge made in that San Jose platform of 1882; and I defy you, or any other human being, to successfully contradict or show that I am wrong in the statement just above made. Neither does the present standard-bearer of the Democratic party—Mr. Bartlett—bring to view any better evidence or any better record, or any more sterling qualifications of character than did Governor Stoneman, the moment he accepted the nomination and endorsed the platform. Yet they proved just as recreant to the interests of the people, were just as ready to do the bidding of Stanford, as are the Republican party, and it matters not which of the political "bosses" is in the majority, Senator Stanford is the dog and does the wagging, you say.

"The Grangers, farmers, producers and working-men are thus called on to bow to this mighty Lord of California and kiss the foot that spurns them. Will they do it? My friends, I trust and believe they will do nothing of the sort."

I am fully in accord with you in the above sentiment, and I also trust that the producing classes of California have at last opened their eyes to the fact that it matters but little to this "mighty Lord of California" as to which foot they kiss, his Republican or Democratic foot.

In making such a statement I believe that I am voicing the sentiments of the entire State Central Committee, as well as Messrs. Russell and Webster. I believe also that I am in accord with the views of a very large majority of the Grangers of California, especially of those of whom the Farmers' Convention were composed. Therefore we say to you and to the independent voters of this State that those who represent the Farmers' party have forever cut loose from the mass of political corruption which is embodied in both the Republican and Democratic parties. That we have unfurled our banner, that we have placed at the head of our ticket as our standard-bearer a staunch and well-tried farmer, an old "war horse" Granger, Judge Joel Russell, of Haywards, Alameda county, one who is worthy and well qualified and comes well recommended. That we never, no, never, will trail our banner to or kiss the ordly foot. That we want no more Stanfords or Stonemans, or any more unredeemed pledges, but that we intend to fight, to fight on until we convince a majority of the people of this commonwealth as to the justness of our cause and victory finally crown our efforts.

MORE FAIRS TO TELL ABOUT.—We yield a good deal of space this week to recent fairs, but still have accounts to give of those at Los Angeles, Arroyo Grande, Visalia and elsewhere, which we had to defer or issue a double-size paper.

## Night Thoughts.

[Written for the RURAL PRESS by FANNIE H. AVERY.]

Apart from scenes of woe or mirth,  
I watch, with pensive brow,  
The moonlight shed upon the earth  
Its pure and gentle glow.

The holy beauty of the night  
Enthralls me with its subtle power,  
And something of its calm delight  
My spirit borrows of the hour.

My thoughts are drawn from worldly care,  
And soar afar on high  
Into the region blue and fair  
That mortals call the sky.

I flit, in fancy, through the realms  
Of space, whose boundless span  
My human intellect overleaps,  
With its "stupendous plan."

My heart with humble awe is thrilled  
To think the heights and deeps  
Of air with suns and worlds are filled,  
That the Almighty keeps

In harmony the most divine,  
Oh, words are all too weak  
The solemn rapture to define;  
I feel, but cannot speak,

When'er I dwell upon such themes;  
For then I love to think  
That there is something in me seems  
To draw me and to link

Me to those shining distant spheres,  
Which I view from the earth.  
What can it be my soul endears?  
Is it immortal birth?

The glorious Universe of God!  
If we thought on it more,  
Our minds would grow more large and broad,  
And worthier to adore

The Great Intelligence that bade  
Our bodies issue from the dust,  
And breathed that into them which made  
Our souls secure from moth and rust.

San Francisco, Oct. 6, 1886.

## The Evolution of Mrs. Thomas.\*

NUMBER 3.

[Written for the RURAL PRESS by M. H. F.]

By the time our heroine had finished "Green's History" the "Chautauqua idea" had taken root in the minds of all the Thomas household. From the reticent and undemonstrative head of the family down to the obstreperous little Dick, all held the mother's new departure in tacit or outspoken approval. Mr. Thomas was a man of sterling worth, if he was a little oblivious to things present. No one thought more highly than he of education. He was as ambitious for his children as every other true Yankee, but he had come from his Green mountain home to California at an early day, and after ten years of unsuccessful mining experience had settled down to his business of accountant, content to let other men do the speculating and roving about. He was quite a bachelor when he first met Mary Rivers and she was a good many years his junior, but they were speedily married, and he had always been of one opinion regarding her, that she was the best and "smartest" of women. Very naturally he had grown to think book-knowledge of not much consequence to a woman. Could any amount of such learning make his wife any better mother or housekeeper? Impossible. Yet when he saw her now quietly bending her energies to self-culture, with a fixed determination to bring herself to a higher intellectual level, he secretly resolved to help her all in his power. It was not his way to put his thoughts into words, but the whole family recognized his attitude and his good wife was infinitely encouraged by it.

They were all quite enthusiastic over each new Chautauqua book. Even little Dick enjoyed "Old Greek Life." A very few words of explanation enabled him to get an understanding of old customs and ideas which made his conversation for a few days seem quite classical to his small boy friends. One of his teachers overheard him discoursing about the Olympian games out on the school playground, and remarked afterward to Albert: "That is a bright little brother of yours. He shows that he comes from an intelligent home," and Albert felt not a little pleased and complimented. Indeed, the whole family almost unconsciously began to feel that they were an exceptionally literary and intellectual household, so much did the home reading help on school work. Some fact in history, a great epoch or revolution, would be read about and talked over at the table or fireside, and within a day or two an allusion to the same subject would appear in a reading or geography lesson at school, and a

teacher's question would follow, which would bring a prompt response from some member of the Thomas family. They all had a fair record at school before, but now their reputation began to grow rapidly. Albert had graduated at the high school and was now taking a year's course at a commercial college, while Mary was almost ready for the Normal; so both of them had essays to write requiring considerable general information, and it was both delightful and rewardful to their mother to have them begin to call upon her for help. With a happy heart she carried her Chautauqua text-books into the kitchen and stole many a glance into them as she watched her oven or had a moment's respite from housework. When she sat down to her afternoon's sewing there was always one of these same little text-books in her work-basket, and by dint of conning them over and over she became quite an authority in dates and names, not only in English, but in Greek history and literature. Nor was she satisfied with mere outlines; it was her nature to be thorough, and her mental appetite "grew by what it fed on." There drifted in her way an advertisement of Alden's cheap reprints of standard and classical books. It was quite wonderful how many things "drifted" in her way. She seemed to have helping hands reached out to her from every side, and she took the proffered aid with a happy and grateful heart. These little volumes from Alden were not beyond her slender purse, and she indulged in several. She found "Plato" not beyond her grasp and very delightful, yet it cost her only 15 cents. In the same frugal way she flavored a good deal of homely fare with "Attie Salt." An investment of a dollar gave her a choice selection of the most famous English poems, and an equal amount brought to her growing library the prose masterpieces of our best English and American authors.

When the minister called to see her one day he caught a glimpse of the little text-book, "Studies of the Stars," lying open on the mantelpiece, and was at once astonished and delighted to find his parishioner, whom he knew only as a model housewife and good church worker, evidently studying the science which to him was like a gateway to heaven. He turned to her with a beaming countenance: "Are you really interested in astronomy, Mrs. Thomas?" he asked.

And when she assured him that not only herself but her whole family were reading Bishop Warren's "Recreations in Astronomy," and enjoying it as if it were a story, he insisted upon shaking hands over the discovery.

"You make me very happy," he said. "I shall certainly venture now to give a little series of lectures I have prepared upon astronomy but have never offered to our people lest they should lack popularity. I have quite a collection of astronomical works which I shall be very glad to lend you. Have you read 'Ecce Cælum'?"

And so the Thomases read "Ecce Cælum" on Sunday afternoons during the next month, and were lifted into a celestial atmosphere of which they had never dreamed. As they together trod the starry highways, and with almost breathless awe followed their guide in his lofty descriptions and imaginations, their very faces took on new lines of refinement and spiritual culture. The higher education to which the mother was now leading them had its beneficent influence in many ways. A sort of tuning-down went on by slow and wholesome processes; voices grew gentler; manners more courteous; they "trod more gently among the parts of speech;" a growing reverence for the mother's opinions brought a quicker deference to her feelings and a prompt obedience to her authority. This did not come about in a day or a year. It was a gracious and beautiful growth, like any of the developments of Nature.

We may not in this brief space attempt even to outline all the influences which came to this household through the mother's uplifting. A whole book could not do justice to the theme. A lifetime, an eternity, can only reveal it all. But we may be sure this light was not hidden under a bushel. "It gave light unto all that were in the house." Nay, this little candle shed its beams much farther than that. The neighbors began to wonder what was the secret of the Thomas family's growing power in the community. The boys were so fond and proud of their home and their mother; the girls so sensible and intelligent; Mrs. Thomas and the minister were so often heard speaking of books and magazine articles of which other people had not heard. An explanation came one day, less than two years from the date of our story's opening. The minister proposed to his congregation to meet at his house for the purpose of forming a literary society, and those who responded to the call found Mrs. Thomas there—shy little Mrs. Thomas who had never spoken a word in public in her life, and whose face glowed with blushes when the good pastor told them that she would tell them about a new society which was having a wonderful growth at the East, and in California, too, called the Chautauqua circle. With a voice that shook so she could hardly control it, and a heart whose throbs she thought must be audible to all present, our heroine told the story of her own experience, and with eyes which threatened to overflow, she closed by saying: "Only my Heavenly Father knows how thankful I am that I have had just the help and inspiration which this course of study is bringing to me."

As a result of this meeting a little Chautau-

qua circle was started in San Luis with the minister for president and Mrs. Thomas for secretary. Thus the good seed grew and multiplied. Not long since the general secretary received a letter from this same minister saying that he had never found anything so helpful to his work in the community as this Chautauqua circle. "It has given me a hold upon the members such as I could have obtained in no other way. In helping them intellectually there has come to me an influence over them morally and spiritually. Besides, the course of reading itself seems all-embracing. It reaches all sides of human nature and need, intellectual, physical, spiritual. Neither does it fail to bring to my own mind a refreshment in many lines of thought which repays me a hundred fold."

Half a dozen years have gone by. Mrs. Thomas finished the Chautauqua course in good season in 1883. She was not able to go to Monterey to graduate, for every dollar was needed to help Mary through the Normal, and the mother was only too happy to deny herself for the sake of her good daughter. But the diploma came from Plainfield, with the signatures upon it, which, to Mrs. Thomas, represented the grandest and best of men. The family grew fairly jubilant over the arrival of that diploma; the boys gave it the benefit of "three cheers and a tiger;" Mary got up on a chair and presented it with a speech which, to say the least, was highly rhetorical; and Amy conducted her mother to "the platform" to receive it. Finally Mr. Thomas bore it off in triumph to be suitably framed, and to-day it hangs upon their parlor wall, its proudest ornament. Each year the back of the frame has been carefully removed and the diploma taken out to have one or more "seals" added to it. Soon there will be a "rainbow" of them, Amy says.

In a corner of the parlor are some beautiful home-made book shelves, the work of the younger boys' scroll-saw, a Christmas present to "mother" for her Chautauqua library; and here are gathered her beloved books and her nicely-bound "Chautauquans." The way in which the whole family regards them reminds one of the old Penates; and, to Mrs. Thomas, they represent more than words can tell—help, comfort, inspiration—these only partially tell the tale. She stands before them sometimes and loses herself in a happy reverie, which ends not infrequently in clasped hands and uplifted face. A few weeks since the Chautauqua circle of San Luis gave a reception to their little community, and Mrs. Thomas was the essayist of the evening. As she came quietly forward upon the platform of the town hall, and with perfect self-possession bowed to the full house, her sweet, matronly face looked so thoughtful and cultured, so pure and intellectual, that an old-time friend would hardly have recognized her. She had chosen for her theme "A Roman Matron," and her paper showed so much acquaintance with Roman customs, such familiarity with their history and modes of life, and yet such appreciation of the fact that the Roman woman had a human heart beneath her sternly-dignified exterior, that her audience were instructed and pleased, yet moved to deep sympathy. She told the story of a woman's life in that far off and cruel age, from the cradle to the grave, stirring every mother's heart as she pictured the poor heathen woman in times of bereavement and trouble—"Christless, lifting up blind eyes to the darkness of the skies."

At the close she pictured her death and burial with a gleam of hope for the future lighting the pitiful darkness of the grave.

"Over her," she wrote, "creeps the tender grass; above her bloom the sweet wild flowers;

"Is the unseen with the seen at odds,  
Nature's pity more than God's?"

A hush of solemn thought filled the room as the sweet, womanly voice ceased to speak.

A stranger present walked home with the minister.

"Who is this Mrs. Thomas?" he asked.

"One of the best and noblest women I know," answered the clergyman. "Yet you would hardly believe me if I were to tell you how she has developed since I first knew her. She proves a pet theory of mine that the powers of the mind and spirit strengthen with our strength, and that the mature mind is better capable of growth than that of a child. Just by virtue of its mature power it can grasp ideas with more force, and is infinitely superior in appreciation and resolute perseverance. In short, we are immortal. As to Mrs. Thomas, my friend—ah, it is a wonderful case of Evolution!"

AN INK RIVER.—In Algeria, there is a small stream which the chemistry of nature has turned into true ink. It is formed by the union of two rivulets, one of which is very strongly impregnated with iron, while the other, meandering through a peat marsh, imbibes gallic acid. Letters have been written with this compound of iron and gallic acid, which unite to form the little river.

THE SWIFTEST BIRD on the wing is the frigate bird, a sort of nautical bird of prey. Sailors believe that it can start with the peep of dawn from the coast of Africa, and, following the trade winds, land on the American coast before sunset. It can undoubtedly fly more than 200 miles an hour, but we do not know of any trustworthy record of the speed of which it is capable.

## Wild Oats.

[Written for the RURAL PRESS by ALLAN.]

Human, not agricultural. The idea of an uncultivated patch of land is dull and uninteresting compared with that of the labored and cultivated ground that yields diverse, plentiful, enriching crops. It is solacing to the mind to consider the great effort that is being made for the cultivation of the minds of the rising generation; but it is also stimulating to think of the need for additional effort to extend and perfect the education of the young, that cannot be obtained by the usual attendance at school. When self-education is thoroughly inaugurated, then the mind is conscious of added growth, power and wealth.

The unskillful politician ruminates sadly over lost opportunities of education and culture, when he would choose to cope with new circumstances and new men in the legislative field. How a man has to reproach himself when he realizes that his powers are unequal to accomplish his work, by reason of being poorly equipped, when diligence in previous years would have furnished him with added power. Some are unable to abide the discipline of life by reason of neglect of themselves in the earlier portions of their lives. Many might have attained to higher experiences and conquests if they had in early years devoted themselves with individual heart and strength to the tasks of life.

The immediate attention is required to the supply for the future of the best influences that shall accrue to the gaining and controlling of the ripe and reliable means of power and attainment in the future time. If a man will work he will find assuredly that true science, knowledge, principles, will have their unflinching reward in natural and proper consequences. The wild oats of bad habits and defective tendencies will drop from him and no more deface him if he presses onward to the full manhood of attainment which is the privilege of all persons. The harrow of right criticism must be allowed to pass over a man's character and work, to procure the best results of the human, lifelong harvest. Under the influence of the drag of events, a living character will be prepared and strengthened to advance in the line of progress traced out. Then let every person, ambitious of progress, be encouraged and confirmed in his faith of the worthy results that follow a right undertaking, although some time and opportunities have been lost in earlier years.

## Fact or Sentiment.

EDITORS PRESS:—When such high contracting parties as the American President and the Queen of Great Britain and Empress of India take months to settle the meaning of so short and simple a word as b-a-y, I presume it is permitted to "F. A." and myself to discuss a word three times as long.

"Sentiment" Webster defines as "A thought prompted by passion or feeling."

Fact, as: 1. "Anything done." 2. "Reality." To instance a "fact," slavery, with its attendant horrors and hardships, was a legalized American institution. Let me ask "F. A." is the knowledge of the "fact" elevating? The "sentiments" entertained regarding that "fact" elevated many otherwise commonplace persons into heroes and martyrs.

The knowledge of certain "facts" in the career of Napoleon I inspires in "F. A." thrilling "sentiments" of admiration; in me, "sentiments" of detestation at the man, and "sentiments" of sympathy with the millions whose lives were brutally sacrificed, with the millions whose homes were ruinously desolated, with the despairing widows, the bereaved mothers, the orphan children, with France depopulated, with Europe weltering in blood; and all to what end? That one miserable, mean, selfish, vainglorious mortal might give rein to his ambition!

So I venture once more to offer my opinion that the "sentiments" we receive and entertain are more important than the "facts" imparted to us.

A mind well stored with "fact" is rightly credited with knowledge, which puffs up. A mind endowed with right "sentiments" is possessed of charity, which edifies.

There is truth of fact and truth of sentiment equally. If by sentiment "F. A." means maudlin amativeness and namby-pamby philanthropy, I quite concur that publications charged with such noxious gas cannot have the match applied too soon.

I think my lecture on "Lowell," published in your issue of Oct. 2d, expresses my views so amply that no further airing of them is now needful.

EDWARD BERTWICK.

Carmel Valley, Oct. 3, 1886.

THE INTERNATIONAL YACHT CONTROVERSY.—A veteran naval officer suggests that the relative merits of the sloop and cutter type will not be settled until one of our sloops conquers in English waters. He says the performances of cutters in the rough seas and thrashing winds of the British channel and narrow seas are really wonderful, and confirm him in the belief that they are the best rough-weather boats he has ever seen in nearly 40 years' service in all quarters of the globe.

## TABLE OF CONTENTS.

**EDITORIALS.**—Loco Weeds; The Anarchists; Grown in San Luis Obispo Co., 357. The West; Consider Your Vote; The Potato Disease; Floriculture, 364. Superintendent of Public Printing; Traction Engines, 365.

**ILLUSTRATIONS.**—Colorado and New Mexico Loco Weeds, 357. Hon. Put. Darden of Mississippi; Birthplace of the Grange-office of Wm. Saunders, Washington, D. C., 360. Col. Jas. J. Ayers, Supt. of State Printing; J. I. Case Co.'s New Traction Engine, with Straw-burning Attachment, 365.

**CORRESPONDENCE.**—From Lake County; Santa Cruz County Fair; Inyo Has a Fair; Wheat in the Salinas Valley; San Diego Fair; The Fair at Downey, 368.

**POULTRY YARD.**—A Fair Question, at Fair Time, 358.

**ENTOMOLOGICAL.**—Need of Action and Co-operation Against Insect Pests, 359.

**THE STOCK YARD.**—Safety in Handling Bulls, 359.

**HORTICULTURE.**—A Model Orchard; A Hill Orchard in Monterey County; Peach on Myrobalan, 359.

**PATRONS OF HUSBANDRY.**—A Substantial Bank (Poetry); Meeting of National Grange, The Farmers in Council, 360. An Invitation to California; Temescal Grange; A Word before Election, 361.

**AGRICULTURAL NOTES.**—From the various counties of California, 360-61.

**THE HOME CIRCLE.**—Night Thoughts; The Evolution of Mrs. Thomas; Wild Oats; Fact or Sentiment, 362. Childhood's Days; Notes from a Girl of Twenty, 363.

**YOUNG FOLKS' COLUMN.**—How Father Cured His Horse; The New First Reader, 363.

**DOMESTIC ECONOMY.**—Chops and Tomato Sauce; How to Cook Rice; Boston Cream Cakes; Cooking Beefsteak, 363.

**FRUIT MARKETING.**—California Fruit at the East.—No. 4, 366.

## The Week.

No doubt all will rejoice that this week will end the political campaign of 1886. It has been a long season of unrest and excitement, and has considerably unsettled the public mind. The supreme duty of the occasion, however, remains still to be done, and that is the voting. An article in another column treats of the general principles involved in this act. Upon a following page may be found the nominees for State offices by the six leading political organizations. The table will give our readers an opportunity to contrast the names for different offices and to discover what formal indorsement each candidate has. The day of election will be Tuesday, November 24, and it is a public holiday, according to the law. There is such an array of candidates that in all probability there will be some very close contests, and it may be some time before the complete result can be announced. One thing is consoling, and that is that the temper of our people is such that there will be quiet and orderly waiting for the result, whatever it may be.

The rains continue in the form of local

showers few and far between. Along the upper coast and bay regions the new grass is starting—the foxtail, so innocent when young and so villainous when old, is the first to break the soil, and it gives a good bite at first. It would do well if the stock could bite it all off young, but that is not possible. It lingers to pierce and persecute nearly all summer. It is, on the whole, one of our worst field pests. Would that its shadow might grow less.

## Consider Your Vote.

An observant foreigner once made the remark that "the people of America seem to be always holding an election, or just getting over one," and in these frequently recurring agitations he thought he saw an element of danger. We have a great many very good, clever people who seem inclined to indulge the same feeling. They have it for a boast that they take little or no interest in political affairs. They rarely attend primaries. They never go to political meetings. They never join clubs and contribute time and money to a campaign. They are even inclined to neglect the polls. In short, they do not conceal the fact that they look upon the whole thing as a necessary evil and are disposed to have as little to do with it as possible.

Now these political croakers and pessimistic fault-finders seem oblivious of the fact that political agitation is one of the best of schools to augment the intelligence of the people. Every man, not a natural-born idiot or fool, likes to have some sort of reason for his vote. No matter whether it be a good reason or a bad one, it will require a little mental effort to give it shape. Hence our elections are educating. They awaken mind. They stir thought. They break up the routine and monotony of business and everyday life, and set everybody to thinking, reading and talking. It may be very poor reading, very shallow thinking and silly, frivolous talking, but it is better than none, and nearly everybody comes out of the fight more enlightened than when he went into it. This will certainly be the case of the man who ran for office, for he will find out what an irreclaimable scoundrel, or fool, or sneak thief, or liar, or drunkard, or ass he has been all these years and did not suspect it.

It was a saying of George Whitefield that the devil is fond of fishing in muddy water. If that is so, he has had fine angling in American politics for some time. The "filthy pool of politics" has passed into a proverbial saying. It is more than a rhetorical fancy or ill-natured jest. That there is a foul, black, malarious stream of corruption and depravity sweeping across our national life the most roseate optimist will hardly deny. The recent exposure of the corrupt measures by which the Broadway railroad franchise was obtained in New York, the postoffice stamp robbery at Minneapolis, the discovery of an alliance between the police and gamblers in Chicago, and the infamous coal ring in Pennsylvania, are mere bubbles on this stream. Politics has become a trade. Party organizations, which were once the property of the whole, are now merely the tools and mouthpiece of a few voracious public vampires who suck the life-blood of the people. These few are regarded as leaders, managers or bosses, and the voters are the slaves and property of the machine. The heads tap the public treasury and divide the patronage. They hold the fat places and market the honors.

And now the strangest feature of the case is the apathy or prejudice of so many good citizens. Some are so thoroughly absorbed in business that they hardly care to take time to vote, and many who do are not careful or active enough to scan their ticket. They seem to forget that good government is essential to business prosperity and the security of rights. They forget they are sovereigns invested with a solemn duty to perform, and that it is not only unwise and foolish but treasonable to the best interests of the country to neglect it. How many seem wholly indifferent until they are approached at the polls, or a few days before the election, and then, in obedience to some old prejudice, or to gratify a friend or acquaintance, slide in a ticket the composition of which should make them blush. They vote for men they would not invite into their parlors or trust in a trade simply because their names are on the party ticket. All such voters are accomplices in the

political depravities and debaucheries of the day; they are accessories before the fact.

There are times when the extent of political uncleanness becomes so apparent as to simultaneously awaken the people and a revolution sweeps the country like an electric current. We had such a wave after the exposure of the Tweed ring, and for some time the country breathed more freely. There are indications now of another such revolt. The general breaking-up of party allegiance all over the country is ominous. The greedy robbers of the people have turned their guns against each other, and if one-half they say about each other is true, the hose should be turned upon the whole squad. A great convulsion is evidently at hand. The people are having more to say about public questions than ever before. The time has come for the industrial masses to move as a unit. We have, scattered over the country, a variety of organizations, all moved by the same instinct, animated by the same aspiration—the elevation and advancement of industry. They cannot accomplish what they desire by divided effort; they should mass their forces at the ballot-box. Their interests are identical, and the times are propitious. It is useless to delay; the time for action has come. Let every citizen remember that his vote is a solemn trust; that it is the flower of the highest civilization. It makes all men equal. It is a privilege that has come to us at great cost of blood and revolution, and should not be lightly prized. There is no excuse for evading personal responsibility, or misusing it. The ballot is secret, and however dependent one may be he can vote his convictions. Vote your conscience, vote as you pray; pay no heed to party names or majorities, for the right will win; and whatever may be the consequence, our own manhood demands that we vote our best convictions.

## The Potato Disease.

We are glad, as we have stated before, that the Department of Agriculture has established a bureau of fungoid diseases of plants and will pursue investigations and collect information which will result, we hope, in a better understanding of these insidious foes of the agriculturist. Pastures, grain crops, garden crops, orchard and vineyard products are all more or less injured by these obscure vegetable parasites which vie with insect pests in the evil they work. Let them be thoroughly studied and all useful discoveries made be widely published.

The Department has begun its attacks on fungoid forces by tackling that old giant of a depredator, the potato disease or potato blight, as it is commonly called. The disease is caused by a parasitic fungus, *Phytophthora infestans*, which grows in leaves and stems as well as in tubers. Early in the growing season the external threads of the fungus may be detected on the stems and leaves of the potato in the form of patches of fine white mold, which causes, later on, a more or less extensive brown-ing and decay of these parts. The rot of the tubers may be either dry or wet, and may continue after the potatoes are dug and housed. The disease has been known for many years. It is present each year, but is disastrous only in exceptional seasons. It is believed to be worse in wet than in dry weather; on lowland than on uplands; on clay soil than on sand; in thin-skinned white varieties than in thick-skinned red ones.

The Department asks the assistance of potato-growers all over the country in furnishing their observations on certain points of the disease, and the compilation of all experience will, no doubt, be sent to each in the form of a special report. The questions to which answers are requested are the following:

1. In your county, about what per cent of this year's potato crop was destroyed by rot?
2. What per cent of last year's crop was so destroyed?
3. About what per cent of the harvested crop of 1885 was lost during the winter and spring by a continuation of the rot in cellars and storage pits?
4. Were any varieties entirely free from rot, or freer than others?
5. Was the season in 1886 wet or dry? In 1885?
6. Did early or late varieties rot most?
7. Did you observe any instances in which location (wet or dry), or quality of soil (sand, loam, clay, etc.), affected the severity of the disease?
8. Did the weather (cold or hot, wet or dry) exert any marked influence?
9. What remedies or means of prevention, if any, did you try? and with what results?

[In case there was no rot, your statement to that effect will be of use.]

Some of our readers can give valuable information on these points, and we trust they will do so. This can be done merely by addressing letters answering some or all of the questions, and giving any additional points that may have been observed, to Hon. Norman J. Colman, Commissioner of Agriculture, Washington, D. C.

## Floriculture.

One of our readers in San Mateo writes to ask how she can best secure information on floriculture which will be practicable and valuable under California conditions. We know no way in which it can be done so well as for all interested in the delightful art of floriculture to begin at once and furnish floricultural notes for the RURAL PRESS. There is really no reason why such subjects should not occupy considerable space on our pages. If those who are working and thinking among flowers will only jot down their lessons of experience and the sentiments which are promoted or suggested thereby, we shall have a Floricultural Department which will be full of value and delight to our readers. We would like to see a floricultural society organized. The State Horticultural Society had such aims at first, but the matters of the orchard seemed of so much greater importance and interest to the members that it was impossible to do any justice to a floricultural subject, even when one was chosen for discussion. It seemed to take all the time of all the meetings to discuss such weighty matters as fruit-tree planting, training and protecting from pests, and fruit selling; and, although this class of subjects has been discussed monthly for seven years, there seems rather more reason for continuing it than there was for beginning it in 1879. The only thing for the floriculturists to do would be to organize among themselves and rule out fruit subjects as coldly as the fruit-growers have ruled out the posies. We would like to see such a society started. We would like to have membership in it; we would like to give full reports of its proceedings, as we do now of the fruit meetings.

The way to begin to develop the literature of California floriculture is to begin to make it, and that duty rests upon every one who grows a flower or loves one. The columns of the RURAL are at the service of such a one. Perhaps it would be a good starting point for each one who believes in having a floricultural society, to meet at some central point monthly, and who would become a member thereof, to write to us of their disposition in the matter, and make suggestions as to the character and location of the organization. If there be enough who favor the idea to make a promising nucleus for a society, it only will remain to set a time and place where all may meet for finishing the organization. This is the way the State Horticultural Society was established, and now it has a good membership and very important discussions, as readers of the RURAL are aware.

It is decidedly wrong that in California, the land of flowers, there should be large floricultural centers, like San Francisco, Oakland, San Mateo, etc., without any society of floriculturists. There are good organizations in some of our counties. The societies at Santa Cruz, Pasadena and elsewhere, which hold floral fairs, always make them grand successes, but we do not hear of meetings for discussion. The Santa Barbara Horticultural Society takes both fruit and flowers within its view and does well with them. The Los Angeles Pomological Society is one of the best in the State, but it is a fruit society, as its name indicates. So there are horticultural and viticultural societies at San Jose and many other places, but so far as we know no distinctive floricultural organization which meets for discussion. If the work should be undertaken by florists and floriculturists in and around the metropolis, probably it would result in similar efforts in other parts of the State. It can be easily done. All that is required is for a few enthusiastic individuals to take the initiative.

Whether this is done or not, the columns of the RURAL are open for contributions from all floriculturists. There is no reason why they should not adopt such a means for exchange of views and experiences, just as those enjoyed in the more prosaic branches of outdoor occupations do. Let us hear from you who are willing to aid in this matter.

### Superintendent of Public Printing.

By his association with the publication of the new schoolbooks, the Superintendent of Public Printing becomes of more general public concern than when he was almost wholly occupied in the dressing up of State officers' reports, legislative bills, etc. The State Printing Office, which is situated near the State Agricultural Pavilion, is also much more of an establishment since the large expenditure has been made for fine machinery, and the force of printers, pressmen and binders so greatly multiplied. We have thought that the portrait of the gentleman who has brought all this vast business into its present excellent form would be of much interest to our readers, and so we have secured the excellent picture which we give on this page of Col. James J. Ayers, Superintendent of State Printing.

Col. Ayers has all his life been devoted to the arts of printing and journalism. When a mere lad of 13 he commenced his apprenticeship to the art preservative in the office of the *Courier des Etats Unis*, New York. Being conversant with the French language, his progress in mastering the type-setting part of the business was rapid. He remained in this office two years, when he entered, as an advanced apprentice, the book and job office of Wm. Wright, at that time one of the leading offices in New York. Here he familiarized himself with this important branch of his business. He was afterward employed in Craighead's great publishing office, where General McComb, now Warden of the Folsom prison, and he worked together, and both finished their educational course in the printing business.

In the spring of 1848 Col. Ayers started with his mother for St. Louis, Mo., by way of New Orleans. On arriving in the capital of the then Far West, he entered the office of the *Missouri Republican*, the most flourishing newspaper then west of Philadelphia. At the close of the year news came of the discovery of gold in California. On the 2d of February, 1849, he started for the new-found El Dorado, and after a voyage of eight months, filled with perils and disasters by land and sea, he entered the Golden Gate on the 5th of October, 1849. Like the great majority of Argonauts, he at once proceeded to the mines, but returned to San Francisco in the fall of the next year. Here he took position for a short time on Judge Crane's paper, the *California Courier*; but when the late Senator Casserley separated from Mr. B. R. Buckalew, the proprietor of the *Public Balance*, a leading daily of that period, Col. Ayers formed one of a co-partnership which purchased that fine establishment and published the paper with great success until the fire of May, 1851, swept the office away. In October of that year he joined Mr. Henry Hamilton and Harry de Courcey in the enterprise of starting a newspaper at Mokelumne Hill, and the *Calaveras Chronicle*, a paper which still survives, was the result. He returned to San Francisco in 1854, and was employed in the *Herald* office (John Nugent's paper) until the vigilance committee boycotted that paper out of existence.

Then he saw what few others at that time could see—a field for a cheap paper in the metropolis of the State. Inducing four other printers to join their fortunes with his, he started the *Daily Morning Call*, the first number of which made its appearance on the 1st of December, 1856. The paper was raised into a prosperous condition by the hardest kind of work and the closest possible attention to business of the associated printers who owned it. The first year placed it on a paying basis, and

after that it became a power in the State. Its circulation rapidly increased, and in three years it could boast of the largest circulation of any paper in California. For 10 years Col. Ayers remained at the head of the firm, and then he sold out to go to the Sandwich Islands for the benefit of his health. At Honolulu he started the first daily paper published there—the

gross in his district in the fall of 1879, but was defeated by Mr. Pacheco. In 1883, when Gov. Stoneman assumed his office, he tendered Col. Ayers the position of Superintendent of State Printing, which that gentleman accepted. His term will expire next January, when he will return to Los Angeles and take charge of the *Daily Herald*, of which paper he and Hon.

COL. JAMES J. AYERS, SUPT. OF STATE PRINTING.

*Hawaiian Herald*. Returning from the islands, he made a most unfortunate venture in taking a large printing office to White Pine. As editor of the *Virginia City Enterprise* for a year before the White Pine furor, he had received such information from that district as satisfied him that the mines were rich, extensive and

Joseph D. Lynch, Democratic candidate for Congress in the Sixth District, are joint proprietors.

ORIGIN OF DEW.—It is common to hear people speak of dew falling; it does not fall—it rises, as one might say. Dew forms on vegeta-

J. I. CASE CO.'S NEW TRACTION ENGINE, WITH STRAW-BURNING ATTACHMENT.

permanent. But, alas! they turned out to be worthless. In 1872 the Colonel went to Los Angeles, and soon became, in conjunction with Hon. Joseph D. Lynch, proprietor of the *Evening Express*. He remained at the head of the *Express* (Mr. Lynch taking the *Herald*) for ten years. During that time he was elected as a delegate-at-large from the State to the Constitutional Convention which met in the fall of 1878. In that body he was conspicuous as Chairman of the Committee on Harbors and Marsh and Tule Lands, and took a leading part in the debates of that body on the Chinese question, on the railroad corporations, on the taxation article, on the law of libel, and on other important questions. He ran for Con-

tion precisely as the moisture forms on the surface of an ice-pitcher in a warm room. Dew is the deposition of moisture in the atmosphere on the cooler surface of the earth.

THE STRONGEST WOOD IN AMERICA, according to Professor Sargent, is that of the hickory of the Arkansas region, and the weakest the West Indian birch (*bur seva*). The most elastic is the tamarack, the white or shell-bark hickory standing far below it. The least elastic, and the lowest in specific gravity, is the wood of the *Ficus aurea*. The highest specific gravity, upon which in general depends value as fuel, is attained by the bluewood of Texas.

### Traction Engines.

There are many reasons for believing that in the future there will be many more traction engines used on the level lands of our great valleys. There has been a steady increase in the employment of them as motive power for thrashing and for hauling heavy loads of grain along the roadways, but the increase has been very slow. It is quite possible that this has been in part owing to the character of the motors heretofore offered here, and that improved machines may be found more available. The subject is one of considerable interest, and we are always glad to give our readers any information on the subject which may come to our knowledge. Our attention has been drawn to a new style of traction engine brought out by one of the most enterprising and best-known Eastern manufacturing firms, the J. I. Case Threshing Machine Co., of Wisconsin, and of which a supply has just been imported by their California agent, Mr. Arthur W. Bull, of 123 California street, S. F. The engraving on this page shows their new traction engine, design of 1886. The design was especially made to give the purchaser his choice between a traction engine with a straw-burning attachment or as a plain traction engine with chain self-steering gear. The engraving shows the engine with the straw-burning attachment. Mr. Bull's catalogue shows also the engine without this and with the chain gear. By the use of the chain running along the boiler to the back end, then connecting to the large and strong steel cross-shaft, and that with the main driving gear, the boiler shell or waist is left free from all brackets and castings, allowing the placing of the straw-burning attachment in position without interference of any gearing or bracket. Several of these engines sold last season as regular tractions gave such satisfaction that the manufacturers decided to furnish them either as plain tractions with self-steering gear, or as tractions with the patent straw-burning attachment without steering gear. The steering gear cannot be supplied where the attachment is wanted. The engine is precisely the same as the J. I. Case geared engine, and they furnish 8, 10, 12 and 14-horse tractions, either geared or chain. They are adapted for thrashing, steam plowing or road purposes. In this connection it has come to our knowledge that a traction engine was used to propel a combined harvester and thrasher for a period of 55 days in Tulare county with signal success this season.

It is not necessary for us to enter minutely into the construction of the engines. The engraving shows it to be as graceful in design as is consistent with strength. Those who may be interested in such machines and desire full information of what is claimed as especial advantages in the design and construction, can obtain it from Mr. Bull's catalogue. We are informed that a number of the new design have been recently sold in this State, and the experience of those who have them can, no doubt, be had. We understand the J. I. Case T. M. Co. propose to make a specialty of traction engines hereafter, and their reputation for their machinery hitherto certainly entitles them to attention in this field.

THE CONGO COUNTRY.—Notwithstanding the glowing accounts which have been published in regard to the splendid opportunities for business, for Europeans, which are presented in the newly-discovered Congo country, Africa, M. de Brazza, the explorer, says that after nine years' experience he has come to the conclusion that the West African territory and the basin of the Congo must be left to be developed by the original inhabitants.

## FRUIT MARKETING.

### California Fruit at the East—No. 5.

More About the Auction Plan—Evils of the Present Methods—Necessity for Concert of Action between Shippers and Growers.

[Our Special Correspondence.]

In his last letter your correspondent advocated the plan of selling California fruits in the Eastern cities by an auction system, and endeavored to show that such a method would solve existing difficulties and insure California growers a fair price and an extended market. Since that writing he has been in Philadelphia, Milwaukee, St. Paul, Minneapolis, St. Louis, Kansas City, Omaha and Denver, stopping again on his way westward at Washington and Chicago. In all these cities he took occasion to submit this plan to the judgment of as many wholesale and retail fruit dealers as time would permit him to interview. He found many who at first did not consider the plan a good one, and who predicted failure if it should be tried. A free discussion, however, of the merits of the system would, as a rule, bring about a decided change of opinion, and many of those who least favored the idea at its first mention are now among its strongest advocates.

#### An Unprofitable Shipment.

The following case in point will serve as an illustration: Among those who at first entertained with little favor the idea of selling California fruits at auction was the well-known firm of Quackenboss & Harlow, who are the St. Paul, Minn., agents for Porter Bros. Co., and are among the largest fruit dealers in the Northwest. A day before the arrival of your correspondent at St. Paul, this firm sold 400 single crates of San Jose grapes at 50 cents per crate. These grapes arrived in a \$600-rate passenger car and were due in St. Paul Friday morning; but, owing to some delays in transit, the car did not reach its destination until late Saturday afternoon. The grapes therefore could not be offered until the following Monday morning. By that time they were in poor condition. The best of them sold at \$1 a crate. Some were sold at 75 cents, and by Thursday 400 single crates were yet on hand, which were gladly sold at 50 cents a crate. The account of this unfortunate San Jose grower will therefore stand as follows:

Freight on 400 crates @ \$600 $\frac{1}{2}$ car.	\$300 00
Cost of crates and baskets at 19c.	76 00
Picking and packing (estimated at 6c per crate).	24 00—400 00
Sales—400 crates @ 50c each	200 00
Less 10% commission	20 00—180 00
Loss	\$220 00

So that in this one transaction the grower, in addition to the total loss of four tons of grapes which should be worth at least \$40 per ton, is out of pocket for freight, crates and labor \$220, making a total loss of \$380. Analyzing the case, we find that this great loss on comparatively so small a transaction was brought about by the four following causes:

First—The highly excessive freight charges of \$600 per car.

Second—The delay in transit of nearly two days.

Third—The fact that the fruit was of an inferior quality; and

Fourth—Because the present method of selling perishable California fruits is entirely too slow.

These causes can and should be remedied. If a proper quality of fruit had been sent, with a freight rate of \$300 per car, with better railroad time and under a system whereby California fruits would be disposed of within a few hours after arrival, the San Jose fruit-grower's statement would have stood as follows:

Freight on 400 crates at \$300 per car	\$150 00
Cost of crates and baskets @ 19c	76 00
Picking and packing, estimated at 6c $\frac{1}{2}$ crate	24 00—250 00
Sales 400 crates at \$1 50 (a low estimate)	600 00
Less 10 per cent commission	60 00—540 00

Net returns for four tons of grapes on vine \$290 00

#### Another Unfortunate Instance.

The experience of this unfortunate San Jose grower was not much worse than that of the firm of which your correspondent is a member. In Kansas City the writer found that a day or two before his arrival, nearly 100 single crates of his grapes had been sold at 50 cents a crate.

"Were the grapes of an inferior quality?" was asked of the commission-man.

"No, on the contrary they were above the average."

"Did they arrive in poor condition?"

"No, they reached us in excellent condition."

"Then how do you explain their being sold for but 50 cents, which involves a loss of about 90 cents a crate?"

"Well, I will tell you how they came to be sold at 50 cents a crate. About two weeks ago

the market looked bare and clean, and we believed we could dispose of a carload of fruit to advantage. Accordingly, we quietly telegraphed our connections to that effect, but it would appear that our neighbors thought just as we did and also wired for carloads each, and as a consequence, instead of Kansas City receiving one carload that week it received several; the market was thus glutted, and after carrying your fruit for a week we were glad to get 50 cents a crate for it."

"How can you prevent a repetition of such an occurrence?"

"Aye, there's the rub; we don't know how to prevent it; under existing conditions, this same thing is likely to happen any day in any week of the season."

#### Arguing the Auction.

But to return to our interview with Quackenboss & Harlow, of St. Paul.

"No, sir, I do not think the plan of selling California fruits by auction a good one, and if tried I predict a total failure," said a member of that firm to your correspondent.

"But why should the plan of selling by auction not work as well with California fruits as it has for many years past with Mediterranean fruits?"

"Because Mediterranean fruits are not so perishable. Malaga grapes, for instance, are so packed that they will keep for several months."

"That is quite true, but is it not also true that the very fact of California fruits being more perishable is all the stronger reason why they should be speedily sold, instead of being held for an indefinite period in the hands of the commission-man, awaiting private sale? Besides, if a concert of action is established between California growers and shippers, the supply can be so regulated as not to exceed the demand. The aggregate daily demand for all Eastern distributing points can easily be gauged, and carloads containing a 24-hour, or, at most, a 48 hour supply, only can be dispatched from the central shipping point in California, and as all this fruit, by the auction system, would positively be sold on the day of arrival, there would be no decaying fruit left on hand, as now, to depress prices of new arrivals on following days."

"That is all very well, if you can get the buyers to attend your auctions, but, you see, the buyers have for years been educated to look for foreign fruits at auction, hence they do not now expect, in fact, cannot buy them from first hands anywhere else; whereas, in California fruits it is different. They have always been sold on commission and at private sale, and it would be a long time before the trade would become reconciled to the idea of buying California fruits at auction. In the meanwhile such fruits as would be offered in that way would, in the absence of buyers, be slaughtered."

"If buyers have been educated to buy foreign fruits at auction, why may they not be educated to buy California fruits in the same way? If there must be a beginning, why not have that beginning as soon as possible? There certainly was a period when foreign fruits were offered at auction for the first time, and it would appear that the foreign growers and shippers have happily outlived that 'first time,' and for many years since have enjoyed a highly remunerative market. Since they have pioneered the way and have demonstrated that selling by auction is absolutely the most equitable and profitable manner of marketing perishable fruits, why not profit by their wisdom and experience? You say, 'it would take a long time before the trade would become reconciled to the idea of buying California fruits at auction.' If only a portion of the California fruits sent East should be sold by auction and the remainder offered at private sale, it must be admitted that the plan would be crippled and could not be made entirely successful. But what if California growers and shippers all agree that their fruits shall be sold only by auction—would not all buyers who must have California fruits to supply their trade be obliged to attend these auction sales or pay a profit to those who do attend, or go without California fruits, and thus lose a valuable trade which must certainly drift into the hands of more enterprising competitors? If there was such an auction sale to-morrow and you needed California fruits and could get them in no other way, do you pretend to say you would keep away, knowing your neighbor would be present and knowing that he would supply the trade you would be obliged to turn away empty-handed from your doors?"

"Well, I must admit that if I needed California fruits, as I certainly would, having established a large trade on them, and could get them in no other way, I should, of course, attend such auction sales. But the question is: Can you get the California growers and shippers to agree to sell their fruits in that way, and would they be willing to take the risk of having their fruit slaughtered?"

"Would the risk be as great as under the present system? Let us imagine that the plan of selling all California fruits by auction was now in operation; that the California growers and shippers had united, were enjoying a \$300-rate with fewer cars to the train than now, and that their trains were running on passenger schedule instead of the present precarious and uncertain time of transit. Under these circumstances the 400 crates of the San Jose grower which you sold but yesterday for 50 cents a crate would have reached St. Paul Friday morn-

ing in place of late Saturday afternoon, with freight charges at 37½ cents instead of 75 cents per crate. Granting even that, from unavoidable causes, the train was delayed in transit and failed to reach its destination earlier than Saturday evening, thus postponing the sale until Monday morning, is it not reasonable to suppose, with the fruit-buyers from 100 miles or more centered in your store on that Monday morning, and with the natural business competition and jealousies usually existing, that these 400 crates would have sold for much more than 50 cents a crate? True, that even as early as Monday morning this lot of grapes was in poor condition, but it certainly was in better condition than on the following Thursday, and for that reason alone would certainly have realized perhaps double the amount you now hold to the credit of the grower. As for the question whether growers and shippers will agree to sell their fruits at auction, why should they not? What protection have they now, and how could the conditions be worse than at present? Has it not been demonstrated that with two factions in the field, viz.: the growers and the shippers, the plan of shipping 15-carload lots at a time is highly disastrous? And as a result has not the Fruit Union discontinued dispatching trains from Sept. 13th up to date, and have they not been sending from two to three carloads daily at passenger rates? Furthermore, by the present system is not the vast market east of Chicago choked and limited, and has not California fruit in and west of Chicago been brought into fierce competition with itself while yet the property of growers and shippers? Whereas, if the proposed plan is put into operation, there is a strong probability that the combined influence of shippers and growers will secure better railroad terms and improved transportation facilities; will thoroughly develop the vast and almost untouched market east of Chicago; will create the strongest competition among the buyers, instead of as now among the sellers, and by the holding of prompt auction sales immediately after the arrival of the fruit will insure a minimum loss of fruit by decay. Hence, when there is so much to gain and so little to lose, why should growers or shippers hesitate to unite and agree upon a uniform method of selling all their fruits by auction?"

"All this is admittedly true, but may not the fear of auction-buyers combining, in order to depress prices and to secure California fruits at their own figures, keep shippers and growers from offering their fruits at auction?"

"Though it, no doubt, has been frequently attempted, such a thing as a combination, on the part of auction-buyers, has thus far proven impossible on Mediterranean fruits and would prove equally impossible if attempted against California fruits. Auction fruit sales are attended by from 50 to 300 buyers, each equally anxious to secure the first choice. This fact, together with the natural competition among city buyers and the further competition between city and out-of-town buyers, make the chances of combination very slender, if not impossible."

At the close of this interview both members of the firm of Quackenboss & Harlow frankly admitted that their opinions had undergone a change, and they had come to the conclusion that selling California fruits by auction is the only proper way to market such products in the East.

#### Mr. Porter's Views.

Mr. Washington Porter, of Porter Bros. Co., of Chicago, after thoroughly discussing the idea, spoke in substance as follows:

"The plan of selling California fruits by auction ought to succeed, and is worthy a fair trial, provided: First, that a concert of action between growers and shippers is secured and both agree to sell only by auction; second, that the California management so successfully gauge this market that the supplies of fruit forwarded to the various distributing points do not exceed the demand. But I should advise the growers, in any event, not to burn their bridge behind them. In other words, if they adopt the auction plan, let them be prepared with some other method to put into prompt operation should this one fail."

#### Other Favorable Points.

The policy that may be pursued under the plan of selling by auction is such that shippers and growers may enjoy the widest possible latitude consistent with "regulated distribution." The prospective united organization of shippers and growers may, through its directory, select as many distributing points as in their judgment will thoroughly cover the Eastern territory. Agents can be appointed at each of these points, with instructions that all fruit consigned to them shall be sold only by public auction.

Where growers or shippers have no preference, the general manager stationed at the California shipping point shall use his best judgment and forward shipments to the most desirable point, consigning them to the agent of the Union at that place. But all growers or shippers should be permitted, not alone to name shipping points but also their own consignees, and it should be the duty of the general manager to carry out such wishes, provided the shipments to certain points do not exceed the demand. To illustrate: If it should be found that the city of Denver, for instance, can use to advantage but one carload a day, it should be the duty of the manager to so regulate shipments that not to exceed that quantity

is forwarded to that point within 24 hours. Those having a preference for Denver as a market and making the earliest application should receive the first preference for space in the Denver car, and so on, until the car is filled, when further applications for space for that point and on that day of shipment must be denied. It may frequently happen that a carload of fruit shipped to any one point may contain a consignment to the agent of the Fruit Union and several other consignments to various commission houses in the same place. These various consignees should place their letters of advice in the hands of some one auctioneer who is to prepare a complete catalogue, giving the brands, quantities, varieties, and names of consignees. The entire carload is to be sold at the same hour and place; the auctioneer's charges to be paid by the commission house out of his commission.

As a rule, it will be found that nearly all these Eastern consignees, including the Fruit Union agents, have a town and country trade of their own to supply. Accordingly, these very consignees will also become bidders for the very fruits which by them are placed at auction, and will purchase, as jobbers, such fruits as their orders may call for. They will thus occupy the two-fold positions of commission-men and jobbers, earning a commission as the one and a profit as the other, thus affording them an opportunity to secure by far more satisfactory earnings than they now enjoy. And thus the plan is sure to meet, with their approval and encouragement, which, in itself, is an important feature, as the assistance of the Eastern commission-men and jobbers is very material in the development of a market for our fruits in the East, and thus, also, will a large and influential number of auction bidders be at once secured, whose presence and whose interest in the success of these auction sales will be a fair guarantee that the fruits will bring market prices.

By the plan now in operation the Eastern commission-men labor under serious disadvantages, frequently receiving, without having been consulted, much more of a kind and variety of fruit than they can dispose of. This very fact has been one of the chief causes for so many ruinous returns. By the auction plan, should any Eastern consignee receive a carload of a certain fruit, out of which he could use but a fraction, he would buy at auction only as much of this carload as he needed, and the remainder would be sold to such other bidders as could make use of it.

The plan of "regulated distribution," if intelligently carried out, would afford shippers and growers almost a guarantee that their fruits were not being shipped to an overloaded market—a point that thus far has never been possible to guard against.

Still another favorable point might be mentioned in connection with auction sales. Each shipper and grower would receive with his returns a copy of the printed catalogue containing the prices realized for all fruits offered at that sale. This in itself would be a source of satisfaction, if not of valuable information, to all parties concerned at this end of the line.

#### General Opinion on the Proposition.

As before mentioned, your correspondent has submitted the plan set forth to many of the brightest, sharpest and most experienced wholesale and retail fruit dealers in Chicago, Baltimore, Washington, New York, Boston, Philadelphia, Milwaukee, St. Paul, Minneapolis, St. Louis, Kansas City, Omaha and Denver. Thus far he has met but one wholesale dealer who, after the matter was thoroughly discussed, held to his opinion that the plan could not be made a success. This gentleman, however, was unable, either by proof or reasoning, to point out why the plan would not succeed, no doubt expecting his mere assertion, that the plan would fail, ought of itself to be convincing.

#### Discussion Desired.

It is earnestly hoped that the California fruit-growers and shippers will, at the State Convention which is to meet in Sacramento in November, thoroughly discuss this and such other plans as may be offered to remedy existing serious evils. The three points to be gained are low freights, quick railroad time and a thoroughly regulated distribution of our fruits throughout the entire East.

The writer firmly believes that the plan he advocates in these letters not alone embraces these points, but also provides a practicable solution. If, in the plan proposed, there be any weak or fatal spots, let those who may discern them promptly, point them out, and if they cannot be strengthened or overcome, the writer will hold himself in readiness to support and advocate any better plan that others may be enabled to present.

H. WEINSTOCK.

Sacramento, Oct. 25th.

"THE RESOURCES OF SAN JOAQUIN COUNTY" is the title of a pamphlet of 50 pages and upward, edited by W. R. Ellis, Stockton. It treats of the soils and climate, wells and waters, farm and orchard industries, manufacturing and commercial interests and towns and villages of the county, and does it in a bright, easy style, well fitted to catch and hold the attention of the home-seeking stranger, who is particularly addressed. The work is illustrated with two maps—one colored to show the character of the lands, as adobe, sandy loam, etc., and cuts of the handsome Stockton courthouse and of San Joaquin county's exhibit at the State Fair, in 1884.

## Santa Barbara Fair.

[Written for the RURAL PRESS by Mrs. J. HILTON.]

The Fifth Annual Fair, held at Santa Barbara Oct. 5th to 9th, had an unusual attraction for the people of the county, namely, the new fair grounds—land reclaimed from the ocean's overflow. Once it was a very unsightly place, devoted principally to tadpoles, mudhens and mosquitoes. Now a fine race-track, well fenced, and a beautiful pavilion in the shape of a Greek cross, greet the eye. Thirty men were employed the last month to finish the work in time, and the last nails were driven the second day of the fair. When the building is painted it will be not only ornamental, but useful to the Barbarens for their rose and horticultural and other fairs for which Santa Barbara is so noted. Entering the main door, the first thing to catch the eye is the coloring. The mind cannot grasp anything else at first, there is such a profusion of everything. Going to the opposite side of the building, we ascended the raised platform to get a good view of the whole. After enjoying that awhile, we turned to inspect the contents of the platform. On a long table we found Lompoc's exhibit of fruits and vegetables, presided over by R. Machin, of that place. He had 46 varieties of fruit, mostly apples. W. W. Broughton also had 46 kinds, and several others had from 5 to 26. Mr. Schuyler had a Peerless potato weighing 6 pounds 6 ounces. Larelle & Robinson's exhibit of honey was fine, as also was Sudden's and Slaughter's display of grain. On another table were fruits, grains and wines of Montecito and Santa Barbara. In the front were pianos, some entirely open, showing their fine mechanism and durability. In the center of the room was a large rock mound, with potted plants, curios, pretty and scarce, owned by Dr. Yates. On one side was an ice-cream booth, beautifully decorated with fan palms and pampas plumes. A notice over a door on the opposite side told that the W. C. T. U. ladies had refreshments for sale, and the way they had to work to feed the hungry crowd proved conclusively that they were reaping quite a harvest. Nothing stronger than lemonade was sold on the grounds, and so everything was pleasant. As we wandered about we saw exhibits of toilet articles by A. Ruiz; boots and shoes by Bell & Hunt; Boeseke & Edwards, fine display of hardware, silverware, and quaint and lovely lamps; the handsome leather-work shown by Loomis; fine harness by Mr. Rundell; photographs, paintings and medallions, Japanese articles, rich-looking Jersey butter, Indian idols and curios of all descriptions, stuffed birds and snake-skins, goldfish, a live parrot, who said he lived at the end of the wharf—in short, everything that goes to make up a grand exhibit. Almost forgetting the wonderful fancy-work and grand paintings, we went and paid them a last look; then out to see the monstrous vegetables—squashes, 240 pounds; melons, 49 and 51; beets as large as three usually grown, even here in California; cornstalks, 16 feet high, with enormous ears; oats, 8 and 9 feet tall; wheat and barley, 5 and 6 feet high, with large fine kernels in the heads; Guinea pigs, pigeons, and a few coops of chickens. Some grand Plymouth Rocks, owned by Mrs. C. K. Lawton, drew all eyes. Then the pigs, sheep, goats, cows, oxen and horses! One would have to be a very good judge to know to whom to give the premiums; they were all so nice. I did not think much of the races on account of the pool selling and betting, and until that is done away with they will not be a credit to the town or association. Good, honest racing to show off stock is interesting to most people, but any other kind is bad and always will be.

The delightful music given by the band was well appreciated; and of course the baby show drew a crowd—in fact there was such a crowd every day that the association felt warranted in holding the fair one day more than was advertised.

Los Alamos, Santa Barbara Co.

## Some Farther Account.

The Santa Barbara Agricultural Society was formed in September, 1881, and a few weeks afterward held a fair in Lobero's theater. Citizens gave a ready and generous support to the undertaking, the horticultural society joined with them in the effort, and altogether they achieved a measure of success which increased with every annual display until that of October, 1884, surpassing all that had gone before, showed that the farmers had become alive to the necessity of raising the very best of everything, and that a spirit of emulation had been aroused which might lead to the very best results. Especially was this manifest in the increase of fine breeds of horses and cattle.

By this time the need of more room for exhibits, both outdoors and under cover, had become so pressing that the directors realized something must be done at once toward getting a park, race-course and building of their own, if the fairs were to continue. In brief, the issue was the acquisition of ample grounds at the estero, the construction of a track and the erection of a roomy, handsome pavilion which was duly opened on the 5th instant, with an apt address by Capt. C. P. Low, president of the society.

The building is in the shape of a St. Andrew's cross, the extremity of each arm forming

a large alcove and the central floor being an octagon, with entrances on three sides, between the alcoves, and on the fourth an elevated platform for speakers, musicians, etc. All available space was taken, and much more could have been filled, the management having been so kind to early comers that they had nothing left for later applicants.

From the long list of entries published we cull some of the more salient:

Lompoc fruit was varied and abundant. R. Machin's display (mentioned above by our special correspondent) included 25 varieties of apples, beside pears, quinces, peaches, Japanese persimmons, English Medlars, Muscat and Seedless Sultan grapes and almonds, and bottles of Versailles currants, Houghton seedling gooseberries, Loquats, Sicily lemons and pomegranates.

Robert Lyon, of Ventura, showed 20 varieties of apples, 2 plates of handsome lemons, 2 of oranges on the stem, 3 of pears.

Geo. Williams had 21 varieties of grapes and 12 plates of apples, beside figs, quinces, pears, etc.

Stephen Rutherford, of Goleta, showed a strange freak of nature in the shape of walnuts grown in clusters, like grapes. His crop was enormous this year.

Hayne Bros. & D'Urban made a notable display from orchards and vineyards in Santa Ynez valley. It embraced Muscat, Riparia, Berger, Grenache, and Folle Blanche grapes from vines only 3 years old; 8 varieties of apples, 2 of pears, and a heavy-laden branch of St. Michael's oranges, grown without irrigation.

M. S. Dimmick, of Carpinteria, had 26 varieties of apples (one 14½ inches in circumference), and 10 of pears, beside plates of peaches, quinces, lemons, oranges and limes. E. H. Pierce had 20-odd varieties of apples, several plates of peaches, evaporated fruits, walnuts and some of the largest ears of corn at the fair. O. N. Cadwell, 20 varieties of grafted and 26 of seedling apples, 9 varieties of grafted pears and 4 of seedlings, 7 of Japanese persimmons, and sundry plates of raspberries, strawberries, quinces, lemons and oranges.

H. Langman, Patterson's ranch, Goleta, showed 6 squashes weighing from 200 to 270 pounds each, the largest ever exhibited in the county.

P. O. Higgins, Carpinteria, had a very large display, comprising 12 varieties of Irish potatoes, 60 varieties of wheat, 20 of oats, 30 of barley, 7 of spelt, 12 of corn, and several beets planted in May, averaging 50 pounds each, grown without irrigation.

Melons, sweet potatoes, peanuts, broomcorn, evergreen millet and Italian rye-grass were also represented.

In the center, from a base of rocks, rose a pyramid of choice plants, contributed by Dr. Yates, including Mexican and Florida pine-apples in fruit, graceful ferns from the South seas, and other treasures of his conservatory.

W. A. & T. S. Hawley's display of Schuttler wagons, plows, mowers, windmills, fanmills and agricultural implements was the largest exhibit of the kind ever made in Santa Barbara.

The weather was delightful, and the races and procession were enjoyed by throngs of visitors. Says the *Independent*: "We have seldom seen so beautiful a sight as this stock parade. We counted 92 horses and mules, among which were a number of splendid animals." Foremost of the cattle were F. T. Underhill's Holsteins from the Ontare ranch—3 bulls, 11 cows and 9 calves, all beauties. Among them were Aggie Kathleen, imported in '83, six years old, with a milk record of 56 pounds 4 ounces in one day and 8432 pounds in six months; Ontare Chief, bull calf, born on the ranch in April, '85; and Strathmore, imported, four years old, weighs 2530 pounds, took first prize and sweepstakes at State Fair last year.

Jerseys were shown by E. J. Packard, A. C. J. Wilson, O. K. Lawton and others; and there were a few scattering Durhams.

Several pens of Poland China, Essex and Berkshire swine were on exhibition, while coops of Plymouth Rock, Houdans, Langshans, Light Brahmas and Brown Leghorns represented the cacklers.

One of the entertainments of the week was a concert given in the Pavilion by the W. C. T. U.

HONORS TO CALIFORNIA BOTANISTS.—Prof. and Mrs. J. G. Lemmon, who toiled so devotedly to have the products and capabilities of the Pacific Coast worthily represented at New Orleans during the winter of 1884-85, have lately received from the management of the World's Exposition, held then and there, six certificates of award in the "First Degree of Merit," as follows:

1. Largest and best exhibit flora of North America, first premium, \$50.
2. Largest and best exhibit flora of the Pacific Slope, first premium, \$50.
3. Largest and best exhibit forage grasses, sedge and other plants, first premium, \$30.
4. Largest and best exhibit new and rare ferns and flowering plants, first premium, \$30.
5. Largest and best exhibit paintings of rare and beautiful plants, made in the field with water-colors, first premium, \$30 (awarded to Mrs. Lemmon).
6. Largest and best exhibit indigenous (Arizona) potatoes, represented by botanical specimens, live tubers and water-color paintings, first premium, \$10.

The fact that our State was but one among 22 competitors makes these awards the more important and gratifying.

An ocean steamer left Boston, the other day, for Liverpool with 10,000 barrels of apples.

## Nevada State Fair.

In her State Fair, held at Reno, the 4th to 9th, our sister Nevada seems to have scored a great success, and the *Journal*, the *Gazette* and the *Stockman* quire in general satisfaction.

In culling and compiling from their ample notes, we find need of considerable firmness in saying "No!"

The town was crowded with visitors, many of whom had trouble in getting a place to sleep.

At the pavilion the merchants were well represented, and gained much credit for their exhibits. The handiwork of ladies also was there in profusion, and no department in the building proved more attractive than that wherein the products of their dextrous fingers were displayed.

But to come to those things which most concern farmers and horticulturists, the output of fruits on the lower floor was deemed the very best ever made in the State. The exhibits, though of the best quality, were not specially selected for exhibition purposes, but placed on view just as taken from the trees. Ross Lewers showed 30 varieties of apples. Go where one may, he can find no more beautiful, perfect, fine-textured and palatable apples than this State produces; she can challenge the productions of any other. And her citizens think the same is true of her pears, peaches, grapes, plums and all classes of small fruit.

Artistically arranged in the form of a pyramid, were innumerable glass jars containing nearly every fruit grown on the coast, all preserved by Mrs. Theodore Winters.

There were only a few specimens of corn, pumpkins, cabbages, beets, onions, eggs, onions, egg plants, tomatoes and hops, but these were of excellent quality. A. S. Barnes, of the Golden Eagle hotel, received a premium for the best specimen of corn. It was raised in the garden adjoining the hotel on Sierra street, and had no more than ordinary care.

Hon. Theo. Winters had an exhibit of cheese from his Washoe valley dairy, which was pronounced by good judges equal to the product of any dairy on the coast. There were, however, only three exhibits of butter, and this in a country where butter-making is almost a specialty. B. C. Pratt showed the Stoddard churn, milk-testers, butter-workers, and many novel articles of practical utility to the dairyman.

A. E. Moore's and Orville Sessions' fine displays of comb and extracted honey testified that no locality excels this in the delicacy of its bee-product. The sole occasion for regret appears to have been the lack of any showing of ores adequate to illustrating Nevada's mineral wealth.

## The Display of Live-stock.

Though not so large as had been expected, was enough to show the progress made in the chief industry of Nevada. The parade at the track the third day comprised 26 horses, five double teams, nine roadsters, 20 Durhams, five Herefords, 21 Polled Angus, seven Holsteins and 16 Jerseys—A. Smith, of Redwood City, heading the line with his 5-year-old Shorthorn bull, Pharaoh. E. W. Crutcher, president of the Nevada Live-stock Association, had a herd of seven Shorthorns and one half-breed Hereford bull calf, recent importations from St. Joseph, Mo. Stinson & Marsh, of Ft. Churchill, showed eight Shorthorns, which attracted great attention. The animals were all descendants of the famous Indian Princess 17th, who was brought from Kentucky in 1872, and at the age of 15 numbers 125 descendants.

A. A. Longley had two cows with calves from the farm of Col. Younger, one of which took rank as the best cow of any breed.

H. F. Hapgood, agent for A. B. Matthews, of Kansas City, exhibited 16 Galloways and several Angus cattle; the former descended in a direct line from Galloway King, one of the noblest sires that ever ranged the hills of Scotland, for whom \$2000 was paid when he was only seven months old. In the same class Leonard Bros. showed their now well-known herd of splendid Galloways.

Sam. Davis, of the Carson Appeal, had on exhibition four beautiful Holsteins, which were admired on every hand, one expert giving it as his opinion that no animals on the coast could show a more thoroughly developed "milk mirror." The Holsteins and Jerseys of M. Gulling, the Reno breeder, received a great deal of notice.

T. P. A. Williams, of Boyne county, Mo., had seven Herefords from the breeding farm of James Kay, England, which were splendid specimens. Poverty, a direct descendant of Lord Wilton, one of the greatest prize-winners England had for many years, is a superb animal, being but four years old, and weighing 2500 pounds when in condition.

C. C. Stevenson's Jersey bull, Statesman, and herd of Jerseys were among the prize-winners.

T. G. Herman, of Wadsworth, who showed several head of graded stock, took a premium for the best one-year-old bull.

The display of stallions, roadsters, brood mares, horses of all work and teams was large and highly satisfactory to lovers of the horse; but as to them, as well as the sheep, goats, pigs and poultry, we must content ourselves with printing the premium list.

One feature of the speed program was an Indian pony race, contested by 21 Indians arrayed

in their best finery and mounted on such animals as are possessed by the Piutes. This proved very amusing. The winner's time was 3:15.

Several ladies took part in an equestrian tournament, and in addition the Kemler sisters gave an exhibition of fancy riding, jumping hurdles, etc., which was heartily applauded.

**SCALDS and BURNS**  
should have  
proper care or they may  
prove very  
dangerous  
and perhaps  
**FATAL.**

**ACCIDENTS**  
are constantly

## Lands For Sale and To Let.

### CHEAP LANDS FOR SALE.

**5680 Acres** of rolling adobe hills, situated in Tehama County. Well watered by numerous springs, etc. Several thousand acres suitable for cultivation. Good two-story House, Barn and other out-buildings. Seven miles of fine wire fence.

**FIRST-CLASS CATTLE OR SHEEP RANGE.** The Cheapest tract of land in Tehama County. Price, \$6.00 per acre. Fair time and interest.

Also, a tract of 20,000 acres adjoining, can be bought at a great bargain. Title, U. S. Patent.

For terms, etc., apply to

J. E. OROOKS, Benicia, Cal.

N. B.—Upon timely notice, intending purchasers will be taken from Cottonwood to the land and returned free.

### A NEW COLONY

On the new extension of Southern Pacific Railroads, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. **20,000** acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. **INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.**

### \$10.00 PER ACRE.

On the C. P. R. R., in Placer county; one half mile from Applegate; one-half hour from Auburn; fine climate; plenty of water; school, postoffice and telegraph near; easy terms; title perfect. Apply to

S. C. OSBORN,

Applegate, Placer Co., Cal.

## FRESNO COUNTY.

## BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being  $2\frac{1}{2}$  times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

### THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huerfano ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

### TITLE, U. S. PATENT.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

## The Lieutenant-Governorship.

[ADVERTISEMENT.]

M. F. Tarpey, of Alameda, candidate for Lieutenant-Governor, is a man whose interests are all linked closely with those of the Grangers. He is a farmer and stockraiser in Stanislaus and Calaveras counties, and has a promising young vineyard in Fresno county.

Mr. Tarpey was the projector of the Wool-growers' Association of this State, and the formation of that association was largely due to his exertions. He is in no sense a politician, but is a farmer and Granger, and having been nominated for Lieutenant-Governor is worthy of the support of the people.

Should Mr. Tarpey be elected he will be the presiding officer of the Senate, and as such will have the appointing of the committees of that body. It is well known to the farmers of this State that all corporations and monopolies when they desire to raid the public treasury, evade taxation, or block legislation in the interest of the people, aim to accomplish their unholy purpose by first getting control of the committees in the Senate, which they do by the connivance of the Lieutenant-Governor. If the farmers and Grangers of the State will elect Mr. Tarpey Lieutenant-Governor, they can rest assured that their interest and rights will be safe in his hands, and that only true and honest men will be appointed by him, and that he cannot be either cajoled or influenced to act in opposition to the true interests of the people of this State.

An endeavor is being made to defeat Mr. Tarpey by monopoly influence, and all arts are being used to accomplish this purpose, even to the extent of trading votes against him, and the lavish use of money. Let the farmers and Grangers vote in their own interest by voting for Mr. Tarpey, and be not misled by false pretenses and insidious corporate hostility. Mr. Tarpey is a man of the people, true and unfaltering, and should be elected. Be sure his name is upon your ticket.

## An Awful Doom

Of any nature is usually avoided by those who have foresight. Those who read this who have foresight will lose no time in writing to Hallett & Co., Portland, Maine, to learn about work which they can do at a profit of from \$5 to \$25 and upwards per day and live at home, wherever they are located. Some have earned over \$50 in a day. All is new. Capital not required. You are started free. Both sexes. All ages. Particulars free. A great reward awaits every worker.

## The Question of this Election.

MESSRS. EDITORS:—The question asked most frequently is: "Who is going to be our next Governor?" What difference does it make to us whether Swift or Bartlett is Governor? Are they not both politicians, both lawyers, both retired capitalists, both behind the times as to the progressive needs of the people? The most important question to me, and to every voter in California who loves the State, seeks its welfare, and desires that the rights of the people shall prevail, and that the people and the country shall prosper and progress, is the same that the great railroad corporations are asking—"Who are to be our Railroad Commissioners?" That's the question the railroad bosses are acting up to, quietly and shrewdly, too. Don't you forget it, dear people, on election day; and when you hear men anxiously asking, "Who is going to be Governor?" just set them right on the too times greater question—"Who are going to be our Railroad Commissioners?" Voters! do your whole duty and be happy.

GRANGE VOTER.

## Musical.

[From the Boston Home Journal.]

The frequent appearance of the Knabe pianos in our concert rooms is not at all surprising to those acquainted with the history of the firm, or the character of the instrument itself. Not long since, the writer, when in a neighboring city, had occasion to play upon one of these pianos. It had withstood the test of 25 years service. The greatest pleasure was still to be derived from its tone. It was so resonant and musical that it seemed as if—like old wine—it must have improved with age. In no other way than this could we justly illustrate its perfect state of preservation. The Knabe piano of to-day is in the foremost rank of instruments. As one listens to its ringing vibrations, it appears as though the poetry of tone itself were being revealed in a language far more complimentary and just than any verbal praise could possibly be.

## Napa Valley Nurseries.

My elegant Souvenir Card, containing best Insect Remedies, and much other valuable information to the fruit-grower, free to every customer, or sent to any applicant on receipt of ten cents. LEONARD COATES, Napa, Cal.

## HENDERSON'S PATENT TRUSS

Comfortable and Reliable.

This simple truss can be worn without inconvenience, and gives all the comfort to the wearer that can be obtained from a perfect-fitting, pliable apparatus. The pad is soft and yielding, and on account of its peculiar construction and the connections of its securing bands, cannot get out of place. It will remain in place no matter what position the wearer may assume. The engraving shows the construction of the appliance. It is simplicity itself, and is comfortable and reliable. Address,

JESSE G. HENDERSON,  
Grizzly Flat, El Dorado Co., Cal.

## TO OWNERS OF HORSES, COWS, ETC.

Convince yourself by trial that the most speedy and effective cures are made by the use of Homeopathic Medicines, and that this is by far the CHEAPEST treatment. Horse-car companies in New York who have adopted this treatment have found their losses by sickness and death very materially diminished. We can give the highest references in this State to prove the superiority of this treatment over any other. Send for our "Guide" and "Veterinary Index," pamphlets of 64 and 42 pages, respectively, containing most valuable information. Sent FREE by mail upon application to

BOERICKE & SCHRECK,  
234 Sutter St., San Francisco, Cal.

WANTED.  
A situation by an Orchardist understanding all branches of the business. Address "POMOLOGIST," care of RURAL PRESS, San Francisco.

## Breeders' Directory.

Publisher of "Niles' Pacific Coast Poultry and Stock Book," a new book on subjects connected with successful poultry and stock raising on the Pacific Coast. Price, 50 cents, post-paid. Inclose stamp for information.

ALSO BREEDER OF

## Jersey & Holstein Cattle, and Hogs.

Address, WILLIAM NILES, Los Angeles, Cal.

## SHEEP AND SHEEPWASH.

Calvert's Carbolic SHEEP WASH  
\$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast

## LITTLE'S CHEMICAL FLUID SHEEP DIP.

Price Reduced to  
\$1.25  
PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Soas in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO.,  
San Francisco, Cal.

Recommended by Professors Hilgard, Cooke, etc.

## Powdered Potash & Caustic Soda

KILLS GOPHERS, INSECTS, Etc.

Makes a pure Soap at a cost of \$1 per 125 lbs. Send for directions to T. W. JACKSON & CO., 304 California St., S. F.

GOLD and SILVER deposits received. CERTIFICATES of DEPOSIT issued payable on demand. BILLS of EXCHANGE of the Atlantic States bought and sold. ALBERT MONTPELLIER, Cashier and Manager.

San Francisco, Jan. 15, 1882.

## DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 28-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished.

We ask you to give our mills a trial. We guarantee that you will find them precisely as represented.

For full particulars, apply to DANIEL BEST, San Leandro, Cal.

LIGHTNING WELL SINKING MACHINERY. Our Artesian Well Encyclopedia contains near 700 engravings, illustrating and describing all the practical tools and appliances used in the art of well sinking; diamond prospecting machinery, windmills, artesian engines, pumps, etc. Edited by the "American Well Works," the largest manufacturers in the world of this class of machinery. We will send this book to any party on receipt of 25 cents for mailing. Expert well drillers and agents wanted. Address, The American Well Works, Aurora, Ill., U. S. A.

## California Inventors

Should consult DEWEY & CO. AMERICAN AND FOREIGN PATENT SOLICITORS, for obtaining Patents and Caveats. Established in 1860. Their long experience as journalists and large practice as Patent attorneys enables them to offer Pacific Coast Inventors far better service than they can obtain elsewhere. Send for free circulars of information. Office of the MINING AND SCIENTIFIC PRESS and PACIFIC RURAL PRESS, No. 252 Market St., San Francisco. Elevator, 12 Front St.

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the JUDSON POWDER especially, is the best adapted to REMOVE STUMPS AND TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing. In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder too strong enough.

For particulars how to use the same, apply to

BANDMANN, NIELSEN & CO., General Agents

GIANT POWDER COMPANY,

SAN FRANCISCO, CAL.

## WINDMILL.

After many years' experience in the invention and manufacture of Windmills, among which may be named the "Hercules," "Saunders," "Cyclone," "Eureka," the subscriber has perfected a mill that infringes no patent; will face the wind; is direct action; solid wheel; no wood screws, pivots, loose joints, flapping sections or spider legs to get out of order. Is beautiful, strong, not liable to get out of order, and in cheapness below any other. Send for pamphlet of the "Eureka Improved Windmill." Pumps of various kinds at very low rates. Address

E. B. SAUNDERS, San Jose, Cal.

## S. F. MARKET REPORT

NOTE: Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 27, 1886.

In cereals the market has ruled stronger and higher throughout the week. In vegetables the varieties lessen, and interest flags. In fruits, grapes have commanded the greater attention, but at lower prices. The English wheat market advanced, but declined to-day. The following is to-day's semi-public cable:

LONDON, Oct. 27.—Cargoes off coast, steady. Cargoes on passage and for shipment, easier. California wheat off coast, 34s. California wheat just shipped, 34s 9d. California wheat, nearly due, 34s. English country market, firm. French country market, steady. Liverpool wheat, spot, firm. Liverpool wheat, Cal. 6s 8d to 6s 11d. Weather in England, cold and wet.

## Foreign Review.

LONDON, Oct. 25.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: The restricted sale of wheat deliveries have caused values to harden. Several provincial markets report an advance in native wheat of 6d@1s. There is an increased inquiry in London for the best samples. The sales of English wheat during the past week were 60,159 quarters, at 29s 9d, against 71,308 quarters, at 31s 6d, during the corresponding period last year. The values of fine barleys are advancing. Beans and peas are steady. The rain has destroyed the Scotch oat and barley crop. Flour is firm, and foreign wheats are steadier. There has been a fractional rise in the best brands. Wheat cargoes on passage have improved in value. There is a demand from France, under the stimulus of the proposed increase in import duties of cargoes. California for French ports are freely taken at 3d@61 advance. At to-day's market, there was an improving feeling. English wheat was not dealt in below 1s advance. Foreign white was 6d dearer. Red American and Russian were firm, at 1s higher. Flour was 6d dearer. Foreign flour, 6d@1s dearer. English malting barleys advanced 2d and seconds 1s. The following is in the Associated Press dispatches to-day:

NEW YORK, Oct. 27.—Labouchere, in his cable letter to the *World*, says: "The wheat harvest in Russia, which is a complete failure this year, should be great news for growers in America."

## English Wheat Markets.

LONDON, Oct. 26.—It can hardly be said that cargoes are easier to buy, but there is no demand at prices asked. The advance seems to have stopped, and the market shows weakness.

## Eastern Wool Markets.

BOSTON, Oct. 24.—During the week there has been a fair demand for wool, and prices are supported about as firmly as for some time past. The sales for the week have been 2,487,700 pounds of all kinds. No further advance has been made this week. It looks as though the high-water mark had been reached. Manufacturers realize the situation and they purchase at full current prices, but many of them are now well stocked. The market, therefore, is more quiet this week, but there is no concession in prices on the part of holders. Many desirable grades have been quiet. The trade in California wool and prices remain the same. We notice the sale of 84,000 pounds spring at 20@24c; 4000 pounds spring at 22½c; 100,000 pounds spring, part at 24c, and 75,000 pounds do on private terms. In Oregon wool there have been sales of only 19,000 pounds Eastern on private terms. The receipts for the week have been 5552 bales domestic, and 1439 bales foreign.

NEW YORK, Oct. 24.—Nothing of special interest has been developed in the market during the past week. Supplies are kept in hand so well that no effort to realize is resorted to. Last week's business has been smaller than usual, recent liberal sales having supplied immediate wants. Full former prices are reported, with no apparent weakening up to the close. Among sales were 100,000 pounds Oregon at 24 cents; 85,000 pounds spring California at 21½@25 cents; 100 bales spring California at 21@23 cents; 31,000 pounds scoured do at 48 cents. The Philadelphia market has ruled quiet. Manufacturers in many cases are stocked up, while others are buying in a hand-to-mouth way rather than submit to the extreme views of sellers. Stocks are light and held with confidence, at full rates. Among sales were 20,000 pounds California at 18½ cents; 55,000 pounds California at 19½ cents; 25,000 pounds California at 22 cents; 10,000 pounds Territory fine at 23 cents; 2000 pounds Territory fine at 23½ cents; 5000 pounds Territory heavy fine at 13 cents. The Boston market is less active, with some apparent weakness in wools, which are in ample supply. The threatened lock-out of 59 mills of the National Knit-goods Association, should it take place, must have an effect on wool, much as dealers strive to appear indifferent about it. Among sales were 137,000 pounds Territory at 23@27 cents.

NEW YORK, Oct. 26.—The wool market is quiet, but prices are very steady. Domestic fleeces are quoted at from 30@38c, pulled wools, 14@35c, and Texas, 9@25c.

## New York Wheat Market.

NEW YORK, Oct. 24.—Wheat movements have been moderate, but the market is firm, and prices higher, with stronger foreign market reports. Spot closed 1½@2c higher; futures, 1½@2½c higher for the week.

## New York Hop Market.

NEW YORK, Oct. 24.—Buyers are few and hesitant, while the competition to sell foreign goods is so sharp that values are very unsettled, making it almost impossible to state market values. Goods are "branded" and "sealed" so as to represent almost anything that may be called for, and this adds to other unfavorable influences. The "best Germans" are quoted at 30@32c, while acknowledged poor grades are from 25c down to 20c. Some strictly choice new Pacifics were offered at 30 cents, and a

fine lot as low as 28 cents. In States, nothing new is reported. Coast crop of 1886, prime to choice, 28@30 cents; 1886, fair to good, 25@27 cents; 1885, good to choice, 13@16 cents.

## California Products at the East.

NEW YORK, Oct. 24.—Beans—The market holds up well on choice. California Lima, flat, \$1.85. Canned Goods—Tomatoes, 20 lbs, 75c; 30 lbs, 95c@1.10; gallons, \$2.40@2.60; Lima beans, 2 lbs, \$1.15@1.20; salmon, Columbia river, \$1.55@1.70; Alaska, \$1.45; California canned peaches, \$2.50@2.75; pears, \$2.50@2.75; plums, \$1.80@2; grapes, \$1.80@2; apricots, \$2.10@2.25. Honey—Extracted, 5c. Seeds—California mustard, 4½@5c for future and spot.

## California Fruit at the East.

CHICAGO, Oct. 23.—Receipts of grapes by passenger train have been quite liberal this week, and the market has gained in strength during the same time. The prices in the forepart of the week were somewhat lower. Tokay grapes, which were then selling for \$2.50@2.75 per 40-pound crate, now bring from \$2.75@3.20. Muscats, which then sold for \$2@2.50, now bring \$2.50@2.75. It is thought there will be better prices during the next two weeks, as receipts of home-grown grapes are falling off, and will still continue to decrease, which will naturally cause a better demand for California grapes. Pears are meeting with good demand at \$2.50@3 for fall varieties, and \$3@3.50 for winter. Quinces are dull and the market is overstocked, selling at 90c@1 per box. It is not thought advisable to ship any more quinces to this market this fall. Grapes and pears will, undoubtedly, be in good demand for the rest of the season. Dried fruits remain firm at unchanged prices.

NEW YORK, Oct. 24.—California grapes are a shade firmer, at \$3.50@4.50 for 40-pound crates. There is now a great abundance of grapes in the market. California grapes are more popular than those from Europe, and sell for higher prices, and there is a greater variety of grapes shipped from California. Almost any of these varieties may be bought at retail, from Italian dealers, at 15 cents per pound, and excellent Malagas may be obtained for 10 cents per pound. The domestic grape crop is abundant; pears are also abundant; fine ones, however, are quite scarce. Pleasant eating pears may be bought for \$3 per barrel, while really attractive looking pears of better variety sell for more than that per bushel. It will be several weeks before common pears disappear from the market, and when they are all out there will be only a few of the finer Eastern pears left.

## Local Markets.

BAGS—The market is without essential change; indeed, it can be said that the demand, for the season, is virtually over.

BARLEY—The taking of three vessels for foreign loading has imparted more strength and activity to the market for the better grades. Transactions are reported large for both exporting and consumption. Transactions on Call have been fairly large at firm prices. The following are to-day's transactions: Morning Session: Buyer season—300 tons, \$1.06½; 100, \$1.05½; 500, \$1.07. Seller season—100 tons, 96c. Seller 1886—100 tons, 97c. No. 1 Brewing, buyer season—100 tons, \$1.27; 100, \$1.27½ c. Afternoon Session: Buyer season—100 tons, \$1.07. No. 1 Brewing, buyer season—100 tons, \$1.27½ c.

BEANS—The market is steady and firm, with a slight advance reported for Pinks. Shipments to the East continue fair.

DAIRY PRODUCT—Fancy brands are barely steady, while good to choice grades are weak, dull, and in oversupply. Concessions are necessary to effect sales.

DRIED FRUITS—Prunes and plums continue in oversupply, but apricots are scarce and high. Very few peaches and apples received yet.

EGGS—California eggs continue scarce, with dealers paying an advance on last week's prices for choice to strictly choice. Eastern and also Utah by express are in good supply.

FEED—Hay continues strong for choice grades, owing to limited supplies, but other grades are fairly steady, owing to lighter receipts. Ground barley, bran and middlings are strong and higher, but feed-corn is weaker. The following is the range for hay: Barley, \$8@11; oats, \$9@12; wheat, \$10@14; with something extra selling slightly higher.

HONEY—The market is reported unchanged. Dealers appear to be making more inquiries for the better grades, but, as yet, are not disposed to bid up.

WHEAT—The market for sample parcels has ruled strong, with higher prices obtained from both shippers and millers. Holders are said to have sold quite freely at \$1.40 to \$1.42½ for good to choice white shipping, but as buyers bid 1½ cts lower to-day, no transactions are reported. On Call, the week has witnessed more activity and freer transactions, with an advancing tendency up to Monday, when it shaded off, but to-day options are steady. Buyers seem desirous of keeping options on Call down. The following are today's transactions on Call: Morning Session: Buyer season—500 tons, \$1.44½; 200, \$1.44½; 2300, \$1.44½; 1300, \$1.44½. Buyer 1886—300 tons, \$1.39½; 100, \$1.39½ c. Afternoon Session: Buyer season—600 tons, \$1.44½; 1000, \$1.44½. Buyer 1886—200 tons, \$1.39½; 800, \$1.39½ c.

[COMMUNICATED.]

## Market Information.

## Cereals.

The yield of wheat and corn for each year since 1880 has been as follows:

Years.	Wheat, bu.	Corn, bu.
1881.....	380,280,000	1,194,916,000
1882.....	504,185,470	1,617,025,100
1883.....	421,086,160	1,551,066,805
1884.....	512,763,900	1,795,528,432
1885.....	357,112,000	1,936,176,000

Total, 5 years, 2,175,427,530	8,094,712,427
Average for 5 years....	435,085,506
Yield this year.....	462,500,000
This year's wheat crop is larger than was claimed	

on September 1 last, yet, large as it is, the situation is only slightly changed. This is better illustrated by the following: The exports of wheat, flour included, for the five years ended June 30, 1882, to 1886, were as follows:

Year ended June 30.	Wheat and Flour, bu.
1882.....	118,650,649
1883.....	147,811,316
1884.....	111,534,182
1885.....	128,993,344
1886.....	94,557,149

Total 5 years.....	601,552,640
Average 5 years.....	120,310,528

Best authorities claim that from the season of 1884-85, there was carried into the season of 1885-86 a surplus of 155,000,000 bushels, which, added to last year's crop, gave a total of 512,000,000 bushels. From this, the consumption for seed and food must be deducted, which is placed at 350,000,000 bushels, leaving a surplus of 162,000,000 bushels. Out of this, there was exported 94,500,000 bushels, leaving a carryover of 67,500,000 bushels to go into the present season. Say this year's crop was 462,500,000 bushels, and the carryover 67,500,000 bushels, then we commenced the present season with a supply of 530,000,000 bushels. The consumption (food and seed) is placed, this season, at 355,000,000 bushels, which leaves a surplus of 175,000,000 bushels. Saying that the very small stock of 60,000,000 bushels will be required as a carryover into the season of 1887-88, then there was an available surplus, at the commencement of this season, for export, of 115,000,000 bushels. Of this, there was exported, in the months of July, August and September, 40,934,232 (this includes flour) bushels, leaving on October 1, for export, 74,000,000 bushels, which is less than was exported last season from October 1 to June 30, as the following shows. Last season the exports aggregated 94,557,194 bushels; of this there was exported (flour included) in the months of July, August and September, 18,336,675 bushels. Taking the latter from the aggregated export and we have 76,220,519 bushels, which represents the exports from October 1, 1885, to June 30, 1886. Our advices to October 16 give the exports, so far in the month of October, nearly two and a half times more than the like time in October of last year. At this rate of exporting, the available surplus will be all shipped out of the country before March of next year, which will necessitate drawing on the normal stock. If this should be the case, dealers expect high prices to rule.

Our local wheat market has ruled very strong throughout the week, owing to an advance abroad, but more particularly to a decline in charters and shippers' necessities, causing them to bid up. As usual, the daily papers, so far as known, have willfully misquoted, of course, not in favor of farmers, but of buyers. Sales were made up to \$1.42½ for choice white shipping wheat, and \$1.45 for milling. Fair shipping sold at \$1.37½ to \$1.38½, and good at \$1.40, yet the daily papers were all of 2½ cts less. At this writing, the tonnage loading wheat here and at San Diego has a carrying capacity of 160,000 short tons; the bulk of the wheat required has to be bought before the middle of November.

Owing to the taking of two vessels for barley loading, the market advanced, with a strong tone at the close. There is a strong but quiet buying of all the best grades of barley, supposed to be on English orders. Feed barley is in comparatively light supply, considering the heavy consumption and the large demand for other kinds.

Oats have ruled firm, with a slight advance obtained for the better grades, but barely steady for fair. The market appears overstocked with poor oats, and to effect sales, concessions, at times, are necessary; but as the consumptive demand is increasing, and as receipts, it is thought, will be lighter, an improvement is looked for.

In rye and buckwheat more trading has been done at current quotations.

Corn has come in more freely, causing low prices to obtain, with much difficulty reported in effecting sales even at the decline. A well-known wheat commission merchant informs us that yesterday he sold to a large exporter, Wm. Dresbach, a parcel of over 4000 sacks choice White shipping wheat, Oakland delivery, at \$1.42½.

Silver continues to advance, which is against India wheat shipment to Europe.

## Dairy Product.

Butter continues weak, with concessions, at times, necessary to make quick returns. There does not appear to be any end to the supply. Poorer grades, as usual, are very hard to sell at any reasonable figure.

Cheese, under light receipts and a good demand, is higher, with the market strong at the advance.

California eggs are scarce and wanted. Some strictly choice, fresh-laid sold in a small way as high as 47½ cts, but 42½ to 45 cts are the quotations given, which can be had for consignments. Choice eggs are also higher. Considerable Utah, by express, are coming in and sell at 30 to 35 cts, while Eastern only fetch 19 to 21 cts.

## Feedstuff.

The receipts of hay have been light, necessitating some competition by buyers to meet their orders. The supply of choice to extra choice is not only in light stock, but the supply in the country is reported light; but poor to good hay is in good supply.

Bran, middlings and ground barley are higher and strong under a strong demand. Feed meal is in liberal stock, and weak. Other ground feed is unchanged.

Feed carrots are only in fair supply, with a good demand ruling at steady but firm prices.

## Fruits.

Grapes kept well up to Saturday, when concessions were made to clean up. On Monday, and again on Tuesday, heavy receipts caused low prices to rule, with buyers offish even at the decline. Wine grapes are coming in in poor condition, the market for which is slow and low.

California oranges are coming in more freely, but as yet the demand is light, owing to liberal supplies of other kinds of fruits.

Apples, unless choice varieties without defects, are hard to sell. Choice are in good demand but at unchanged prices. Wormy and otherwise defective apples sell at the best prices sellers can get.

Strawberries fluctuated considerably. On Monday only 16 chests were received, which caused them

to advance to \$10 to \$11, but Tuesday freer receipts sent them down again.

The remarks above apply to pears—while choice are wanted, poor are unsalable.

Figs, plums and canteloupes are about out of market.

## Hops.

Dealers report the market weak in sympathy with lower prices at the East. The decline in New York is said to be due to heavy purchases in Germany for immediate shipping and a large transfer, about 5000 bales, of Californian. So far as can be ascertained, dealers here are confident of better prices later on, and while not buying except at lower prices, they do not offer their high cost purchases on the market.

## Live-stock.

Beef cattle are weaker under heavy offerings from all sections of the State and also Nevada. Mutton sheep are firmer, but no higher. The higher price of wool causes sellers to be more indifferent. Hops continue to be forced on the market. The supply is largely in excess of requirements, and buyers purchasing buy low with the expectation of having to feed. Milch cows are weak and low, with the range \$30 to \$45; to fetch the latter price, the cow must be something extra. In horses, last week's report covers this week's market.

The following are to-day's meat prices: Beef—Stall-fed, 6½@7½ c; grass-fed, extra, 6@6½ c first quality, 5½@5¾ c; second, 4½@5c; third, 4@4½ c. Calves, small, 9@10c; larger, 7@8c @ lb. Mutton—Ewes, 4@4½ c; wethers, 4½@5c. Lamb—Spring, 6½@7c @ lb. Pork—Live hogs on foot, 2½@3c for grain and dairy feed; 2½@2¾ c for soft; dressed, 5@5½ c for hard, and 4½@4¾ c for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Raisins.

The market is reported dull for home trade, owing to curers sending consignments direct to large jobbing houses. These consignments, it is claimed, operate against the market. The demand for Eastern shipment continues free, at unchanged prices for choice to fancy, but off-grades are slow.

## Vegetables.

Potatoes have dragged throughout the week, owing to few shippers being in the market. Poor qualities have been and continue to be hard to sell, but choice go off fairly well at the lower prices.

Sweet potatoes have held to steady prices, with the demand and receipts about equal.

Onions, under light receipts and a good demand, advanced from 10 to 15 cts, but on Monday fell back again under freer receipts and a lessened call. To-day the market appears firmer.

String beans, Lima beans, summer squash and cucumbers are about out of market.

Egg-plants are in lessened supply, but prices do not advance.

Cabbages, etc., are unchanged.

## Wool.

The market continues to hold to strong prices, with all received meeting quick sales at full prices. Receipts are growing light, with the bulk of the fall clips marketed. English advices report a firm, strong market, particularly for crossbred.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	250,375	213,597
In port, disengaged.....	72,000	91,969
In port, engaged.....	94,610	37,649
Totals.....	416,985	343,215

The above gives a carrying capacity as follows: 1886, 657,176 short tons; 1885, 549,144 short tons; increase over last year, 108,032.

Heavy receipts of poor fowls have caused poultry to rule in buyers' favor. Only large, choice, well conditioned find a quick market, and for which an advance on top quotations can be had.

Game has ruled steady, at full quotations.

San Francisco, Oct. 27, 1886.

## Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

YEAR. }WHITE ADRIATIC,  
SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Preparations, Macropia, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobalan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Greenhouse Plants.

## TRY THE PERSIAN MULBERRY.

NO SCALE I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

## MISSION ROCK DOCK

AND

**GRAIN WAREHOUSE,**  
SAN FRANCISCO, CAL.  
75,000 TONS CAPACITY. 75,000 Storage at Lowest Rates.

CHAS. H. SINCLAIR, Supt.  
Cal. Dry Dock Co., props. Office, 318 Cal St. room 3.

## COMMERCIAL HOTEL.

A. & J. HAHN, Prop'rs,  
Nos. 278, 276, 277 and 2 Main Street, STOCKTON, CAL.  
Rates, \$1.25 to \$2 Per Day.

Stage offices for Collegeville and Oakdale, Roberts and Union Islands, and J. A. C. Mineral Springs stages. The most desirable location in the city. Refurnished and refitted in the best style for the accommodation of the public.

**BONDS' ECONOMY WINDMILL**

Is the cheapest ever offered to the trade, and as efficient and durable as the most elaborate self-regulators. It is intended to run constantly, and turns on the stand facing the wind, from whatever direction. The wearing parts are few and cheaply replaced. Requires little or no attention. Will raise 25 per cent more water than any "self-regulator" of same diameter of wheel. Any one can put it up. Write for Circulars to 625 6TH STREET SAN FRANCISCO.

**ACME BANJO METHOD.**

By N. P. B. CURTISS. Price, \$1.25.  
Mr. Curtiss, whose Guitar Method has long been a standard, does real service to the lovers of good music at home, by this thoroughly good and entertaining instructor. No less than 75 diagrams illustrate the positions of the fingers. Simple explanations and very sweet vocal and instrumental music fill a book, which is destined to make the elegant modern BANJO still more appreciated and popular.

**THE ROYAL SINGER**

Holds the field against all comers as the chief book for singing classes in 1886-7. Good music, sacred and secular. Improved instructions. L. O. Emerson. 60 cents; \$6 per dozen.

Song Greeting (60 cents) for High Schools; Song Bells (50 cents) or Song Reader (Book 1, 50 cents; Book II, 60 cents) for Common Schools, and Gems for Little Singers (30 cents; \$3 per dozen) form a complete set for music teaching in schools.

**SONGS OF PROMISE**

(35 cents), Tenney and Hoffman, is the newest book for Sunday Schools. Superior collection.

In press and nearly ready—Anthems of Praise.

**PIANO CLASSICS**

(\$1.00) is a great favorite with good pianists.

**HORSE POWERS, WINDMILLS, TANKS**

And all kinds of Pumping Machinery built to order. Awarded Diploma for Windmills at Mechanics' Fair, 1885. Windmills from \$65. Horse Powers from \$50. F. W. KROGH & CO., 51 Beale Street, San Francisco.

**PRICE'S EXCELSIOR SEED SOWER**

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

**LIGHTNING HAY KNIVES**  
WEYMOUTH'S PATENT.

This Knife is the BEST IN USE for cutting down hay and straw in mow and stack, cutting fine feed from bale, corn stalks for feed, cutting peat and ditching marshes. The blade is Best Cast Steel, spring temper, easily sharpened, and is giving UNIVERSAL SATISFACTION. A few moments' trial will show its merits, and parties once using it are unwilling to do without it. Its sales are fast increasing for export as well as home trade, and it seems destined to take the place of all other Hay Knives. They are nicely packed in boxes, 1 dozen each of 60 pounds weight, suitable for shipping to any part of the world. Manufactured only by  
**HIRAM HOLT & CO.**  
EAST WILTON, MAINE.  
For sale by the Hardware trade generally.  
warned of our rights, and the public are cautioned against purchasing any Hay Knives made as described above, which are not of our manufacture.

to sell the  
**MISSOURI STEAM WASHER**

Active, honest persons all over the country, with or without team.  
[Extracts from Reports of Purchasers.]  
"MARY J. TAPPAN, Reynolds, Neb. They excel all other washers I ever saw. JOHN R. DODGE, JR., Normal, Ill. The best machine ever invented by man. H. H. HUNT, Cottageville, S. C. Everybody likes them and everybody wants them."  
"S. H. ADAMS, Austin, D. T. My wife would not take a quarter section (160 acres) of land for her machine, if she could not get another."  
"MRS. J. H. SWIFT, Near Orem, Iowa. The most useful article about the kitchen. ANNA RAMSEY, Mission, Tex. Have thoroughly tested it on articles from two states to look quita; gives entire satisfaction."  
"ST. CLAIR PARKER, JR., Evert, Washington Ter. Self-stuff and can not be spoken of too highly. JOHN DEPTON, Bismarck, Minn. Have given it several severe tests and it came out triumphant every time."  
"JNO. H. WHEELER, Kansas City, Mo. They have proved themselves to the families we secured them. A. P. SHIPLEY, Topeka, Kan. Gives entire satisfaction. Rather handle the Washer than anything I have seen."  
"E. M. MANSLEY, Lawrence, Texas. He proved a better Washer than I ever thought would be invented. JOHN C. BYARS, Scotland, Mo. If you will get up any instrument that will take as much labor off of men as this Washer takes off of the women, and I want to know, I could sell one at every house."  
"MRS. M. P. DODGINS, Coahoma, N. Y. Gives perfect satisfaction. I do my washing when in sun, and I use it with hard soap. MRS. M. MOORE, Nebraska. Will do more than any, especially washing dishcloths."  
"MRS. F. G. SINDEN, Sullivan, N. Y. Would not take \$50 for mine if I could not get another. Washes quicker and better than it can be done by hand. MRS. FRED H. HARRIS, Hillsdale, N. Y. I call that the best I would not be without one for twice its price. MRS. ISAAC B. POND, Southfield, Conn. Have used it nearly four months. Am perfectly satisfied. I rarely recommend it to all housekeepers. MRS. MARY E. VALE, Yakima, Wash. Saved me \$25.00 per year for 15 months I've had it."  
"MRS. C. W. TALCOTT, Northfield, Conn. I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, Stamford, Mich. Had rather give up my Jones cow than part with my Washer."  
I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

**Timber Claim and Seed Men, Attention!**

100,000 lbs. of fresh Forest Tree Seed and 1,000,000 Tree Seedlings offered at prices that defy competition. Also I have for sale a limited number of the famous Potawatamia Plum Tree. T. E. B. MASON, Shenandoah, Iowa

# MOST EXTRAORDINARY CAPACITY FOR CUTTING FEED.

## THE ROSS FEED CUTTERS

ARE THE  
MOST POWERFUL,  
EASIEST RUNNING  
—AND—  
BEST CONSTRUCTED  
MACHINES

In the Market,

And are guaranteed to cut double or treble the amount of Feed with the same or less driving power, of any other Cutter in the world. Smaller sizes of the Ross will cut more Feed than the largest sizes of other makes, hence we can sell a better Cutter for less than any other firm can manufacture.

We carry the greatest assortment of Styles and Sizes, furnish the most complete Descriptive Catalogues and sell below other's prices for inferior goods.

ROSS LITTLE GIANT No 17A.

## THE ROSS CUTTERS WITH ELEVATORS

Have been Awarded  
ALL FIRST PREMIUMS,  
Cal. State Fair,  
Every Year Exhibited,  
OVER ALL OPPOSITION.

The Largest Stock Raisers on this Coast use our Cutters with great satisfaction, there being Single Ross Cutters in use in this State which can cut more feed than TEN of the largest of other makes in use here, and our smaller sizes are just as satisfactory.

All who want the best machine in the market for Cutting Feed, either in large or small amounts, must buy a Ross to accomplish their purpose.

NEW STYLE EUREKA GANG PLOW, with Seat behind the Levers.

EUREKA GANG PLOWS.

No. 107c. Beams 3½x1½ Inches. TWO EXTRA SHARES WITH EACH PLOW.

THIS NEW STYLE EUREKA GANG PLOW HAS THE CELEBRATED GALE CHILLED IRON BOTTOMS. We find the farmers of California require a Gang Plow with Chilled Iron Bottoms. We have spent the past two years in experimenting with different kinds of plows, have studied carefully the good qualities of each plow offered in the market, and now feel sure that we have in the NEW EUREKA GANG PLOW with the Gale Chilled Iron Bottoms, the best Chilled Iron Gang ever invented. It has all the good qualities of the EUREKA GANG, of which every farmer in California is acquainted, combined with the NEW SLOPING LANDSIDE GALE CHILLED IRON BOTTOMS.

We offer this Gang Plow, knowing it to be the best Chilled Gang in the market. It is the Strongest and Lightest Draft Gang to be found. We can supply this Plow, with all the various Eureka Gangs, as follows:

No. 107c, with 5-16 Iron Center Steel Moldboards, chemically hardened, Cast Cast-steel Shares, with or without Land Gauge, 10 or 12-inch Cut.....	\$95 00
No. 107c, with Star Moline Bottoms, with or without Land Gauge, 10 or 12-inch Cut.....	95 00
No. 107c, with Chilled Iron Bottoms, with or without Land Gauge, 10 or 12-inch Cut, Chilled Shares.....	85 00

Extra, for Bottoms cutting 14 inches.....	per Gang, 5 00
Extra, for Bottoms with Fin Cutters.....	per Gang, 3 00
Extra, for one Detachable Beam.....	per Gang, 5 00

EUREKA GANG PLOW, No. 7c.

THE FAVORITE.

AWARDED THE FIRST PREMIUM at the State Fairs of 1877, 1878, 1879, 1880, 1881, 1882, 1883, and numerous County Fairs.

THE LEADING GANG PLOWS OF THE UNITED STATES. They are made to adapt themselves to various kinds of soil, and are supplied with different patterns of Plow Bottoms. These implements have received more State and County Fair Premiums, have been successful in more plowing contests, and have met with a more extensive sale, than any Gang Plow ever invented. They have been the Plows against which all dealers and manufacturers interested in the sale of other Gangs have waged the fiercest war, and the ones by which inventors have measured their efforts, well knowing that if they could make a more satisfactory implement than the Eureka, they could justly claim to have the best. The efforts in this direction, both by Eastern and California inventors, have been strenuous and unremitting, and possibly might have been crowned with success but for certain stumbling blocks in the shape of broad patents, covering all essential points, whose validity they have compelled us to establish in the courts.

Weight, with Steel Bottoms, 63½ lbs. Weight, with Chilled Iron Bottoms, 68½ lbs.

No. 7c Eureka Gang Plow, with 5-16 Iron Center Steel Moldboards, chemically hardened, Cast Cast-steel Shares, with or without Land Gauge, Beams 3½x1½, with 2 extra Shares, 10 or 12-inch Cut.....	\$95 00

# PACIFIC RURAL PRESS

TWENTY-FOUR PAGE EDITION.

Vol. XXXII.—No. 19.]

SAN FRANCISCO, SATURDAY, NOVEMBER 6, 1886.

{ \$3 a Year, in Advance  
SINGLE COPIES, 10 CTS.

## The Story of a School.

Written for the RURAL PRESS by JEANNE C. CARR.]

In the year 1873, a company of gentlemen in and around Indianapolis, Indiana, conceived the idea of founding a rural colony in Southern California, glowing reports of the country having captivated their imaginations with pictures of golden fruits and ever-blooming flowers at the season when the States of the interior are swept by blizzards, or buried under the snow. A choice was made by their agents of a portion of the rancho San Pasquale, lying at the extreme northern end of the San Gabriel valley, and thither in '73-4 the Eastern emigrants had so far settled as to incorporate a colony, form a school district, and engage Miss Jenny Clapp as a teacher.

The best room in Deacon Clapp's comfortable cottage was given up to the school; meanwhile under an enormous oak tree on the mesa, now Orange Grove avenue, a little one-roomed school-house went up. For two or three years this was used for the various public needs of the colony, when it was moved to a more central position at the nucleus of Pasadena City, then consisting of a grocery store which also served as a post-office wherein the tri-weekly mail was dispensed, and a blacksmith's shop.

Soon a new district was formed bearing the name of the settlement, and so rapid was the increase of population that in 1876 a large two-story building was erected, the upper floor being arranged with special reference to the social needs of the settlers. The site of the Pasadena schoolhouse, about four acres in extent, was given to the district for these purposes by the late D. B. Wilson, one of the original owners and most judicious promoters of the San Pasquale enterprise.

In 1883, the consent of the Wilson heirs having been obtained, the Free Library and Village Improvement Association, of Pasadena, placed their building upon the school lot.

Meanwhile the increasing population required the formation of new school districts and building of new schoolhouses in the suburban neighborhoods. South Pasadena, already quite densely populated, has a pretty rural school-house commanding a lovely view over the San Gabriel valley. North Pasadena schoolhouse, in the best modern style of school architecture, is seen from afar on the summit of Monk hill. East Colorado street has a third, equally well appointed. All these outlying stations are tributaries of the new Wilson or Central school, figured at the head of this article.

With the opening of the San Gabriel Valley Railroad, and the consequent increase of busi-

ness, it became evident that the removal of the Wilson school to a more suitable location was inevitable. By a vote of the citizens it was decided to sell the original site at auction and erect a new and model schoolhouse with the proceeds. The sum of \$46,500 was realized from this sale, and \$10,000 from the subsequent sale of the lot on which the Free Library building yet stands.

The site selected covers two acres, and is one

Back of these apartments are the accommodations for primary classes, with their separate entrances and conveniences of every kind. There are ample spaces reserved for playgrounds for the little ones, and in the basement they, as well as the older pupils, will have rooms for gymnastic exercises in wet weather.

The second is really the main story of the building; in it is a fine room for the library, the principal's room, and the arrangements of slid-

in California is now receiving the finishing touches.

To the stranger within our gates who rightly estimates the progressive forces which are at work here, I am sure none will seem as important as the ample provisions made for the education of the children. The teachers now employed in our crowded schools brought to us well-earned reputations in other fields. Mr. Pierce, the principal of our Central school, with

his estimable wife, came to us from New Jersey, and is one of the most accomplished school officers in the State.

There is no lack in Pasadena of facilities for more private instruction in literature and fine arts than that furnished by the public schools. But it is ever to these that we must look for what is to determine the character of our civilization and citizenship, and the people who are thronging here to-day, as well as those who succeed them, will hold in highest honor the little band of pioneers who, amid many privations incident to a new settlement, first founded and amply supported the public school.

**A DRY LAND GRASS.**—The Sagebrush Stockman makes the interesting statement that Prof. Vasey, botanist of the Department of Agriculture, in Washington, in a recent visit to Colorado, expressed the belief that he had found a grass which only needed water at the time of seeding, and stated that an appropriation will be asked to experiment with it another year in fenced tracts on the plains. We hope such a grass has been found, and that some of the seed will be sent for trial in California. There are a number of native grasses from the interior plains now being tested at the University of California—the seed having been sent by Col. Colman, Commissioner of Agriculture, but we are not aware that Dr. Vasey's best grass is in the lot. If not, let us have

it to try in this State, by all means. We can give it more rain than at the "time of seeding."

**COLD STORAGE.**—We see by the Los Angeles Times that cold storage such as is used at the East for preservation of fruits and other perishable produce is now provided for at Santa Ana. The process used is described as that of E. G. Wheeler—an ammonia process. They bring the fruit to a temperature of 45 to 50 degrees, and then ship it on refrigerator cars which keep it at the same temperature during the journey. The great advantage of the cold storage process is that if the shipment arrives on a glutted market it can be held or forwarded to some point where the demand is good. The plant now in use at Santa Ana cost complete \$5000, and has a capacity of two carloads of fruit every 36 hours.

NEW BUILDING OF THE WILSON OR CENTRAL SCHOOL, PASADENA, CAL.

of the most beautiful and commanding in the settlement, being upon Marengo avenue, at a point overlooking the busy little city, with ample grounds, water supply, and easy facility for drainage. As the building is now nearly finished, it is not too much to say that it is by far the most commodious and perfectly appointed public-school building we have seen.

Architecturally considered, it is also very satisfactory—massive but not heavy or labored in detail, admirably lighted, warmed and ventilated. Entering the main story, a spacious lobby leads into the hall, 16 feet in width, in which are the grand staircases leading to the story above. The two large classrooms on the main floor are bright and cheerful and each equipped with ample cloak and dressing-rooms for boys and girls. Here are private rooms for teachers, also.

ing-doors are such that the whole can be thrown into a noble audience-room when needed for public occasions.

While nothing essential to the wants of the several departments has been sacrificed to display, the interest of the public in the work of the school will surely be promoted by making the place for our public-school exercises so pleasant and attractive.

From the beautiful tower which crowns the schoolhouse, the eye sweeps over a marvelous scene of beauty and activity. Stately villas rise above the orange groves and orchards of the encircling hills, the growing, densely-populated little city, with railroad depots and business blocks, lies at the base of Marengo avenue, a lovely street, leading by one of the pleasantest of drives to the Raymond hotel. Lower down on this avenue one of the finest churches

## Monterey District Fair.

The 10th annual exhibition of the Monterey Agricultural Association, District No. 7, opened at Salinas City on Tuesday, October 5th, and closed on Saturday, the 9th.

The weather during the week was fine, and there was a goodly attendance both at park and pavilion. Local reporters declare the display of horses was the largest and best ever had there—it is becoming better every year. The absence of gambling at the track was very noticeable, and the pool-box was less patronized than at any previous fair.

The ladies' equestrian contest, Saturday morning, drew a throng of witnesses, and the fair riders all four acquitted themselves handsomely.

The exhibition of cattle, though rather small, was otherwise highly creditable. Among the implements to be seen at the park were Lacey's sulky harrow; Hamilton's improved teeth for thrashing machine cylinders and device for rolled steel plow-shares; the Pacific Co.'s fence machine; Benicia sulky gang-plow and Tiger-mower; Compton automatic gate; Price's Excelsior seed-sower; Best's grain-cleaner and Dutcher's squirrel-smoker.

At the pavilion—passing the various mercantile and artistic displays, the fancy work and an interesting collection of Mexican curios—Paul Romie, of the Salinas nurseries, had a beautiful pyramid of foliage plants. J. S. Tibbetts, of the San Miguel, showed an assortment of vegetables, melons, garden seeds, etc., that attracted much attention. W. T. Gilkey, R. Windsor and W. S. Hunt had choice exhibits of fresh fruits. H. Corey displayed a fine lot of ranch produce, including two mammoth squashes, similar in shape and size, upon a single vine. Mrs. W. T. Gilkey had a superb output of canned fruits, jellies and pickles. Judge I. J. Harvey exhibited a lemon pear tree bearing green fruit, ripe fruit and blossoms. Mrs. J. B. Hickman had a beautiful display of grasses and pressed wild flowers, and dairy products were represented by Chas. Reynolds, Hiram Corey and J. W. Patton.

Matthew Cooke delivered the annual address on Friday evening, before a large and well-pleased audience.

Following are awards in agricultural and related industries:

## At the Track—Horses.

Roadsters.—Best stallion or gelding four years, C. W. Rowe's Hambletonian King; stallion, 2 years old, H. J. Palmer's Election; mare three years old, D. W. Evans' Ellen Voorhees.

Horses for all purposes.—Best stallion four years old, H. Corey's Clarence King; stallion three years old, J. W. Patton's Granger; stallion one year old, J. R. Hebborn's Nutmont; mare four years, J. R. Hebborn's Flora; mare three years old, M. Lynn's Silver Tail; mare two years old, H. Corey's Rose-dale; mare one year old, H. Corey's Ira; sucking colt, R. Corey's Comet, Jr.; gelding, H. Corey's Sir Henry; mare four years old with colt, H. De Groat's Kittie Lee.

Draft horses.—Best stallion three years old, W. B. Ford's Robert Ingersoll; stallion two years old, McEntee Bros.' Chief Justice; mare three years old, M. Barry's Nellie Miller; mare two years old, J. B. Smith's Flora; sucking colt, M. Barry's Col. Le Mar.

Carriage horses.—Best span buggy horses, H. M. Cavanagh's Susie and Kittie; single buggy horse, D. W. Evans' Monte.

Thoroughbreds.—Chas. Cockrill's Daisy D, Clara Treat and Ironclad; J. B. Iverson's Herculeine.

## Cattle.

Durham.—Best bull three years old, H. Corey's Prince Albert.

Jersey.—J. R. Hebborn's Fisher.

## Goats.

Best buck, W. J. Gilkey's Billie.

## Sheep.

Best ram, ewe and family, all J. W. Patton's.

## Swine.

Best boar and best sow of any breed or age, W. T. Gilkey's Dan and Chloe.

## Poultry.

Best pairs black Spanish chickens, ducks, bronze turkeys, white Leghorns, brown Leghorns, and 2d Langshans, J. W. Patton; best pairs turkeys, and Langshans, J. C. Webb.

## Agricultural Implements.

Best mower, E. P. Iverson's tiger mower; grain cleaner, Best's grain cleaner; sulky harrow, J. V. Lacey, Common Sense; gang plow, E. P. Iverson, Benicia; Sulky Gang; grain sower, D. Best, Jacob Price Excelsior; Farm gate, E. P. Iverson, Compton; S. Hamilton, Cylinder and Concave, special mention; J. Hamm, Pacific Co. combination fence machine, special mention.

## Equestrianism.

Lady equestrians.—1st prize, Miss Minnie Gilkey; 2d, Miss Florence Hebborn; 3d, Miss Ariana Williams; 4th, Miss Dottie Patton.

## Awards at the Pavilion.

Farm Products.—Best sack of oats, J. W. Patton; best sacks wheat, barley, buckwheat, corn, collection of native grains, W. T. Gilkey; hops, best 10 lbs. lard, Mrs. W. T. Gilkey; California peppermint, Miss Minnie Gilkey; exhibit corn, J. S. Tibbetts; honey in comb, strained honey, pickled olives, Mrs. W. T. Gilkey.

Garden products.—Collection garden seeds, parsnips, winter radishes, celery, cabbage, melons, cucumbers, tomatoes, turnips, sweet potatoes, best sack of onions, best pumpkins, J. S. Tibbetts; sack of potatoes, Robt. Porter; carrots, Mrs. J. R. Gil-

key; squashes, W. L. Carpenter; dried beans, W. T. Gilkey.

Fruits.—General display, W. T. Gilkey; 12 varieties of apples, W. S. Hunt; single variety of apples, Mrs. W. T. Gilkey; collection of pears, W. T. Gilkey; single variety of pears, quinces, Mrs. J. R. Gilkey; peaches, plums, collection of foreign grapes, collection of wine grapes, collection of nuts, W. T. Gilkey. Exhibits of R. Windsor, O. P. McFadden, of Cambria, M. Bolanger, of Jolon, and I. J. Harvey, not entered for premiums, deserve special mention.

Canned Fruits.—Best domestic canned fruit, fruit hermetically sealed, pickles, Mrs. W. T. Gilkey; sweet pickles, Mrs. J. B. Hickman; preserves, Mrs. W. T. Gilkey and Mrs. J. R. Gilkey; jellies, Mrs. W. T. Gilkey.

Preserved and Dried Fruits.—Exhibit domestic dried fruit, prunes and plums, apples, pears, apricots, peaches, Mrs. W. T. Gilkey.

Native Wines and Liquors.—Sweet red wine, Angelica wine, vinegar brandy, Mrs. J. R. Gilkey; white wine vinegar, W. T. Gilkey; exhibit of plants, P. Romie.

Best Bread.—Miss Lettie Cook; 2d, Miss Mabel Dorn.

Dairy Produce.—Butter, Chas. Reynolds; cheese, J. W. Patton.

## The Fair at Lakeport.

The Twelfth Agricultural District, which includes Mendocino and Lake counties, had its Fourth Annual Fair at Lakeport, Oct. 5th to 8th. The occasion failed to bring to town the usual number of strangers, which the *Democrat* ascribed partly to the fact that the directors had prohibited games of any description on the grounds, thus leaving out the main attraction for "sporting" characters, and at the opening the stock entries were so meager, and visitors so few, that the management felt somewhat discouraged. The second day, however, there was a decided improvement in exhibits, attendance and receipts, and Wednesday evening found the pavilion well filled with interested and pleased spectators.

The display of vegetables and of fruits, both green and dried, was excellent. Grapes, pears and apples especially were fine, and some of the same variety of apples from Scudamore's orchard, Esopus Spitzenberg, which took the first premium at the World's Fair in New Orleans, could hardly be surpassed. Despite the lateness of the season for peaches, some very nice specimens were to be seen, measuring as high as 11 inches in girth. The Clear Lake Canning Co.'s output was large and creditable. The best display of jams, jellies, fruits and pickles in glass was made by Mrs. Wambold. Choice bread, cakes, butter, cheese and honey filled the portion of tables allotted to them.

Wambold Bros' vegetable exhibit included squashes, onions, beets, cabbage, cauliflowers, melons, carrots, celery, tomatoes, lettuce, cucumbers, peppers, beans, radishes, corn and okra. A number of stalks of corn were shown standing over 13 feet high. One of the squashes weighed 125 pounds, and a watermelon tipped the scales at 45 pounds.

A large collection of house plants and ferns, by Mrs. Hunnewell, of Kelseyville, was greatly admired.

"The Charm flour-chest," full size, by Mr. Ozenberger, of Middletown, and a small model of another flour-chest by Mr. Herman, of Kelseyville, drew notice and praise alike from farmers' wives and city housekeepers.

Beautiful specimens of woman's needlework were displayed in variety and profusion. And in the children's department the embroidery and knitting, the bread and cakes and jellies showed that the little girls of that district are learning how to make home comfortable and pretty.

Among the mechanical exhibits an open buggy, manufactured by Jenkins & Davis, of Lakeport, without paint or oil on it to cover any defect, was entered for a premium and took it.

At the park the equine entries of all classes numbered nearly 50—stallions and mares, colts and fillies—roadsters and horses of all work being in an overwhelming majority. Shorthorns had a single representative in T. Manning's "Jumbo." John Mewhinny and A. G. Platt each showed a Holstein bull, cow and calf, and Thos. Haycock a Jersey bull and cow, which, with three graded cattle, made up the livestock.

## A New Railroad Enterprise.

EDITORS PRESS:—Some weeks since, at a meeting of the fruit-growers of Sonoma county, a resolution was adopted in regard to the necessity of a direct communication by rail with the East. All admitted that there was a good paying investment for some enterprising capitalists. At the next meeting the project was still further discussed, and a committee appointed to get propositions from the Donahue Line and the Central Pacific Co. So impressive were some of our people with the great benefit that would ensue that a corporation has been formed and the necessary papers obtained. The directors are: John Walker, Pres.; J. B. Rue, V. P.; Geo. Noonan, Treas.; W. H. Orr, Sec., and T. J. Proctor.

The directors are hard at work getting right of way. Maps and profiles of the survey have been made, and we are determined to have a railroad if we have to build it ourselves. The name of the road is the Santa Rosa & Benicia Central railroad; the distance about 50 miles,

and the route selected is an unusually easy one to build. Sonoma and Benicia strike hands with us, and all along the line the great desire is for a standard gauge railroad to enable the people to get their fruits, wine, hops, wool, wheat, etc., East. Now that the entire county has become interested, I believe the road will be built. One man says he will give a dollar an acre, and he is away from the line 1½ miles and has 1200 acres.

The extension of the Donahue line is a foregone conclusion, the surveyors are in the field, and the word is "On to Oregon," I hear, "and close up the only link in the United States not yet forged for the great chain of railroads." I rejoice in the progress ahead.

Santa Rosa.

PRO BONO PUBLICO.

## HORTICULTURE.

## Walnut Growing in Los Angeles County.

[Read by F. R. Willis before the Los Angeles County Pomological Society, at Downey City, Oct. 7, 1886.]

Of the various branches of pomology now attracting the attention of fruit-growers in Los Angeles county, none is more deserving of attention than the culture of the English walnut.

As an employment, nut culture is the easiest, most pleasant, certain, and, taken one year with another, most remunerative of any branch of industry in which the small farmer of this valley can engage.

The walnut seems to be almost indigenous to the southern parts of Europe and Asia, and the central part of South America. It is more hardy than many suppose, and would doubtless bear the winters of the Gulf States. In England, Scotland and France the walnut has become acclimated and bears large crops—France alone exporting in 1885 over 33,000,000 pounds of nuts. In California we find an entire State adapted, in a greater or less degree, to this branch of industry—the difference in adaptability being governed entirely by soil, climate and location.

The walnut flourishes best when planted in rich, moist, sandy soil to which there is good drainage, but where water can be found in from 15 to 20 feet from the surface.

It has been remarked by a well-known writer upon this subject that "sloping and rocky ground like the hillsides of our mountains is the soil best adapted to the walnut." While this may be true of other parts of this State, it is our observation that the reverse of the rule is true in Los Angeles county.

The walnuts grown upon the rich, sandy soil of Ranchoito, or upon the darker, heavier, but equally fertile soil of Old Los Nietos, are as large in size, fine in quality and in as great demand as the choicest imported nuts; and the reputation of the nuts grown in these two places of Los Nietos valley is an important factor in selling the entire crop of Los Angeles county; at least that is the inference we draw when we see sacks bearing the mark "Los Nietos walnuts" sent to various parts of the country each year, to be filled with the nuts sold by certain Los Angeles commission houses. And the further fact that in the San Francisco *Merchandise* and in the New York market reports, Los Nietos walnuts are always quoted in good demand, and at from one-fourth to one-half a cent per pound higher than nuts from other localities.

The trees are grown from roots which may be planted in the fall or in the spring, say about March.

The ground is first plowed deep, then harrowed and leveled. With a small plow open a furrow three or four inches deep, and drop the walnuts about 18 to 24 inches apart in the furrow; then cover with a plow, harrow the land, and the planting is done. After the trees appear above ground, cultivate carefully and often, but do not irrigate oftener than necessary. More trees are injured by too much than by too little water.

When the trees are from two to four years old they should be transplanted to land previously well prepared. Set the trees in rows 40 feet apart each way, keep well cultivated, and irrigate once or twice a year until they are large enough to shade the ground, when irrigation can cease altogether.

Some prefer to plant in boxes or barrels of damp sand, and when the trees are from four to six inches high, transplant at once to the places where they are to grow. For ourselves we prefer the former method, as inquiry and observation show to us that if a four-year-old tree is properly transplanted, there need be no loss, and the tree will come into bearing at least three years earlier than one transplanted during its first year.

In this valley large crops of corn can be raised each year between the trees until they come into bearing, thus insuring to the industrious farmer a continuous revenue.

The walnuts raised in this valley are classed as hard shell and soft shell, the latter now being most in favor, in consequence of coming earlier into bearing, and producing a finer nut than the hard shell. Either variety produces large crops, and such a thing as failure is almost unknown.

A few walnut groves in this valley were killed during the wet season of 1883-4 by being insufficiently drained, it being generally supposed that, owing to lack of drainage, the roots

of the trees were standing in water for some weeks, and, as the warm weather came early, the flowing sap was soured by the combined action of sun and water, thereby permeating every portion of the tree and causing its death; but generally the trees are absolutely hardy and always free from insect pests.

To prove that people have faith that such an occurrence can easily be obviated, I have only to cite the fact that many are putting out new trees in the place of those killed; and also, that they are preparing to drain the ground thoroughly during the rainy season.

In walnut growing, as well as in other kinds of work, the object to be attained is a liberal supply of coin, and it has been our observation for the last three years that in no other way can such a desideratum be more surely and successfully reached than by walnut raising.

The conditions for successful walnut culture seem better and are better in Los Nietos valley than in any other portion of the State. With our rich alluvial soil, our abundant rainfall and excellent facilities for irrigation, our protection by mountains and foothills from the hot desert winds, with the sea breeze equalizing the temperature of our summer and autumn days, we have all the natural advantages that we could desire.

The area of walnut groves now in bearing is not large, but within the past five years enough walnuts have been planted to more than quadruple the present yield.

There is still some land in Ranchoito suitable for walnut culture, most of which will be planted during the coming year; also a considerable number of acres in Old Los Nietos, under the Los Nietos irrigation system, which is also well adapted for the same purpose, and we venture the prediction that but few years will pass ere that will be considered the finest section in the United States for this industry.

## THE PUBLIC LANDS.

## Uncle Sam's Business for the Year.

Commissioner Sparks, of the General Land Office, has submitted to the Secretary of the Interior his report for the last fiscal year. At the outset the Commissioner says: "In my previous report I referred to the imperative need of reform in the administration of the public land laws to the end of protecting the public interest rather than ministering to the advantage of speculation and monopoly, private or corporate. The steady purpose, in which I have endeavored to reflect the aims of all good men, has been the protection of the public domain and its preservation for inhabitancy by actual cultivators, to whom it rightfully belongs. The evidences of 'widespread persistent land robbery' laid before you in my last report were furnished by officers and agents appointed by the last administration. The developments of the past year under the agencies of the new administration have justified every word said in my last report." The sales, entries and selections of public land under the various acts of Congress, says the report, "embrace 20,991,967 acres, and of Indian lands, 1,132,596, making a total of 22,124,563 acres, being an increase over last year of 1,129,050 acres." The public surveys reported during the year embraced 2,302,376 acres. On this subject the Commissioner says that 1,400,000 acres of the Territory of Arizona have been surveyed, principally in the southern and central portions of the Territory. About 710,000 acres have been surveyed in California and about 580,000 in Colorado. Concerning the surveys in this State the report says: "The eastern portion, known as the plains, which is largely dominated by cattle corporations, was returned and surveyed several years ago, but no monuments existed and there are no means of identifying the subdivisions of sections, or even the locality of townships. It is of the utmost importance that prompt steps should be taken to fully ascertain the condition of the public surveys in that part of the State. In Dakota the eastern half of the State has been surveyed, except in portions along the international boundary line of the Turtle mountain region. The surveyed area of this Territory is about 4,700,000 acres."

In speaking of the surveys in New Mexico, the Commissioner quotes from the report of Mr. Julian, Surveyor-General of New Mexico, in which he expressed the opinion that large areas of the Territory will have to be re-surveyed, on account of the previous inaccuracy and fraud.

The work of the office is reviewed at length, showing that 3087 cases of entries were investigated, of which 1168, embracing 17,505 acres, were canceled as fraudulent, and 1485 cases, containing 225,000 acres, have been held for consultation. The Commissioner says his attention has been called to 3750 unlawful inclosures, containing 6,410,000 acres, and that proceedings to compel the removal of fences have been recommended in 88 cases, involving 2,250,000 acres, and final decrees ordering their removal obtained in 13 cases, involving 1,000,000 acres. Agents report 65 inclosures removed from 1,374,862 acres, and 47 inclosures, covering 359,000 acres, removed without resort to the courts. In several cases no area is given, and in one case the amount of fencing is stated as 130 miles. The total area over which fences

have been or are being removed is 2,714,926 acres, mostly in Colorado.

The report continues: "Twelve hundred and nineteen cases of timber depredations have been reported, involving a value in timber and timber products amounting to \$9,339,679 recoverable to the United States. About \$100,000 of this has been recovered. Depredations on public timber by powerful corporations, wealthy mill-owners, lumber companies and unscrupulous monopolists, though to a certain degree checked, are still being committed to an alarming extent and great public detriment."

"The subject of forest reservation," he says, "is one of unquestionable importance, and I respectfully renew the recommendation heretofore made." The Commissioner recommends that an act be passed making false and fraudulent returns of public surveys and of surveys of private land claims offenses punishable by fine and imprisonment. The recommendation is also made that the law authorizing surveys to be made under the "special deposit" system be repealed.

## SHEEP AND WOOL.

### The Proposed Registry of American Angora Goats.

In our report of the meeting of the California Angora Goat-breeders' Association, in last week's RURAL, the following paragraph occurred:

The question of joining the American Mohair Growers' Association of Texas, to establish a standard for a pure-blood Angora goat or a system of registry, was discussed and resolved that action on this subject be laid over until next annual meeting.

In order that our goat-breeding readers may understand more fully what is proposed by the American Mohair Growers' Association, we give below a communication which we have just received from the secretary:

EDITORS PRESS:—I send you herewith rules of the Angora Goat Register adopted at a meeting of the American Mohair Growers' Association held on the 4th and 5th of this month in the Southern hotel at San Antonio, Texas. There were 19 members present. G. A. HOERLE, Corresponding Secretary of the American Mohair Growers' Association.

#### Report of the Committee on Registration.

After a six-hours' argument, your Committee on Registration, consisting of J. P. Devine, San Antonio, Chairman; S. J. Arnold, Montell, Uvalde Co.; J. C. McFarland, Boerne, Kendall Co.; Thomas Evans, Montell, Uvalde Co.; R. H. Lowrey, Camp San Saba, McCulloch Co.; G. A. Hoerle, Ridge-wood, Bergen Co., N. J., came to a final conclusion, and recommend the following for adoption:

1. That an Angora Goat Register shall be established under the following rules:

2. That no animal shall be admitted unless it be covered entirely with mohair, without mane or coarse hair.

3. That no animal shall be admitted unless its fleece and undergrowth of hair be entirely white.

4. That the Register shall be divided into two classes—Class 1 and Class 2.

5. That the first requirement for admission into Class 1 shall be purity of blood.

6. That the applicant for admission shall make an affidavit, before a notary public, that according to his best knowledge and belief the animals in question are descendants of imported pure-bred stock, or shall prove, in any other way the association may hereafter decide upon, either by committee or in open session, such purity of blood.

7. That this Class 1 shall be subdivided into three degrees of excellence, the standards of which to be agreed upon by a committee to be appointed for that purpose by the president.

8. That the second class, or Class 2, shall consist of grades, which shall have also three degrees of excellence, of the same standard as Class 1.

9. That the above-mentioned committee shall consist of an equal number of pure-blood breeders and grade breeders.

[The president, Mr. W. D. Parrish, then appointed G. A. Hoerle and J. C. McFarland to represent the pure-blood breeders, and S. J. Arnold and R. H. Lowrey to represent the grade breeders, a committee to define the above-mentioned degrees of excellence. After adjournment they met and agreed upon the following rules:]

10. That besides the requirements already agreed upon in resolutions Nos. 2 and 3, only animals with fleeces reaching the following weights shall be called the lowest standard of excellence:

BUCKS.		
	If fine fleeced.	If coarse fleeced.
Over 5 years old.....	.....	.....
Over 3 years old.....	4½ lbs.	5½ lbs.
Two years old.....	3½ lbs.	4½ lbs.
Yearlings (first fleece).....	2 lbs.	2½ lbs.

EWES.		
	Fine fleeced.	Coarse fleeced.
Over 5 years old.....	3 lbs.	4 lbs.
Over 3 years old.....	3½ lbs.	4½ lbs.
Two years old.....	3 lbs.	4 lbs.
Yearlings (first fleece).....	1½ lbs.	2½ lbs.

11. That the above weights shall be called two points with an animal, and that for buck fleeces every additional pound of mohair, and for ewe fleeces every additional twelve (12) ounces, shall be counted as one additional point in the scale of points hereafter given.

12. That in judging fineness of fleeces, mohair of the factory standard fineness (No. 18) shall not count any point with ewe fleeces, but that with them No. 24 shall be counted three (3) points, No. 30 shall count six (6) points, and No. 36 nine (9) points; whereas for buck fleeces No. 18 shall count three (3) points, No. 24 six (6) points, and No. 30 shall count nine (9) points. However, kids of both

sexes shall not be rated that way nor admitted in the upper degrees of excellence.

13. That the animals submitted for admission into the upper degrees of excellence shall be judged by a scale of points, perfection to be called 50 points, and shall be composed of:

A. Fleece 31 points, viz.:	
Fineness counting up to.....	9 points (nine)
Weight counting.....	8 points (eight)
Evenness of mohair and covering.....	6 points (six)
Shape of fleece (quality of ringlets).....	4 points (four)
Luster.....	4 points (four)

B. Body 16 points, viz.:	
Constitution to count up to.....	6 points (six)
Symmetry of shape up to.....	5 points (five)
Weight up to.....	5 points (five)

C. Fancy 3 points, viz.:

Earlocks and tuft up to.....	2 points (two)
Lop-ears up to.....	1 point (one)

14. That in judging evenness, "shape and luster of fleeces, as well as constitution and shape and weight of the body, a fixed starting point shall not be agreed upon for the present, but it shall be left to the discretion of the Examining Commissioners to act upon their best knowledge and belief.

15. That in order to gain admission into the two upper degrees of excellence, thirty-five (35) altogether shall be required, including fancy points, for the second degree, and to gain admission into the first degree of excellence, forty (40) points shall be required and best possible fancy points indispensably necessary, and absolutely no coarse hair shall exist in the fleeces of the respective animals.

16. That the examination of animals for which admission into any of the three degrees of excellence of either of the two classes is applied for shall be made by commissioners, to be elected annually in open session, and that at least two commissioners shall be necessary to make an examination.

17. That the Examining Commissioners shall be men of integrity and thoroughly acquainted with the Angora goat husbandry.

18. That they shall be paid for every examination trip at the rate of (to be decided at the next meeting).

19. That the application for registration shall be made to the secretary of the association.

20. That whenever an application for admission into the Register is made by any owner of Angora goats, the secretary shall notify all the Examining Commissioners and ask them to volunteer and state at what lowest price each is willing to make such examination, and that in case no voluntary offers for the respective examinations are made, he shall appoint two commissioners who shall make the examination, and, as long as no fixed charges have been agreed upon, shall arrange themselves privately with the owner of the goats in regard to fees payable for the respective examinations.

21. That the owners of Angora goats for which admission into the Register is demanded shall make an affidavit to agree to answer correctly, according to their best knowledge and belief, all the questions addressed to them by the Examining Commissioners in regard to the breeding of their stock.

22. That each commissioner shall have for the term of his office a book, in the shape of a check-book, containing duplicate permits for registration, showing that the owner of a certain Angora goat is entitled to have that animal registered in a certain degree of Class 1 or Class 2. One of these duplicate permits the commissioner shall retain in his permit-book as a record; the other he shall give to the owner of the goat. The owner of the goat shall forward his permit, together with the amount of registration fee, to the secretary, who shall give him a receipt therefor and send the permit to the keeper of the Register.

23. That the charges fixed for registration shall be:

	Class 1	Class 2
Lower degree of excellence.....	25c.	10c.
Second degree of excellence.....	35c.	15c.
First degree of excellence.....	50c.	20c.
Transfers.....	10c.	10c.

For members of the association; non-members shall have to pay double charges.

24. That the keeper of the Register shall make the necessary entry in the respective records and furnish the owner a Certificate of Registration and an association card for every individual animal for which he produces a permit.

The above rules were adopted.

Before adjourning, the following Examining Commissioners were elected: J. C. McFarland, Boerne; Henry Fink, Leon Springs, Bexar Co.; W. H. Clark, Montell, Uvalde Co.; S. J. Arnold, Montell, Uvalde Co.; Maurice B. Moore, Austin; W. W. Haupt, Kyle, Hays Co.; W. Morgan, Fort Worth; P. H. Hale, Fort Worth; R. H. Lowrey, Camp San Saba, McCulloch Co.; Capt. W. Gordon, Junction City, Kimble Co.

The first Monday in June was agreed upon for the next day of meeting of the association, whereupon the president adjourned the meeting.

## THE IRRIGATOR.

### Ownership and Use of Water.

EDITORS PRESS:—The work in the orchards and vineyards is about over for the season. The vineyards were a success in this region, but orchards were a partial failure. The cultivation of wine and raisin grapes has passed the experimental stage and may now be considered a regular business here. The Natoma Company have made a great success with their vineyard this year. They employed many girls to select and pack grapes for shipment, and the company say that they give better satisfaction than Chinamen, and it is their intention to provide accommodations for them another year, so they can rely on their help.

The town of Folsom, 22 miles from Sacramento, on the Sacramento & Placerville Railroad, situated on the American river, at the foot of the rapids, is destined at some future time to become a city of some

importance. When the Natoma Company finish their canal to Folsom, and perhaps extend down to Sacramento, it will furnish unlimited water-power and abundance of pure, clear cold water for both cities; also an abundance of water for irrigation purposes.

I can appreciate the advantage that plenty of water would be to the inhabitants of this valley, as I have had 10 years' experience with irrigation, and it is my candid opinion that it is impossible to grow fruit to its utmost perfection without irrigation, except in some low situations.

The problem of the growth of trees few think about. The amount of moisture drawn from the ground is incredible without proof and facts. A large, healthy grapevine cut off in the spring, and a machine attached to the stump to weigh the pressure, will indicate 80 pounds pressure, more or less. Such a drain from the soil continually during the summer by trees and vines must exhaust almost all the dampness unless supplied by rain or irrigation.

Irrigation is the great question of the day. In my opinion, freely, the waters of the State belong to each individual composing the State; each one has a right to say what shall be done with his own. A riparian owner should have his share; the prior appropriator should have his share and no more. Now come in the people, the owners of the water, and say you riparianists and appropriators have taken possession of what does not belong to you, and we will now, through our authorized agents, redistribute this water justly among the people. Teach greedy, rapacious men a lesson, much needed, that they will not be permitted to take possession and monopolize the water as they have the land. Let no man or company of men own the canals or ditches. Irrigation should be a State work, with the Board of Supervisors in each county as agents for the State to manage the water for the people. Only enough should be charged to each irrigator to pay the interest on the cost of construction, and all work should be done under direction of a competent engineer.

If we could rise to the height and be able to comprehend the vast possibilities of this State, to produce a hundred-fold more in quantity and variety of the products of the soil by irrigation, rendering us independent of rain or drouth, we would scrutinize and question closely the men who undertake to represent us in the Legislature. All kinds of monopoly, tyranny, oppression and wrong die hard, and the history of all ages shows that oppression once fastened upon a people can only be shaken off by revolution and bloodshed.

MONTGOMERY PIKE.

Routiers, Sacramento Co., Cal.

## THE STOCK YARD.

### Baden Farm Shorthorns.

We have received a newly-issued catalogue of the Baden Farm herd of Shorthorns belonging to Robt. Ashburner. It is illustrated with four cuts, all of which have appeared in the RURAL PRESS, with full explanations of the breeding of each animal, together with a full analysis of their pedigrees, which, with the catalogue now issued, will be a great help to those beginners who have not access to the herdbooks, in the study of the pedigrees of Shorthorn cattle, as, most likely, those of our readers who are at all interested in the breeding and rearing of good cattle will have their copies filed away for future reference.

The catalogue contains the pedigrees of 76 cows and heifers and 21 bulls and bull calves, the youngest calf in the catalogue being calved on Sept. 19, 1886. The cows and heifers represent direct descendants of 12 imported cows; or, in other words, 12 different families in female line direct, of which the Frantics and Fidgets are most numerous. They are all descended from imported Frantic by 4th Duke of York (10167), and have always been bred to good bulls—bulls, with one exception, full of the best of Bates blood. That exception was the bull Water Prince 13114 (a son of the late Wm. Torr's Water Prince (19126) and Pocahontas 1st); being a large, good bull, he was used with great advantage on the then too much in-bred Frantics, as they came into Mr. Ashburner's hands.

There are 16 called by the name of Frantic, up to the 36th, that name now being given only to descendants of Camilla, by Aprioot's Goater, through her daughters, full sisters, Goldleaf and Fragrant, by Water Prince. Those called by the name of Fidget, seven in number, are descendants of White Rose, by Mad Anthony, a son of Echo of Oxford (12821).

After the Fidgets are 10 of the Pansy family that have come through two different lines of breeding from imported Pansy by Blaize (76). Then there are eight Gwynnes—descendants of R. Colling's Princess by Favorite (252), through two cows imported from England by Mr. Ashburner in 1875. This family and the Frantics are about equally esteemed by Mr. A. for their good breeding qualities and general usefulness.

There are, next, nine descendants of Flora, imported from the herd of Mr. Mason, England, in 1819. These are much esteemed for their milking qualities, especially that branch with the cross of imported Cirencester Duke (17563), a bull that improved the milking qual-

ities of all families on which he is known to have been used. His dam being of Sir Charles Knightley's Primrose family and his sire a Darlington bull with a double cross of Mr. Bates' 4th Duke of Oxford (11387), who was himself descended from some of the best milking strains of Shorthorns, on both sides.

The next family consists of seven descendants of imported Lady Jane, by Whittington (12299). All that Mr. A. ever owned of this family, that have come into use, have been great milkers. Eliza, now the oldest cow of the family in the herd, gave 26 quarts a day one season, for some time after calving, on grass only. There are five Fawsleys descended from Sir Charles Knightley's Garland by Gray Friar (9172), through imported Fawsley Garland 4th by Vanguard (10994).

Fawsley Garland 4th, bred to imported Cirencester Duke, above named, produced Fawsley Garland 6th, and Fawsley Garland 8th, from which the five females in the catalogue are descended.

After these come four descendants of imported Jane by Young Magog (2247); three from Mason's No. 6 by Dr. Syntax; three from imported Lady Newham by Belleville (6778); two from Mr. Torr's Gold Princess by British Prince (14197); one, Golden Hope, a 14-year-old cow, by Golden Duke, and out of a cow by Cirencester Duke, granddam imported Gold Princess, etc.; the other being a roan yearling by Baden Duke 7th and out of Golden Hope.

There is one Oxford cow, calved in 1872, a granddaughter of Princess of Oxford, bred by Samuel Thorne and bought of him by A. B. Forbes, of San Francisco. This cow is forward in calf to the Princess bull Baron of St. Lawrence 37610, who is already the sire of some good heifers in the herd.

Those interested will have some recollection of what we said about the bulls on the occasion of our last visit to Baden Farm, in June last. Since that time the fine old bull Cherry Prince has been added to the list of bulls, Royal Duke having been given in exchange for him. Cherry Prince was bred at Baden, got by imported Grand Prince of Lightburne (36730) and out of imported Cherry Oxford 2d by Baron Bates (30041), etc., to Old Cherry by Pirate.

There are three yearling bulls and 11 bull calves under one year old, beside two that have been calved since the catalogue was in print. At the end of the catalogue are four pages filled with reference to sires, giving some explanation as to the breeding of each bull recently used, whose pedigree does not appear among the bulls now in the herd. There are also 14 pages of reading matter, which will be both instructive and interesting to most people who are breeding cattle. The catalogue can be had by addressing Robert Ashburner, Schoolhouse Station P. O., San Mateo county.

### A Grand Cattle Convention.

It is announced from Chicago that formal calls have been issued for the annual meeting of the National Cattle-growers' Association of America to be held in that city on Monday, November 15th. The meeting, it is declared, will ratify the articles of consolidation agreed upon last fall between the committees representing the Chicago and St. Louis associations, and a joint meeting of the two organizations will be held for the purpose of effecting a permanent organization, to be known as the Consolidated Cattle-growers' Association of America.

A call has also been issued by order of the joint Executive Boards of the two existing associations for a delegate convention of cattlemen from all quarters of the United States to be held November 16th and to continue until the important business which will come before the meeting shall be dispatched. These delegates are to be appointed by the various cattle-growers' associations, Governors of the States and Territories, State and National Departments of Agriculture, agricultural colleges, live-stock exchanges, and the live-stock and agricultural press. The meetings are to be held while the American Fat Stock Show is at its height. All railroads centering at Chicago will grant reduced rates of fare during that exhibition.

### Cure for Milk Fever.

EDITORS PRESS:—D. A. Logan, of Cayucos, reports having cured two cows of milk fever by administering one tablespoonful of common soda dissolved in teacupful of warm water, given to cow from a bottle. Then immediately after this dose give in the same way a teacupful of vinegar mixed with a pint of warm water. The cow gets well without giving any medicine. A neighbor has succeeded in curing cows of the milk fever in the same way. This is deemed an important recipe and well worthy of trial.

San Luis Obispo Co.

DEATH OF JOSEPH RUSS.—Hon. Joseph Russ, of Humboldt county, died in Alameda last lately, aged 63 years. Mr. Russ was born in Maine in 1823, and received a good common-school education in his native State. He came to California in the spring of 1850, and for many years resided in Humboldt county, his home being in Ferndale. He served in the Assembly in 1871-72 and again in 1877-78. He was extensively engaged in stock-raising and dairying, in which pursuits he was very successful.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## State Grange Annual Session.

(CONTINUED.)

## Concerning Resolutions.

At the time of publishing the resolutions adopted at the session, we were unable to give the writers' names, and can only do so in part now, we regret to say. Those on education and taxation were offered in part by Bro. Webster, and reported with modifications by Bro. Blackwood, Chairman of the Committee on Resolutions.

Bro. Bangs presented brief resolutions from Ceres Grange on irrigation. A more lengthy series offered by Bro. Caples, of Galt Grange, were adopted as a substitute for the first resolution of Ceres Grange, and all were subsequently laid on the table. At the last hour Bro. Webster presented those adopted, which seemed to give general satisfaction, embracing, as they do, very briefly the main and essential points of legislation needed.

Bro. Ostrom presented the anti-debris preamble and resolutions, which were adopted, without amendment, unanimously.

Bro. Adams presented the resolution on National Grange session in Sacramento, and that concerning the establishment of agricultural experimental stations.

Bro. Hancock offered the resolution adopted on transportation.

Bro. A. P. Roache, of Watsonville, introduced early in the session a very impressive preamble and resolutions in favor of woman suffrage. Not coming up for action until the closing moments of the session, when few were present, in deference to the opinions of several earnest Patrons (some of whom highly favored the resolutions) action was indefinitely postponed, although we believe a very decided majority of those present were in favor of their adoption under more opportune circumstances.

## Anti-Debris Resolution Adopted.

We present a slightly amended report of action had regarding the debris nuisance:

To convince all of the usefulness of our organization it seems only necessary to refer to a few of its accomplishments, when thoroughly united and in earnest. It never attacked a foe that it did not subject to law and equity, and which was maintained by the highest tribunals in the land.

The first grand triumph was in the effectual subjection of the creature to the will of the creator in the matter of governmental control of railroad and other corporations as exemplified in the Granger cases.

This State has not been without its foes, and strong and determined they were. The rivers were used as receptacles for the mountains in dissolution and with the most direful consequences to rivers and valleys, all under the plea of vested rights. The legal battle came, and the position so often expressed by the sufferers of the State and subordinate Granges have been sustained by the highest courts, both State and National, and in compliance with memorials by our people, from the last State Grange, the general government, recognizing its duty in the premises, instructed the Secretary of War to protect our navigable waters.

To this end, we, the State Grange, recommend prompt and speedy action by the Secretary of War, so that the injury may cease, and the money heretofore appropriated for the correction of the evil may become available for the purposes intended.

The following, offered by Bro. D. A. Ostrom, was unanimously adopted:

WHEREAS, After our late success some recognition should be made by the people of the Sacramento valley toward its steadfast friend, the State Grange; also to individuals thereof who have so determinedly and continuously stood by us in our long and bitter contest; therefore be it

Resolved, That we extend to all our heartfelt thanks for their timely assistance in the hour of our severe trial.

Bro. Krull, on the part of Enterprise Grange, presented a lengthy article proposing the establishment of a Beneficiary Department or Auxiliary Branch of the Order, whereby Patrons can insure their lives as in Fraternal Life Benefit Associations established by members of other orders elsewhere. It was reported on favorably by the committee.

Upon discussion the feature allowing those insured to retain membership in the association while not remaining members of and contributors to the support of the Grange, and the fact of not placing the management irrevocably under control of the State Grange, was deprecated by some members who are earnestly and sincerely in favor of adopting provisions for the further protection of the lives of brothers and sisters. It was moved to refer the report back to the committee, with the hope that amendments would be made acceptable to a majority of those present. The motion to refer back was lost and the report finally rejected.

There is a growing feeling in favor of adopting some further life beneficiary provision, and if the friends of this movement will persevere and present some more perfectly devised plan, we believe it will eventually be adopted. The

fact that there is less risk on farmers' lives, than the average, is a strong incentive in this direction. While on this subject it may be a kindness to some to refer them to the "Life Benefit Fund" provisions already in our State Grange constitution, whereby any Grange can provide for the payment to the heirs or representatives, on the death of a member, of any sum adopted by the Grange not exceeding the amount of \$2.50 for each member.

Possibly forming similar plans for operating in Pomona Granges or the State Grange would prove better. We are told that Stockton Grange has acted under like provisions for years and accomplished great good in several instances. We should like to receive correspondence from Patrons on this subject, the better to prepare the minds of all representatives at the next State Grange. Let each Grange bring the subject up for discussion; refer to the provisions already in the constitution, and adopt or reject the same. Plymouth, Temescal and Stockton, we believe, are the only Granges that ever took action on this subject.

## The Pomona Feast.

The contributions of fruits, flowers, etc., to the recent Pomona Feast at State Grange were as follows: John Bidwell, Chico, 2 crates melons, 2 boxes pomegranates, 3 boxes pears, 11 boxes grapes, 5 boxes peaches, 1 can syrup; C. L. Durban, Pentz, Butte county, 1 box grapes; H. G. Leeman, Grass Valley, 2 boxes grapes; Thos. Paine, Grass Valley, 1 box grapes. Yuba City: J. W. Hicks, 3 boxes peaches; G. W. Carpenter, 10 boxes raisins; R. C. Kells, 2 boxes pears, 1 box pomegranates, 11 boxes grapes, 20 boxes raisins, 2 pumpkins, 1 load melons; S. J. Stabler, 1 load melons; G. F. Starr, 3 boxes grapes, 3 boxes raisins; J. P. Onstott, 12 boxes grapes; Abbott & Phillips, 3 boxes peaches, 1 box apples, 1 box grapes, 1 box plums; T. B. Hall, 2 boxes grapes, 1 box apples, 1 box pears, 2 boxes almonds; H. C. Jones, 1 box quinces, 2 boxes pomegranates. From Hock Farm: Graves & Williams, 3 boxes grapes. Yuba City Grange, 5 boxes pears, 2 boxes grapes, 5 boxes peaches, 2 boxes plums. Contributors of flowers, Marysville: Mesdames W. C. Swain, C. H. Crowell, J. Greely, F. H. Freely, N. A. Rideout, N. D. Rideout, E. H. Hudson, F. D. Hudson, C. C. Harrington, M. Marcuse, Lizzie Smith, J. R. Garrett (wagon trimmed), Miss Lizzie Swain, crosses, and many others of the Marysville ladies whose names the committee were unable to ascertain. Yuba City: Mesdames W. P. Harkey, E. G. Van Arsdale (basket), Moody Clark, Charles Weeman, M. E. Sanborn, S. C. Deaner, G. F. Starr, R. C. Kells, T. B. Hull, G. W. Carpenter, J. B. Wilkie, B. F. Frisbie, H. C. Jones, B. E. Walton, George Ohlrey, W. P. Smith, H. M. Williams, and Mrs. Ida Pierson (anchor), Miss Pauline Newkom decorated (pumpkin).

## Temescal Grange Report.

Temescal Grange, No. 35, meets in Oakland on the first Saturday evening and the third Saturday afternoon of each month. One meeting only has been omitted during the past 12 months, and that by prearrangement on account of the National Encampment of the Grand Army of the Republic. Our meetings have been somewhat better attended on the average than during preceding years. We have 41 members, with an usual attendance of some 18. We have admitted nine applicants and lost seven, making a gain of two, with good prospects for further accessions to our ranks in the near future. Three of our members have died. Being located near the State Grange headquarters and the metropolis of the State, we have been repeatedly favored with visits of able and zealous Patrons from our own and other States. We hope that all brothers and sisters present will bear in mind that our Grange is very convenient for visitation by Patrons while sojourning in Oakland or S. F., and that their company is always cordially invited. While our location is one in which we cannot expect a large membership, we have, therefore, endeavored to make the best of our situation by aiming to secure and maintain a good and true membership rather than a large one, and we believe our success has been admirable in this direction.

There was a time when some of our members were fearful of incurring the disfavor of candidates by initiating them into so thin ranks. That time has long since passed, and Temescal seems steadily on the up-grade.

Our Grange was instituted before the organization of the State Grange, by N. W. Garrettson, Deputy of the National Grange, in June, 1873, with 15 charter members present, nine of whom have never been off our list. Among our members we are proud to name a genuine Webster, our gifted Dr. and Jeanne C. Carr, and Bro. J. W. A. Wright, the eloquent author of the "Aims and Purposes of our Glorious Order"—a heaven-inspired document that will live as long as any words of liberty ever written in American history.

To increase the regular attendance, as well as the membership of our Grange, during the past year, it has been our special effort not only to have the Grange always opened promptly, but to have some previous arrangement and announcement for interesting transactions. We have found these to be good features, worth continuing and worthy of recommendation all along the line of Granges.

In a word, we try to act up to the precepts of our Order—that whatever we attempt to do, let us strive to do well; and, although small in

numbers, I am glad to say that we are all earnest and constant in our endeavors not only to make our meetings pleasant and profitable to ourselves, but our work as effective and useful as possible to the Order at large and humanity everywhere.

A. T. DEWEY, W. M.

## California Exhibit at National Grange.

Shortly before his departure for the East, as we learn from the *Sacramento Record-Union*, Worthy Master Johnston appeared before the Executive Committee of the Citrus Fair Association at Sacramento, and stated that he was going to Philadelphia to represent this State in the National Grange. It is customary at the sessions of the National Grange to have exhibits of the products of the soil from every State in the Union. This had become quite an important feature, and as the Grange was largely attended by representative men from every portion of the Union, each State sought to make as good a showing as possible, and in order to assist in that direction, space was allotted for the exhibit of each section. He was very anxious that California's wonderful and varied products should be fairly represented, and, if so, he was sure she would not suffer by way of comparison with any other section of the Union. He recommended the taking back of a large and varied assortment of dried fruits, such as raisins, French prunes, etc. He also desired to have an abundance of them to give away—to allow those who visited the exhibit to partake. He thought there should be samples of oranges, grapes and all green fruits obtainable, as well as all the cereals. Any one who is willing to contribute to this laudable exhibit is requested to leave the same with Strong & Co., in this city. The dried fruits should be put up in small packages, with glass covers, with the card of the exhibitor and the name of the variety underneath the glass, where it can be plainly seen. The railroad company has agreed to carry this exhibit to Chicago free of charge.

The Committee passed a resolution indorsing the suggestion of Senator Johnson regarding his Philadelphia exhibit, promising to render him all the aid possible.

## Subordinate Grange Membership.

In response to blanks sent out by Secretary Chester, the following Granges only had replied at the time of the meeting of the State Grange: Enterprise, North Butte, Valley, Yuba City, Santa Rosa, Sacramento County Pomona, San Jose, St. Helena, Paso Robles, Watsonville, Temescal, Elk Grove, Alhambra, Stockton, Eden, South Sutter, Potter Valley, Magnolia, Roseville, Bennett Valley, Sacramento.

In which the aggregate loss by suspension for non-payment of dues, dimits and deaths is 75 males and 57 females. Total 132.

The aggregate gain is—Males, 69; Females, 83. Total gain, 152.

Granges with 100 members and over—5: Sacramento, Alhambra, Stockton, Enterprise and San Jose.

Granges with 50 members and over, and less than 100—9: Santa Rosa, 89; Valley, 87; Yuba City, 75; Roseville, 70; Elk Grove, 67; South Sutter, 62; Watsonville, 60; North Butte, 57; Potter Valley, 53. No charters surrendered.

The additions, Sacramento County Pomona Grange with 68 members, San Joaquin County Pomona Grange with 64 members, Tulare Grange with 18 members.

## Grange Items.

(Condensed from the *Patron*.)

SAN JOSE GRANGE initiated two candidates in the first and second degrees at the regular meeting Oct. 23.

THE POMONA GRANGE will have a permanent exhibition of the products of Sonoma county in Howell, Bryant & Co.'s new Central Market at Santa Rosa.

VALLEY GRANGE had a social at Odd Fellows' Hall, Pacheco, on the evening of Oct. 15. Over 100 persons attended, and there were readings and recitations, music and dancing.

SONOMA POMONA GRANGE.—Elected and installed Oct. 20, 1886: G. N. Whittaker, M.; M. Litchfield, O.; E. W. Davis, L.; N. Carr, S.; J. P. Whittaker, A. S.; Dan Mills, Sec.; A. J. Mills, T.; John Adams, G. K.; N. Martin, C.; Mrs. G. N. Whittaker, Pomona; Mrs. E. W. Davis, Flora; Mrs. N. Carr, Stewardess; Miss Emma Mills, L. A. S.

RAILROAD FARES AND FREIGHTS.—The conference of passenger agents in this city before adjourning Monday advanced overland rates to Chicago and New York to \$72.50 and \$93.30 for unlimited, and \$44 and \$61 for emigrant tickets. The freight agents took action which will probably result in making rates by all the transcontinental lines on the basis of 50 percent of the old tariff to through Eastern points.

FRUIT-GROWERS' CONVENTION.—Some notices of the coming meeting at Sacramento have given the date Nov. 13th. This is a mistake; the meeting will open Monday, Nov. 15th, at 11 o'clock A. M., in the Assembly Chamber of the State Capitol.

OUR AGRICULTURAL NOTES may be found this week on page 388.

## FRUIT MARKETING.

## Crying Need of Co-operation.

EDITORS PRESS:—Now that the election is over, I hope that we fruit-growers will unite on at least one proposition, which is even of more importance to us than who should be our Governor. For that purpose, allow me to suggest to you to direct the attention of all fruit-growers to the importance of their meeting in Sacramento, on Nov. 15th, to take such action as in their opinion may be necessary regarding the future marketing of their fruits. Let every fruit-grower consider it his or her duty to be present, and not depend upon a few in numbers to attend what, to them, is a matter of the greatest importance in their business.

Some fruit-growers think that they can stay at home and let others provide markets for them, and then they can either sell their fruits or ship them. This would be well enough if such could be done advantageously, but the fact is, if they do not act together they will have to pay higher rates for freight than they can afford, getting nothing for their fruits in return for their labor; or, they can sell them at such prices as will not pay them sufficiently to reimburse them for their own labor and the expenses incidental thereto. Already thousands of tons of grapes are going to waste for want of a market, and those that are marketed are only a source of profit to the railroads, box-makers, draymen and commission-men, and generally a loss to the grower. So it is with much other fruit. The grower who toils hard the year round has to be satisfied if his income meets his expenses.

In your last week's issue you have a statement made by your special correspondent, Mr. Weinstein, showing a statement for 400 half crates of grapes shipped to St. Paul, Minn., showing a loss of \$220. Even this statement is incomplete, as it does not include the expense of loading, bracing and drayage, which will further increase the loss say \$20 more. Now let me give you a statement of two accounts of sales that I received—one by slow freight received partially in bad order of 189 boxes pears and 475 plums:

Account of sales, total.....	\$500 15
Expenses, freight.....	\$266 45
Drayage.....	8 00
Commission.....	50 00—\$355 45
Returns to me.....	\$142 70

The other was sent with special train from Sacramento, fast freight, containing 611 boxes plums and 151 boxes pears, received in "good order."

Account of sales, total.....	\$606 70
Expenses, freight.....	\$403 10
Drayage.....	8 00
Commission.....	60 65—\$471 75
Returns to me.....	\$134 95

In both cases the expense of boxes, paper, packing and loading exceed the returns. Had I allowed the fruit to rot on the trees, I would have saved about \$50 in each case. The railroad in one instance got \$299.45; in the other, \$403.10, and I nothing.

I state here that we have no encouragement from the railroad companies to improve our condition. While they propose slight reductions in two instances, they propose an increase of rates on special trains for a better time schedule.

I suggest that Governor Stanford as president of the S. P. R. R. Co. be invited to our meeting. I believe that the Senator is sincere in his previous promise to us to do what he can to assist us. I am satisfied that the Senator would, upon examination, meet us in a proper spirit, thereby benefiting us, and much more largely benefiting the railroad company. Let the Governor meet us with his officers. I for one am willing to leave our case in his "own" hands for "his" arbitration.

The above statements are not exceptional; hundreds can be shown of the same nature. The question is: "How long can that continue?"

We have now two organizations in this State for the evident purpose of assisting the fruit-grower to market his fruits. Now is the time to meet, and criticize, and devise ways and means to either make those institutions act in harmony and give them our undivided support, or break them up, or find means to make them more efficient and useful, and even extend them and make them useful in the handling of our home fruits. Let every fruit-grower come to that meeting with the sole object of devising ways and means for his or her interest and those of their co-laborers. Let them leave every disposition to be contrary at home, and bury every feeling to rule or ruin, which has unfortunately been too much the case heretofore. We meet unions in every trade and calling, except with the farmers and fruit-growers, and we pay dearly for it. Let the few who have possibly made some money this year not flatter themselves that they can get along without acting together. Their time will soon come. Fighting so many insect pests makes fruit-raising laborious and expensive, and reduces largely the product of our labor, and if to this be added high freight and low prices, it must soon force us to virtually abandon our industry. Much more could be said here which would interest fruit-growers, but I have no disposition to lengthen this article or encroach further upon your space. Come,

every one, to the meeting in Sacramento on November 15th.  
A. BLOCK.  
Santa Clara, Cal.

### The Auction Method.

EDITORS PRESS:—As the Fruit-growers' Convention will soon meet in Sacramento, it becomes all those interested to make suggestions for a new deal in its affairs, so as to give at least some satisfaction to growers and shippers. With this object in view, I will state that I find the large majority in this valley favor the views of Mr. Weinstock of selling by auction, as it is by far the most feasible plan yet suggested. We would, in furtherance of his views, propose having the president and principal manager stationed at Sacramento. Let them be merchants or those thoroughly conversant with mercantile usages, and not growers or shippers, as they are to be persons serving growers and not their own personal interest to the exclusion of others. Besides this general manager, a clerk could be stationed at all the way points to superintend the receiving and loading of only the proper class of fruits. He could in the season announce himself open to offers for a carload to New York, Boston or Chicago, as the case may be, and allow growers to enter their names for as many boxes as they desired, and when the complement is filled to load and dispatch the car. By conferring with the general manager at Sacramento daily by telegraph, he could announce the desires of shippers and have cars forwarded. Let any one subscribing for freight be responsible for the freight whether he furnished it in time or not.

It could easily be so arranged that speculators at shipping points could not monopolize the shipping to the exclusion of small shippers by having equitable rules for the governing of this department.

Let every shipper designate his own receiving merchant at point of destination, with the understanding that all in that car is to be sold as soon as possible after arrival by the one auctioneer.

We want no boards of directors or other associations at these various points, but printed laws governing these clerks and stating their duties, expenses to be incurred, and other items of interest to all concerned.

There could be appointed at these various points a board of orchardists whose only duty would be to arbitrate any misunderstandings or dissensions that might arise between this clerk and shippers, so as to give small shippers equal chances with large ones, and by that means prevent any monopoly of freights.

The present system has proved a failure. We are now thoroughly satisfied that no one or two persons, let their ability be ever so great, can properly ship and dispose of the fruit products of this coast.  
VACA VALLEY.  
Vacaville.

### Stockton Notes.

(Written for the RURAL PRESS by Mrs. W. D. A.)

The rain that swept the State Oct. 22d was very light here, but many believe it all that will fall till winter sets in, and are steadily putting in summerfallow on black and red lands, hard to work when wet. Field fires have lighted the sky for two weeks, now, black and level fields wait the rain and plow. Hay, which is good and cheap, is stored.

With the exception of a few heavy dews, the fall has been excellent for drying raisins and figs. Raisins are so cheap that not many are made for market. Purple figs are mostly raised, cured by dipping in hot lye for home use. White Smyrna grow very large, and young trees of the White Adriatic will soon bear and should be cured for market in this best of all sunny valleys for rich, sweet figs. I must claim for San Joaquin grapes best flavor and yield, though I concede size of berry to lands with water near the surface. Sultanas and Black Moroccos are larger here than I ever saw elsewhere.

The company organized to test the gas known to be around Stockton bored to the depth of 1000 feet on the north bank of Mormon channel, opposite the paper mills, on La Fayette street, and got 400 gallons a minute, with an intense flow of gas that an incredulous individual tested with a match, getting whiskers and hair singed. Haas, of the company, says \$25,000 would not buy it.

It is said a San Franciscan has bought 20 acres in the belt at French camp, and will sink a well 2000 feet and build a hotel for invalids with bath and swimming-houses.

Thomas H. Williams received the Government bid for dredging Stockton channel—\$4900—and is at work.

Another steamer is to be put on the San Francisco route, the fourth on that popular line, giving people the day, both in San Francisco and Stockton, for business, and the night for travel and sleep. Steamers can carry freight cheaper than schooners, too.

Seven blocks of Main street are being paved with basalt. Citizens pay for paving in front of their property, so the slush of this level street will be a tale of the past. The streets have been greatly improved this year, and with four good gravel roads leading out, getting about will be a comfort and pleasure.

Little is talked of but the near election. It is to be hoped that honest and temperate men will be selected from the many candidates.  
Stockton, Oct. 29th.

### State Horticultural Society Meeting.

The regular meeting was held in Irving hall parlor, S. F., on Oct. 29th, President Hilgard in the chair. Mr. Wickson, secretary, read his annual report reviewing the year's work of the society, showing that all meetings of the year had more than a quorum in attendance, and that the proceedings were of general interest and value. The treasurer's report was postponed until the next meeting, as the treasurer, Mr. R. J. Trumbull, is in Southern California. Another reason for deferring the report was to give members a chance to pay up their dues, as the secretary's report showed that many were delinquent and the money is needed to make a good balance on the right side.

Mr. A. Kelle, of Yuba City, was proposed for membership.

A communication from W. H. H. Judson, of New Orleans, was read, offering to procure for members of the society 50 per cent of the money awards given them at the New Orleans Exposition. For his services Mr. Judson asked two and a half per cent commission. On motion of Dr. Gibbons the proposal was accepted, and Mr. Klee was requested to present a statement of the amount due the society at the next meeting.

It was voted to devote the awards received for fruits entered at New Orleans by W. H. Jessup for the society to the building of a monument to Mr. Jessup, who died at New Orleans while representing the society. The secretary was instructed to communicate with Mrs. Jessup concerning the matter and report the result at the next meeting.

Mr. Hatch presented a circular concerning the bill establishing experiment stations now before Congress, and the secretary was instructed to present the gist of the matter for action at the next meeting.

Mr. Wickson read a communication from the managers of the Central California Citrus Fair Exposition requesting donations of fruit; also the presence and co-operation of all horticulturists at the Citrus Fair to be held at Sacramento in December. On motion of Mr. Hatch, it was voted to comply with the request, and to zealously support the Citrus Fair.

The following officers were elected to serve during the ensuing year: President, Professor E. W. Hilgard; Vice-president, A. T. Hatch; Secretary, E. J. Wickson; Treasurer, R. J. Trumbull; Directors, I. A. Wilcox, L. Coates, F. C. De Long, W. C. Blackwood and D. Lubin.

Dr. Gibbons exhibited fine Glout Morceau and Vicar of Winkfield pears grown on his place in Alameda. Mr. Klee exhibited a very handsome cluster of dates grown by John R. Wolfskill, of Winters, Yolo county. The tree is 15 years old and has been in bearing five years. The variety is a chance seedling from the dates of commerce. Mr. Klee made some interesting remarks on the growth of the date, and alluded to his pamphlet on the subject, published by the U. S. Department of Agriculture, copies of which were given to members. He remarked the desirability of getting early ripening varieties of the date for growth in this State.

Professor Hilgard stated that he had addressed the former Commissioner of Agriculture, asking that U. S. Consuls in date-growing countries be instructed to report upon the date, and to secure suckers of the early-maturing varieties for trial in California. He received answer that the request was referred to the Department of State, and that there was no provision requiring consuls to do such work. Professor Hilgard thought that a request from the society to the present Commissioner of Agriculture might accomplish more, and the society by resolution decided to make it.

### Discussion on Fruit-drying.

Mr. R. B. Blowers was called upon to open the discussion on fruit-drying. He stated he had dried from 25,000 to 30,000 boxes of raisins in his drier, and that they had sold in the market as well as the best sun-dried. He said the most economical drying can be done in a large drier with exhaust fans. He had dried 4000 trays of fruit holding 20 lbs. each, with 9 cords of wood. [Mr. Blowers and others then discussed the use of sulphur in fruit-drying, a report of which is given on another page of this issue.] There was also a conversational discussion as to different methods of fruit evaporating, but no definite statements made.

### Insect Pests.

Some discussion was had on insect pests and the laws to abate them. Dr. Gibbons and Judge Blackwood held that the reduction of pests could be left to individual enterprise and self-interest. Messrs. Webb, Hatch, Klee, Kimball and others held otherwise, and the sense of the meeting was shown by the adoption of the following resolution proposed by Mr. Moulton:

WHEREAS, The vast and growing fruit and vine interest demands some forcible means to protect it against careless persons; therefore be it

Resolved, That this society appoint a committee of three to present for the consideration of the State Fruit-growers at Sacramento such remedies or draft of laws as to them seem best.

The following gentlemen were appointed the committee: W. G. Klee, of Berkeley; E. H. Rixford, of San Francisco; and S. F. Leib, of San Jose.

It was voted to invite the inventors, manufacturers and agents of fruit-driers to be present at the next meeting, to exhibit and explain their methods and inventions.

The meeting then adjourned to meet at Sacramento, in connection with the State Fruit-growers' Convention, on Friday, Nov. 19th, at 1 o'clock P. M.

### Fair at Arroyo Grande.

Early in September last a meeting was held at Arroyo Grande with a view to forming an agricultural society. Great interest was engendered, and on the 21st of that month the Arroyo Grande Agricultural Association was organized with the following officers: E. W. Steele, president; E. Leedham, vice-president; W. H. Findley, secretary; A. Phillips, treasurer; J. F. Beckett, J. Gregory, Geo. O. Taylor, W. N. Short, Dr. E. L. Paulding and J. H. Orcutt, directors.

Their constitution declares the object of the society shall be to promote all industrial pursuits of the country, especially the agricultural, horticultural, floricultural, mechanical and dairy interests, also the fine arts and domestic manufactures. One of the by-laws is that "No gambling nor game of chance will be allowed, and no intoxicating liquors will be allowed on exhibition or for sale on the fair ground." Four days later the directors decided to hold a fair and stock show on the 15th and 16th of October. At once, says the *Tribune*, all parties entered into the project with enthusiasm, determined it should be a success. There was no pulling back, no jealousies nor greed, but a general fraternizing and kindly combination to aid in the work. A simple membership fee of \$2.50 procured a fund to cover the extraordinary expenses, much of the labor being volunteered. Posters were sent out through San Luis Obispo and Santa Barbara counties, inviting people to join and compete, and a catalogue and premium list was published in pamphlet form.

All was done on the spur of the moment; the best the farmers had on hand was brought forward, and thus a more truly representative show was given than if preparations had been made a year in advance by extra cultivation of some one thing, or the forcing of the growth, or the training of stock. The articles exhibited were the honest product of the farm, and if of mammoth size, extraordinary weight and superior quality, they were still the natural products of the valley without special stimulation.

The fair was duly opened October 15th, in Arroyo Grande hall, which had been handsomely fitted and decorated for the occasion. The walls were ornamented with many works of art and the handiwork of ladies in quilts, rugs, afghans, etc., and tables covered with exhibits filled the floors.

Edgar W. Steele delivered a fitting and happy inaugural, and several others made brief addresses with frequent applause, after which the auditors became inspectors.

The greater part of the west side of the hall was filled with fruit by different exhibitors. J. F. Beckett's display was one of the most attractive. It included 25 varieties of choice apples, fruit of the melon shrub, figs and Japanese persimmons. Mr. Beckett planted his nursery and orchard about seven years ago, and shows grand results. W. H. Findley had 34 varieties of fruit, embracing apples, pears, figs, quinces, grapes, walnuts, almonds, strawberries, blackberries, etc. Mrs. N. J. Abbott's soft-shelled almonds were equal in size and quality to any imported from the Mediterranean. It was, of course, rather early for citrus fruits of the present season, but E. Leedham made a fair display of oranges.

The output of vegetables, also, was remarkable; but we must be content to name only a few of the most salient features. T. B. Record was conspicuous in the display of enormous squashes, one of which weighed 215 pounds, and a group of five 822½ pounds. These are of excellent quality, either for stock or table use.

Solid, handsome Marblehead cabbages, marked from 50 up to 86 and 90 pounds, were in the varied exhibit of Vice-Pres. Leedham. J. V. N. Young presented a great variety of products, fine in quality and prolific in growth, among which were a musk-melon weighing 20½ pounds, and corn, six varieties, with stalk 15 feet high, ears 13 inches long, 2 inches in diameter and solidly filled. One white onion weighed 3 pounds and 10 ounces.

Mr. E. W. Steele exhibited bald barley planted June 20th, upon which no rain had ever fallen, nor had it been irrigated. The yield was at the rate of about 50 bushels per acre, but with early sowing and a favorable year the same tract is expected to harvest 75 to 90 bushels.

Select specimens of the fruit and vegetables were sent to San Francisco, after the fair was over, and are particularly noticed on page 385.

Cheese shown by D. F. Newsom was from the milk of Angora goats. Last spring 20 of his goats lost their kids, and two of his children, aged 8 and 12 years, milked the goats and made over 600 pounds of cheese, worth \$150.

The stock show included nearly 50 fine draft horses and roadsters, single and matched; E. W. Steele's famous Holsteins; J. M. Price's Durhams; Angora goats, by D. F. Newsom; and a considerable variety of pigs and poultry by several parties.

While reading the local report of this, San Luis Obispo county's first fair, we have found its pervasive enthusiasm somewhat catching and can well believe that it was, as they call it, a grand success.

### Sixth District Fair.

The Seventh Annual Fair of the Sixth District Association came off at Los Angeles, Oct. 11th to 16th. Among the indoor exhibits, which were made in Turn Verein hall, the local press notes a table, 8 by 50 feet, which sustained a fine display of horticultural and agricultural products, mostly from Downey, comprising apples, pears, peaches, quinces, pomegranates, oranges, lemons, grapes, huge mangewurzels, corn, oats, barley, cabbage, squash, watermelons, potatoes, carrots, and boxes of sun-dried Muscat and seedless Sultana raisins of excellent quality. Ranchito furnished several boxes of English walnuts, grown by Messrs. C. A. Coffman and H. L. Montgomery. The largest of several mammoth squashes weighed 218 pounds and girt 7½ feet. Handsome specimens of second-crop Muscat grapes, from Fruitland district, were quite as large as berries of the first crop.

Choice nursery stock was exhibited by Mrs. Grellack and by T. A. Garey; and Mrs. Garey displayed two wagon-loads of plants and flowers.

E. C. Neidt & Co. exhibited insecticides and chemicals used in making the same; potash, soap, etc. A specialty of theirs is the No. 8 whale oil petroleum insecticide wash, which can be used without injury to the trees or fruit, and is readily prepared for spraying. It is soluble in water, and forms a milky substance when the proper proportion is added. The red scale exterminator is another of their preparations.

Cheese was shown from the Alamitos and Los Bolsas factories, and fine rolls of butter from Lynwood dairy.

C. N. Wilson and W. W. Bliss had good exhibits of honey.

C. & L. Garnier exhibited in a glass case a fleece of wool from a French merino ram two years old. The fleece is of 12 months' growth, and weighs 62 pounds. It was very fine.

At the park the show of live-stock was deemed much finer than last year. Indeed, the Durhams, entered by J. W. Waters, Jr., of San Bernardino, the Jerseys, by F. J. Barretto, of Downey, and the Holsteins, by J. W. Bixby & Co., of Alamitos, were said to constitute "the best herds of thoroughbred cattle ever seen upon the ground." Bixby's Holsteins won the sweepstakes for best and second best bulls and cows, and his two-year-old Hereford bull, Parker, received a premium. Other prize-winners were A. Smith's well-known bull, Pharaoh, and C. A. Coffman's Durham yearling and calf, Duke 2d and Duke 3d of Ranchito. Wm. Niles' fine Jerseys and Devons also attracted a good deal of attention. The list of graded cattle was not very large, but those exhibited were of the best, and are credited to Messrs. Niles, Barretto and Coffman.

Andrew Smith, of Redwood City, was there with his Berkshire pigs, and took most of the prizes, though C. A. Coffman was adjudged to have, in his Sallie and Tom, the best breeding sow and second best two-year-old boar.

The sole poultry exhibit, made by Jas. T. Brown, embraced Light Brahmas, Partridge Cochins, Croad Langshans, Plymouth Rocks, Wyandottes, white-faced Black Spanish, White and Brown Leghorns, Black Hamburgs, S. S. Hamburgs, Houdans, red Pyle game Bantams, gold Seabright Bantams and Bronze turkeys.

All the plows, farm wagons and agricultural implements on the grounds were shown by H. Giese.

The races were attended by crowds whose character was commented upon with severity, and both the *Times* and private correspondence complain bitterly that the gambling abomination out-herded anything of former years. We will hope the good examples of Contra Costa and Arroyo Grande and some other associations will yet be followed by every agricultural association.

### Thanksgiving.

#### Proclamation by the President.

By the President of the United States: It has long been the custom of the people of the United States, on a day in each year especially set apart for that purpose by their chief Executive, to acknowledge the goodness and mercy of God and to invoke His continued care and protection. In the observance of such custom, I, Grover Cleveland, President of the United States, do hereby designate and set apart Thursday, the 25th day of November, 1886, to be observed and kept as a day of thanksgiving and prayer. On that day let all our people forego their accustomed employment and assemble in their usual places of worship to give thanks to the Ruler of the universe for our continued enjoyment of the blessings of free government, for the renewal of business prosperity throughout our land, for the return which has rewarded the labor of those who till the soil, and for our progress as a people in all that makes a nation great; and while we contemplate the infinite power of God in earthquake, flood and storm, let the grateful hearts of those who have been shielded from harm through His mercy be turned in sympathy and kindness toward those who have suffered through His visitations. Let us also, in the midst of our thanksgiving, remember the poor and needy with cheerful gifts and alms, so that our service may, by deeds of charity, be made acceptable in the sight of the Lord.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the city of Washington this first day of November, in the year of our Lord one thousand eight hundred and eighty-six and of the independence of the United States of America one hundred and eleventh. (Signed), GROVER CLEVELAND.

By the President,  
T. F. BAYARD, Secretary of State.

## Faith.

[Written for the RURAL PRESS by FANNIE ISABEL SHERRICK.]

Hark! do you hear that silver chiming  
From the bells in the church over there?  
The musical strains to a rapture swelling,  
And the organ's low-toned prayer?

Do you see the dove o'er the altar brooding,  
And the lilies still wet with dew;  
Do you hear the song of the kneeling circle?  
Is it complete without you?

Open the doors with your heart-love thrilling,  
And enter that temple of God!  
Can you stand in that high-domed solemn cathedral  
And say you are born of the sod?

Can you walk in the aisles of the forest chapels  
When the trees in the silence speak,  
And still the cry of your heart out-reaching,  
Denying the God you seek?

Can you gaze on that star that's shining in heaven,  
Sun of those worlds unseen,  
And doubt the power that guides and holds it,  
As it circles in space serene?

The great ocean swells to an emerald madness  
As it beats on its rock-bound shore;  
Do you think that the hand of man could keep it  
From bursting its confines o'er?

Faith! it is born of the seas and forests,  
It lives in each sun-steeped flower;  
The highest star and the lowliest grass-blade  
Are proofs of God's infinite power.

It is blazoned in gold on the shield of the sunset,  
And mirrored on mountain-wall;  
It cries aloud in each wind-swept valley,  
And sighs in the wood-bird's call.

Faith! it is born of your own heart-longings,  
And your soul with its burden of care;  
It lives in the sorrow that lifts you upward  
And the struggle that leads you to prayer.

It glows in the heart of each frail earth-blossom,  
Is humanity less than the sod?  
O hearts! can you turn from this earth and its  
wonders,  
Denying your faith and your God?

## A Story of All-Halloween.

[Written for the RURAL PRESS by M. B. D.]

"Here is a rosebud for you, Ethel, and some pansies, Joanna. Maud and I have crysanthemums; now for the bees."

Four small gilt pins, representing honey bees, were fastened upon a piece of paper, and this was quickly produced. As three of the young girls took one each and with it fastened her flower to the bosom of her dress, Joanna held up a tiny gilt beehive and merrily exclaimed, "My bee is hived with the ho-o-ney," drawing out the sound of "o" in the last word, until it seemed completely changed.

At this moment Mr. White, the Sunday-school superintendent, ascended the steps and raising his hat to the girls pleasantly, remarked: "I am glad to see you early. There is always work for busy bees;" and then passed on into the Sunday-school room.

His presence checked their merriment for a moment, and Nellie said reflectively: "I wonder if it is not wrong to make fun of them. Really, they are not silly a bit. We only make them out so by our nonsense."

"What do you suppose his name is, girls?" continued Joanna heedlessly, her large eyes half closed and her lips smiling archly.

Ethel answered in the same strain, "It is Shepard H-o-."

"There is just where the fun comes in," the other interrupted. "H. stands for honey—Shepard Honey. Maybe he is a herder of bees," and with this witticism she hid the lower part of her face in her handkerchief to smother her laughter, for they were in the vestibule of the church awaiting the sound of the bell that should call them into the schoolroom.

The young gentleman who bore the name which these girls were so merrily discussing was not a stranger in Bret's Camp, as their remarks might imply, yet Joanna had but recently made his acquaintance. He had called several times at her father's house to see her orphan cousin Julia Parker, whom he greatly admired and honored with every attention gallantry might suggest. He was in all respects an eligible suitor, too, being young, fine looking, and possessing enough of fortune's gifts to place the comforts of life within his reach. Besides, he was well read and agreeable in his disposition, yet he had long since ceased to be considered a "catch" by the little society circles of Bret's Camp, owing to his indifference to many things in which they took a deep interest.

But Julia Parker, with her fluffy hair and dimples that seemed always to make her blush

when they deepened upon her soft cheeks, had captivated his heart, so he lost no time in adopting a course of action which he thought would most agreeably disclose his feelings to her. His advances, however, had been met by such constant coyness on her part that he had nearly come to the conclusion that she disliked or even despised his offer. If he had known the cause of her indifference he would not have been so easily discouraged.

The mischievous little secret resulted from the fun-loving spirit of Joanna and her favorite schoolmates, who enjoyed teasing Julia because she was so very sensitive to their attacks. She was several years their senior, yet her nature was so retiring and her tender heart so used to bear in silence its own sorrows, that she never complained or even let them know how deeply their boisterous fun wounded her feelings, but sought to escape it by avoiding its cause.

The serene beauty of an autumn morning in the foothills made the winding roadways inviting, and in consequence the little Sunday-school upon the hill slope in Bret's Camp had an unusually large attendance. Among the many young men who had assembled, Mr. Honey was there, and the rich, clear tones of his voice added greatly to the volume and harmony of the songs which they sung. His deep, earnest eyes watched furtively for a girl's form that seemed to linger. They were strangely blind to the little golden bees so near them, and which were connected with many mysterious glances and whispers among the members of a certain class of young girls.

A light footstep and the soft rustle of drapery attracted their attention, and they saw Miss Parker come slowly up the aisle in her light-brown dress, relieved only by a blue ribbon that matched the color of her shy, lovely eyes. As she joined in singing a hymn she raised them and caught a glimpse of the bees that adorned the dress of her little cousin and the girls near her.

"Have one?" whispered Maud, offering the last of the gilt pins.

"No, thank you," Julia quickly answered, while the color surged up to her very temples, for Ethel responded wickedly, "You know she would rather have honey."

After the exercises Mr. Honey looked for her in vain. She had slipped quietly away, and he was keenly disappointed, for he had anticipated a delightful walk at her side down the winding roadway, now smooth and soft with rain-laid dust, to the fine old farmhouse where she made her home. Instead of this he walked forth alone along a dreamy wood road all flecked with brightly tinted leaves; but he noted not the beauty of nature or the fragrance of the fresh wood scents, for in his heart and brain a stern struggle was taking place. He was making himself believe that lovely Julia Parker, the choice of his heart, was refusing his proffered love in the most delicate manner she could adopt.

In the meantime the four sprightly girls who were the unconscious cause of his unhappiness had forgotten all about Julia and their impish fun at her expense in the development of new schemes interesting to their restless minds.

When Julia reached home she found no one in the sitting-room, so she curled herself comfortably into a commodious and well-cushioned easy-chair, and began to indulge in a gloomy reverie. The fire in the wide, open fire-place burned low, and beneath the flames a bank of red coals glowed above another of pale wood ashes, into which they slowly smoldered. She sat watching the fate of the embers, her chin resting upon the palm of her dainty hand, while she imagined their irregular shapes took the forms of grotesque and uncanny fire goblins which mocked at her sadness. Ere long the clatter of a horse's hoofs broke upon her musings, and raising her eyes to the window she saw Mr. White mounted upon a handsome bay saddle-horse cantering over the road toward his home.

The graceful, undulating motion of the animal and its rider called to mind how often she had seen them passing at that hour. He had done this so many years that she could not remember a time when some one else had filled his place in the church. "Must my life be like his—one long, monotonous path of duty?" she mused. "It would not seem so dreary if I could always wear such a pleasant expression and so bright a smile as he does. I wonder what the secret is?"

The imaginary fire goblins sputtered out a rocket of sparks, and she hastily reached for the tongs as she pushed her chair from the fire-side. But she had scarcely settled them when she heard the ringing laughter of her little cousin, who was coming in with several schoolmates; so she fled to her own room.

Nearly a week later, on the eve of All-hallow day—

When charms more potent wax  
Because of magic in the air,  
And maidens blithely spin their flax,  
Which now a witching spell will wear,

The glow of an autumnal twilight was gathering about the eaves of the stanch old farmhouse. Joanna's chamber was built high into its gabled roof, and was made light and airy by means of three French windows opening upon a small balcony. Three merry girls, and Joanna their hostess, had spent the early part of the evening with the family in the parlor. They had behaved remarkably demurely for young girls of their age. The eldest had scarcely seen 15 years, and living the active, joyous life which the young people led in those foothills, their usual manners were apt to be too lively

for the reposeful taste of their elders. At last their restless feet sped up to the great, gloomy chamber with such alacrity that John and Allen, Joanna's brothers, said to each other, "There must be something in the wind," at the same time emphasizing the remark with a significant nudge.

They were right in this conjecture, for the girls had no sooner closed their door than Ethel said: "You get the mirror out of the bureau, Joanna, and I will light the candles."

As she spoke she bent over several candlesticks fantastically arranged upon a small mantelpiece. The flickering yellow lights broke one by one each out of its own tiny waxen column, bringing into relief their forms against the shadowy walls and corners of the room.

Soon the lights played fitfully over the sparkling eyes and flushed, excited faces of the girls as they proceeded to unfold the mysteries of a charm. Little Nellie turned her dress pocket wrong side out in search of a red-chalk pencil that had been treasured there a week for this occasion, and Maud took from a pocket-book four sheets of white paper and some pencils.

A short pause followed these acts of preparation, in which each one almost held her breath with a sort of superstitious dread at what might be the result of their own audacity.

"Put the mirror down in the middle of the chamber," commanded Ethel, with a little effort as she consulted a watch.

Then, the spell being broken, the others joined in with their parts, which had been carefully rehearsed.

"The clock strikes ten. The hour has come  
When fairy feet may walk the earth,"

Repeated Joanna, placing the old oval mirror upon the floor. Just then the hall clock downstairs began its dinning, startling them all; but after a moment's hesitation Maud continued, resolutely:

"Our candle lights now softly burn,  
While we call in murmured mirth;  
O fairies fair! we pray return,  
And make our charms of magic worth."

She placed the lights at equal distances from each other upon the frame of the mirror, and leaving the slips of paper in the center of the glass quickly withdrew to a corner opposite that in which Ethel was standing.

Nellie, having found her chalk pencil, marked a circle upon the carpet, inclosing herself, her companions and the mirror within triple lines of scarlet, all the while singing in a low voice:

"O fairy forms as light as air!  
Within our circle red and bright,  
We chain you, though unwilling here,  
By flickering beams of candle light."

After this each one took a slip of paper from the glass, and turning her face to the wall, wrote upon it her most secret and ardent wish. Then advancing in concert, the four girls knelt around the mirror, and each one taking a candle fastened her note upon the glass by means of wax that dripped from the lights. Then placing the candles above the paper, they all arose, saying:

"Now, little fairies, tell us true  
If we shall have our heart's desires,  
By keeping plain and bright as new  
Our written words beneath these fires;  
And whether we shall wake or sleep,  
Bright ones, we pray your watches keep."

Nellie broke the red-chalk pencil into four pieces, and as the girls left the mirror they each drew several lines from it to the edges of the circle, still murmuring together the last couplet of the fairy song.

The sighing and creaking of the winds outside suddenly grew audible as they became silent, and the darkness of the night was so deep that the window panes looked like black mirrors reflecting in richly colored figures their own forms and the lighted candles. Each one felt a shiver as the almost naked branches of the trees now and then broke the outlines of these reflections, by bending over the balcony in the stronger gusts of wind and becoming visible in the uncertain light that streamed through the glass. After several minutes they huddled themselves together upon the great square bed like so many frightened kittens, and, twining their arms around each other in mutual fear and sympathy, they whispered comforting little phrases until more confident feelings regained their usual ascendancy.

While they waited, watching the tiny waxen columns grow shorter, the winds rose until the light flickered and sputtered ominously. Semi-transparent streams of wax flowed down upon the paper and rolled out upon the mirror, which in turn threw upon the ceiling strange figures that danced together in intricate mazes. Nellie noticing these at length, began to cry.

"O Ethel!" she sobbed, "why did you invite me to join in this horrid enchantment? I feel just awful. I know it is wicked, and I wish I had not come."

"Say, girls, if you do not mind much I would rather take my paper away," whispered Maud, her eyes glowing brilliantly, though her manner was calm as usual.

"Pshaw! Don't you all be ninnies now, when everything is going on so nicely," Joanna softly cried. "See my candle! the wax has stopped running and not a drop is on the paper yet. Oh, I know my wish will come true." And springing down upon the floor, she began to dance in her glee.

"Joanna! stop, for mercy's sake!" called Ethel in alarm. "If you touch the red lines, all—"

At that instant one of the windows blew open, and a gust of wind puffed out the candles, leav-

ing them in darkness. Joanna flew to the arms of her friends, and the four thoroughly frightened girls sat in almost breathless silence, while their ears were tortured with strange sounds that seemed indeed to come from fairy feet. Dense shadows appeared to shape themselves upon the balcony, which creaked and groaned as the boughs dashed themselves against it, and the heavens beyond were bleak and starless.

How long they shuddered together upon the great square bed they never could tell. It seemed ages to them. The winds tossed leaves in their faces, and increased the rattling for awhile, but at length died away, and they began to gain courage.

"Let us call to some one downstairs," suggested Nellie.

"Oh, not for the world!" replied Joanna, quickly.

"Then the boys, perhaps they have come up," Maud chimed in.

"I'll tell you what," said Ethel, confidently, "let us all take hands and close the window, then we'll light the candles and put everything straight."

Consequently, the four trembling little figures huddled closely together, groped their way to the window and closed it; then to the mantel shelf, where the candle was cautiously lit, and after some deliberation they again advanced to the mirror.

"The red lines have been broken," cried Joanna, with quick perception.

"You did that yourself, dancing about," returned Ethel.

In the meantime, Maud had bent over the old round mirror to re-light the candles. As the quivering beam from one of the flames grew steady, she clasped her hands and stepped backward with a stifled cry of terror. All eyes were instantly turned toward the glass, where they saw that a monster spider had woven a web over the face of it, pinning down their notes; and there he clung himself, in the very center of the gleaming silver, like a brown splash in which lurked some grim spirit of evil. Again all four sprung upon the bed as a haven of refuge, and there they tremblingly confided to each other that they believed they had done wrong to try charms.

"That is not all, either," sobbed Nellie; "we have teased poor Julia, and made her slight Mr. Honey."

"And it was not a bit right to think of such fun in church; for my part, I am just sorry," declared Maud.

"So am I," said Joanna and Ethel in a breath.

"Let us try to do something good to make up for it. If we could only make Julia happy, and—"

"I'll tell you what—we'll give Mr. White a present," Joanna interrupted.

The last idea met with approval, and led to a discussion that put the hideous spider and its dark web out of their minds, until they grew weary and fell asleep just as they were.

Bright sunbeams stole through the half closed shutters and fell upon the magic circle and the glowing mirror, when Ethel, who was the first to awake, opened her eyes. She called the others, and in a minute they were kneeling around the glass in wonder, for the sunlight dissolved the veil of obscurity that had rendered the spider and its giant web so fearful, and showed that they were merrily painted upon the glass. Who could have done it? was the first question that rose to their lips. Like a flash Joanna called out, "Our wishing was all wrong; let us burn the notes," and this was done. Still, try as they would, they could not solve the mystery of the painted spider net.

However, the point was settled beyond a doubt later, when they all sat demurely at the breakfast table.

"Are all the girls afraid of spiders?" Allen asked with a sly twinkle in his eye, and John continued to discuss the subject at some length. The girls were very much embarrassed, and were glad, too, that their elders did not seem to notice them. Their discomfiture was "just nuts" to the boys, as they told each other afterward.

The next Sabbath morning an unusually large congregation assembled in the church. Garlands of flowers were twined about the altar, and large ferns and plumes of cedar filled every niche and corner. Our little heroines were there with fair, eager faces that were the brightest and happiest expressions imaginable. After the exercises, and yet, just before the last hymn was sung, one of the young ladies threw off her cloak, and walking slowly up the aisle revealed to the expectant throng her slender form clad in purest white. She stopped at the foot of the altar and addressed the superintendent.

I cannot tell you what she said in the stately sentences that she had learned by heart, or justly describe the radiant and blooming countenance of Julia Parker. As she spoke the superintendent's look of surprise gave way before one which was equally indescribable; and, at last, when she held out to him an elegant watch as a token of gratitude and esteem, from the young people whom he had taken so kind and constant an interest in, the tears rose to his eyes.

He called the page of the hymn before replying. When the full sweet cadences of praise to God died away upon the air, he said a few simple words that showed how deeply his feelings had been touched.

He was a soldier in the Master's service, who served Him faithfully, braving many discour-

agements and severe hardships. As Sabbath after Sabbath passed away, he was always to be found at his post of duty, whether the jewels of rain clung to his garments, or the dust, beneath the hot suns of summer, covered them like a shower of gold. This little gift was richly merited. Indeed, it was but as a grain of sand to the splendid reward which he deserved, and which he has now secured, for years have passed since that Sabbath morning, and he dwells upon the shining shores beyond the gates of pearl.

When the exercises were ended, a murmur of satisfaction filled the church, and poured from the portals as the assemblage dispersed.

Mr. Honey was not disappointed this day, for he walked proudly by the side of one whose long cloak scarcely concealed the snowy drapery that gleamed out now and then, as she moved.

Joanna invited her little friends to dine with her at her home, and as they lingered over their nuts and candied fruit they discussed the success of their plans for making people happy with perfect satisfaction; and in the large airy parlor Julia Parker was consenting to accept the offer of her manly lover.

"Little one," he said tenderly, "do you really consent to bear the name that has caused you such unhappiness?" And she answered innocently: "I will be proud of it, Shepard; truly, I think it the sweetest name in all the world."

### How Shall we Dress the Baby?

[Written for the RURAL PRESS by JEWELL.]

Twenty years ago, when I was making my first baby's wardrobe, my mind was greatly exercised how best to combine health, comfort, and beauty, and thus do away entirely with the old-time fashion in baby clothes, so objectionable in every way.

The first thing to strive for was warmth and looseness, thus insuring to baby health and comfort. So I knit out of soft, white, Saxony wool, high-necked and long-sleeved shirts, coming to the knee; instead of the tiny linen shirts, so common at that time (with their flaps of linen, back and front, to pin over the petticoat or dress). The flannel band I left unhemmed, so as to be smooth and soft to the skin. The petticoat I made of flannel, sack-shaped, and buttoned on the shoulder—a crude way—and afterward it was superseded by flannel waists, long-sleeved and high-necked, with a row of buttons about the waist to fasten petticoats to. The dress was made long-sleeved and high-necked also, thus doing away with the everlasting sack, that was always in wrinkles behind for baby to lie on, and left unprotected the chest, which should be kept warm.

For socks I knit long-legged stockings with pretty bright shoes to them, thus keeping the legs warm. The dresses were trimmed with lace or embroidery, making the baby look pretty as well as comfortable and happy.

When baby was a few months old I was surprised to meet a lady from an Eastern city, who remarked that I had my "baby clothes in the height of the fashion, for they were dressing babies in long-sleeved and high-necked robes where she came from."

Since then the reform has crept along slowly, the length and breadth of the land, until now it is rare to find a full set of old-style baby clothes. Still I was given some to put on a new-born babe not long ago, which set me to thinking that there were some few mothers to be reached with the new heaven still.

The perfect clothing of the human body consists in having, first, equal distribution of material over the whole body; next, let it be soft, warm and loose; last, make the clothing pleasing to the eye—"A thing of beauty is a joy forever." The old way of dressing a baby had some of these requisites, and were an abomination to the child and nurse too. Count the number of thicknesses over the abdomen. Nine, and the neck and arms bare. No wonder the child was fretful and had colic.

Mothers, let me beg of you to try the new way of clothing your baby. A soft flannel band wide enough to reach from the armpits to the legs—unhemmed; a soft wool knit shirt, long-sleeved and high-necked, reaching to the knees; a flannel waist, also with long sleeves and high-necked, with flat linen buttons about the waist to button petticoats to; a pretty slip-yoked, or sack-shaped, makes a pretty outfit for day, and at night a long flannel night-dress is the best for various reasons. It is warmer and is not cold even if it gets wet. Instead of a shawl or blanket for night wear make a long sack of colored flannel, with a hood of the same to bring up over the head if you wish; thus insuring baby warmth, comfort and an opportunity of having plenty of fresh air in the sleeping chamber, which is as necessary for the child as the mother.

Los Gatos.

AN INSUFFICIENT PATENT.—"The controllable beehive" is advertised in agricultural papers. Any fool can control the beehive. It is the restless beggars that inhabit the same that are uncontrollable.

MRS. SARAH DAVIDSON, of Lower Boulder, Montana, shot a bear and with the bounty received for it she paid for a sewing machine.

CHINA and Japan buy our dried apples freely. Thus does American industry help to swell the population of the Orient.

## YOUNG FOLKS' COLUMN.

### The Young Folks' Club.

[Written for the RURAL PRESS by MRS. J. HILTON.]

Dear children, our club took a paseo lately through the Santa Barbara Fair buildings, and they want me to tell you what they saw, as far as it relates to the pets which interest the club. And right here they want me to say, first, that they hope there will be a place arranged where the coops of birds will be seen to better advantage than they were at the fair just past. The chicks do not show to advantage when the coops are on the ground.

There were White Brahmas, Langshans, Brown Leghorns and Plymouth Rocks in the chicken-coops, and carrier and Tumbler pigeons, guinea pigs and rabbits in some cages. There were the loveliest little "snow birds" (they looked like white canaries), and some smaller birds, called "strawberry birds," from Japan. A large green parrot amused the little ones by his ability to stand on one foot and hold a peanut in his other while he took out the meat to eat. He could talk quite well when he wanted to, but preferred to eat nuts.

On the road to Santa Barbara we saw a large flock of the handsome magpies. Who can tell the right way to split the magpie's tongue so as to make them talk? for they can talk if it is done right. I suppose some parrots and magpies are more intelligent than others, and some have a wilder nature than others. Do you remember my telling about our getting a linnet that we called "Dolly" and then changed to "Dick" because he learned to sing? Well, he has a wilder nature than one which E. H. caught, and which would eat from our fingers or lips and would allow us to handle it without being a bit afraid; but "Dick," with the same care and attention, will get frightened very easily. Poor "Dolly" was hurt by a wild bird and finally died; but "Dick" is as bright and happy as can be. I prefer the song of the linnet to that of the canary—it is full as pretty and varied and is not so shrill. Did any of you ever see a linnet and a canary in the same cage? I think some of getting a female canary for a mate for "Dick." I guess if I do I had better keep them in separate cages until they get used to one another; don't you?

Los Alamos.

### A Little Tease.

[Written for the RURAL PRESS by BECCA M. SAMSON.]

Harry Howard loved to quarrel, he loved to tease, he loved to make trouble, and when he wasn't doing one thing, he was doing the other.

One morning he went into the garden, cut off a long switch from the willow tree, and when he had trimmed and peeled the stick white and smooth as an ivory cane, he carried it in to his mother and said: "Mamma, here's a switch I made for you to whip Georgie with when he's naughty."

Now, Georgie was Harry's baby brother, and he was just the sweetest little fellow in the world.

He wouldn't be naughty. This particular morning he sat on the floor, where his mamma had left him, and played merrily with his blocks and picture-books; he only laughed when Harry made faces at him, and cooed when he pushed the blocks out of the way; he thought it was all for play, but it was really Harry's way of teasing.

Harry, at last, grew tired of waiting for his baby brother to get naughty by himself. He would have to help him. So this unkind little boy, taking care to see his mother wasn't looking, crept up to the good little baby on the floor, and said in a low voice: "See that switch over there on the sewing machine, by mamma? that's to whip you with when you're bad."

Baby didn't cry when he heard this; he only pursed up his mouth and said: "No, no, baby dood."

"No, you're not good, either," answered naughty Harry, "you're as bad as you can be; you're a little rascal, and if you wink your eyes at me like that, you'll be thrashed."

At these terrible words, poor baby opened his mouth and set up a loud cry.

"Hear him howl, mamma," called the delighted Harry; "he wants a thrashing with that switch, that's what he wants."

Now, mamma, who hadn't been so busy over her sewing as Master Harry thought, knew best who deserved a thrashing.

After she had kissed and quieted the frightened baby, she called Harry to her, picked up the nice switch he had so carefully provided for his little brother, and gave the little torment what he had intended for somebody else.

I tell you, somebody in that room was howling, presently. But it wasn't baby George.

Alameda.

GREAT EATERS.—Birds have wonderful appetites, and the insect-eaters must do great execution among the insect enemies of the farmers. This is illustrated by Prof. Wood's estimate that a man would have to consume in every 24 hours 67 feet of a sausage nine inches in circumference in order to eat as much in proportion to his bulk as the red-breast whose daily food is considered as equivalent to an earthworm 14 feet long.

## GOOD HEALTH.

### The Gas Treatment.

There seems to be quite a furor in Los Angeles in regard to the gas treatment for whooping cough and other throat troubles. The Los Angeles Express gives the following observations from a reporter who recently visited the gas works in that city, to learn what was going on there in this direction: "Passing around the building, the reporter was soon standing in front of an iron-grated door, and the sweet music of several infants could be plainly heard. The door was opened and the scribe passed in, where he found 19 children, their ages ranging from six months to five years, who were all accompanied by some grown person. At first the scribe was compelled to place a handkerchief over his mouth, in order to close out the gas which was powerfully strong; but gradually the feeling wore off and the sensation was similar to that of inhaling ether or laughing-gas. The scribe then interviewed several of the mothers present, and learned from them that by spending from 15 minutes to an hour each day the worst case of whooping cough would receive great relief. One lady informed the reporter that her little three-year-old girl coughed so bad that blood would issue from her nose and ears, and that they were about to give up all hope of her recovery, when she was told of the gas cure. She tried it, and in less than a week the little sufferer was cured. Then her baby was taken down; but a few more visits would bring it out all right. One and all declared that their children were greatly benefited by the treatment. It appears to be soothing and works upon the lungs, keeping them clear as well as the throat from filling, thereby avoiding the dreaded croup. The employees of the gas company are very courteous to visitors. They receive over 20 calls a day."

THE GERM THEORY IN DISEASE.—At the late meeting at Buffalo of the American Association for the Advancement of Science, the relations of germs to disease occupied a prominent place, and over half a dozen investigators made the discussions interesting. Dr. D. E. Salmon read two papers bearing on the causes of immunity from a second attack of germ diseases, and gave the following possible explanations: 1. Something is deposited in the body during the attack which is unfavorable to the germ. 2. Something has been withdrawn which is necessary to its development. 3. The tissues have acquired such a tolerance for the germ or for an accompanying poison that they are no longer affected by it. Dr. Salmon favored the last view, and gave details of a large number of experiments to substantiate his opinion. He said that large doses of the germs were more powerful than small ones. He attributed their action to a poison which was a result of their growth, and thought that a large dose had a greater effect because the poisons benumbed or killed the cells, thus giving the bacteria a better chance to grow.

TYPHOID FEVER IN PETALUMA.—There is an unusual amount of sickness in Petaluma at the present time, and business is suffering in consequence. The sickness is of that character which chiefly comes from bad and insufficient drainage, and typhoid fever is almost epidemic. There are not less than 30 cases of it in that town at the present time. The progressive people there are talking about a new and complete system of sewerage, which will conduct the drainage a considerable distance from the town, and also for an ordinance which will do away with cesspools and independent drains.

INJURIES TO THE EYE.—Two German physiologists have calculated the relative liability of injury to the eye, finding that if all parts of the body were equally exposed to injury, wounds of the eye would bear to wounds of other parts the proportion of one in about 600. As a matter of fact, the actual proportion is more than 20 times as great, or about 36 in 1000.

THE BIRD SLAUGHTER.—Iowa women make their opposition to the slaughter of birds practical. They have held a convention at Des Moines and resolved that "hereafter we will abstain from buying any plumage where the life of the bird is sacrificed to obtain the ornament." Humane woman might everywhere adopt the same sentiment and only do a plain duty.

SOAP TO CLEAN CLOTHES WITHOUT RUBBING.—Take two pounds of salsoda, two pounds of yellow bar soap, and 10 quarts water. Cut the soap in thin slices, and boil together two hours; strain, and it will be fit for use. Put the clothes in soak the night before you wash, and to every pail of water in which you boil them, add a pound of soap. They will need no rubbing, but merely rinsing.

IS THIS A FACT?—We have it on the testimony of a reliable man (says a cotemporary) that buttermilk mixed with fine sand, and applied to new woodwork outside, will stand for many years, and gives the most complete imitation of stone it is possible to get, and with it absolute preservation of timber.

## DOMESTIC ECONOMY.

### The Dust Question.

A housekeeper whose rooms were as nearly speckless as modern conveniences admit, a furnace being always a distributor for the entire house, long ago settled to her satisfaction that a damp cloth was the key to the difficulty. Not a wet cloth, for wet is the interpretation that the common mind will put upon damp, but a soft cloth, sprinkled in a slight degree, enough to make dust cling till it can't be taken off. Moldings, baseboards and all corners should be wiped in this way, and whoever tries the experiment will be amazed to see how the necessity for what is known as a general cleaning diminishes.

Sweeping is far less a frequent need than is supposed, and when it must be done, the damp cloth system is of equal avail. Put a spoonful of ammonia in half a pail of warm water and wipe the carpet with a cloth wrung out from this water. The dust is removed, the colors freshened, and any stray moths—a possibility everywhere in these days of furnaces—find a sudden end. Fluff, insidious and unconquerable, forming itself in mysterious rolls under beds and in corners, is reduced to its lowest forms, sinks into almost impalpable unpleasantness before the damp cloth, instead of sailing triumphantly before a broom.

The broom will still be essential, but as servant, not monarch, and where one cannot afford a carpet-sweeper, need never again involve the amount of hard work associated with it.—Ex.

DRIED RUSK AND MILK.—Two cups of milk, two eggs, half a cup of butter, half a yeast cake, dissolve in warm water; one quart of flour, one even teaspoonful of salt; mix the milk, butter, yeast and a pint of flour into sponge and let it rise five or six hours, or until light; beat in the eggs, salt, and the rest of the flour; roll out the dough into a paste more than half an inch thick; cut into round biscuits, set rows of them in a baking pan, rub the top lightly with butter and put another row of these; let them rise for half an hour before baking. Remove from the oven and let them get nearly cold before dividing the upper from the lower stratum, pile lightly in pans, and leave in a cooking oven all night to dry. They should not be browned at all in drying. Hang them in a clean bag in the kitchen closet or other dry, warm place. In two days they will be ready for use. Set a bowl at each place; lay a rusk, cracked in two or three places, in it, a bit of ice on this, and pour enough rich milk to cover the rusk well. In three minutes, if well dried, the desiccated biscuits will be soft and delicious. Pass sugared berries as an accompaniment.

CHOPS AND CAULIFLOWER.—Boil the chops and serve them in a circle on a hot platter round cauliflower prepared thus: Soak the cauliflower, face downward, in cold water for two hours—this takes out whatever insects may have harbored therein. Cut off all the green leaves and boil in salted water from 20 minutes to half an hour—it depends upon the size. Try with a silver fork from time to time to see if it be done. When thoroughly done, pour off the water, and pour over the vegetable a sauce made thus: Bring to boiling point a half-pint of milk, add a piece of fresh butter size of an egg, salt to taste, and the well-beaten yolk of an egg, stirring all the while; then add a teaspoonful of arrowroot smoothed in a little cream. Let it boil up once.

WAFFLES FOR BREAKFAST OR LUNCH.—Pass one pint of warm, soft-boiled rice through a sieve and add to it a small teaspoonful of salt, one tablespoonful of flour sifted with two teaspoonfuls of baking powder. Beat the whites of three eggs to a stiff froth. Beat the yolks of the three eggs as light as possible and mix with three gills of milk; stir the mixture into the rice and flour and add an ounce of melted butter; add the frothed whites; mix all thoroughly together and pour into the waffle-iron, baking a delicate brown. The waffle-iron should be heated, well greased and filled two-thirds full with the mixture.

APPLE JAM.—If apples are decaying faster than you can use them, apple jam may be made, which will keep for several weeks. To every pound of fruit, weighed after it is pared and sliced, allow three-quarters of a pound of sugar, and the juice and grated rind of half a lemon. Put the apples into a jar, and set this into a pan of boiling water. Let the apples stew until quite tender, then put them into a porcelain kettle with the sugar and lemon juice. Stir until soft, and let it simmer for at least half an hour.

MUFFINS.—Cream together one cupful of butter and one cupful of sugar; add three eggs and one pint of milk, stirring well; then add one quart of wheat flour with two teaspoonfuls of baking powder and one cupful of yellow Indian meal. Bake in muffin-rings in hot oven.

NICE CAKE.—One cupful of sugar mixed with two tablespoonfuls of butter; add one cupful of flour, with one teaspoonful of baking-powder, half a cupful of cornstarch, half a cupful of milk, and the whites of three eggs, flavoring with vanilla. Bake in a good oven.

## The Week.

The agony is over but the anxiety remains. As we write on Wednesday there seems as much uncertainty about the result of the election as there was before the votes were cast. The die is cast, however, and mathematicians and statisticians will tell us soon in whose lap it has fallen. Election day was a gem of California autumn—bright, warm and beautiful—such a day that even the least patriotic could stand all day around the polls and serve the country. So far as heard, the great event passed with exceptional quiet and order, even though the issues were so vexed.

Last Thursday saw the formal uncovering of the Bartholdi statue, the ceremonies being as indicated in previous issues of the RURAL. The distinguished French and the distinguished Americans gathered around the statue and poured forth eloquence, and the clouds poured forth a libation upon the statue, upon the orators, upon the people, in the shape of an

October rainstorm. The elements ratified the action of Congress in declaring that no wine should flow at the celebration, and gave the sparkling raindrop to trickle down the necks of the nation's representatives and the nation's guests. The nation dared to do right and the heavens fell.

And now comes Thanksgiving. The President's proclamation may be found in another column. Let all begin early to arrange the visits and reunions which fill the heart with joy, and give new strength and courage for honorable deeds.

## Glad it is Over.

We hear the expression from nearly every one we meet: "I am glad the election is over." And we must say that, while we consider an election of great importance and think every citizen should regard with solemn interest the duty it brings, we join the general refrain. Somehow we have come to regard an election as we do steam whistles, locomotive bells, visits to a dentist, girls ding-donging all day on pianos, or a squalling babe—a disagreeable necessity. They bring a deal of unpleasant noise and pain. Party rancor, the embittered strife of rivals, the ugly features of demagoguery, the spirit of vituperation and dirt-flinging, seem to be inevitable accompaniments of every campaign. We can conceive it possible to hold elections when these ugly features will be refreshingly absent, but hardly this side of the millennium, and that important epoch seems very slow in putting in an appearance.

But then these periodically recurring seasons of strife and debate act as a very good safety-valve to let off a vast accumulation of superfluous zeal and energy. A government founded upon the will of the people, so full of whim, caprice, headlong impulse, insatiable hunger for novelty and change, and easily inflated by partisan zeal, may be liable to be caught some time in a big gust of passion and blown far out to sea. Our heated political discussions, in the newspapers, on the rostrum, on the street, are a very good escapement of party fumes and vapors. It is wonderful what a vast amount of steam we manage to blow off during a hotly-fought campaign. A quiet stranger looking on, hearing the charges and counter-charges hurled by opposing newspapers and candidates, might conclude the government is in a bad way and society about to dissolve into chaos and a midnight of anarchy; but after the battle is over, the smoke cleared away, the dead buried, sore-heads poulticed, and the victors have had their little shout, we all go our several ways, to shop, office or field, quite content that matters are no worse, eager to enjoy our Thanksgiving turkey, and when the bugle sounds we will all be on hand for the next affray.

## Flock Against Herd.

There is trouble brewing in eastern Oregon and Nevada between the flock-owners and the cattlemen as to who has better right upon public ranges. The Sagebrush Stockman, of last week, mentions at least three distinct phases which the conflict assumes. In Oregon, an organization of cattlemen in the Malheur region have notified the sheepmen to take their woolly stock off the public range, and the sheep-owners claim as much right to occupy this wild land as the cattlemen and decline to recognize the authority of the cattlemen; hence a bitterness of feeling between them has arisen that may culminate in more than angry talk. In Inyo county, California, there is also an issue between the flocks and herds.

In Nevada complaint is made by the cattlemen that the sheepmen wander all over the State, feeding whenever they can find a little grass, no matter on whose range it is, and when the feed is exhausted move on in search of fresher pastures. It is charged that this annual invasion wastes feed, as the owners of the migrating flocks herd them wherever they find the best feed, and move through the country like locusts, leaving devastation in their wake.

The points at issue, so far as Nevada is concerned, are to be reviewed this week by a joint committee composed of members appointed by the Nevada Wool-growers' Association and the Nevada Live-stock Association. It is to be hoped that this method of conference, and, if need be, arbitration, will prevail in the settlement of the question. No one in the world

knows the equities in the matter so well as the cattle and sheepmen themselves, and if they go into the courts they will find it costs a heap of money, engenders ill-feeling, and does less justice than can be had by conference and arbitration.

## South America a Formidable Competitor.

Hon. J. R. Dodge, Statistician of the Department of Agriculture, looks upon the temperate zone region as our great future competitor in the supply of several most important productions. He describes tendencies in the present state of affairs in that vast territory which promise to speedily advance its development and productiveness, and predicts that the world's markets will soon show the importance of this little-thought-of factor. He shows that until quite recently the great country was much as was the territory of the United States at the time of the revolution, practically unoccupied, except by a scattered aboriginal population of no industrial account. But a new era is dawning, and in his special report for October, 1886, Mr. Dodge sketches its features and what may be expected of it as follows:

Immigrants are of late pouring into the temperate zone, especially into the Argentine Republic, from Italy, Spain and other countries of Southern Europe, literally by millions, bringing money, agricultural implements (the more enterprising ordering them from the manufacturers of the United States), knowledge of modern agricultural methods, and a good degree of enterprise and ambition. The rapid extension of railroads opens up new lands, on which agricultural colonies are located, and wheat, flax and other products are already largely grown and seeking export.

From this immigration, railroads connecting the fat pampas with salt-water navigation, and the enticing cheapness of these productive lands, a competition with our meat and wheat and wool may come more serious than any heretofore suffered. India is populous and unenterprising, with old and worn soils, sending only 5 to 15 per cent of her wheat, and liable in any year to need it all to save her people from famine. The Argentine Republic has a virgin soil, few people to feed, and can soon send 50 to 75 per cent of wheat produced to foreign countries. India plows with a stick and thrashes with the hoof of oxen; the Argentine Republic and Chili are moving for the best steel plows and the finest American reapers and thrashers. Our competition in wheat is to be serious with South America, when apprehensions of Indian competition yield to pity for her famine-stricken people.

Mr. Dodge shows that the region mentioned, and especially the Argentine Republic and Chili, are being fostered by British capitalists who hold most of the public obligations of those countries. They are furnishing them their steamship lines, building their railroads, and apparently regarding the new direction as the most promising one in which their capital can be invested.

The present condition of trade between the United States and all South American countries is shown to be thus:

U. S. imports from South American countries .....	\$65,289,956
U. S. exports to South American countries .....	27,735,857

Our imports of coffee alone from Brazil reach a yearly value of \$30,346,792, or more than our exports to the whole South American continent. The countries which Mr. Dodge fears most in competition with our temperate zone productions—wheat, meat and wool—do not yet reach great totals in their aggregate trade; but the rate of increase is very rapid, and therein he finds the ground for apprehension. The course of affairs in the region named is worth watching, and those who are trusted with the duty of protecting the industries of the country should see to it that we are not pressed too hard by competition at home, however we may have to fight for favor in the open markets of the world.

## State Election.

The vote for Governor has been so close and returns are so incomplete at the hour we go to press, that it is quite uncertain whether Swift or Bartlett has carried the State, though the Republican seems a little ahead. The Republicans appear to have elected four out of six members of Congress. The city of San Francisco has gone decidedly Democratic, and that party will have a small majority in the Legislature on joint ballot, it appears.

The farmers yet hope that their movement has secured the election of Foote and Filcher for R. R. Commissioners.

## Port Charges.

We notice that the Contra Costa Gazette is righteously indignant because Mr. Wise, of the Harbor Commission, to secure the return to San Francisco of the wheat-loading business, makes this proposition in a letter to the Chamber of Commerce and Produce Exchange of this city:

If you gentlemen are really sincere in your desire to concentrate all freight here, recommend to the Legislature to put all of the bay and its tributaries within the reach of deep-water vessels, under the Board of State Harbor Commissioners, and let tolls and dockage be established at all places alike. But you may say that the people of the interior will object; but I say "no." The cereals do not go to Port Costa and other places to find a market, but as a rule are bought in the country on San Francisco prices, and if anything is saved in the way of discriminating freights in favor of Port Costa and other places, the producer gets the benefit of it. But he would be benefited if the State were to make all vessels at Port Costa, Oakland and other places pay toll and dockage as they do here, because this would increase the revenues to such an extent that we could largely reduce the port charges and continue all the work on the water front. If this were done, and if the railroad would give San Francisco the same rate of freight that it gives Port Costa, the producer would derive a still larger benefit, and the merchants who are now using Port Costa, if they are interested in the prosperity of this city, ought to strongly recommend the reduction to the railroad, and assist in passing the law which I have indicated.

We do not wonder that such propositions excite the ire of our cotemporary. We like San Francisco well enough and have our business interests here; but we don't like it well enough to favor measures which aim to subjugate the whole deep-water frontage of the bay to the local interests of the metropolis. We rather enjoy the building up of shipping points just as near the fields as possible. If it could be done we would like to run deep-water ships to Marysville on the north and Tulare on the south, and load the ships directly from the wheat fields. As this is not within the possibilities at present, we like to have the ships load as near the fields as possible, and if enterprising business men find a way to get the wheat aboard ship without extravagant port charges, it is all the better for the wheat-grower. Mr. Wise's proposition comes too late. Such a thing might have prevailed when the wheat trade was wholly in the hands of the grain ring and warehouse ring and the other rings of a decade ago, but now we have country warehouses and plenty of money to borrow upon their receipts; also a lot of places to load wheat where it is convenient and quiet and near by the fields, and it is idle talk to propose to get the Legislature to take away from the wheat-growers the advantages they have gained by years of effort. Go to, Mr. Wise; your idea belies your name.

## The Oleomargarine Law.

We thought that the oleomargarine-makers and sellers would find they had a very different class of people to deal with when the U. S. revenue detectives got upon their track than when they had merely to dodge the constables acting under laws which read well on the statute-books, but rarely get beyond the covers. These revenue detectives have had so much experience with illicit whisky and unstamped tobacco and the like, that they pounce upon oleomargarine like skillful and hungry cats upon fat gophers. The new law only went into effect on Monday of this week, and yet it was telegraphed from St. Louis on Tuesday that on that day many seizures of bogus butter were made by the internal revenue officers. The latter began their work early in the day, and went from house to house testing butter and confiscating all but the genuine article. Before the day had closed seizures were made at 12 different places.

It is announced from Washington that the reports received by Commissioner Miller show that all classes of manufacturers and dealers, including the retail men, propose to meet the tax and continue in business. The Internal Revenue Bureau had made all arrangements deemed necessary for the enforcement of the law. The demand for stamps has been very great and a large amount of the commodity is probably being put on the market the present week. The production of oleomargarine for domestic consumption is estimated by Commissioner Miller at the rate of 100,000,000 pounds a year, and the amount exported is also believed to be very large.

We have not heard that the revenue officers in this city have struck the trail yet.

SOME Tulare county items will appear next week.

# Sulphur Bleaching Dried Fruit and Nuts.

At the last meeting of the State Horticultural Society a discussion arose on the use of sulphur in fruit-drying and almond bleaching, during which points were brought forward which will be of interest to many of our readers. The subject was introduced in remarks by R. B. Blowers, of Woodland. After commenting upon the superior appearance of fruit dried in artificial driers or evaporators, in that speedy curing prevented oxidation, as shown by the dark color of the fruit when sun-dried, Mr. Blowers asserted that the oxidation is also prevented by the use of the sulphur bath, and if this is skillfully handled there need be no formation of sulphuric acid in the fruit; but, carelessly used, sulphur can do great harm to the fruit.

Prof. Hilgard said that sulphur is often too extravagantly used, and is applied so that it comes in contact with the fruit at the wrong time. Raisins had been sent him which were nearly white, and the fruity taste of which had been almost entirely destroyed by the sulphuric acid formed. The fruity odor is also destroyed. The fruit may thus become not only undesirable, but positively injurious. In Germany, according to the latest reports, they are now using a harmless substitute, which consists in dipping the fruit in a mild saline solution. For example, apples, which are apt to get very dark by oxidation, are dipped in water containing one-fourth of one per cent of common salt; that is, to 100 pounds of water there would be four ounces of salt used. Thus treated, the apples do not dry so dark. They do not, of course, have the pale, unwholesome color of sulphur-bleached fruit, but are of a rich color, which would seem to be far more desirable than the whited-sepulcher tint of sulphur bleaching as too commonly conducted.

Mr. Blowers said that dipping in pure water would have the same effect to a certain extent. He favored, however, the *wise* use of sulphur. He melts the sulphur at a low temperature, dips strips of cloth in it and lets it cool. To bring it to bear upon the fruit, the latter is put in a close chamber as soon after cutting as possible, and strips of this sulphured cloth are lighted. They burn slowly, and there is not sufficient carbonaceous material in the cloth to raise the temperature high enough to volatilize the sulphur. Throwing the sulphur upon a pan of coals and subjecting the fruit to these fumes, results in charging it with sulphur deposit and sulphuric acid. Such fruit is unwholesome.

Col. Webb remarked the present disposition of the Eastern market toward sulphured fruit. Over-sulphured fruit has become unsalable, especially in the New York market. California fruit is therefore discriminated against, while the fruit from the evaporators in Delaware, Maryland and New Jersey is popular because they know how to use sulphur properly.

Dr. Gibbons, of Alameda, said it should be evident that sulphur ought to be skillfully handled; it should be regarded as a scientific operation.

Prof. Hilgard impressed the need of having a care not only as to the amount but also of the time of the application. This should be made before the fruit is put in the drier, or just after it is put in, and not after the evaporation has proceeded. Dried fruit will absorb and retain an excessive amount. It is decidedly wrong to sulphur, as it is sometimes done, driving the fumes ostensibly upon a tray of fruit which has just been put in, while in fact the fumes are carried by the draft beyond the fresh fruit, which only absorbs a little over to the partially-dried fruit which absorbs too much—in some cases all the sulphur volatilized being taken up by the fruit over which it passes, so that one can detect no sulphur at the escape-pipes of the evaporator. It is decidedly wrong to sulphur continuously; it is wrong to keep a drier charged with sulphurous gas through the whole drying process. The use of sulphur in fruit-drying is only one of many cases in which legitimate processes are misapplied and dangerous results produced.

Judge Blackwood stated that he dried chiefly fruits in which a dark color was desirable, as prunes, and with some varieties it is necessary to use materials to make them dark enough. On the French prunes he uses a little logwood: the Bulgarian prune dries dark enough. He

dries his fruit down pretty dry and then he dips in boiling water, places in a pile, covers with a cloth, and 24 hours afterward packs them in boxes. He had used pure boiling water, but hereafter he would put in a little salt. He mentioned the case of a neighbor who had sulphured his fruit so that by the following spring it had absolutely no desirable flavor.

Dr. Kimball showed a very fine Bulgarian prune of his drying.

The use of sulphur in almond bleaching was introduced by James Shinn, who mentioned the case of a neighbor of his who had sulphured his nuts and generally did well, but year before last he over-sulphured them and they had no taste. He gave him the nuts to plant, but the germ had been killed; they would not grow. He had applied the sulphur when the nuts were but partially dried after gathering.

Mr. Hatch said there were tons of almonds spoiled every year by sulphuring before they are well dried. The nuts must be thoroughly dried, then sprinkled and sulphured.

Prof. Hilgard gave the *rationale* of this process, which is approved by practice, as follows: If sulphur fumes are applied to green or partially dried nuts the sulphur is absorbed

been told that in California and other countries where no rain falls for a long period, and comparatively little in the rainy season, they would live the year round in no hives except the protection afforded by such combs as they could build, and by their own clustering shedding the rain with their wings turned like shingles."

## The Young Men's Christian Association.

The State Convention of the Young Men's Christian Association assembled Oct. 21st in the First Presbyterian church, Los Angeles. The convention was opened by a short jubilee service under the leadership of George W. Marston, president of the San Diego Association, followed by a collation and speeches of welcome.

The kingdom of heaven does not come with beat of drums, bonfires, rockets and display of banners. It comes without observation, an immanent, informing force, working in the heart of society as silently as the leaven hidden in the meal. We have a good example in the history of this organization. A very slight acquaintance with the mode of its operation and the results of its achievements shows it to be

CALIFORNIA BEES LIVING AND PROSPERING WITHOUT A HIVE.

and transmitted even through the shell into the kernel; the sulphur acts continuously and forms sulphuric acid. If the nut is dried thoroughly, and then sprinkled and then sulphured, the sulphur is taken up merely by the film of water on the shell and its action is speedily accomplished and affects only the surface.

Dr. Gibbons and Mr. Moulton briefly mentioned the effect of sulphur upon germs of insect and fungoid life as incidental to its other action as described above. The points brought out in the discussion are important and should be considered by all who are using sulphur in their productive enterprises.

## The Bees' Testimony.

Bee-keepers bear frequent testimony to the perfect adaptation of California climate to their industry by their reports of large honey yields, multiplication of stocks and by their freedom from the dangers of "wintering," which are a constant and important factor in the success of Eastern apiarians. The bees themselves not infrequently bear testimony to our "glorious climate," and one way in which they do it is shown in the engraving on this page. It represents a hiveless swarm operating with full vigor without shelter, and was made by *Gleanings in Bee Culture* from a photograph sent to the publisher by H. H. Hillier, of Pasadena, Los Angeles county. Bees will make such dwelling places and will occupy them safely for several months, even in wintry climes, not being injured by frequent rainstorms; but the editor of *Gleanings* says: "We have also

one of the most conspicuous developments of the Christian religion in this century, and one well worthy of the study of the social philosopher. Herbert Spencer has written an elaborate treatise on Sociology without mentioning it. But this is not strange. Science is more busy catching new bugs, impaling new beetles, hunting ferns and studying the solar refrangibility of cucumbers, than in the study of the marvelous psychic phenomena of the age. The statistics of this association reveal some wonderful results, and yet we know that statistics give very little insight into latent moral forces. The census of Rome at the time of Nero would have cast no light upon the fact that there was existing in the bosom of that great city a hidden germ of spiritual power destined to break the chains of polytheism and turn the pantheon into a museum of dead gods. And yet the reports of this association show that it has halls, libraries, reading-rooms and social parlors in nearly every considerable town and city in the world; that every day its altar-fires of devotion burn brightly in the densest centers of business and trade.

This association in some respects may be considered as a sketch and outline of the church of the future—caring nothing for creeds, unconcerned about the squabbles of polemic theology, but holding fast to the basic truths of all religions, the central idea that gives all these churches all the vitality they possess. It has one well-defined purpose—the rescue of men, especially young men, from idleness, intemperance, the seductive vices of city life, and has worked toward that end with a harmony, singleness of aim, faith, hope and patience that

has no parallel. It counts among its active workers many of the keenest and most successful business men of the land—men who live in the world, come daily in contact with every phase of civilization; men who have had to struggle to gain a footing in society and know what temptation means. They give freely of their substance and have the satisfaction of knowing that it goes where it was intended. Perhaps there is no organization so extensive where there is so little money lost in the lubrication of the machinery. These workers find thousands of young men in the great cities without the blessings of a home, and tender them friendship, a reading-room, a pleasant place to spend the evening in social enjoyment, food when hungry, work when idle, a bed when shelterless, and support and sympathy when tempted. They are plainly doing a work that the church cannot do, a work that no other agency is doing; and the power and benefit of such an organization in this city and elsewhere should be recognized and liberally sustained by all who seek the welfare of society and the salvation of men.

## Grown in San Luis Obispo County.

Some very handsome specimens of fruit and vegetables from the western part of the above-named county have been sent to Secretary Street, of the Immigration Bureau, and are now in view at No. 10 California street, in this city. They were among the exhibits, we understand, at the recent fair of the Arroyo Grande Agricultural Association, and were forwarded by the secretary of that society. The biggest thing in the collection is a cabbage-head 5 feet 3 inches in girth and weighing 48 pounds. One White Lisbon onion, marked 3 pounds 10 ounces, measured over 22 inches about, and has beside it Danvers onions, both Globe and flat, some of which can fall but little behind it. Red and white potatoes of unusual size, Southern Queen and other sweet potatoes, lie adjacent.

Several great green and russet pears range from 1 lb. 13 ozs. to 1 lb. 15 ozs. each. Five Vicar of Winkfield, 4 lbs. 8 ozs.; 5 orange quinces, 6 lbs. 15 ozs.; 5 R. I. Greenings, 4 lbs. 6 ozs.; 5 Fall pippins, 5 lbs. 10 ozs.; 5 Y. Bell-flower, 4 lbs. 4 ozs., indicate the size of the fruit. There are also fine quintets of Easter Beurre and other pears, Newtown and Skinner pippins, Twenty Ounce White Winter pearmain, Smokehouse, Golden and Roxbury Russet, Hyslop Crab, Kentucky Red, Reinette, Winesap and Jonathan apples.

These pears and apples are peculiarly showy, having been thickly coated with varnish, which not only makes them look bright, but will, it is hoped, protect them alike from early decay and the ravages of insects and inconsiderate bipeds.

AN IMMENSE BUSINESS.—Armour & Co., the Chicago meat-packing firm, the employees of which furnished the chief portion of the men who inaugurated the recent great strike in Chicago, is probably the largest packing house in the world. The following statistical items of their business for the year ending March 31, 1886, will be of interest: Their sales for the year amounted to \$43,000,000; they killed during the year 1,133,479 hogs, 330,652 cattle and 635,262 sheep, and produced 55,142,952 pounds of lard, 85,918,460 pounds of salted meats, 51,508,386 pounds pickled meats, 4,062,459 pounds spiced meats, 8,219,630 pounds green hams and shoulders, 54,008,729 pounds smoked meats, 33,696,460 pounds canned meats, and 22,461,522 pounds fertilizers. Armour & Co.'s buildings cover 30 acres of ground, and furnish a floor area of 88 acres. Their chill-room and storage area is stated at 20 acres, and their storage capacity at 90,000 tons. During the summer season they employ 4000 men, and during the winter season 5000. Their annual payroll exceeds \$4,000,000.

STRIKES AND MACHINERY.—Newly invented machines have been substituted for several processes in tanning leather as a consequence of the recent strikes and lockouts in Massachusetts, and the occupation of the "beamster" and "green shaver" is practically gone. There is no greater incentive to the inventor of labor-saving machinery than the present labor-striking mania.

THE wheat crop in Russia this year is reported by the N. Y. *World's* correspondent an utter failure.

## Orchard Industry in Tulare County.

[Written for the RURAL PRESS by W. A.]

EDITORS PRESS:—Knowing that you take a lively interest in all matters pertaining to the agricultural development of the State, I send you a short account of the opening of a new industry, or new to this county—the canning of fruit—and I may safely assert the success of which will revolutionize in a great measure the present mode of farming the fine lands of this county. It can be said, without fear of successful contradiction, that no county in the State possesses a larger body of sedimentary soil, or sandy loam, which is acknowledged by all to be the best fruit and vine land known, where naturally moist enough, or where irrigation can be practiced. Yet there are thousands of acres of this quality of land now devoted to wheat culture, yielding a light and very doubtful revenue, owing to low prices and uncertain supply of winter rains. If the canning industry proves successful, these acres, incumbered as they now are with old machinery and an occasional mortgage, will soon be transformed from wheat fields to orchards and vineyards, for as a rule the water which will mature a wheat crop will suffice for the orchard and vineyard where the land is properly cultivated. But in a larger portion of the fruit belt, artesian water can be had by sinking, and in large districts after the trees and vines have attained the age of three years no irrigation is required when the annual rainfall exceeds seven inches, good cultivation being all that is needed to secure a good crop and promote a healthy growth of tree and vine. Alfalfa, the great forage plant and one of the chief factors of the wealth of this county, fails of being profitable under like conditions. It must have plenty of water at intervals through the summer, unless its roots can reach the moisture, and in large areas of excellent fruit soil this cannot be accomplished. Hence, the cultivation of fruit on the wheat lands will commence as soon as a profitable home market shall have been insured, and on the result of the working of the cannery much will depend. A few years ago the lands of Paige & Morton were a

## Dreary Sheep Walk.

Later grain and alfalfa fields, but now fast being transformed into the finest orchard and vineyard in the San Joaquin valley. The lands commence about three miles west of Tulare, and embrace about 3000 acres of choice sedimentary loam, all under ditch and all within the artesian belt. The lands lie between two creeks—a belt of fine old oaks extends along the sides, giving the place the appearance of a park rather than of a "farm on the plains." There are several hundred acres in alfalfa, some 400 head of horned cattle, and still larger grain fields. The latter will soon give place to orchard trees and vines, but the alfalfa being "in the timber" will retain a longer place. It is well worth while to visit the place and mark, by contrast with the surrounding country, the improvements which a few years' time, a judicious outlay of money and the indomitable will and energy of Jas. A. Morton have accomplished.

A drive due west from the city, of about three miles, brings one to the lands which comprise the "home farm." The "Home House" stands and the orchards begin a half-mile from the eastern line. The drive, or private road, continues due west past the house, through the farm, bordered on each side by two rows of fruit trees of various kinds. From the house to the county road, on the north, an avenue has been laid out, bordered with umbrella trees. Here is a small orchard of apricots, one of peaches, and the vines all raisin grapes, the oldest now three years old and bearing heavily. Here are 250 acres of grapes, and on the ranch are 450 acres of stone fruits, but the larger part is on "the other ranch," or "White House," further westward. Although called the "other ranch," the land is all connected—all one body, and could be inclosed by one continuous fence.

## Artesian Wells

Have produced plentifully on every portion of the tract yet prospected, the average depth to flowing water being about 360 feet. This winter probably 600 acres will be put to grapes and fruit, the home nursery furnishing the stock; and thus will the work go on, until the ranch—excepting the timber belt—will be planted in fruit trees and vines. In driving in from Tulare, the view is, at this season of the year, exceedingly fine when contrasted with the surrounding stubble-fields. Wide stretches of orchard and vineyard, clothed in foliage of densest green, at once attract the eye and charm by their novelty. The fields are scrupulously free of weeds, for the orchard and vineyard brook "no lover near the throne." The trees and vines are set with mathematical precision—in rows whichever way one views them. A whitewashed barn and granary and a small, cozy dwelling, standing under a lone old oak, are the first to attract attention from a distance. Then the two small orchards appear, then the vineyard, then a belt of timber, and, further on, the White House orchards and nursery, and the cannery by the artesian well, claim attention. Hitch up your team, pass by a dozen long, lank, lean greyhounds curled up under the

shade of the old oak, who lazily look at you from half-closed eyes, as if wondering why anything having legs should take the trouble to move around in this delicious fall weather. Perhaps one may make a half-blind attempt to knock a troublesome fly from its nose, but he can go no further. He has run the festive jack-rabbit until "worn and weary, half distraught," he has come home to rest, nothing more. If at home, Mr. Morton, the resident partner of Paige & Morton, will greet you cheerily, and, if possible, show you over the place; if not—and his time is so closely occupied that he rarely has leisure to do so—he will send a man along who can show what has been accomplished. Mr. Morton is built on a generous plan, large, massive, and with will and mind well suited to his solid figure. Under his push and daring, for he was often berated for his "want of business sagacity" by those who would risk nothing to improve their lands, the sheep walks have become the finest and most valuable farm in Tulare county. Yes, it required time and patience to win this acknowledgment from grudging competitors, and though Job and Mr. Morton's tempers cannot be compared together, the firm have won the distinction of having the most valuable farm in the county, and will have the credit of really being the founders of the fruit industry of Tulare county, because they have been proving by a liberal expenditure of money that it can be made the most profitable investment, and the most surely remunerative for the small or large land-owner. Before the advent of

## The Cannery.

Which I will now consider, beyond the local, there was little or no market for green surplus fruit. Dried fruit might not pay, but for choice canned fruit there was always a ready market. With the orchard in bearing, naturally came the fruit-drier and the cannery. This season, despite the objection of those "I-told-you-so's," Mr. Morton decided to erect a small cannery as an experiment. It was built at the White House, and is in charge of R. Wheeler, of the Wheeler Process Canning Co. In vain did Mr. Morton urge on the many with whom he talked regarding the subject the necessity for providing a market for surplus fruit, for finding employment for the youth of both sexes, and many other cogent reasons. He was generally met with: "Oh, pshaw, it won't pay." "You can't get boys and girls to work at it;" "Better sell to the Chinese;" "You'll just throw away your money," and a thousand other objections equally weighty, why he should not strive to improve the county, and while bettering the value of the Paige & Morton property, better the condition of those around him. Like most such enterprises, it was established by the firm with hardly the moral encouragement of the community, so slow is the average man to get out of the old-traveled roundabout road his fathers trod, and try the newer, shorter-cut, though comparatively untraveled trail to prosperity. It is immaterial to your readers, the size of the building, but the cannery was erected large enough, it was supposed, for present wants, and possibly large enough for future demands. With this understanding of the case, let's look at the

## Cannery Work.

And see what has been accomplished under the supervision of Mr. Wheeler. I have his word for it that his force of boys engaged in picking have given him less trouble than the best organized gang of Chinese pickers he has ever employed. They have left the trees in better shape, have broken and injured less wood-growth, have given him better selected fruit, and on the whole have proved far more intelligent, docile, practicable and valuable than any orchard help he had previously employed, for that help had invariably been Chinese. Now, here is Mr. Wheeler's refutation to the charge that "our boys won't work." He says they work cheerfully and intelligently, with an eye to future preferment and the interest of their employers when rightly dealt with. The cannery now employs from 40 to 50 boys and girls, and has had no trouble in finding a supply of help equal to the demand, though this is the first season of cannery work. They all belong in the immediate neighborhood, many boarding at home, while those who live farther away are provided for at the company's boarding-house. Mrs. Wheeler, wife of the superintendent, has charge of the dormitory, where the company provide the "bunks," and the girls furnish their own bedding. The house in which Mr. Wheeler and family reside is large, clean and comfortable, the upper story being used for the girls' sleeping-rooms. The "boarding-house" is a large, elegant tent, which will be taken down when "the season" has passed. An artesian well throws a stream of pure water into a reservoir near by.

Now let's go into the cannery proper and in detail examine the work and learn as much as possible from a brief survey of the mysteries of fruit-canning. Seated around the cool, airy room, at convenient tables, are a bevy of bright-eyed, happy-looking girls, ranging in age from eight years up to—well, let's stop at years, for among these busy workers I notice two "schoolmarm's" whose nimble fingers are now earning as much money weekly as the busy brain can command for the more laborious work of schoolteaching. The cannery has an "earth floor" which keeps it cool, and the furniture, seats, tables and benches are of the most primitive kind. It is a place of labor, for labor—not of or for show. Everything works with the precision of a clock. Mrs. Wheeler,

the able assistant of the superintendent, supervises her white working force admirably. Here let me remark that

## No Chinamen Need Apply

At the cannery. It is the embodiment of white labor. Our sons and daughters are not brought in competition with the Mongol. All work is paid for by the piece, and if a Chinese contractor would offer to do the work at half rates he could not have the chance. Messrs. Paige & Morton have established, by and with the advice of the Wheeler Canning Co., a schedule of rates for labor which is liberal, but it is for white labor only. Not a Chinaman can be found at cannery work, and as long as white labor can be obtained, none will be permitted.

The working rates will appear partially in detail, and your readers can judge of the advantages offered the young of both sexes by the establishment of this or other canneries when conducted in a liberal spirit, and with a view to a permanent investment of capital. To commence, the nimble-footed boy's sole ambition has heretofore been to do something vigorous, for he has a superabundance of animal life, is turned loose in the orchard after having been instructed in the art of picking fruit; and, by the way, here is where the value of white labor commences. Let me explain: The boys have a natural relish for fruit, especially if they have to "crib it." There are not many of us who have not in our younger days gone miles out of our way to crib roasting ears, fruit and melons, when perhaps we had plenty at home; but there was no fun in taking what we could have for the asking, or what was ours by right of inheritance. The boy of to-day is about what his father was 40 or 50 years ago—probably a little improved if his surroundings have been ordinarily good. Placed as a picker in the orchard, he feels the responsibility of his new position and has a new incentive to do well—pride in retaining his place and the confidence reposed in him. There is no fun in stealing this fruit; he can get all he wants by reaching out his hand, hence he doesn't want it. But he does want to see it reach the cannery in good shape, for on that depends his position, his pay and the success of the enterprise, which shall give him employment next season. On the contrary, the Chinaman has no such feelings. His hours of labor, if by the day, are filled by him without care of his employer's interests; if by the piece, the broken limbs of the fruit trees and the careless, slovenly manner of handling the fruit attest his utter indifference to the welfare of any other but himself. I have been particular in noting these points, for but few have written encouragingly of our boys' efforts to establish a reputation as reliable workers. True, they have had few opportunities—none whatever in this neighborhood—to prove their metal before the opening of this work; but wherever tried under reasonable rules and regulations the white boys have won and held their way against their foes—the Chinese. But then the opportunities are so few in which to test their merits.

Well, the boys pick the fruit, which is hauled to the cannery and weighed, the picker receiving credit for each box and a check for each dozen, as the price is so much per dozen boxes. It comes in in good shape, for the picker has been taught how to select and knows he will be better paid for good work. In the cannery the fruit is assorted into first and second class and pie fruit. A blemish on a peach mars its value for first-class or glass jar fruit, while not hurting it for tin cans. But that which is too small for tin cans or too soft for first-class glass or tin work is put in large tin cans and labeled "pie fruit."

From the weigher the fruit goes to the "peelers," who with their machines take off the rind and pass it to the pitters and cutters. When the peeler has prepared a certain number of boxes he draws from Mrs. Wheeler a check which entitles him or her—for girls and boys alike work at all branches of the trade—to a certain sum. This is repeated through the day and when labor closes for the day each one knows the amount earned by self. Following the work of preparing a peach for canning, the halver and pitter, after completing their work, draw their checks and the fruit is passed along to those who place it in the cans. If in glass, the girls who do most of this work fill the jars carefully with selected fruit, a piece too small, soft or with a blemish being rejected. The labor is light, but in this as in all the departments skill and judgment are required in selecting, and again the bright-eyed youths are of far more value than their Chinese competitors, and the work leaves their hands first-class in every particular. When a dozen jars or cans are ready, a boy removes them to another table where the work is further advanced. Thus it goes, a dozen cans or jars go from the peelers, pitters and cutters, through the packers, those who put on the rubber bands preparatory to covering, through the hands of those who fill the jars with syrup, to the one who "heads" them or puts on the covers, to the solderer if in tin, then to the range where they are cooked, then back to the solderer if tin, if of glass to the one who replaces the clamp which renders the jar air-tight, then through the hands of the labeler, until at last the prepared fruit rests in the warehouse ready for shipment. I cannot go into details of this work for two reasons, I have not the knowledge and I think you have not the space to spare. But each portion of the work is paid for by the dozen, as the fruit when marketed is sold in the same manner, and when the work of preparing a

hundred dozen cans has been accomplished the exact cost of fruit and labor has been ascertained. Perhaps your readers may ask,

## What do the Employees Earn?

Well, they earn according to their strength, energy, skill and the hours they labor. As nearly all the work is by the piece, the quick-fingered lad or lass earns more than their slower competitors, and those who work steadily earn more than those who play part of the time allotted to work. A little girl of eight years earned 60 cents one day in labeling, but she had an extra appetite for work that day. One young lady earned \$3 in filling glass jars one day, but she must have been angry with her beau and worked off her ill humor at the cannery. Those, of course, are exceptional cases. The young child can earn from 20 to 40 cents per day in labeling; the young lady from \$1 to \$2 in filling jars or cans. The pickers, peelers, pitters and those who follow other branches can earn a like amount. I think a fair average of the earnings of the members of the whole force would be \$1 per day each; of the larger class of boys and girls, \$1.50 per day when the time is fully occupied. With increased knowledge and skill, for it must be remembered that all the employees are in their first season, the boys and girls of 15 years and upward can earn from \$1.50 to \$2 per day of 10 hours, and have a light, agreeable employment, free from Mongol competition. Another season the cannery will be enlarged to thrice its present capacity if the season bids favorable for fruit. It has a regular capacity of 100 dozen cans per day—has run as high as 130 dozen when pushed. It is calculated that 150 boys and girls will be employed next season, all things being favorable. The fruit handled this year has been pears, peaches, apricots, plums, nectarines and grapes. The canning of tomatoes for the Eastern trade will soon commence, and a large trade is expected in this line.

## Now as to Results.

We have but to learn whether there is money in the business for the operators and projectors of the enterprise. I cannot answer that question, but should judge there was profit in the work. Tulare furnishes the finest fruit of the State. The great drawback of transporting the green fruit to the bay with the attendant loss is avoided, and only the marketable, prepared fruit is sent. It must be a better article put up here, for the fruit is fresh, gathered at the proper time for preparing, avoiding the bruising and decay belonging to long transportation and rough handling. With equal facilities for canning, possessed by the San Francisco canneries, a better article of prepared fruit can be produced here, where the fruit is taken fresh from the trees or vines as wanted.

Premising that there is a profit in canning fruit in the city canneries, there must be at least an equal show for a profit on capital invested in a cannery in the immediate center of the fruit region of this valley. If so, the future of the enterprise is an assured fact, and Messrs. Paige & Morton may be considered public benefactors in having inaugurated an enterprise which thus far bids fair to maintain a new industry. Its worth to our boys and girls is incalculable, inasmuch as it opens to them a new field of industry. Its value to the county can hardly be estimated. Already are the cannery agents purchasing all the choice fruit to be had in the immediate neighborhood, and those who saw no profit in shipping small quantities of fruit below now see a profitable and permanent employment in fruit-growing, where for years they have barely made a living in growing grain for a far-away market. Orchards will rapidly replace the grain fields, for the market for choice canned fruits can never be overstocked. The demand now is and will continue in excess of the supply, for the choicest fruit is that canned where grown, and it requires capital to build and conduct a cannery. Paige & Morton should be credited with having created and conducted the first successful cannery trade in this part of the State, and with having demonstrated that capital rightly employed is a blessing to the community in which it centers. But above all should they be commended for providing employment for the youth of the community in which their property is located. One word about

## The Wheeler Canning Process.

And I leave the question of "providing employment for our youth," as far as canning is concerned, for other topics regarding the progress of this county. That question has been solved by Paige & Morton in favor of the youth, as evidenced by those now in cannery employ. The system known as the Wheeler system or process was evolved from the active brain of R. Wheeler, for many years a newspaper writer of San Francisco. Becoming interested in the fruit question, he turned his attention to canning, and from the old evolved a new system which bids fair to supersede all other processes of canning. By his method, goods in glass are subject to no more loss than is met with in putting goods in tin by the old method. His fruit, whether in tin or glass, is cooked by superheated steam, while in the old way it was boiled in vats or large receptacles. It is well known that fruit in glass brings better prices, yet the breakage and wastage in putting fruit in glass by the old method amounted practically to prohibition, often exceeding 30 per cent of original stock. By his method canneries can run glass jars as low as two and a half or three per cent loss, which is a heavy item in favor of the new method. His loss with green hands in

this cannery this season, from "swells" and other causes in tins, has been nominal, and less than two and a half per cent from breakage and swells in glass; and, with employees thoroughly conversant with the work, the loss would be nominal as now in tin work. Mr. Wheeler is enthusiastic in his praise of Tulare county fruit, and never tires of expressing his preference for white help in the cannery. He is an enthusiast on both subjects, and probably one of the best-informed men regarding the fruit interests of the coast now engaged in the work. Success to the enterprise, its projectors and founders, and due credit should be given to the one who devised or invented the Wheeler canning process, for it bids fair to become a familiar member of the commercial family of every fruit-growing county of the coast.

Tulare, Cal.

**LAND IN S. L. O. COUNTY.**—The West Coast Land Co., of which C. H. Phillips is manager, has published a descriptive catalogue of the lands included in the Rancho Paso de Robles, with a very neat map of its subdivisions, as surveyed in August last. Of the adjoining Santa Ysabel, Eureka and Huer-Huero ranches, also, brief accounts are given. These lands, embracing 100 square miles of virgin soil, lying all together, in the heart of San Luis Obispo county, are for sale by the above-named company, which was incorporated last spring. The tract is well wooded with white and live oak, has an abundance of living water, and is traversed throughout its length by the S. P. R. R. A concise statement of the agricultural and climatic excellences of the county is prefixed, and the whole is presented to moneyed, home-seeking immigrants in a comely little pamphlet of 23 pages. We are informed that 12 lots were sold the first day, in the new town of Crocker, where railroad construction ceases for the winter, and that building was begun on 10 of them immediately; also, that sales on the Paso Robles ranch, the first ten days, amounted to over \$60,000. The boom has reached there, assuredly.

**JAPANESE NURSERY STOCK.**—H. H. Berger & Co., of 317 Washington St., S. F., make a specialty of importing choice nursery stock from Japan. Their fall catalogue for 1886 includes a great variety of ornamental trees and plants—including climbers, palms, ferns, lilies and orchids—as well as an assortment of seeds of Japanese forest trees, shrubs, etc. They claim a thorough acquaintance with the botany of that country, and gardeners of note there, and select their stock from nurseries in Tokio and Musashi, paying Japan a personal visit every year for that very purpose.

#### Consumption Cured.

An old physician, retired from practice, having placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

#### Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

#### Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Montana.  
Geo. McDOWELL—Fresno and Tulare Cos.  
O. F. BERGMAN—Tehama and Colusa Cos.  
J. H. SMITH—Plumas and Sierra Cos.  
J. C. SWEENEY—Sonoma and Mendocino Cos.

#### A New Wonder

Is not often recorded, but those who write to Hallett & Co., Portland, Maine, will learn of a genuine one. You can earn from \$5 to \$25 and upwards a day. You can do the work and live at home, wherever you are located. Full particulars will be sent you free. Some have earned over \$50 in a day. Capital not needed. You are started in business free. Both sexes. All ages. Immense profits sure for those who start at once. Your first act should be to write for particulars.

**NAPA VALLEY NURSERIES.**—We have received a copy of the new catalogue of these nurseries, which, as we recently stated, are now the sole property of Mr. Leonard Coates, who established them. Mr. Coates shows a good assortment of novelties and standard varieties.

#### Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

#### Farmers and Travelers

Sojourning in Marysville will find the Western Hotel the best in the city, being clean, quiet, comfortable and reasonable in prices. Geo. Wappel, proprietor.

## H. C. SHAW PLOW WORKS.

20 000 IN USE!

### Reversible Moldboard.

SEND FOR PRICES AND CIRCULARS.

201 & 203 El Dorado St., STOCKTON, CAL.

## THE JAY EYE SEE STEEL SULKY

Steel Wheels, Steel Beam, Steel Frames.

Weight only 400 pounds. Can't be Strained or Broken in any land. Easily managed and Light Draft. Try one and be convinced. Made with 14 or 16 inch bottoms and sold same as Iron Sulkys.

## THE J. I. C. GANG

Made with 2 12-inch or 2 14-inch Steel Bottoms.

Is constructed, like the Sulky, entirely of Steel. Weight only 550 pounds.

THE LIGHTEST DRAFT AND STRONGEST SULKY PLOW IN THE MARKET.

## THE "J. I.

CASE"

Steel Beam,

CENTER DRAFT

PLOW.

It is absolutely Center Draft. It draws lighter, owing to its Center Draft. It cannot be clogged, as there is no standard. It is perfectly balanced, and can be operated by a boy. The Beam is warranted against breaking or bending.

SAVE TIME, LABOR AND EXPENSE BY USING THE

"FARMERS' FRIEND," 3, 4, and 5-PLOW GANG.

For Orchards,

Vineyards,

Large & Small

Ranches.

PRICES.—3 GANG (WITH STEEL).....\$40 00  
4 GANG (OR CHILLED).....50 00  
5 GANG (SHARES).....60 00

ARTHUR W. BULL, Sole Agent for J. I. C. Plows,  
123 CALIFORNIA ST., SAN FRANCISCO, CAL.

WRITE FOR DISCOUNT AND TERMS.

UNCLE Sam has found it at last! A sure remedy for Torpid Liver, Sick Headache, Habitual Constipation, Chills and Fever, and all affections of the Kidneys and Liver. This is a New Compound, and one trial will convince you that it is the Cheapest and Best Remedy in the Market for Diseases of Kidneys, Liver and Stomach. If you want a pure vegetable compound, that is positively guaranteed to contain no mercury, go to your Druggist, and get a Bottle of the Arkansas Liver and Kidney Remedy. Price, \$1.00 per Bottle.

For Sale by all Druggists.

## Jeans' Sack Holder & Filler.

SIMPLE, DURABLE AND EFFICIENT.

HAS BEEN USED WITH GREAT SUCCESS THIS SEASON.

TOOK THE FIRST PREMIUM AT State and District Fairs.

State and County Rights for Sale.

Address, W. F. JEANS, Woodland, Cal.

## MASON & HAMLIN

### ORGANS.

Highest Honors at all Great World's Exhibitions for nineteen years. 100 styles, \$22 to \$900. For Cash, Easy Payments, or Rented. Catalogue, 46 pp., 4to, free.

### PIANOS.

The Improved Method of Stringing, introduced and perfected by MASON & HAMLIN, is conceded by competent judges to constitute a radical advance in Piano-forte construction.

Do not require one-quarter as much tuning as Pianos generally. Descriptive Catalogue by mail.

## ORGAN & PIANO CO

154 Tremont St., Boston. 149 Wabash Ave., Chicago, 46 E. 14th St. (Union Sq.), N. Y.

## HENDERSON'S PATENT TRUSS.

Comfortable and Reliable.

This simple truss can be worn without inconvenience, and gives all the comfort to the wearer that can be obtained from a perfect-fitting, pliable apparatus. The pad is soft and yielding, and on account of its peculiar construction and the connections of its securing bands, cannot get out of place. It will remain in place no matter what position the wearer may assume. The engraving shows the construction of the appliance. It is simplicity itself, and is comfortable and reliable. Address,

JESSE G. HENDERSON, Grizzly Flat, El Dorado Co., Cal.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

**MAMMOTH POTATO.**—S. F. Call, Oct. 30: There was an exhibition yesterday, at the Merchants' Exchange, a large potato, grown in Alameda county. It is of peculiar form and weighs five and ten-sixteenth pounds. The ship captains stare at it in amazement as they talk of the possibilities of our glorious climate.

**FRUIT SENT EAST.**—Haywards Journal: Pear shipments have about ceased. There have been about 35 carloads of fruit shipped East from San Lorenzo during the fruit season, and, at \$300 per car, the freight amounts to \$10,500.

**MEXICAN ORANGES.**—A dispatch from Nuevo Leon states that the orange crop is exceedingly large, notwithstanding the disastrous weather of last winter, which destroyed many of the trees.

## Butte.

**VINES BOUND TO LIVE.**—Fourteen years ago a gentleman living near Oroville leased a piece of land to some Chinamen to be worked for mining purposes. The land was then covered with a fine lot of grapevines in full bearing. In 1882 the land came again into the owner's possession. It was filled with old shafts and mining debris and a large share of the vines were covered up or destroyed. During the past four years the abandoned vineyard has been used as a cattle pasture. Last winter, however, it was fenced, and this fall Mr. Yetter has picked and sold 15,000 lbs. of grapes from the vines and made 39 barrels of wine. The vines were not irrigated nor cultivated during the whole time. Truly a grapevine is a hard thing to kill.

## Calaveras.

**APPLES.**—Citizen, Oct. 30: Some of the finest mountain apples we have seen of late were grown upon the orchard of Wm. Mullinex, near Avery's, this summer. They were of average size, as sound as a rock, of excellent flavor and splendid edible qualities. He has sold the entire fruit of the orchard to a party at Vallecito. The apple worm is unknown at that altitude, and the fruit grown in that vicinity promises to command a high price in the market of the future.

## El Dorado.

**LAND AND CLIMATE.**—Latrobe Cor. Record-Union: This is mostly a grazing country, but is also adapted to wheat, barley, oats, and fruit and vegetables. The land is a red loam; rocky in places, poor, thin, steep and stony. The land in the western part of the county has all passed out of Government hands, except some that is broken. To the east, Government land becomes plenty. Forty miles east of this place it is most all Government land, and timber good and plenty. Grizzly Flat is situated where the snow falls to a considerable depth. They farm successfully there. Three miles east of that town there is very little of the land sold, and it is open to homestead settlement. The timber grows so tall and thick there that very little grass grows. I have lived in this county 34 years, and there is no better place for the home-seeker than El Dorado county. He can get any kind of land he wants. Italians have started a settlement southeast of Latrobe, paying from \$9.50 to \$15 per acre. There is good land in the neighborhood for \$10 per acre. It seldom snows at this place, and in a great portion of this county oranges can be successfully grown.

## Fresno.

**MONEY IN MUSCATS.**—Expositor, Oct. 15: Henry Davihill purchased of Mr. Foster, near this city, a half acre of Muscat grapes on the vines. He now has 268 trays of raisins nearly dry that will average nine pounds to the tray. He has refused six cents per pound for them, which would, at that rate indicate a gross receipt of \$289.44 per acre, and shows that notwithstanding the large expense connected with raisin-growing there still must remain a good margin in the business. Col. Forsyth has purchased from Mr. Grout the raisin grapes off 1024 seven-year-old vines. Some two tons were rejected as indifferent fruit, but the amount paid for weighed 38,372 pounds. The usual number of vines to the acre is 680, and the prices paid have not been less than \$15 per ton on the vines, and average about \$20. Now get out your pencil and figure out whether Fresno lands are worth \$100 per acre or not.

## Humboldt.

**WOOL AND COYOTES.**—Standard, Oct. 23: H. C. Hanson and Robert Porter own the Fort Baker Ranch, where they have just finished shearing 20,000 sheep. Seventy shearers were employed in the operation. Mr. Hanson says there is an abundance of dry feed this year and sheep are in prime condition. The fall clip is clean and of good length, and if anything above the average in weight. There is the usual complaint among sheep-owners of the depredation of the coyotes. Mr. Hanson says their losses from these pests during the past year number not less than 2500 head. Other sheepmen have suffered in like proportion. This is a serious question, and it looks as if many will have to abandon the growing of wool unless some check is put upon the depredations of these semi-wolves. There seems to be but one remedy, and that is, to offer a bounty for killing the coyotes. A reasonable allowance would probably induce persons who have the leisure to engage

in the business of killing these animals for the reward offered. We believe the county should pay for the extermination of the coyotes.

**A BIG VINE.**—Mr. Hanson says there is a grapevine growing on the Fort Baker Ranch, of the Mission variety, which is as large as the thigh of a man's leg, from which he has gathered 400 lbs of grapes. Fruits of all varieties do well there.

## Inyo.

**ENCOURAGING THE SETTLERS.**—Independent: Last spring W. L. Hunter inclosed and cleared sagebrush land at Georges creek. He has a good crop of corn from the land; many an acre of it would to-day yield three tons of first-class hay, but it won't be cut, as he already has more than enough in stack to feed his 60 head of cattle and a lot of horses. Potatoes are now piled up in great heaps upon the ground; pumpkins and squash the same; beans gave a heavy yield. Black walnut trees were brought from Illinois and planted; they have made fine growth. White ash, black locust and other trees are all doing well. A young orchard of apple, pear, peach and other fruit trees was set out and all have grown well, and two years hence Mr. Hunter will have fruit. His land is no better than thousands of acres now lying idle in Owens valley.

## Napa.

**KILLING OFF "VARMINTS."**—Register, Oct. 29: Chas. Wassum and John Taylor, of Berryessa, have within the last six months captured, by trapping and shooting, 21 coyotes and 56 wildcats. These animals have been doing destructive work among the sheep and hogs of that section, and the farmers, some time ago, insured their extinction by jointly agreeing to pay liberally for their scalps. For coyote scalps they pay \$30, and Messrs. Wassum & Taylor have put considerable money in their purse by taking the warpath against these pestiferous creatures. In the mountains bordering Berryessa, Mr. Chas. Cabler has also won some fame by "downing" four large California lions. It is only during late years and because flocks and herds have increased up that way that these wild beasts have given any trouble.

## Nevada.

**GOLD AND GRAPES.**—Grass Valley Tidings: The other day Ross Cooley drove up in front of W. K. Spencer's store and told Mr. Spencer that there was a box in the wagon for him. The box was filled, at one end, with big bunches of purple grapes, luscious and plump; the other end was occupied by big chunks of quartz rock which showed free gold and rich sulphurets. The vines that bore the grapes grew on the croppings of the ledge that gave out the gold-bearing quartz. In Grass Valley district such grapes and quartz are very common; it is a habit the district has in the bearing line—fruits above and gold below; and cabages once grew on the top of Allison Ranch ground, from which gold, in millions, has been taken. This is a pretty good country, and the climate is finer than that of Italy.

## Sacramento.

**UNEXCELLED RAISINS.**—Record-Union, Oct. 23: Some of the finest raisins ever produced in the State, and equal to the best from foreign lands, were brought to the city this week from the vineyard of Mrs. G. G. Briggs, near Sausalito Station. They were from the first crop of Muscatel grapes, and cured by W. T. Greenwood, who thoroughly understands raisin-making and packing. They were very large, fully retained the bloom of the fruit, and were most delicate in texture and flavor. Such a quality of raisins maintained will soon make home productions first to be sought for, and, with a proper protective tariff, our raisin-makers will reap rich reward.

## San Mateo.

**GRAPES AND RAISINS.**—The Times and Gazette, after acknowledging the receipt and praising the quality of a large box of muscatel raisins, this year's crop, from the vineyard and drying-house of Mr. S. L. Jones, goes on to say: Mr. Jones has done a great deal to demonstrate the fact that at least one portion of San Mateo county is well fitted to the culture of both table and raisin grapes. He has spent thousands of dollars in developing a property that was naturally unproductive, in that it was heavily timbered or closely thicketed, requiring such extensive tree felling and grubbing that the cost of the vineyard has been made far greater than the average cost of profitable vineyards in this State. It has been fortunate that Mr. Jones has had at once the wealth and the persistent energy to battle with natural obstacles until he has made his investment yield a handsome income. And although it is not claimed that the vineyard, orchard and farm pay a satisfactory return upon their cost, yet it has been proven by their products and net returns that men of small incomes who may live by other means while their vineyards are growing, and who are not afraid to work, can make small vineyards and orchards pay in the foothills of Portola valley.

## Santa Cruz.

**FRUIT-DRIER BURNED.**—Watsonville Transcript: Last Thursday, just after supper, the fruit-drying building of J. A. McCune, Green valley, was discovered in flames. Owing to the extreme dryness of the building (there having been a fire in the furnace for about 15 hours a day during the past three months) it was totally destroyed in a very few minutes. The building and contents, including about \$900 worth of green and dried fruit, was a total loss. The

dried fruit was ready to ship, the most of it being already packed. The total loss is about \$1800, the building and drier being insured for \$600. The fire was quite a set-back to Mr. McCune, almost his entire year's work besides a large amount of fruit purchased being a total loss.

**PAJARO APPLES.**—Pajaronian: L. G. Sresovich, one of the pioneer fruit-growers and buyers of this coast, and who annually buys the greater part of the apple crop of this valley, is seriously thinking of removing his driers to this valley. At present they are located in San Jose. Mr. Sresovich was one of the first buyers of Pajaro apples. Through his commission house he sent Pajaro apples to Australia, China, Japan and other foreign lands, and there built up for our fruit a most enviable reputation. His interests here are already large, and if he makes this change it will be in the line of the development of his business.

**THE HEROIC METHOD.**—Courier-Item, Oct. 21: C. C. Martin, of Glenwood, has been giving his extensive apple orchard heroic treatment this season in hope of ridding it of the codlin moth. He has stripped every tree of all its fruit, leaving not an apple of the whole crop, hoping by sacrificing this year's crop to eradicate from his premises the pest that is proving so destructive to the apple orchards of this county.

## Santa Barbara.

**BEANS, CORN AND SPUDS.**—Santa Maria Times: The Oso Flaco bean yield this year will surpass any previous one in yield; the potato crop will be better than the average; corn is very good everywhere. Some very fine stalks measured over 12 ft. high in the Nipomo Flat, at Mr. Holt's. Jose Dominguez has a corn-stalk around which a beanstalk has climbed to the height of 8 ft., and myriad pods are hanging from the branches.

**A NOVEL HIVE.**—While Mr. Shuman, who resides west of town, was gathering his pumpkins, he loaded one on the wagon from which he noticed bees issuing. It was a veritable beehive. The bees had gained access through a crack in one side of the vegetable and taken up permanent quarters. Mr. Shuman took out eight pounds of fine honey. Is there any other land under the sun where the farmer can raise his own pumpkins and honey on the same vine?

## Santa Clara.

**RAISINS.**—Santa Clara Cor. San Jose Times, Oct. 30: A number of fruit-growers in this section, who have during the grape season been experimenting on raisins, state that the results have been very satisfactory, and as to quality and flavor the product is unsurpassed. A few of them will complete the packing of their raisin crops next week. One grower has been experimenting in curing grapes with the aid of a drier, and thus far the raisins turned out have proved a success.

## San Diego.

**PEANUTS PROMISING.**—San Jacinto Register, Oct. 14: A gentleman who has cultivated peanuts in the Southern States, and visited the best peanut sections of the Sacramento valley, was a few days ago shown specimens of peanuts raised in this valley, and unhesitatingly pronounced them superior to those raised in the Sacramento valley. He formerly lived in Tennessee, and grew peanuts there, and is well qualified to speak with precision on this matter. (Of course, we only claim this superiority for the San Jacinto valley, and do not care to divide the honor with all Southern California.) The gentleman alluded to says our peanuts are equal to the North Carolina nuts, being close-grained, with large, smooth pods, well filled with fine meat. There is, doubtless, in the raising of this nut in our valley, a fine field for remunerative labor.

## Shasta.

**HORTICULTURAL ITEMS.**—Redding Free Press, Oct. 16: R. S. McMurry, four miles south of Redding, has an orchard of peach trees two years and a half from the bud, which average 18 feet high and of like size other ways. They bore a heavy crop this year. They have never been irrigated. We challenge the State to beat this. If any one doubts the virtue of red land for the production of fruit and grapes, he only needs to examine the orchard and vineyard of Joe Frietas, four miles southeast of Redding, to satisfy himself that there is no better land for that purpose. He can also satisfy himself in regard to grain, vegetables, etc. Mr. Frietas has had to dig 110 feet for water. The young orange trees in and around the town are full of fruit, and when the citrus fair begins at Sacramento, Southern California will find the semi-tropical north ready to compare notes. Mrs. S. E. B. Myers has raised this year single bunches of Muscat grapes weighing seven and a half pounds. Mr. L. Snyder, another rancher near town, can show bunches weighing from five and a half to seven pounds each. Some of the finest soft-shell almonds in the county may be seen at Mr. Kern's place on Pine street.

**PROMISING ORCHARD.**—Free Press: W. P. Sebring, living eight miles east of Redding on section 19, township 32 north, range 3 west, put out from the 11th to the 16th of February last a young orchard consisting of the following varieties of fruits: Apple, pear, cherry, prune, plum, peach, apricot, nectarine, orange, olive, almond, pecan, English walnut and fig. The ground for this orchard was thoroughly plowed and pulverized several times before planting, and has since been constantly cultivated by plowing and pulverizing. The trees have made

a most remarkable growth of from two and a half to six feet. Prior to the rain, growing moisture could be found anywhere in this orchard six inches below the surface. The land is the red, gravelly brush land so common in this vicinity, and this orchard on the "worthless" hills is the wonder of all the dwellers on the alluvial lands along Cow creek.

## Siskiyou.

**A NORTHERN RANCH.**—A correspondent of the People's Cause says the great cattle and stock ranch of Alex. Parker is situated about nine miles from Callahan's, along the range of Scott's mountains, and contains about 1500 acres of good meadow and grazing lands, with surrounding ranges of at least five miles extent. The scenery is quite enchanting, high mountains in the background and near at hand gurgling mountain streams are heard continually. The taller peaks are already covered with snow, which looks beautiful through the pines. There are generally between 2000 and 3000 head of cattle on this ranch, and their hay crop is immense. I notice that all the out-buildings on the premises are decorated with huge deer horns. I saw not less than 500. Mr. Parker informs me that for the 20 years he has lived here they averaged killing two deer per week until recently. There have also been a great many bear killed in this vicinity. Mr. Parker is a man of indomitable energy, shrewd judgment and business capacity. He came to California in 1854 with very little of this world's goods, but fortune has rewarded his industry and he is now ranked as one of the wealthiest men of Siskiyou county. He is the owner of a valuable placer mine on the south fork of Scott river, for which he was offered \$50,000 in cash. He is the senior partner of the firm of Alex. Parker & Sons, at Etna, who are doing about as extensive business as any firm in Northern California. Mr. Parker has one of the best and largest bearing orchards I have seen, principally apples and plums. He informs me for small fruit such as strawberries, currants and blackberries, this section is unsurpassed. It is 35 miles from here to the present terminus of the railroad, but when completed will only be about 17 miles.

## Sonoma.

**EQUINE SURGERY.**—Index-Tribune, Oct. 23: A veterinary surgeon of Santa Rosa performed a surgical operation about two weeks ago on a mare belonging to Capt. H. E. Boyes, of this place, and removed a stone from the animal's upper jaw, oblong in shape and three and a half inches in length. The stone had evidently got into the mare's mouth while feeding and becoming wedged in between the back teeth and the cheek, had gradually worked its way into the flesh until completely hid from view. The stone was removed from the outside, and the animal, which was doing poorly before the operation, is fast picking up.

## Sutter.

**HEAVY HARVESTS.**—Yolo Democrat, Oct. 23: This is an unusually busy time for the Sutter county farmers, it being their harvest for the corn, bean and buckwheat crops which are uncommonly large. Our neighbors grow immense quantities of sweet potatoes, broomcorn, squashes, pumpkins and melons almost in sight of our doors, while the majority of us are in perfect ignorance as to the wonderful productions and beauty of homes just across the river.

## Tehama.

**VINES BY THE SQUARE MILE.**—People's Cause, Oct. 23: The Stanford vineyard at Vina now embraces 3825 acres, all but 1000 of which are in full bearing. Next year it is the intention to set out another 1000 acres, which will bring the acreage almost up to 5000—a perfect sea of vines. This year it is expected that between 600,000 and 700,000 gallons of wine will be made, and this quantity will increase each year as new vines come into bearing.

## Tulare.

**STEAM PLOW.**—Delta, Oct. 23: G. S. Berry, who harvested his grain this year with a combined harvester operated by steam (a detailed description of which was given several months ago), is now using the same machine for plowing. The header and separator and the small engine were detached, and a gang of 25 plows attached to the rear of the machine. He plows 35 acres a day easily, employing five men and using for fuel the straw left in the field from last harvest. He finds as great a saving in the expense as during the harvest season.

**PEACHES.**—Register, Oct. 22: The peach season in the East is very short and also of uncertain occurrence. In Tulare it begins early, ends late and comes with as much certainty as Fourth of July. Peaches begin to ripen from the first week in June, and from that date until Thanksgiving people may have them freshly plucked, upon their tables every day, if they will. Mr. J. B. Zumwalt brought us in some peaches this week that are scarcely ripe. He had them until Thanksgiving last year and will have them up to that time this year. Moreover, peach trees will bear continuously and profitably in Tulare from 14 to 25 successive seasons.

## Yolo.

**POMEGRANATES.**—Democrat, Oct. 21: Fine large pomegranates are now in our markets. This fruit, which is considered a semi-tropical one, grows in profusion in Yolo county, 20 trees being in bearing in Woodland at the present time. The product of these trees varies from 10 to 250 pomegranates, and the fruit grows to a monstrous size.

BEWARE OF IMITATIONS.

THE "NEW DEAL" SERIES OF WHEELED WALKING PLOWS.

Manufactured by JOHN DEERE & CO., Moline, Ill.

The Latest and Greatest Improvement of the Age in Plows. One Season's Experience has Thoroughly Demonstrated their Adaptability to the Various Soils of California.

UNIVERSALLY PRONOUNCED AN UNQUALIFIED SUCCESS!

For Lightness of Draft, Ease of Management, Strength, Durability, and Quality of Work,

THE "NEW DEAL" IS WITHOUT A PARALLEL.

It is much neater in appearance than any wood frame plow, and weighs some 300 pounds less than any other Gang Plow sold in California. The beams are made *entirely of Steel*, which give at once lightness, great strength, and durability. Having no tongue, and the team being hitched close to the work, it can be run as close to the fence as an ordinary single plow.

FOUR GANG.

One of the greatest points in favor of the "New Deal" Plows is their **ECONOMY**, an important feature in these times. They are not expensive, and the amount and quality of work that can be done with them simply cannot be approached by any other plows manufactured. The "New Deal" is no untried experiment, but the outgrowth of years of study and observation, with a full appreciation of the demands of the times, and fully approved by the most rigid tests.

3-Gang, 8-inch.....	\$75 00	4-Gang, 10-inch.....	\$90 00

## The Latest Fashions.

## Ladies' Toilet.

FIG. 1.—For toilets that are to be completed in tailor style the mode is especially adapted, the material here represented being serge and the edge finish a binding of silk braid. The four-gored skirt is shaped to hang evenly all around, whether it be worn over a long or short bustle, and has upon its gores a kilted drape that extends almost to the belt. The plaits in the kilt are very wide, and the bottom is finished with an invisibly sewed hem. Drooping over the top of the kilt is a short, round *tablier* that is much wrinkled by plaits in its back edges, its lower edge being bound with braid. The back drape has all its draping made by plaits at the belt, and falls almost to the edge

simple manner. Serges in white and colors are fashionable and handsome for "tailor" costumes. Silks, surahs, velvets, plushes, etc., are equally suited to the mode, and combinations of two or more materials may be stylishly achieved.

The hat is a fine felt, trimmed with a ribbon and plumage.

## Misses' Dress.

FIG. 2.—The combination here achieved shows lace net, bronze velvet and figured cream cashmere, and results in a *chic*-looking dress for indoor wear. The skirt is gathered all round at the top and finished with a belt. It is of the cashmere, and has a very deep hem and three moderately deep tucks in the bottom, all made with invisible stitches.

The *guimpe* is drawn in about the waist by a

top of the lacing and may be of a contrasting material; but this may be omitted, as in this instance, and show the *guimpe* all the way down. The bodice and skirt or the *guimpe* and skirt may be alike, if desired. Scarlet and white *guimpes* are very pretty with almost all materials, and may be of cashmere, surah, silk, satin, flannel, lace, embroidery, etc. All kinds of wool and silk fabrics, as well as all sorts of mixed goods, may be made up in this way, and for dressy wear very beautiful effects may be realized.

## Hats and Bonnets.

FIG. 3.—This hat is of brown-and-mode-fancy straw, sufficiently pliable to permit of the brim being bent in the way most becoming to the face. In this instance it is drawn up at the back, the curve being so gradual that it

and the velvet facing which shows so conspicuously is of the same shade. A band of velvet is about the crown, and in front are long loops of velvet, while a large "dude" bow is at the foot of the loops. Toward the side where the brim rolls are two sharply pointed wings poised against each other in such a way as to bring out the beauty of each. One is a dull white and the other of the faint mode shade that is often seen in natural wings. If better liked, pale-yellow wings or those showing yellow and brown may be substituted.

FIG. 6.—This hat is of dark-gray felt, in shape a sailor, with a brim that curves slightly on the edge. The trimming is simplicity itself. A folded band of dark green grosgrain ribbon passes smoothly round the crown, and in front is a round cluster of ribbon loops which, while

Fig. 3.—LADIES' HAT.

Fig. 4.—LADIES' HAT.

Fig. 5.—LADIES' HAT.

Fig. 1.—LADIES' TOILET.

Fig. 6.—LADIES' FELT HAT.

Fig. 2.—MISSES' DRESS.

of the skirt at the center. Its edges are bound with braid.

The basque shapes two pretty tabs between two points over the *tournure*, is very short on the hips and forms double points below the closing, which is made with button-holes and braid buttons. The edges are bound with braid, and the exquisite adjustment is made with double bust-darts, under-arm and side-back gores and a curving center seam. The high standing collar laps at the throat, and is almost concealed at the back by a rolling collar that joins small lapels in notches, the lapels meeting at the bust. The rolling collar and lapels make suitable the adoption of the fashionable chemisette with its high collar, and a masculine tie. The coat sleeves fit beautifully, and are trimmed in simulation of deep, round cuffs with a row of doubled braid that is continued down the outside seam to the edge, a row of buttons and simulated button-holes being arranged in front of the braid.

Clothes, flannels, *tricoli*, camel's hairs, cashmeres and all varieties of suit goods, including checks and hair-line stripes, will be fashionably made up in this way, and stitching or braid will usually complete them. The braid may be in flat applications, as a binding, or used in any

shirr-tape in a casing and closes at the back. It is perfectly plain, but in this instance its visible portion is covered with plaited lace net that produces a very dainty effect. The neck is high and close, and the standing collar is covered with a lace ruching. The sleeves are in coat style and fit the arms closely. They are made of the net and trimmed with pointed cuffs of velvet and a frill of lace falling toward the hand. Over the *guimpe* is worn a handsome bodice of the velvet that is deeply pointed at the back and front and is much arched and very short over the hips. The fitting of the bodice is close, and is made by bust darts, under-arm and side-back gores and a curving seam. At the neck the bodice is low and round at the back and is cut away in front so that the front edges meet only at the lower edge and flare widely toward the shoulders, thus exhibiting the front of the *guimpe* in V outline to the waist-line. Below the bust the front edges have eyelets in them, and through these is laced a thick silk cord that is tied at the bottom. A lacing is also made down the center seam of the back. A large sash-bow of watered ribbon is fastened at the back.

In the pattern the bodice is provided with a center-front that extends no higher than the

shows but slightly at the side. A narrow band of velvet encircles the crown at the foot, and the decorations—a mass of golden-brown and mode ostrich tips—are arranged at the back so as to droop far over the crown. Short, fluffy tips are given preference over the long ones, as the result achieved is decidedly more artistic. On a black hat the feathers could be pale-yellow or cream-white.

FIG. 4.—This hat is decidedly suggestive of the Tyrolean shape, and is in the real mountain color, Lincoln-green. The broad brim is underfaced with green velvet and shows where there is a curve slightly to one side. Two broad loops of green velvet extend from the front far over the crown on each side, and standing straight up just between them are two wings of the natural gray hue which contrasts so well with the green. The air of this hat is one of jauntiness, and it almost seems to tell that the wings were the result of the unerring shot of some special admirer.

FIG. 5.—Decidedly picturesque in effect, this hat belongs to the class that is either very becoming or not becoming at all. It has a very high crown, and a brim that is medium in width where it is turned down and quite wide where it is rolled up. The color is an American brown,

they add to the height, are yet so prettily arranged that they do not take away from the breadth of the *chapeau*. Ribbon matching the felt in hue can be used with good effect, but the combination of colors described is not only a fashionable one, but is also adapted to most of the fancy suitings in vogue. On brown, dark-green may be used, and on deep blue a dull Egyptian red is desirable.

TIPSY HOGS.—At Mr. Furber's, near here, 45 out of 50 hogs became completely intoxicated by eating pomace (the refuse grapes), which contained a little too much of the "goody-good part." The spectacle was more interesting than watching a drunken man. We did not learn whether or not they made quite as big fools of themselves as some men occasionally do, but we say probably not.—*Cloverdale Sentinel*.

GAREY'S NURSERIES.—These nurseries, formerly O. W. Childs', are under the personal oversight of that veteran horticulturist and nurseryman, Thos. A. Garey. Their isolated location, nine miles out of Los Angeles, is deemed favorable to their continued freedom from all sorts of harmful bugs.

No. 14a, Six Gang, 8-inch.....	100 00	10-inch.....	105 00

The cut explains the above-named implement so clearly that an extended explanation is unnecessary. It will be seen that there is an arrangement of levers, whereby all the wheels can easily be raised or lowered, or fastened in any position by a simple movement of one lever. Its advantages for plowing uneven ground, and for various other purposes, are so apparent that an enumeration of them is not necessary.

### Improved Granger Gang, with Lifting Device and Gale Chilled Iron Bottoms.

No. 11b, Three Gang, 8-inch.....	\$67 50	10-inch.....	\$77 50

### GALE CHILLED IRON BOTTOMS.

In order to meet the requirements of some of our customers who have gravelly or gritty soil, we are prepared to furnish Chilled Iron Bottoms with any of our Granger Gang Plows.  
Remember that the GENUINE GRANGER GANGS are made only by the Benicia Agricultural Works, Benicia, Cal.

IMPROVED GRANGER GANG, as now constructed, is conceded to be the Best Bench Beam Plow in use. It has superseded the reversible Mold Gang wherever introduced; it being more durable, lighter draft, does not require the amount of team, and leaves the ground in much better condition. Its success has been unparalleled, and meets a long felt want for a cheap and effective Gang Plow in a very satisfactory manner.

N.B. We also carry a large stock of STOCKTON or REVERSIBLE MOLD-BOARD GANG PLOWS, which we will sell at GREATLY REDUCED PRICES.

### THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

### TITLE, U. S. PATENT.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map.

### BURNHAM'S ABIETENE!

NO COMPOUND, but Nature's Remedy for Rheumatism, Neuralgia, Throat, Lung and Kidney troubles, a Specific for Croup. Every family should have it. Beware of imitation. The genuine article has the name of WM. M. HICKMAN Druggist, Stockton, on the label.

**C. SANBORN, ARCHITECT,**  
Builder and Superin't.  
Preliminary Drawings and Estimates furnished gratuitously. Plans and Specifications prepared with accuracy. No. 6 Eddy Street, S. F.

CHOICE LAND AND WATER FOWLS for sale at all times of all the most popular and profitable varieties. Please inclose stamp for new circular and price list to R. G. Head, Napa, Cal.

### TO OWNERS OF HORSES, COWS, ETC.

Convince yourself by trial that the most speedy and effective cures are made by the use of **Homoeopathic Medicines**, and that this is by far the CHEAPEST treatment. Horse-car companies in New York who have adopted this treatment have found their losses by sickness and death very materially diminished. We can give the highest references in this State to prove the superiority of this treatment over any other. Send for our "Guide" and "Veterinary Index," pamphlets of 64 and 42 pages, respectively, containing most valuable information. Sent FREE by mail upon application to

**BOERIOKE & SCHRECK,**  
234 Sutter St., San Francisco, Cal.

### RUPTURE

Positively cured in 60 days by Dr. Horne's Electro-Magnetic Belt. Guaranteed the only one in the world generating continuous Electric & Magnetic current. Scientific, Powerful, Durable, Comfortable and Effective. Avoid frauds. Over 10,000 cured. Send Stamp for pamphlet. **ALSO ELECTRIC BELTS FOR DISEASES.**  
**DR. HORNE, INVENTOR, 702 MARKET ST., SAN FRANCISCO.**

## FRESNO COUNTY.

## BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being  $2\frac{1}{2}$  times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

For further particulars call on or address

O. J. WOODWARD, FRESNO, CAL.

L. SHARPE, SELMA, CAL.

## NAPA VALLEY NURSERIES.

CENTENNIAL  
CHERRIES

THE FINEST SHIPPING AND CANNING CHERRY IN THE WORLD.  
LEONARD COATES, NAPA, CAL.

### FLOWERS, BOUQUETS, ETC.

With the many improvements inaugurated at my Nurseries during the season, I am now better prepared than ever to furnish all manner of designs for exquisite Bouquets, Flowers for Marriage Ceremonies, private and public Parties and all other Entertainments. Will also rent shrubs in pots or boxes for Hall or House Decorations. Mourning Wreaths and other Funeral Designs to order at the shortest notice, and on reasonable terms. **EMIL BOURGUIGNON, Sainsevain Villa, near Narrow Gauge Railroad, 1/2 mile from Depot. Telephone No. 34, free to all patrons. Floral Depot, 72 N. 1st St., San Jose.**

### STENCIL PLATES.

We have an arrangement by which we can furnish our readers with Stencil Plates for marking boxes, bales, and sacks of produce, at reduced rates during the continuance of this notice in our columns. Address

**RUPTURE**  
RADICALLY CURED BY  
Dr. Pierce's Great Discovery. Thousands of patients cured AT THEIR HOMES. No operation! It does the work  
DRS. PIERCE & SON, 704 Buena Vista St., San Francisco, Cal.

The Fair at Visalia.

The Sixth Annual Fair of the Tulare Valley Agricultural Association opened on Monday, Oct. 11th, and was well attended throughout the week, the gate receipts amounting to about \$1200. The Delta pronounced it the most successful that has yet been held; and the Times says the directors feel encouraged to make extensive improvements for the accommodation of exhibitors during the coming season, not the least of which will be the erection of a nice pavilion.

The stock exhibit, though not so large as some had looked for, proved fine in quality and very interesting.

Awards—Horses.

For horses of all work the first prize was awarded to T. D. A. Collins' Stonewall, three years old.

Draft horses—T. Rochford's St. Paul, 1st; H. Hellman's Mark Dunham, 2d.

Roadsters—Best stallion, Diamond Denmark; best yearling, Clipper; best suckling colt, Bessie Hubbard; best mare, Bessie B, all R. O. Newman's. Animals competing in this class were exhibited in harness.

Standard trotters—Best stallion, Milton R; best yearling, Strathway; best suckling colt (sired by Anteo); best mare, Maud Medium, all to H. Hellman.

Families—Best stallion (not thoroughbred) and five colts, George Dodge's Legal Tender.

Jacks—Best jack, R. O. Newman's Domingo; best suckling mule and best span of mules, exhibited by same; best yearling mule, exhibited by A. Mitchell.

Cattle.

Durhams—Best bull, Hyde & Moore's Kaweah Duke; the same parties exhibited best bull calf, Kaweah Duke V; best three-year-old cow, Miss Leslie IV; best two-year-old, Kaweah Maid II; best heifer calf, Kaweah Maid III, and also received premiums for herd.

Jerseys—Best bull, J. B. Smith's Blucher.

Devons—Best bull, S. & J. Evans' Joe Hooker; best cow, Cherry, exhibited by same.

Holsteins—Best two-year-old bull, exhibited by Thos. Rochford; best one-year-old, exhibited by Geo. A. Parker; best cow, Nellie, and calf, exhibited by J. W. Brown.

Graded cattle—A. I. Westons' bull, Duke, cow, Sallie, and calf.

Bees and Honey.

Josiah Gregg was awarded a special diploma for the best colony of Italian bees; also for the greatest amount and best quality of honey made by one colony of bees.

L. Walker & Son.

The late disastrous fire that swept over the lower part of the city completely destroyed the interior of the wool-scouring establishment of L. Walker & Son, at 360 Townsend street, S. F. In this short time new and improved machinery has been added and they are now at work scouring wool. During the last week they have received large consignments of wool, which are now under process for our domestic and foreign market. It is quite creditable and shows the push of this house in resuming operations so soon.

THE PEERLESS INCUBATOR.—An advertisement of the Peerless Incubator which was mentioned favorably in our reports of the Stockton Fair, may be found in another column. We have an engraving of the Peerless which we expected to use this week, but must defer it until another time.

FRUIT, SHADE  
—AND—  
ORNAMENTAL TREES.

We have at our Nursery, on the Buhach Plantation, Merced County, a fine assortment of choice Trees, Shrubs and Vines, which we will sell at prices to suit the times. We have Bartlett and Winter Nels Pears, French Prunes, several choice varieties of Figs, among which is the

WHITE ADRIATIC FIG,

The True White Fig of Commerce, and particularly well adapted to California, Black English Walnuts, and Eastern and California Black Walnuts, a choice selection of

TABLE GRAPES,

Consisting of Black Ferrara, Black Cornichon, Black Prince, Emperor, Flame Tokay, Muscat of Alexandria, Schiraz and Verdal. We also have

Evergreen and Deciduous Shade and Ornamental Trees, Climbing Plants, and Blackberries.

For catalogue and prices, address

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING OCTOBER 26, 1886.

351,563.—ORE FURNACE—J. & W. Applegarth, Fresno, Cal.

351,423.—DUSTPAN—T. D. Brown, Oakland, Cal.

351,666.—SAW BIT GRINDER—N. W. Spaulding, S. F.

351,542.—EGG TESTER—Vansant & Cooke, Dixon, Cal.

351,727.—FLY CATCHER—Z. F. Xevers, S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

IN TULARE COUNTY.—Another page of this issue contains a very interesting account of the development of the Paige & Morton property in Tulare county. The enterprise which is now showing such satisfactory results is the pioneer in the line of vineyard and orchard growing in the vicinity. It is being conducted with skill and zeal. The visitor is delighted with the manner in which the large areas of trees and vines are kept up, neatness and good culture being apparent on every hand. Besides the propagation of trees and vines for planting on the land owned by the firm, there is a nursery large and well stocked, which will be found of convenience to those in the neighborhood who desire to improve their farms in the direction of horticulture. Both as a stimulating example and in the way of furnishing material for improvement, the enterprise of Paige & Morton promises to be of signal benefit to the Tulare district. The space which we give to the matter in this issue is, we think, warranted by the importance which really inheres in the artesian belt of country in which it is situated.

We hear that Batchelor & Wylie, of this city, have just sold one of their Acme steam fruit-driers to go to Australia.

Seventh District Awards.

The Salinas Index corrects the list of premiums at their late fair (page 378) as follows:

Draft horses—Best stallion, two years old, McEntee Bros.' Chief Justice; best sucking colt, M. Barry's Colonel Lamar.

Carriage horses—Best single buggy horse, H. Cavanaugh's Monte.

Sweepstakes—Best stallion, with four colts, McEntee Bros.' Henry Clay; best mare, with four colts, H. Corey's Rosa; best stallion, any breed or age, R. Corey's Comet; second, W. B. Ford's Bob Ingersoll; best mare, any breed or age, J. B. Iverson's Lady Jones; second, H. Corey's Belle; best gelding, any breed or age, McEntee Bros.' Speculation; best colt, any breed or age, foaled in 1886, H. Corey's Comet, Jr.

YEAR. } WHITE ADRIATIC, { YEAR.  
SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Praparturiens, Macrocampa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobalan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE.—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

WM. H. ROBINSON, Quarantine Guardian San Joaquin Fruit District,  
JOS. HALE, County Commissioner of Horticulture.

THE GREAT REGULATOR!

No medicine is so universally used as Simmons' Liver Regulator. It won its way into every home by pure, sterling merit. It takes the place of a doctor and costly prescriptions. It is a family medicine containing no dangerous qualities, but purely vegetable; gentle in its action and can be safely given to any person, no matter what age.

WORKING PEOPLE

Can take Simmons' Liver Regulator without loss of time or danger from exposure, and the system will be built up and invigorated by it. It promotes digestion, dissipates sick headache, and gives a strong, full tone to the system. It has no equal as a preparatory medicine, and can be safely used in any sickness. It acts gently on the Bowels and Kidneys and corrects the action of the Liver. Indorsed by persons of the highest character and eminence as

The BEST Family Medicine.

If a child has the colic it is a sure and safe remedy. It will restore strength to the over-worked father and relieve the wife from low spirits, headache, dyspepsia, constipation and like ills. Genuine has our Z stamp in red on front of wrapper, prepared only by

## WINDMILL.

After many years' experience in the invention and  
manufacture of Windmills, among which may be named  
the "Hercules," "Saunders," "Cyclone," "Eureka," the  
subscriber has perfected a mill that infringes no patent;  
will face the wind; is direct action; solid wheel; no  
wood screws, pivots, loose joints, flapping sections, r  
spider legs to get out of order. Is beautiful, strong, not  
liable to get out of order, and in cheapness below any  
other. Send for pamphlet of the "Eureka Improved  
Windmill." Pumps of various kinds at very low rates.  
Address  
**E. B. SAUNDERS, San Jose, Cal.**

## CLEAR YOUR LAND WITH JUDSON POWDER.

**RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE,**  
by practical experience, found that the JUDSON POWDER especially; is the best adapted to REMOVE  
STUMPS and TREES.  
FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with  
roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing.  
In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder  
of strong enough.

For particulars how to use the same, apply to

## ECONOMY

WINDMILL

Is the cheapest ever  
offered to the trade,  
and as efficient and durable as  
the most elaborate self-regu-  
lators. It is intended to run  
constantly, and turns on the  
stand facing the wind, from  
whatever direction.

The wearing parts are few  
and cheaply replaced. Re-  
quires little or no attention.  
Will raise 25 per cent. more  
water than any  
"self-regulator" of  
same diameter of  
wheel. Anyone can  
put it up.

Write for Cir-  
culars to

**BYRON JACKSON 625 6TH STREET  
SAN FRANCISCO.**

BROWNE'S  
SQUIRREL and GOPHER  
SMOKER.

\$100 Reward to any one  
who will produce one of  
equal merit at the same  
expense.

It is the Cheapest,

By more than one-half, of any other  
in the market.

EVERY ONE GUARANTEED, or  
money refunded. I am in, every  
way responsible. Refer you to the

## S. F. MARKET REPORT

NOTE: Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Nov. 3, 1886.

The week was broken into by rains on Saturday, and election yesterday. From the effects of the latter it has not recovered. Heavy frosts Monday, Tuesday and this morning, are reported from many sections of the State, doing considerable injury to green vegetables. The English wheat market shaded off twice during the week, with the following closing to-day:

LONDON, Nov. 3.—Cargoes off Coast, quiet, but steady. Cargoes on passage and for shipment, firmly held. California wheat off Coast, 33s 3d to 33s 6d. California wheat just shipped, 34s 6d. California wheat nearly due, 34s. English country market, steady. French country market, do. Liverpool wheat, spot, very quiet. Liverpool wheat, Cal. 6s 7½d to 6s 10½d.

## Foreign Review.

LONDON, Nov. 1.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: The deliveries of native wheat have been small at 6d@1s above the previous week. The sales of English wheat were 48,910 quarters at 30s 3d against 56,590 quarters at 31s 4d during the corresponding period of last year. Country flour is firm and 6d dearer. A fair trade is doing in barley at an advance for the finest of 2s, and for seconds of 1s. Foreign wheats are firmly held and values are unchanged. Corn has risen 3@6d. Linseed has gained 1s. Three cargoes of wheat have arrived. One cargo was withdrawn and two remained. At to-day's market wheat was firm, though there was less demand. There was a short supply of corn and sales were freely made at 6d advance. Barley was steady. Oats, beans and peas were unchanged.

## California Products at the East.

NEW YORK, Oct. 31.—Beans—Choice California Limas, scarce; quoted at \$1.65@1.80.

Dried Fruits—California raisins coming into the markets show such a decided improvement in quality over those of last year that the trade is taking them in preference to imported, that is, the leading brands. Outside and irregular brands are not meeting with a ready sale. London layers, \$2.35@2.40. Loose Muscatis are quoted at \$1.85@1.90.

Canned Goods—The principal transaction of the week was the sale of 40,000 cases of "Centennial" tomatoes, closing out the entire stock remaining in the packers' hands, at 92½¢ cash. The market naturally is much stronger, and higher prices are soon considered probable. Corn continues in demand, and prices are very firm. Salmon is firmer, but not quotably higher. Salmon, Columbia river, \$1.55. California canned peaches, \$2.25. Pears, \$2.25. Plums and grapes, \$1.80@2. Apricots, \$2.15@2.25.

Honey—Extracted, 4½¢.

Seed—Choice California yellow mustard, scarce and firmly held, at 4¼¢@4½¢, but off quality is obtainable at 3½¢.

## California Fruit at the East.

CHICAGO, Oct. 30.—Receipts of grapes have been large since our last report, and the market is firmer, choice Muscatis selling at from \$2.75@3 per 40-lb crate, and Tokays bring \$3@3.25. The weather has been very favorable. The receipts of grapes from nearly all points are becoming lighter, and the season for these is almost over, promising a better market for California grapes. Pears are also firm. In fact all classes of green fruits which are now arriving are firm, with the exception of quinces, which continue low, selling at about \$1 per box. Winter pears are firm and there has been no material change in the prices for dried fruits for the last three weeks. The receipts are light and the markets firm, all lots meeting with a ready sale. Evaporated apricots are worth 20@25 cents per pound, as to quality; pared peaches bring 20@23 cents, and unpared, 12@14 cents per pound. Prunes range from 6½¢@9 cents per pound, according to size and quality.

NEW YORK, Oct. 31.—California plums, \$2@3 ½ box; pears, \$3@5 ½ box; quinces, \$1@1.50; grapes, Tokay and Muscatis, \$1.50@4 ½ lb case.

## New York Hop Market.

NEW YORK, Oct. 31.—The hop market was very quiet without apparent change in any particular. First-class goods, domestic or foreign, move off in moderate lots to a fair extent at steady prices, but brewers continue to be extremely critical, and stock that is not first-class proves a drug on the market even at round concessions. New York State, 1886, common to medium, 25@30¢; do 1885, prime to choice, 16@19¢; do common to medium, 12@15¢. Pacific coast, 1885, 28@32¢; Pacific coast, fair to good, 25@27¢; Pacific coast, 1886, prime to choice, 13@16¢.

## New York Wheat Market.

NEW YORK, Oct. 31.—The wheat market has been active, excited, very feverish and variable, and the closing prices show a material decline for the week. Spot closed ½¢@¾¢ lower. Options closed as follows: November, 84½¢; December, 85¢; January, 87½¢; February, 89½¢; May, 93½¢.

## Eastern Wool Markets.

NEW YORK, Oct. 31.—Wool remains quiet but unchanged. Holders, as a rule, manifest no inclination to grant concessions, though buyers claim the tendency is in their favor, and they look for concessions at an early day. The sales of the week included 50 bales and 33,000 pounds California at 19 @25¢; 10,000 pounds scoured do at 63@65¢.

## London Wool Market.

LONDON, Oct. 30.—The fifth series of wool sales has been postponed until November 30, when about 125,000 bales will be offered, including 72,000 bales of new clip Australian. The market has been quiet since the last sales.

## Local Markets.

BARLEY—The market has ruled exceedingly strong, throughout the week, owing to large buying orders for the better grades. The orders are chiefly

from England, where the crop is short. The supply of bright in this State is being rapidly reduced. The market closed very strong. The following are to-day's Call Board transactions: Morning Session: Buyer season—300 tons, \$1.08; 200, do \$1.08½; 1000, do \$1.08½; 300, do \$1.08½; 100, do \$1.08½; 100, do \$1.09; 200, do \$1.09½; 200, do \$1.09½; Buyer, 1886—100 tons, \$1.02½; 400, do \$1.01½; 100, do \$1.01½; 200, do \$1.02. Seller season—100, 98¢; 100, do 98½. Seller, 1886—100 tons, 99¢; 100, do 99½; 400, do \$1.00. Brewing buyer season—200 tons, \$1.28½; 400, do \$1.28½; 100, do \$1.28½. Afternoon Session: Barley—Buyer season—100 tons, \$1.09½; 300, \$1.09. Buyer '86—100 tons, \$1.02; 300, \$1.02½. Seller season—200 tons, 99¢; 100, 99½; 200, 99½; 400, 99½. Seller '86—300, \$1.00.

BEANS—Under free receipts the market eased off, but at the close there is a steadier feeling owing to holders not pressing the market, but storing in preference.

DAIRY PRODUCT—Butter has a steadier tone to-day for fresh in rolls, with a firmer tone for pickled and solid. Cheese is in light stock.

DRIED FRUITS—The market is reported active for the more choice, at unchanged prices. The demand is for shipping and also on coast orders.

EGGS—California eggs are scarce, but usually well-informed dealers profess to believe that receipts will increase from now on, which will affect prices, but equally as well-informed parties think values will keep well up, as Eastern shipments will fall off.

HOPS—Holders do not appear disposed to press the market, consequently trading is light for the present.

WHEAT—The stock of wheat here and at Port Costa is placed at 97,350 tons. Of this quantity fully one-half if not more is owned by farmers who hold, as a rule, at \$1.45 to \$1.50 for choice shipping. The shipping in port to load wheat has a carrying capacity of 160,000 tons, of which amount they have in about 15,000 tons, leaving 145,000 tons yet to be put in, so that to get the quantity desired, it is claimed shippers will have to pay well up. The sample market is strong to-day for white shipping with \$1.37½ bid at Port Costa for good and \$1.38½ for choice shipping; one sale is reported made at \$1.40 afloat. Exporters are buying considerable coast wheat which is generally of poor quality and will require choice white to bring a cargo up to a certain standard. Call Board transactions to-day were as follows: Morning Session: Buyer season—200 tons, \$1.43½; 400, \$1.43½. Afternoon Session: Buyer season—1500 tons, \$1.43½; 200, \$1.43½.

[COMMUNICATED.]

## Market Information.

## Cereals.

The nine groups of countries into which the wheat-growing and consuming portion of the world is divided show the following comparisons of estimated production and requirements for the current year, in quarters of eight bushels each:

FIRST DIVISION—NORTHWESTERN EUROPE.		
	Yield, qrs.	Wants, qrs.
United Kingdom.....	7,920,890	26,000,000
Belgium and Holland.....	3,500,000	5,750,000
France (two-thirds).....	21,803,800	27,000,000
Total.....	33,224,690	58,750,000

SECOND DIVISION—MEDITERRANEAN EUROPE.		
	Yield, qrs.	Wants, qrs.
France (one-third).....	10,915,400	13,000,000
Spain and Portugal.....	16,000,000	16,500,000
Italy and Sicily.....	19,000,000	19,250,000
Turkey and Old Provinces.....	14,500,000	12,500,000
Total.....	60,415,400	61,250,000

THIRD DIVISION—CENTRAL EUROPE.		
	Yield, qrs.	Wants, qrs.
The German Empire.....	12,000,000	15,250,000

Total.....	53,500,000	46,500,000

SIXTH DIVISION—AUSTRALASIA.

An export surplus of half a million quarters is the largest figure that we feel justified in taking for the whole Australasian group.

SEVENTH DIVISION—UNITED STATES, ETC.		
	Yield, qrs.	Wants, qrs.
United States.....	54,921,000	40,000,000
Mexico.....	500,000	550,000
West Indies.....	50,000	1,000,000
Central America.....	50,000	1,000,000
Total.....	55,521,000	42,550,000

EIGHTH DIVISION—CANADA.

Without giving details, 700,000 quarters is the probable exportable surplus for Canada, including Manitoba.

NINTH DIVISION—SOUTH AMERICA.

Chili is estimated at 600,000 qrs. surplus, La Plata, 300,000 qrs. surplus, Brazil and Colombia, 25,000 qrs. required, Peru and Bolivia, 100,000 qrs. required—making a net surplus of 550,000 qrs.

Analyzing the estimates on the lines of political or national divisions, the following table of approximations of requirements and surplus of wheat for the current year, in quarters, is submitted:

	Requirements, quarters.	Surplus, quarters.
The United Kingdom.....	18,079,110	
France.....	7,253,800	
Belgium and Holland.....	2,250,000	

Spain and Portugal.....	500,000
Italy and Sicily.....	250,000
Ottoman Empire.....	3,000,000
Germany.....	3,250,000

Chili.....	600,000
La Plata.....	300,000
Brazil and Colombia.....	250,000
Peru and Bolivia.....	100,000
South Africa.....	400,000
China.....	250,000
Egypt.....	250,000
Total.....	35,632,910

Export buyers of wheat lowered their bids the past week, but sellers were slow to respond, causing, at the close, buyers to advance to their original figures, \$1.37½ to \$1.42½ for fair to choice white shipping.

On November 1st, the stock of wheat and flour in Liverpool, England, was as follows: Wheat, 480,000 to 500,000 quarters; flour, 250,000 to 260,000 bbls., against the like time in 1885; wheat, 800,000 to 825,000 quarters, and flour, 300,000 to 350,000 bbls. This year's stock in November is far below the average, and emphasizes the statistics heretofore published of the wheat shortage abroad, and that Europe will want all of our surplus at advancing prices.

Oats have a steadier, firmer tone for the better grades, but fair to good are in liberal supply, with prices favoring buyers.

Corn is in lighter receipt, yet the demand is offish, and sellers have hard work to maintain prices. It is generally thought that better prices will obtain later on.

Rye is in good demand at a slight advance.

The following are the stocks in the warehouses in this city and at Port Costa on Nov. 1st: Barley, 19,845 tons; oats, 736; corn, 850; bran, 700.

The exports last month aggregated as follows: Wheat, 1,195,990 cts.; flour, 124,494 bbls. (equal to 373,382 cts. in wheat; total in wheat, 1,569,372 cts. or 78,469 tons); and barley, 181,994.

On November 1, the stock of grain at Port Costa and in this city was as follows, in tons: Wheat, 97,350; barley, 19,845; oats, 736; corn, 850; of the barley, 5845 tons were brewing, 14,820 feed.

## Dairy Product.

There is an improved demand for pickled and solid, but fresh butter in rolls is hard to sell at last week's prices. It is claimed, though, that in pickled an advance is likely to occur soon, which will perhaps improve fresh.

Cheese continues very firm under a moderate stock and a good demand.

California eggs are scarce and wanted at full quotations. Eastern eggs are in good supply, as are Utah's by express.

## Feedstuff.

Bran, middlings and other feedstuffs are without essential change.

Choice to extra choice hay continues in good demand, with prices in sellers' favor. Poorer grades are reported in large supply, with buyers disposed not to bid up.

## Fruits.

Heavy rains on Saturday last caused dealers to advance their views on table grapes from 5 to 15 cts per box on Monday, but the higher asking price could not be maintained owing to heavy receipts, and consequently last week's low prices obtained. To-day, the market is stronger. Wine grapes are in liberal offerings, but for the most part being of poor quality are very hard to sell.

Strawberries are in lighter receipt, owing to rains and heavy frosts doing considerable damage.

Peaches continue to come to hand in a small way, but owing to the lateness of the season are very hard to sell.

Figs are about out of market, causing quotations to be nominal.

Quinces continue slow, owing to canners buying sparingly, and retail dealers having a light trade for them.

The market continues to be glutted with poor apples, which sell at the best obtainable prices. Choice apples are in good demand, which allows consignees to maintain better prices.

The supply of poor pears is lighter, which creates a better feeling for good to choice. Some choice Winter Nellis, from Oregon, sold at from \$1.50 to \$2 per box.

The market is better supplied with oranges, but as yet the trade takes sparingly, causing sales at lower figures for those not choice selected.

Limes and lemons are in large supply, with prices in buyers' favor.

## Honey.

Choice continues in good demand for home trade, but poorer grades are slow, and hang unless concessions are made. It is reported that the demand from both England and the East is light, but owing to light stocks with us no lower prices are reported for choice.

## Live-stock.

In beef cattle there is nothing new to report since last week's issue. Mutton sheep are firm, under a strong holding in the interior. Hogs continue to press the market, causing the low prices current last week to still obtain. In much cows there is nothing new to report. In the horse market there is a fair inquiry for roadsters and matched teams, but for draft horses the demand is very light. For the latter a better inquiry is expected, provided there is a severe winter.

The following are to-day's meat prices: Beef—Stall-fed, 6¼¢@7¼¢ lb; grass-fed, extra, 6@6½¢; first quality 5¼¢@5½¢; second, 4¼¢@5¢; third, 4@4½¢. Calves, small, 9@10¢; larger, 7@8¢ lb. Mutton—Ewes, 4¼¢; wethers, 5¢. Lamb—Spring, 6½¢@7¢ lb. Pork—Live hogs on foot, 2½¢

@3¼¢ for grain and dairy fed; 2¼¢@2½¢ for soft; dressed, 5@5½¢ for hard, and 4¼¢@4½¢ for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Raisins.

Receipts continue free, with heavy shipments going forward to the East, where a good active demand rules. In our market there is an improving demand from Oregon and British Columbia. It is reported that some shipments have been sent forward to Canada by way of British Columbia. A very strong bear pressure is reported in this market, but as yet no bad effects are reported.

## Vegetables.

Notwithstanding the receipts of potatoes have been only fair, values have ruled in buyers' favor, with a weak closing owing to fewer orders on the market. Stocks are large, with the wharves overcrowded.

Onions have ruled fairly steady, although at times some shading was necessary to clean up consignments.

Sweet potatoes have ruled weak, but yet consignments were worked off fairly well for the more choice. The market closed steady.

Heavy frosts on Sunday and Monday nights last killed all the tomato, cucumber, pea, bean, squash, etc., vines, which is having its effects on the market for these vegetables. The quality of the tomatoes received was very poor, causing much trouble to place them, even at concessions. Large quantities were dumped.

Cabbages and root vegetables are unchanged.

## Wool.

Buyers claim that our market is above Eastern parity, yet they continue free buyers for crossbred and the more desirable clips. English advices report a strong market, but Eastern advices give Boston dull, with no marked activity looked for until after the turn of the year.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	229,523	213,597
In port, disengaged.....	82,284	91,969
In port, engaged.....	100,442	37,649

Totals.....412,249 343,215

The above gives a carrying capacity as follows: 1886, 658,875 short tons; 1885, 549,984 short tons; increase over last year, 108,894.

Poultry ruled weak and low throughout the week, under heavy receipts and dealers well stocked. Ducks were in light receipt and strong.

Wild game have moved off well at full figures, owing to the superior condition of the receipts.

San Francisco, Nov. 3, 1886.

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

THE SCIENTIFIC MILL.

FOR GRINDING BARLEY, EAR or SHELLED CORN,

AND ALL KINDS OF

Grain for Feed.

No. 4 MILL SET UP.

No. 4 MILL TAKEN APART.

No. 0 JUNIOR MILL.

FOR SUCH WORK IT HAS NO EQUAL!

The Grinding Plates are a Special Metal, Hard as Steel, Guaranteed to Grind 5000 to 8000 Bushels before Wearing Out.

THE BEARINGS are in one casting, consequently are always in line and cannot get out of true.  
THE JOURNALS are in half boxes rabbitted with the best metal and can be adjusted to take up all wear.  
THE SHAFT is of the finest cold rolled steel of ample size and perfectly true.  
THE FLY-WHEEL AND PULLEY are turned, and, with the Running Plate, are put on shaft and balanced accurately, so when in mill they run perfectly true, without any shaking or undue strain on it.  
THE VIBRATOR keeps moving constantly when grinding ear corn, so that it cannot clog in the hopper.  
THE "SCIENTIFIC" IS THE ONLY MILL MADE HAVING SUCH PROVISION.  
THE HIGH DISCHARGE is most convenient for delivering the feed, and as it draws a current of air through, it prevents heating, as is frequently the case with Iron Mills.  
THE PIN BREAKER provides against damage to mill should iron, steel or any hard substance accidentally go between the plates.  
THE MOST PRACTICAL THING OF THE KIND EVER INVENTED.  
THE FEEDER provides a successful means of regulating the feed when grinding small grain and cotton seed.

NO OTHER COB MILL has any such provision. In fact the "Scientific" is superior to other mills of this class.

THE SIMPLEST. Can be taken apart and put together in a short time without the aid of a mechanic.

THE STRONGEST. All parts are heavy and well braced and especially adapted to the work.

THE LIGHTEST RUNNING. Having but one shaft, running in bearings, which are always in line, with Fly-Wheel, Pulley and Plates accurately balanced, it follows it must run with least possible friction.

THE MOST DURABLE. Can be run in either direction by simply changing the spout and crossing the belt. This gives double wearing capacity to the plates as they sharpen themselves each time they are reversed.

THE BEST MILL ON EARTH, of the best material throughout, and every part made especially for its place.

EACH MILL GUARANTEED TO DO ALL WE CLAIM FOR IT.

SEND FOR DESCRIPTIVE CIRCULAR AND PRICE-LIST.

## ACME BANJO METHOD.

By N. P. B. CURTISS. Price, \$1.25.  
Mr. Curtiss, whose Guitar Method has long been a standard, does real service to the lovers of good music at home, by this thoroughly good and entertaining instructor. No less than 75 diagrams illustrate the positions of the fingers. Simple explanations and very sweet vocal and instrumental music fill a book, which is destined to make the elegant modern BANJO still more appreciated and popular.

**THE ROYAL SINGER**  
Holds the field against all comers as the chief book for singing classes in 1886-7. Good music, sacred and secular. Improved instructions. L. O. Emerson. 60 cents; \$6 per dozen.

Song Greeting (60 cents) for High Schools; Song Bells (50 cents) or Song Reader (Book 1, 50 cents; Book II, 60 cents) for Common Schools, and Gems for Little Singers (30 cents; \$3 per dozen) form a complete set for music teaching in schools.

**SONGS OF PROMISE**  
(35 cents), Tenney and Hoffman, is the newest book for Sunday Schools. Superior collection.

In press and nearly ready—**Anthems of Praise.**  
**PIANO CLASSICS**

(\$1.00) is a great favorite with good pianists.  
Books mailed for retail price.

Japan Clover Seed.  
(Lespedeza Striata.)

Clean seed of this valuable pasture plant. Unequaled in dry sections. Bears heavy grazing. \$2.00 per pound, prepaid. W. STITH, COLEMANVILLE, TENNESSEE.

## PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

## Pacific Barley Crushing Roller Mill

WITH SHAKING SCREEN.

These Mills are constructed in the least complicated and most substantial manner possible, with rigid iron frame, long bearings, adjustable boxes, with coil springs to allow any chance obstruction, such as nails, screws, etc., to pass through without injury to the rolls. This feature is found on no other roll made on this Coast. Send for prices to

## A Prize-Taking Jersey.

We give on this page an engraving of a well-bred Jersey bull which has made an excellent record at the New England fairs, in fact has taken a prize whenever exhibited from his first appearance as a calf in 1884. He possesses the somewhat unkind cognomen "Snappit" and is registered 13,395 American Jersey Cattle Club. Snappit was born January 13, 1884, bred by Davis Collamore of Orange, N. J., and is owned by John R. Brewer, of Hingham, Mass. The engraving is taken from a photograph.

Snappit is described as well grown, straight backed and handsome; his head and body are sealskin brown, back light gray, muzzle white, long black switch, skin rich orange color, fine hair and limbs, slim tail. Snappit's pedigree shows the richness of his breeding in the choicest strains of blood produced in Jersey, and wonderfully developed in America. He has one-eighth of the blood of Khedive and one-eighth of Koffee, claimed to be the best two sons of Coomassie; hence Snappit is an inbred Coomassie bull and should produce good butter cows. Snappit has from his dam also a blend of the blood of Garenne, a cow second only to Coomassie as the ancestor of many valuable animals. Maxwell says: "The combination of the blood of Garenne with that of Coomassie has been productive of great results. Young Garenne, out of Garenne by Coomassie's Son Koffee, sold with her yearling heifer and three-months-old bull calf for \$7335." Garenne, as aforesaid, gives her blood to Snappit, who tracing twice to Coomassie, thus possesses the combination of Garenne and Coomassie blood. Tormentor gives him one-quarter of his blood and Guy Fawkes contributes an equal amount. He also has the highly prized blood of Angela, Top Sawyer, Angelica, and their renowned ancestors Marius, Nonpareil, Welcome, Brown Prince, Lady Mary, Clement, Orange Peel, Noble and many others, and traces eight times to Old Noble, the founder of many illustrious families.

**THE NEW OLEOMARGARINE LAW.**—The passage of the new oleomargarine law, says a Western paper, is proving to be very much more of a victory to dairymen than was at first supposed. Manufacturers of bogus butter are in a bad way. Most of those in Chicago have been forced to shut down, as they can see no money in the business under existing conditions. As long as there were no restrictions placed upon the sale of the stuff, there was big money in its manufacture. It is not the tax that is knocking the pins from under the business, but the fact that bogus butter is now compelled to sail under its own colors. A prominent commission merchant in this city gives it as his opinion that there will be but very little butterine shipped into this market this season. Both wholesalers and retailers do not care to take the risk of paying license on its uncertain demand. A great deal, of course, will depend upon the strictness with which the law is enforced, but from all appearances the honest article will have little to fear.

**ARIZONA ALARMED.**—The *Arizona Gazette*, of Phoenix, is alarmed because citrus fruits, well endowed with scale insects, are being sent to them from this State. This distribution of pests is one of the most grievous afflictions, and one which seems to demand the most effective laws.

**SERICULTURAL.**—The Board of Silk Culture lacked a quorum last Saturday, and the regular meeting was postponed to the 20th. Members who were present, however, employed their time to advantage in examining specimens. In one instance an ounce of silk had been reeled from three ounces of cocoons. This ratio is

**SCALE-EATING INSECTS.**—Mr. Robert Williamson evidently believes in natural agencies in repressing pests, and has been introducing in his Penryn orchards the two-spotted black ladybird (*Chilocorus cacti*), which we have described as eating scale insects in Los Angeles, Fresno, San Jose and Berkeley, and which is no doubt

JERSEY BULL "SNAPPIT," 13,395, A. J. C. C., AT 18 MONTHS OLD.

likely to be bettered by the use of improved machinery. The Board has filed a protest against the duty imposed by the U. S. customs authorities on machines imported for the reeling school, and hope to receive the benefit of that section of the revised Tariff Act which

to be found elsewhere. Mr. Klee showed us the other day some specimens of a *Seymour* which had been given him during one of his excursions by a fruit-grower who said it was eating scales. We found the same chap a couple of months ago on scale-infested laurel

A VILLÁ RESIDENCE IN BERKELEY.

exempts all implements for use in public schools or incorporated institutions of learning from paying duty. Prof. Bandelli, of the Royal Observatory, Siena, Italy, has sent a lot of the finest cocoons, which, together with a large consignment of cultivated mulberry trees now on the way from Milan, will be distributed among promoters of the silk industry throughout the State.

It is said that there are 32,000 people booked for Southern California by the Emigration Bureau, due between now and April 1st.

trees in Berkeley. He belongs to the *Coccinellidae* or ladybird family of beetles, but he is very small; hardly larger than an alfalfa seed; black, with a dull yellow thorax and head, and black eyes. Who has seen them?

**COOPER MEDICAL COLLEGE.**—Commencement exercises took place Tuesday evening, Nov. 9, Dr. Gibbons, Dean of the Faculty, presiding, before an audience of about 500. Prof. Lane conferred the degrees upon 11 graduates, two of whom were women, and addresses were delivered by Dr. J. H. Wythe and Wm. C. Bartlett.

## A Berkeley Villa.

The beautiful village of Berkeley is best known as the seat of the State University and of the State Institution for the Deaf, Dumb and Blind. The beauty of its situation and surroundings, which led to its designation as the abode of these important institutions, has also proved attractive to those seeking to establish homes, and so for a couple of miles along the base of the Contra Costa range of hills and upon the gentle slope leading thence westward to the waters of the bay of San Francisco, there are scattered many tasteful residences, any one of which would make a pleasing study for an artist. Nearest to the base of the hills the most picturesque situations are found, the small streams bordered with California laurels and alders, and the intervening mesas well dotted with native oaks, being the leading natural contributions to the diversity of the scene. The little picture on this page gives a glimpse of one of the prettiest private residences and grounds which can be found in Berkeley. It is the beautiful spot to which Dr. M. C. O'Toole, of this city, betakes himself after his arduous days of practice in the city, and finds in the rural quiet and in his studies of nature in tree and plant and bird, to all of which he is devoted, a restful balm from professional application and anxiety. The situation is in the extreme north of the town, and near the line where Contra Costa calls a halt to the tax collector of Alameda.

**ARBOR DAY.**—Arrangements are progressing for the observance of November 27th as "arbor day" in the bay region. Mr. Sutro has distributed about 40,000 young trees among the school children of San Francisco, and they are to be put in permanent position on that day. A meeting of those interested in forestry, and especially in the successful establishment of an arbor day for California, will be held at the Palace hotel on Friday evening of this week. The State Board of Forestry has taken hold of the proposition with vigor, and has in preparation a bill which will be presented to the Legislature this winter, establishing an arbor day. Just what day will be selected does not yet appear. It is difficult to name a day which will be satisfactory to all parts of the State, and for this reason the assistance and wisdom of all interested is desired by those who are guiding the movement.

**PLEURO-PNEUMONIA.**—Eastern press dispatches bring the unwelcome announcement of the outbreak of pleuro-pneumonia in other parts of the great West than Chicago. One report says that in Jasper and Clinton counties, Indiana, the disease has developed to an alarming extent in the last few days. They say that in their vicinity more than 1000 cattle are afflicted with the malady, which is incurable and which is rapidly spreading. Dr. Navin, State Veterinarian, has already ordered a number killed. Two hundred spring calves shipped from Northern Ohio about three weeks ago were brought to Clinton county and 100 were sold there and sent to Illinois. Pleuro-pneumonia broke out among them, and two having been killed, showed the disease unmistakably. Sixty-seven of the calves have been killed and burned, and the farms upon which they were brought will be quarantined 90 days.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Notes Along the New Coast Railway Survey.

EDITORS PRESS:—During a five-weeks' survey (between Soledad and San Luis Obispo) I had a good opportunity of gaining considerable knowledge as to both the agricultural and geological aspect of this beautiful section of the State. Few people in our large cities, perhaps, trouble themselves about the advantages lying outside the municipal boundary. There they sit and toil year after year in the same monotonous fashion, their energies receiving no stimulus from change of occupation or the fairy zephyrs and waving foliage which make the rural valleys a second Eden. I wish to have it understood I am not an enthusiast, but when nature overflows the cup of enjoyment then it is time to confess her benefits.

Leaving Soledad, you find yourself winding between two low ranges of sandhills with intervening canyons, where, shut out as it were from the worry of the world, some peaceful rancher brings up in sweetness and simplicity his healthy, generous family—content and happy with what nature provides. The Salinas river runs between, now skirting one range and then the other. Along its banks grow various kinds of wild shrubs, and now and then some stately, moss-mantled oak looks down, as it were, in silent contemplation of the peaceful scene.

The new railroad which runs through this region has increased the value of real estate considerably, and we hope that in a few years those who own extensive tracts of fine, arable land will be willing to part with some of it at fair prices; so that where before the coyote and mountain lion held sway we may find smiling farmsteads with their attendant fruit gardens.

Wheat-raising is now the staple industry. Farmers all along the valley are jubilant over the rapidity with which the S. P. Co. pushed forward the work whereby inside of four months the road was completed between Soledad and Crocker City, a point on the Salinas river about seven miles south of Paso de Robles. Everything seems instinct with sudden energy; new towns are growing rapidly, and the settlers who came here only last spring bid fair to rival their elder neighbors. The latter look on with surprise at the systematic way in which the new-comers set about making their farmsteads.

Those who happen to find themselves in this section ought to pay a visit to San Miguel, with its crumbling walls and ancient church towering in tottering dignity over all—suggesting to a person of a serious turn how in centuries to come men may perchance look upon the works of the present period with the same feeling of mingled curiosity and respect.

Water is plentiful and can be had by boring at from 10 to 60 or 70 feet; but there is hardly a square mile which has not its natural surface-spring beneath the shade of some venerable willow. The hills, as well as the low-lying districts, are clothed with oaks, and the whole landscape somewhat resembles a well-kept English park. Fruit of almost every sort may be raised with very little trouble, and I have eaten grapes from two-year-old vines which would satisfy the palate of the nicest critic. A stranger would perhaps feel puzzled to tell how the immense herds of cattle and hogs which range over the valley manage to find sustenance, but such are the properties of the soil that, dry and withered as the grass appears, cattle and horses that never get anything else to eat, either summer or winter, look as if they had been fed up for sale. As for the hog, the acorns provide him with a dainty meal. He goes around indifferent to place or ownership, bearing a brand like cattle or horses, and nowhere have I seen finer specimens or in greater numbers. I asked an extensive rancher one day about how many hogs he had, and he answered, with a smile, "Their name is Legion."

Paso de Robles is too important a place of interest to be passed over, as the healing qualities of its hot sulphur springs are so widely known. Situated in a lovely valley between the river and a prominent sand range thickly covered with spreading oaks, it affords amusement and recreation to both strong and delicate. Here may be seen the consumptive, the blind and the paralytic, side by side with their attendants, enjoying the cooling breeze beneath the piazza of some vine-decked cottage, and rapid and numerous are the wonderful cures wrought at this natural health resort. The water is of a brackish-yellow color, and smacks strongly of sulphur, but with a pleasant after-taste. It virtually boils up in a huge caldron, covering itself with a volume of steam which at a distance looks like a cloud. Scattered around may be seen the crutches thrown away by thankful people rescued from the jaws of miserable and deadly afflictions.

The mineral wealth of the country is not yet developed. Silver exists to a known extent in the Coast Ranges, and coal and copper indications are abundant. The petrifying properties of the soil are remarkable. I have seen bones of both men and animals dug up in a complete state of petrification, and for speci-

mens of many kinds of pebbles and flint this district challenges the world. Mineralogists would be amply repaid for a few weeks' sojourn along the banks of the Salinas.

Alkali exists, but not in quantities highly detrimental to human or animal nature; yet parties would do well to be cautious as to the quantity of water used before paying the penalty of nausea and headache. Existence is nowhere more prolonged, or with so little consequent inconvenience. I have seen old men with the hoar of a hundred winters on their heads riding around seemingly hale and hearty. I noticed that nearly every one, young and old, was on horseback when occasion required. Now a young girl of 15 flew past, and anon a staid old rancher, with his favorite mustang, went by at a well-practiced amble. I must say the lower orders of animal nature seem well represented—the coyote howls all night long, while squirrels, gophers, toads, lizards, sand-owls and snakes burrow up the earth into seeming business-like occupancy; but on the whole, after having traveled considerably over the New World and the Old, I declare unhesitatingly that this region deserves great attention and every benefit which a State Legislature can afford. WM. MULCAHY.

S. F., Nov. 6, 1886.

## Oak Moths and Gophers.

EDITORS PRESS:—The other day, as I was walking through the woodland on our ranch, I saw countless small, light-colored moths hovering about the oak trees. I wonder if any of your readers have noticed the same, and if they can tell me whether they are the dreaded codlin moth? If so, what is to be done? Must we cut down all the grand, noble old oaks that add so much to the beauty of the place, as they stand with their massive branches crossed with garlands of gray moss? Is it possible that instinct teaches the moths they will find shelter in the never-failing foliage of the oak till our choice and luscious fruits are ready for them to spoil?

We have had bands on 27 bearing apple trees and have caught at least 1000 worms. Our apples did not suffer as much as in some places, but still many a large Bellflower was ruined for market.

We have been quite successful trapping gophers; over 500 have been trapped in 15 months. I hope some kind reader will take time from his or her busy life to tell me if it is the codlin moth that swarms about the oaks. C.

Kilfasset Ranch, Santa Cruz.

[The moth on the oaks is not the codlin moth. It is probably *Phryganidea Californica*, which is unusually abundant this year. Its larvae are caterpillars with phenomenally large red heads which live upon the foliage of the oak. How do you trap the gophers?—EDS. PRESS.]

## Santa Barbara Notes.

EDITORS PRESS:—I will attempt to give you a few words about the result of the season and some other matters.

Orchard fruits with the exception of quinces have proved nearer a failure than any other season since the trees began to bear. We have had very few apples of fair quality and no pears to speak of.

English walnuts, on the same list, were never before so near a failure.

Hay is plenty, of fair quality. Barley and flax are good. Corn is fine and a larger crop than for several years.

Beans are more than medium and the farmers have improved the last few days of dry weather in thrashing Lima beans, which are of good quality. Potatoes, squashes and other vegetables have done well.

Altogether we have fair crops and no reasonable excuse for grumbling. No rain has come yet to wet anything, but autumn is here, so we may expect rain in the near future.

The outlook for a railroad is encouraging, and our people are feeling well over the prospect of having a way opened for marketing our products without sending them all to San Francisco.

Our county fair was a success financially and otherwise. The display of fruits was better than we expected this year. Farm products made a good show and were tastefully arranged. There were lots of big squashes, from 270 pounds down to medium size. So, with the fine cattle and horses, with the smaller animals and poultry, we had a very creditable display.

Santa Barbara county can yet accommodate many with good land for homes, which can be made as comfortable and pleasant as can be made anywhere in the United States. Our little valley, the most beautiful and pleasant of all, can afford homes for many more than we have, but our lands are valuable and will be appreciated by those who wish a pleasant climate and most fertile soil.

Of the western part of our county much is yet used for pasture. There are cattle, horses and sheep on a thousand hills, with a large share of the valleys between. The time must soon come when our large land-holders must consent to sell to those wanting homes.

I made Lompoc a visit in July, so had a fair chance to see where thousands of pleasant

homes could be made. Soon after leaving Goleta for Gaviota the country becomes a narrow stretch of rolling hills between the ocean and mountains. Every little distance there are fine streams of clear, beautiful water crossing the road on their way to the ocean. The streams are beautifully wooded with magnificent sycamore and live-oak timber. The day cannot be far distant when smiling homes with fruit and flowers will take the place now given to sheep and cattle.

There is now a fine road graded through Gaviota pass over which it is a pleasure to travel. From the pass to Lompoc the country is more or less hilly, but the soil very good and fairly watered with springs and living streams.

Lompoc is a beautiful valley, fertile soil which will produce finest fruits, vegetables and grains. The people, too, are generous, temperate and industrious.

From Lompoc to Los Alamos valley the country is rather rough, but soil good, much of which can be used to better advantage than stock ranges. Los Alamos valley was a vast wheat field. The valley is beautifully timbered with white and evergreen oaks which give it a fine park-like appearance.

From Los Alamos to the Santa Inez river the country is more or less hilly, timbered with a variety of oaks. The soil is good, and can be made to produce the best grains and fruits.

At Ballard, Mr. A. M. Boyd has an orchard of several thousand olive trees which look promising indeed. Another and larger olive grove at the river belonging to Mr. Hayne shows that the olive will grow and fruit abundantly.

Carpinteria.

O. N. CADWELL.

## Percheron Horse-Breeders' Meeting.

EDITORS PRESS:—I beg to advise you that the annual meeting of the stockholders and directors of the American Percheron Horse-breeders' Association will be held at the Sherman house, Chicago, on Wednesday, November 17th, at 2 p. m.

While the important business of electing officers will not take place until next year, it is desirable that a large attendance of the members be present.

The past year has been a notable one in the history of the association; never since its organization in 1876 has there been such a happy combination of circumstances as during the past year.

All the prominent breeders in the United States and Canada have identified themselves with our interests, and are members of the association. We have received assurances of the hearty support and co-operation of the French Government. Nearly all of the various State Boards of Agriculture have extended their encouragement and support by making separate classifications for registered Percherons; the number of entries are treble what they have ever before been in one year, and the complete unanimity of action which characterizes the members of the association, as evinced by the unqualified success of the great Percheron show held at Chicago, must be a source of great gratification, not only to the officers but to each individual member of the association.

An interchange of ideas among all the members is at all times useful in promoting the interests of and preserving unanimity of action in any association, therefore all breeders are earnestly requested to be present at this meeting. S. D. THOMPSON, Sec'y.

Wayne, Ill.

## SHEEP AND WOOL.

## The Coyote Question.

A correspondent of the Ukiah Press, writing from Covelo, pictures the duty of Mendocino county on the coyote bounty question very vividly. We quote as follows:

It is urged as an argument against the scalp ordinance that it would bankrupt the county. This would be good and sufficient if it were true. They say we tried it for five months and there were 42 coyotes killed, which cost the county \$630. Now, if any one will take the trouble to figure a little on that, he will discover that those 42 coyotes cost about three-fourths of one per cent of the taxable property of the county. Does this look like bankruptcy? Had the law remained in force, it is probable that there would have been twice that number killed within the next five months. If so, so much the better, for we understood the object of the ordinance to be the extermination of these pests. A tax of five cents on the \$100 would yield a revenue of about \$4000, which would be more than enough to pay for all the coyotes that would or could be caught during any one year. Would this "bankrupt the county"?

Another argument they use is this. They say: "It is no use. The coyotes increase faster than we are killing them." This is discouraging, indeed, if true, and it is probably true during their breeding season, which, thanks to the nature of the brutes, lasts only a month or two; but we think we could gain on them during the rest of the year.

There is in Round Valley township more than 70,000 sheep, and \$9 of every \$10 that comes here comes through sheep. The owners of them live here, and whatever profit there is in the

business is invested here and becomes taxable property of the county. And here let me say, and I do not think any one who is familiar with the facts will dispute it, that sheep and sheep ranges come nearer being assessed up to their full value than any other class of property in this county. And suppose they are driven out of the business, which they certainly will be, what will or can take the place of the sheep? Nothing, sir, simply nothing. The land is of no value for agricultural purposes, and if it was there is no market. Looked at in the light of economy, it is certainly to the interest of the people of this county to get rid of anything that destroys the taxable property of the county.

## POULTRY YARD.

## The Egg Trade of San Francisco.

A reporter of the Call recently interviewed several egg merchants and obtained a number of statements which will be read with interest by many of our readers.

"People used to think that eggs were eggs, but now there are almost as many different qualities of them recognized by the trade as in clothing or any other article of merchandise." This bit of information was given a Call reporter by a Front-street produce commission merchant, who was superintending the storing away of a carload of eggs that had just arrived from the East.

"We have eggs here," continued he, "ranging in price from 10 cents to 35 cents a dozen. They come in cases from various parts of the State and from Iowa, Nebraska and other Eastern points. Most eggs are now shipped in the paste-board compartment cases, containing 30 dozen. Every egg when it reaches a commission house is subjected to the inspection of an egg-selecting expert. He grades and separates them into different qualities, from the black, rotten ones, that have to be thrown away, to the prime, sound eggs. It is curious how proficient and quick these experts become with training and experience. The most ordinary method of examining eggs is to pass them before the flame of a candle, but there are men who can tell almost infallibly by the appearance and feeling of an egg as to its condition. They explain that there is the same difference in the looks and feeling of a sound and a stale egg as there is in that of a live and dead body. In order, however, to make the finer distinctions it is necessary to inspect the egg directly before a strong light. Come into our selecting-room and I will show you the process."

The merchant then ushered the reporter into a darkened room, the walls of which were painted black. On a stool before a lighted candle was seated the selecting expert. Around him were conveniently arranged various cases for the different grades. He was engaged in running the eggs, three at a time, through his fingers in front of the flame, and then dropping them into one and another of the cases. This was done with remarkable dexterity and equaling in rapidity the feats of a juggler in a ball-tossing act. Although the eggs were rattled around with seeming carelessness, not one of them was broken.

"There is an egg," said the merchant, "that shows no light through it. It is hopelessly bad and must be thrown away. There are some eggs that show vacant places of various sizes inside the shells, indicating the different stages of decomposition that they have reached. The eggs in that box are sound and prime, perfection itself, and are worth 35 cents a dozen. They are used for the concoction of fancy drinks, and for other purposes for which only the best eggs can be used. Out of almost every case that comes in, every grade of eggs can be selected. In the 30 dozen often four and five dozen are found to be entirely worthless. It is remarkable how bad some eggs are that are nevertheless sold, and no doubt consumed in some manner. Eggs that almost smell from their shells, bring eight and ten cents a dozen. The Chinese are the most extensive consumers of stale eggs, and they seem to prefer them to good eggs. They acquire a taste for them, something like the taste that is acquired for certain kinds of cheese and other malodorous articles. I lost a sale with a Chinaman a few months ago because I had no eggs that I would sell for less than 10 cents a dozen. Much of the less questionable eggs are used for baking purposes, where their savor can almost wholly be disguised. In the hot months of the year the only choice eggs that come to the San Francisco market come from the cool, fog-covered counties along the coast. The eggs from the hot interior counties are then little better than the Eastern eggs."

"All imported eggs are called Eastern eggs, but they seldom come from any farther east than Iowa, which State sends by far the most to this market. Large quantities are also sent from Nebraska. One carload came through in good condition from Canada last winter, which was the first and only shipment over made from that point. A carload also arrived recently from Minnesota."

"Men in the egg business can see no reason why all the eggs needed for this market should not be produced in this State. The San Francisco market is the only one that uses Eastern eggs. All interior points produce enough for their own consumption, and send a limited quantity to this market besides. The cost of

bringing eggs from Nebraska is about two cents a dozen, and from Iowa two and a half cents, so that the producers here always have this saving of freight charges in their favor.

"Eggs are usually shipped from the East in carload lots, 400 cases to the carload. In hot weather refrigerator cars are used, and they are rushed through as quickly as possible, often with the fast passenger trains. Ice is put in the cars at the point of starting and again at Ogden.

"In the cool months of the early spring, from February to May, eggs are produced in enormous quantities so as to flood the market everywhere. Commission merchants then are compelled to store them away for use in the season when there is a scarcity. By being pickled in liquid lime and other processes they are preserved several months. One firm in this city has now 35,000 dozen eggs in pickle. The eggs now being imported from the East are storage eggs, and are coming through in very good condition. They do not, of course, compare with fresh eggs, and range from 10 to 15 cents per dozen lower than the best California eggs.

"Last year about 1,250,000 dozen eggs were brought to the San Francisco market from Eastern points. Adding the California eggs, we have a grand total of 25,000,000 dozen eggs consumed here. This vast quantity of eggs would weigh nearly 2000 tons, and if they were loaded on cars of the usual size, the train would be one mile and a quarter long and extend from the ferries up Market street nearly to the Odd Fellows' building. If this immense train, with engines enough to move it, could pass in review before a spectator, it would give him a startling idea of the amount of eggs consumed every year in a city the size of San Francisco."

## FLORICULTURE.

### Let Flower-growers Organize.

EDITORS PRESS:—Having just read your editorial under the above heading in the PRESS of Oct. 30th, I hasten to express the hope that your suggestions may be carried out, and that societies may be formed and correspondence carried on in the interests of this attractive industry. Let the work not be carried on by florists, altogether nor in their interest, but let the object be rather to beautify the homes, to develop the love of flowers in the households.

Let the object be to awaken in the minds of stay-at-home housekeepers and their daughters a desire to thus add to the attractions of their homes, and at the same time give themselves recreation and pleasure, by giving touches of sentiment and refinement to the homely duties of every-day toil. There are those who declare that they must have a few flowers, and to this end struggle with poor locations, poorer soil, no water, little or no help, and but little spare time, to whom a few wise suggestions from experienced cultivators would be of great advantage.

Only those who have tried the experiment can know what a delight a bunch of fragrant, bright, sweet peas, or a honeysuckle at the back door, is. What a help a graceful fern or rose-bush is under the kitchen window, or how it rests the body by cheering the mind to look out upon a gay geranium from the work-table. There should not be a window in a house that does not look out upon flowers, nor a door which does not have its fragrant, clinging vines.

Flowers when cultivated by one's own hands become friends; they are companions, always ministering to the delights of the mind and educating the heart to gentleness by their subtle influence.

It is not necessary to make the cultivation of flowers a very laborious affair, nor would it be desirable in a home. Simple methods are best, and would produce a beautiful, attractive and satisfactory result if a little care be used in arrangement of color, growth, etc.

Yes, let us have the societies by all means, although we cannot all become members; but we can all profit by interchange of ideas, results of each other's experience, successes or failures; and nowhere can this plan and its effects be better disseminated than through our RURAL PRESS, which so generously offers its columns to our use.

So, lovers of flowers, let us begin and have a meeting—a protracted meeting—continuing on and on until every home in this fair land is beautified and enlivened by the presence of flowers.

Already I have two points to discuss. Last year I freely fertilized my fuchsia-bed and the plants nearly died after it, and have never well recovered. Should fuchsias never be fertilized? And when I trim the tops off of rosebushes they die down gradually to the root, and then other branches begin to do likewise, and the bush never does well again. Some rosebushes grow so tall. What is to be done? And so I might go on asking for information *ad infinitum* which could be given by one and another, and thus helping hands be reached out to anxious workers in this beautiful line of labor and recreation.

HELEN M. CONANT.

Santa Cruz, Nov. 1st.

## HORTICULTURE.

### The Apple in Southern California.

At the last meeting of the Los Angeles County Pomological Society a paper was read by Milton Thomas, of Los Angeles, of which we publish the greater part, as follows:

The apple is grown by the nurseryman, either by budding or grafting, planted in the nursery six inches apart, in rows three feet apart, and when one year old is from four to six feet high, and at that age should be planted in the orchard. After planting in the orchard the trees should be all cut back to a uniform height of three and a half feet. Then keep all the buds and sprouts rubbed off below two feet, leaving branches growing on every side, and when two years old cut back two-thirds of the last season's growth, and at such distance from the trunk that the ends of them will form a pyramid, and all pruning done afterward from year to year will become easy to any one who has attended to these rules.

The orchardist must keep the tree so thinned out or cut back as to admit light and air to preserve the vigor and symmetry of the tree. The central and upright branches will require to be cut back most. This general plan should be followed from year to year, pruning superfluous branches out or cutting back, as your judgment may deem best, remembering there is very little danger of pruning too much. If you want your fruit better and larger, prune your trees more than the above indicates. The apple will grow on the most of soils, but in California a strong, rich soil is the best. It will grow on a sandy soil and produce good fruit, but a deep, rich soil is preferable. Cold, wet soil, where the water is near the surface, is not suitable for the apple. As to the distance apple trees should be planted, 25 to 30 feet apart is as near as they can be planted and do well. In this country apple trees are usually planted too near together. The orchardist will get more apples to the acre 25 to 30 feet apart than he will 12 feet apart. In this connection I would impress upon those who think of planting apple trees to plow deep, 8 to 12 inches, and under no circumstances to sow barley or any small grain or alfalfa among your trees. It will always pay to manure your apple trees, as well as any other tree. Now, as to cultivation, cultivate thoroughly and keep your soil well pulverized and all weeds destroyed; in other words, keep the orchard entirely free from weeds, and never irrigate your apple or any other deciduous fruit tree in ordinary soils. There is no question in my mind but that all deciduous fruits and also grapes can be successfully grown by planting in fair to good soil, plowed deep and kept thoroughly cultivated, in almost any locality in California without irrigation. Hoed crops or small fruits can be planted between the trees in the orchard six feet away from the trees, for the first six or eight years.

Now, I would call the attention of orchardists to

#### Thinning Out the Fruit

From their apple trees. In the most of orchards many varieties bear too heavily, and especially the White Winter pearmain. At least one-fourth should be taken off. But if this must be done, take off all the small and defective apples, and when there are too many on the branches remove them, so that the tree will not be overtaxed. Nothing contributes more to the quality of an apple, and also to size, than thinning out the fruit. When the orchardist gathers his fruit in the fall he will not have to sort them out, as he otherwise would, and he will have as much fruit and his fruit will be worth 50 per cent more than if he neglects thinning. As to gathering, there are but few that are careful enough in this respect. Every apple should be gathered by hand, placed in a basket and taken out in the same way. Ladders and step-ladders should be used in gathering apples.

No apple that falls to the ground should be put into the basket among the hand-picked ones. Apples should not be removed to the apple-house in a common wagon, but in a spring wagon or a sled. Then they should be put in as cool a place as is possible to provide, for storage. Now as to keeping them: The best apple-house should be built with double walls, 12 inches apart, and this space should be filled and packed well with straw. Then there should be a double roof, 12 inches apart, on the same general plan as the sides. Then double doors, and use every precaution to keep the house cool as possible. Then place the apples on shelves or in apple boxes. Have ventilators to use at night. There is another important thing relative to keeping apples which ought to be known—that winter apples should be gathered as soon as they are done growing, not ripe, at least a month before they are gathered, in ordinary years, in this country.

Apples gathered from the 20th of September to the 10th of October are firm and hard and will keep well if put in a cool place. In marketing apples let fruit of a uniform size be put in tasty packages or boxes, and made as attractive as possible. It is necessary that apples should be assorted, the large from the small, the defective from the smooth, and the hard, firm ones from those which are too ripe. Skillful marketers will discover that apples of two sizes will bring better prices when separated than when left together. A few small apples in a box may prevent the sale of the

whole box. Now I will name a list of apples which have been tested most thoroughly, and are good to best, and are good bearers and regular, except such years as this is, which is certainly an off year. At least I have not known such a year for apples in the last 16. In fact, I have not known such a year in California in the last 25 years, as the apple crop, I am informed, is short all over the State. Well, now, as to the

#### Varieties.

I will commence at summer apples, naming the best of summer, then fall and winter apples. Red Astrachan and Early Harvest; these two varieties will last from four to six weeks. Then early fall and fall apples are Gravenstein, Skinner's pippin, Fall pippin, R. I. Greening, Yellow Bellflower, Smith's Cider, Jonathan and Ben Davis. For winter apples, White Winter pearmain, Yellow Newtown pippin, and in some localities, the Baldwin. For market, Red Astrachan, Gravenstein, R. I. Greening, Bellflower, Jonathan, Ben Davis, W. W. pearmain and Yellow Newtown pippin. It would be worse than folly to have any more varieties. This list gives a succession of fruit from July until March. Now I was requested to give the names of the best 25 varieties of apples. I could give 25 or 50 best varieties, but I will not do any such thing, for it is not to the interest of any one to spoil or waste his land in planting out so many varieties of apples.

I have tested some 150 varieties, hoping to find some one which would supplant some of our old, well-known varieties. Have sent East to various States, and especially to the Southern States, hoping I could find an apple that would keep until April or May. After waiting for years for all to bear, I must admit that I have not succeeded in finding any apple that is superior to the varieties we have. The fact is that many varieties that are winter varieties East are fall apples here. I am well persuaded that no one wants to plant 25 or 50 varieties of apples after they know that it is useless.

One word more as to the profit or pay in an apple orchard. Apples can be produced a greater distance from market than many other fruits. An apple orchard planted 25 feet apart contains to the acre 69 trees. Now these trees, well taken care of at the age of six years, should produce 50 pounds to each tree, and when eight years old 100 pounds per tree, and at ten years 150 pounds. Now every year after that for a long time to come the tree will yield more apples each year. I have gathered 300 pounds from trees ten years old. A tree ten years old should pay at least \$1 to the tree. Prices of apples being low, I am purposely making the profits smaller than I think they should be. I do not approve of exaggerated reports going out to the public in regard to the profits of fruit-raising. I think it is better to underestimate. The facts are good enough. Producing fruit will pay at least double what ordinary farming will, providing the orchardist will plant very few varieties and plant enough of each to make it an object for the buyer to look after the fruit. In closing this essay on the apple, I would suggest to any one who intends to plant an orchard not to plant any one kind of fruit, but to find out just what kind of fruit his land is adapted to, that is, which will do the best, and bring the best returns. If he concludes that his land will pay best in apples, pears, apricots and peaches, then plant only those kinds, and plant only Bartlett pears, as there is always a market for them, and four or five varieties of peaches are enough, and the same with all kinds of fruits. Plant only a very few of the best varieties and take the very best care of them, and you will be well repaid. And aside from profit in fruit he is helping to develop the country, to enhance the value of his land and his neighbor's, and make his home more attractive, and have spread on his table the best that the land affords—good enough for a king.

#### Information Wanted.

EDITORS PRESS:—Will some of your readers please tell me what is the matter with my peach trees? They are of the Early Crawford variety, six years old, and have never borne a crop of fruit. The trees seem to be healthy and produce each year a very few fine peaches. They make but a few fruit buds, and in the spring a majority of those buds and fall off. Other varieties—the Foster and Salway—do well on the same soil and location.

I have some Moorpark apricot trees. Can they be successfully grafted to any other variety of fruit?

J. A. McCUNE.

Watsonville.

THE ADVANTAGES OF CYPRESS FOR LUMBER.—The cypress is soft, more closely resembling the better qualities of the white pine. It is easily worked and commands a high price in the market, merely because of its value and superiority. It grows in clusters on low, swampy grounds subject to overflows. On account of its aquatic life it seems to endure exposure to the weather. Cypress roofs and sidewalks in New Orleans are a century old. Cypress is usually cut in low water, and floated out in high water. The Northern lumber companies are rapidly erecting mills and putting them in order in certain sections of Louisiana and Mississippi. From present appearances the lumber interests in these States will soon exceed the cotton interest.

## FORESTRY.

### Forestry Plank in a Political Platform.

There is seldom sounder timber put into a political platform than the forestry plank in a platform recently adopted in Los Angeles county. We should not be surprised if it were stated that the "plank" was prepared by Abbot Kinney, of that county, whose interest in forestry is well known to our readers. However that may be, the subject has attracted attention at the East, as may be seen by the following excellent paragraph from the Philadelphia Weekly Press:

#### To Save the Streams.

The average political platform does not contain a great amount of edifying doctrine on topics relating to rural economy. But it was a sensible member of the Committee on Resolutions who drafted the following deliverance at a recent Democratic Convention in Los Angeles county, California, and the best work done by the delegates that day was its unanimous adoption:

The life of Southern California lies in its climate and streams. These depend on the snows and rainfall in the mountains which percolate into the soil and rocks to appear again as springs or wells in the valley. The fires and destruction in the brush and forests of our mountains we believe are endangering our water rights. If this waste and destruction go on our springs will dry up and destructive torrents similar to those on the desert which wash away 50 miles of railroad track at a time will take their place. We therefore ask the Legislature to strengthen the State Board of Forestry so that these dangers may be averted.

In a State where the mountains are unusually lofty, rising sharply to the line of a great snowfall, the danger from torrents is more threatening than in lands of more uniform surface, and in places where agriculture is directly dependent on irrigation the need of an equable flow of water in the streams throughout the dry season is greater than in such need elsewhere. But in a broad way agriculture everywhere suffers where fire and floods and reckless logging strip bare the highlands where the streams head.

It is the business of the Government, State and National, to conserve these forest areas. Private owners cannot be expected to administer their property in the interest of the public. But the State can provide for, or at least encourage, the establishment of adequate woodland reservations, and private owners in many cases would find it to their personal advantage to hold their lands in permanent forest for successive crops, as forest products grow more valuable.

## THE GARDEN.

### Mole Drains.

EDITORS PRESS:—Mr. E. Leedham, of Arroyo Grande, has invented a new mode of irrigation and drainage of his garden. The idea was suggested by gopher holes. He noticed that wherever water gets into gopher holes, plants growing in the immediate vicinity do better.

He takes a plow-beam with handles; runs down through the beam a bar of iron  $3\frac{1}{2}$  inches in width by five-eighths of an inch in thickness. This extends down from 12 to 18 inches, to be raised or lowered at pleasure by bolts running through both beam and bar. To the lower end of the bar is fastened, by a link, a mole made of cast iron, well polished, about 15 inches in length and tapering from  $3\frac{1}{2}$  inches at the large and rear end to a point at the fore end where fastened to the link.

He prepares the ground as follows: He digs down with a spade to proper depth, inserts bar and mole, hitches two horses and runs the mole in any direction desired; say up and down garden 6 to 8 feet apart. The mole dragging after the bar, opening the earth, presses the loose soil upward into the track of the bar above the mole, leaving a good open hole for irrigation or drainage purposes.

This is found to be of great practical advantage in the growing of such crops as strawberries, onions and the like. The ground thus treated does not sun-dry and crack, as when in irrigation the water is allowed to run on the surface. It renders unnecessary the cultivation usually resorted to after irrigation, as the drain is well covered and not subject to the ordinary influences of the sun at the surface.

Mr. Leedham has no patent on this invention and freely gives it to the world. We think it of importance and well worthy of trial. A cheap mole for trial may be made of wood and polished; but of course for long use the cast-iron will work much better.

San Luis Obispo Co.

[Mole drains have been used for years beyond memory and serve a good purpose. The trouble is that they are not durable, but serve a very good temporary purpose. They do not work equally well in all soils.—EDS. PRESS.]

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## Rural Life and Rural Scenes.

[Read at Literary Meeting of Sacramento Grange by Charles E. Mack, Jr., and sent by instruction of the Grange for publication in the RURAL PRESS.]

Connected with whatever can improve the mind or charm the fancy, rural scenes and rural occupations possess an almost endless source of rational amusement. From the volume of unsullied nature the poet draws his sweetest harmony and from her palette the painter extracts his richest tints. Nothing seems to harmonize more with the first principles of our being than a love for rural retirement. That within the barred and massive gate of our hearts' sacred precinct there is still inherent a lingering love for unsophisticated nature, is proved continually. I ask is there one person who does not love the country? Were my voice pitched in accents like the thunder's peal on high, still I am sure no mortal man within its scope would send back on the faltering breeze a responsive "yes." Who confined in the cities' narrow streets does not long for its cheering scenes, its cooling breeze and its boundless prospect? Many a weary pilgrim whose sands of life are fast ebbing away cannot erase from his memory sweet reminiscences of it in connection with his childhood's days, when he bounded with lithe limbs over its green fields and found health in its pure air. A phantasmal vision slowly rises like living mist before him, and in it he can see the dear old home with its walls of unshorn mountain fir, with its mossy pine-slatted roof, and he can recall vividly to his mind (not yet withered by relentless age) all the happy associations connected with it. He sees the very spot beneath an oak tree's interlacing where he sported with his playmates nearly three-score years ago; the ferny, ever-flowing brook whose ceaseless lullaby fell upon his youthful ears as sweetly as the mimic din of old ocean's roar in every pink-lipped shell; and the rustic schoolhouse, where the buzzing fly and strumming bee at torrid noon-time used to hold high carnival. I say, Mr. President, there is no avocation on earth more calculated to improve and elevate the condition of man to a higher altitude in the scale of excellence than a rural life and rural scenes. He sees above his head a leafy giant heaving its saffron crown in haughty mien, and bowing to and fro in scorn at him by the fitful breeze that whistles through its branches; the little flower, with its sweet face nestled in its soft bed of emerald green, and making the ozoniferous air sweeter with its kiss; and the almost boundless, floor-like valley, dotted here and there by the rude habitation of a young man just entering the arena of business life, or, farther on, the palatial farmhouse of his senior, whose harvests have been many and bountiful; while, in the misty distance, he sees a somber pile, surrounded apparently with a halo of a livelier light. Upon closer inspection, he finds this undefined something an undecorated yet substantial hall. This is the farmer's shrine. There he goes at least twice a month, with his loving wife and chicks, all dressed in their best bib and tucker, to meet his neighbors in friendly communion and to exchange those trivial yet sweet little courtesies of life which go so far toward lightening the burdens with which we are so heavily laden on our journey through the valley of life. And, be it said, these little courtesies always flow as spontaneously from the open depths of every true Granger's heart, as many a pretty purling stream in yonder eastern snow-capped mountains gently ebbs its sparkling water from its home in the heart of the hillside. This is the lighthouse which guides the young away from the rugged rocks of danger, and if they will but heed its beaming light, it will bring them safely home at last. This is the haven, deep and long, where the older Granger can anchor his beaten craft, and though it may tremble at times from the tiny waves that dash its side, yet neither whistling wind nor roaring tempest can ever reeve its little sails. The contemplation of the thousand specimens of God's handiwork to be seen in the country has the salutary effect of exercising his thoughts, purifying his heart and leading him eventually to feel keenly his own insignificance and express his gratitude to Him who so beautifully fashioned and richly ornamented this earth to feast the eye and to lead to the greater moral elevation of man. How many do we see possessing every opportunity to avail themselves of a quiet home amid such scenes, still breathing the city's stifling air amid the dusty piles of brick and mortar. They scorn rural life on account of its reported drudgery. The rustic path of life is freer of rocks and windfalls than it used to be. Poets have tuned their harps and sung unto today of "ye good olden time," yet I say, Mr. President, there never bloomed in the boasted garden of bygone years a flower as sweet and pure as the lily that broke, this very morning, its prison bars of green. The farmer's life is not what it used to be. That dreadful chasm of isolation has been bridged in part by the invention of several ingenious agents of communication. That ceaseless humdrum of yonder old farmer's life is best expressed in Gray's "Elegy in a Country Churchyard."

The plowman homeward plods his weary way, And leaves the world to darkness and to me. This darkness is not now great, for the modern farmer's fancy flows free and fair through a thousand new and pleasant channels. Wonder ye, why this wondrous change? I will tell you all. It can be attributed to a star. One morning in August, 1867, the illustrious Wm. Saunders, around whose name fame has twined a wreath of immortality, was abroad long before old sun had dipped his brush in vermilion and touched his canvas, stretched on a gigantic easel in the Eastern sky, and gazing into the canopy of heaven he saw a star of unusual brightness trying to insinuate its light into a nimbus cloud which hovered persistently around it. On December 4, 1867, he named this gem of the firmament the Grange. He placed his star in the galaxy of cardinal virtues. This grand constellation will shine no dimmer in a thousand years than now. I love the country with its grand expanse of verdant fields; with its freshness and its beauty; and with the conviction in my own heart of the greater freedom, the more exalted pleasure, and the happier state of health there to be enjoyed. There, crime stalks not, neither by night nor by day. There, the grim monster, Vice, walketh not, at all times ready to clutch his unsuspecting victim, and hold him to his heart until his ruin has been accomplished, and then with a devilish grin on his beastly face, with one mighty hurl, cast him over a precipice upon the jagged rocks of an unforgiving world below. Mr. President, that contentment, that happiness, that independence for which so many are seeking, and seeking in vain, through other sources, may be indeed realized in the blessed country. Within this enchanted hall there are two friends of mine whom I wish to thank in public for their kindness in pointing out to me, some time ago, a less rugged path for me to pursue, and by their united efforts I turned my wayward footsteps from their cheerless haunts, and journeyed along hand in hand with the Assistant Steward up-hill and down dale, over table lands and along the tortuous course of one dark ravine until at last we arrived at this grand Elysian field bounded by these four walls of spotless white. Upon reaching here my faithful guide gently said: "I unclasp thy hand. Brother, this endeth thy pilgrimage. Thou art at last within the blessed realms of fraternal life. May peace be thine. I must leave thee, for the soft wind gently bringeth to mine ears a distant rap from yonder mountain's terraced side. It meaneth that in that cheerless waste beyond the cold and repulsive Alps there is still one more poor wanderer who seeketh this calm and sunny Italy."

I am a new member of this Grange. As yet I have touched hands with not a dozen of my comrades, yet I know full well there burns brightly in every breast where the love for the Grange is not a feeble flame almost snuffed out a fire of fraternal friendship for every new acquisition. To-day the realization is more apparent to me than ever before that I am truly a link in this magic chain of union—a morsel of sympathizing clay in this the grandest federation of "nature's noblemen" beneath God's sun. We should be bound together still closer and try just a little more to smooth the paths of those less fortunate than ourselves. A Granger's life is like a flower in spring—born to die by the chilling wind of autumn.

Death's icy breath will bring a cloud of sorrow to this Grange in time to come. Who knows but that he who is brightest and gayest to-day may before our next literary day be reduced to a handful of everlasting and dreamless dust? When time brings this awful change I shall follow with bated breath and measured tread the inanimate clay of my fallen comrade to God's acre. I will go and stand on the yielding sand at the open grave, let my tear-drops trickle down my sunburned cheeks on the coffin's lid, throw in my garland of roses—my last tribute of love—and feel a certain consciousness within the recondite precincts of my own heart that when the dusty grave shall twine its spectral arms around this poor mortal dust my Granger friends will pause for a moment in their mirth and drop a silent tear for me. In conclusion, I love my country home, I glory in my country's independence, I rejoice in the prosperity of the Sacramento Grange, I take exquisite pleasure in going abroad in early spring when the white alabaster-like clouds roll past my head in serried columns in the heavens above, to dash themselves ultimately into milky hills and vales and dales before they leave my gaze, as many an incoming wave from deep old ocean's secret hold resolves itself into prismatic mist upon the fretted lace-work of every rock-bound coast. I enjoy sitting in the gloaming and watch stately evening bow her willowy form in the crescent, in the golden West, and kiss with her cold gray lips the last few crimson tresses of departing day. I love to go afield when the air laden with an incense ten thousand times sweeter than Lubin's sweetest balm fans my fevered cheek; when mother earth is sunshined with a texture wondrously woven out of sunshine and flowers. When on such pilgrimages I always let my thoughts wander back in retrospect to the springtimes of one, two, three years ago, when these self-same scenes were no less enjoyable than now; and when I find a modest buttercup with upturned face gazing at me I always feel like going down in reverence on bended knee and whispering in its willing ear: "Can you tell me, little flower, will there ever be a time when rural scenes, sylvan joys, and the Grange with its hallowed memories, will be less consonant with my sensibilities than now?"

## The Display at Philadelphia.

In referring to Worthy Master Johnston taking with him specimen-products of California soil, to exhibit at National Grange in the City of Brotherly Love, the *Record-Union* says:

No man in California is more fully conversant with the products of this State than Mr. Johnston, and in his position of Master of the State Grange, California will not suffer in comparison with her sisters. Among the exhibits were noted the following:

Wm. Johnston, Richland—Persimmons, pampas grass, English walnuts, pomegranates and two varieties of large, ripe oranges plucked Nov. 2d, from trees upon his place, now laden with golden fruit.

Dwight Hollister, Courtland—Large variety of persimmons, three varieties of lemons, two varieties of oranges—all large, ripe, and beautifully colored.

Dr. N. Williams, Richland—Oranges in variety and English walnuts.

Isaac Freeman, Elk Grove—A number of monster quinces—specimens that will give the Eastern Granger some idea of the size of California fruits.

J. Bibby, Franklin—A large variety of pomegranates.

Booth & Co., of Sacramento—Dried figs in variety.

W. R. Strong & Co., Sacramento—Boxes of raisins, finer than anything of the kind ever imported from Malaga.

The Grangers' Co-operative Business Association, of Sacramento—Raisins and dried prunes in variety.

Jackson Bros., Woodland—Raisins in variety.

J. Rutter, Florin—Several boxes of raisins.

W. L. Overheiser, Stockton—Large and elegant clusters of Tokay grapes.

N. Mertes, Roseville, Placer county—Two boxes dried figs.

Weinstock & Lubin, Mayhew Farm—Green and dried fruits in variety.

The dried fruit was put up in fancy boxes covered with glass, the inner edges trimmed with colored fringed paper, making as handsome sample packages as were ever on exhibition. The citrus fruits are fine specimens, and will be particularly attractive from the fact that they ripen in no other part of the Union at this season of the year. Los Angeles will have no oranges to market until next spring.

## Sacramento Notes.

EDITORS PRESS:—The fourth Saturday was set apart by the Sacramento Grange for holding their literary exercises. Bro. Wm. Sims acted as chairman of the day, and Sister Frankie Stevens as secretary. The program was as follows: Song, Grange, "Onward Marching;" reading, Joseph Holmes, "Then and Now;" declamation, Carrie Rich, "On the Shores of Tennessee;" instrumental solo, Gussie Wilcox; reading, Alice Greenlaw, "Sarah Jane Silvester;" essay, C. E. Mack, Jr., "Rural Life, Rural Scenes and the Grange;" song, Gussie Wilcox, "White Wings;" remarks, O. S. Flint, "Emigration;" recitation, Katie Aiken, "Brown They Say;" Matron's offering, Frankie Stevens. The program was well rendered. There was a good attendance. The Grange requested the secretary to forward the essay of C. E. Mack, Jr., to the RURAL PRESS and Patron for publication.

The Pomona Grange, No. 2, met at Grangers' hall, October 31st. The day being rainy and few out, the election of officers for the ensuing year was postponed to Thursday, Nov. 18th.

Farmers are busy sowing their summer-fallow. Wine grapes are nearly all picked. A few shipping grapes still sent out. Fall work is being pushed. Orange and lemon trees are bending with their weight—have to be propped—and the fruit is coloring fast.

Citrus fair is being worked up in the county by committees, with the expectation of showing Eastern friends our Central California fruit. G. T. E.

## The National Grange.

The National Grange, P. of H., was to convene at Philadelphia, in 20th annual session, on Wednesday of this week.

A public reception to the National Grange was to be given by State, City and Grange officials on Thursday; and the sixth degree of the Order conferred by the National Grange on Friday, at 2 o'clock, and again at 7.30 o'clock in the evening, in Musical Fund hall. All fifth degree members of the Order in good standing are entitled to this degree upon the payment of the fee of \$1; and all fourth degree members in good standing who brought with them a certificate of good standing in their subordinate Granges became eligible to and could receive the sixth degree at this meeting. They would first be obligated in the fifth degree at the National Grange, and then receive the sixth degree in full form.

Extensive arrangements for the benefit of visiting Patrons had been made as to excursion tickets over the main line and branches of the Penn. R. R., and respecting hotel accommodations; and we trust all is going on pleasantly and to good purpose.

THE "PATRON'S" MATRON'S DEPARTMENT.—The home department quill of the *Patron*, recently laid down by Sister Flora M. Kimball, the talented lady who has so long wielded it, has been taken up by Misses Becca, Adelaide and Reis Samson, who have written many very delightful sketches for the *Young Folks' Column* of the RURAL PRESS. The new group of editresses are able and energetic, and we expect they will attain very gratifying success.

## Personal.

Bro. C. J. Cressey, of San Jose, was kind enough to give us a call the other day. He has just returned from his 10,000-acre stock ranch in San Luis Obispo Co., where he has spent three months in fence-building and otherwise improving his property. He seems very enthusiastic over the future of that part of the State, says real estate is rising rapidly in value, and gave some instances where parties who had recently made purchases had refused an advance of nearly one-half of the purchase money. He had himself recently given \$15 per acre for a large piece of land that (with others) he had sold for \$7. Mr. Cressey is one of the real solid farmers of the State, and his large property has been steadily accumulated by patient and careful attention to business.

Mr. Cressey is preparing soon to visit Brownfield, Maine, his native place, and making a tour of the Southern States, visiting Georgia, where he lived five years before the war. His young son, Willie, accompanies him, for the benefit of his health; and his daughter, Cora, who has long been at the East, is expected to return with them about two months hence.

## National Grange Telegram.

PHILADELPHIA, Nov. 10.—The National Grange of the Patrons of Husbandry met here to-day. A committee of business men of the city welcomed the delegates, tendering them an excursion and other courtesies. Governor-elect Luce, of Michigan, replied on behalf of the Grange. A rollcall showed 24 States represented. Among the delegates present are: Governor Robie, of Maine; Governor-elect Luce, of Michigan; Secretary of State Lipscomb, of South Carolina; Hon. J. J. Woodman, of Michigan; Hon. Wm. Johnston, of California; and Hon. John D. Brigham, of Ohio.

At the afternoon session Hon. Putnam Darden delivered the report of the master of the National Grange. He said: "In nearly every annual address of my predecessors, attention has been called to the existence of monopolies, and the necessity for legislation to prevent their discriminations and injustice. We have been trying resolutions and petitions long enough. Let us try a remedy which has been suggested at nearly every meeting of the National Grange. Let us with our ballots send men to the Legislatures, State and National, who will equalize and reduce taxation, restrain corporations from oppressing the people, have the finances managed in the interest of the people, keep our public domain for actual settlers, prevent gamblers from pricing our productions, and extend the same protection to farmer and manufacturer. For this great work the Grange was organized and it was not born to die, nor will it fail in the accomplishment of its purposes."

SONOMA COUNTY POMONA GRANGE, at a regular meeting held Oct. 20th,

Resolved, That the thanks of Sonoma County Pomona Grange are hereby extended to the members of the Order, and to all persons who aided in making up the county exhibit, displayed at the various fairs.

Resolved, That the thanks of this Pomona Grange are hereby tendered James M. Donahue, president of the S. F. & N. P. R. Co., and his employees, for many courtesies extended our committee on Pomona Grange exhibit.

EDEN GRANGE will have a good social celebration of Thanksgiving, in which Patrons and their families are to unite in their hall at Haywards. Members of this same Grange are in hopes of soon reviving the lapsed work of the Order at Centerville.

TEMESCAL GRANGE considered the election of Government officials, at its last meeting, with a good deal of interest, the discussion taking a wide range. "The Legislative Needs of California" will be debated on Saturday P. M., Nov. 20th.

GRANGE ANNIVERSARY DAY occurs Saturday, Dec. 4th. We recommend that each Grange, as far as possible, arrange in advance for specially appropriate services on that date.

SACRAMENTO GRANGE, at the close of the third quarter, numbered 142 members, 69 being males and 73 females.

## The Coming Orange and Lemon Crop in Italy.

A firm in Messina, Italy, write to Griffin & Skelly, of Riverside, that the orange and lemon crop of last year was much reduced by frost, but that this season's crop promises well, and if nothing unforeseen happens, shipments to the United States the coming season will again be on a heavier scale.

The firm gives these figures of shipments for Messina and Palermo, which are worth preserving for reference:

ORANGES.			
	1885-6.	1884-5.	1883-4.
Messina, bxs. ....	261,600	573,200	651,500
Palermo, " .....	237,300	404,900	685,600
Totals .....	518,900	978,100	1,237,100
LEMONS.			
	1885-6.	1884-5.	1883-4.
Messina, bxs. ....	338,800	370,800	424,200
Palermo, " .....	824,100	1,203,100	1,505,800
Totals .....	1,162,900	1,573,900	1,928,000

## AGRICULTURAL NOTES.

## CALIFORNIA.

## El Dorado.

**APPLES AND CHESTNUTS.**—Georgetown *Gazette*: Italian chestnuts are grown as high up on the Georgetown divide as John Flora's ranch near Volcanville, more than 3000 feet above the sea level. Seven years ago Mr. Flora received a quantity of Italian chestnuts from the S. F. *Bulletin* office which he planted in a box, seven of them growing. These prospered and were transplanted to larger boxes and cared for as house plants, believing that they were semi-tropical tree and not adapted to this region. The trees kept on growing until Mr. Flora decided to transplant them to his garden. There they did well, considering the two transplantings which they had undergone, and some of them bore nuts two years ago, and this fall some of the trees bore very well. The nuts are as large and perfect as those produced in their native clime, which samples brought down this week by Mr. Flora will attest. Mr. A. J. Wilton's apple orchard in the mountains north-east of Georgetown, at an altitude of about 3700 feet, has yielded a good crop of first-class apples this season, which find a ready sale in the Georgetown market. Mr. Wilton has already shipped 300 boxes to that market and has 600 more to ship.

## Mendocino.

**WILLOTS ITEMS.**—Ukiah *Press*, Nov. 5: The early rains started the grass to a fine growth, but now hard frosts bid fair to keep it down. Plowing and seeding have begun in earnest. The potato crop is gathered. It is fair, but not near so good as that of last year. The apple crop is both abundant and of fine quality.

## Merced.

**WALNUTS.**—*Argus*, Nov. 6: We have a walnut tree six years old, which gave us this year nearly 400 large, well-developed nuts. In some parts of the U. S., these nuts are known as the Madeira nuts, but we believe here in California they are generally known as the English walnuts. They are white, very large, with quite a thin shell. The tree is perfect in symmetry, and ornamental as well as productive. The soil is well adapted to its growth and productiveness.

## Napa.

**THE GRAPE CROP** of the county this season, says the *Register*, has far exceeded the expectations of growers. H. W. Crabb has already expressed 500,000 gallons of juice and has about 500 tons of grapes yet to work up. Just now the vineyardists are harvesting the second crop, which in many cases, where the vines are young, is larger than the first.

## Placer.

**ORANGES AND VEGETABLES.**—W. J. Wilson, of Newcastle, writes the *Bee*, Nov. 2: I claim to have had the first oranges this season. Ten days ago I picked oranges and notified Dr. Latham at the time. Any person passing by my place at this time can see the trees loaded with the golden fruit. They are large and fine, but we must have one year more to get our Navel trees bearing. Then look out for fine fruit. Sept. 1st I planted potatoes, string beans, peas and onions, and am now enjoying the fruits of my labors.

## Sacramento.

**NURSERY OUTLOOK.**—*Record-Union*, Nov. 8: Indications point to a more extensive planting on the part of growers, both for home gardens and orchards, than for the past 10 years. The large call for citrus trees last year has caused the nurserymen to have a large stock of oranges, lemons, etc., on hand. Oranges are now ripening in this valley and in the foothills of Placer, El Dorado and Butte counties.

**RIPE ORANGES AND OLIVES.**—*Bee*, Nov. 6: Isaac Lea, of Florin, left at the Immigration office to-day some handsome specimens of oranges and olives, grown in his orchard this season. The fruit is much earlier upon the red soil of the plains than in this city. He says his family have been eating oranges from his trees for two weeks past. The fruit he brought to town was of fine size and color.

## San Bernardino.

**CRACKED ORANGES.**—*Valley Echo*, Nov. 4: The splitting of oranges this year is not peculiar to our Navel orchards. The same trouble appears with the fruit in other sections, even to a greater degree. In Riverside and Lugonia it is not specially noticed except upon the Navel trees, but a friend from the Highlands tells us that there seedling trees will, in some instances, lose two-thirds of their crop from this cause. It must therefore be due to some peculiarity of the weather.

**MONSTER MELON.**—The *Press and Horticulturist* has been presented with a watermelon weighing 93½ pounds. It was brought in by A. W. Eames, having been raised by him on his place in Arlington. It measures 63½ inches in circumference and looks as though it would feed a large family for a week.

## Tehama.

**RED-PINE LANDS FOR LATE FRUITS.**—Henry Myers, who owns a ranch near Belle mill, about 30 miles east of Red Bluff, in the pine woods—a beautiful little valley in the mountains—brought to the *Sentinel* office six very large red apples—a sample of many bushels grown in his orchard this year. The largest measured 14½ inches the longest way around. A. J. Gooch, of San Leandro, one of the largest fruit-grow-

ers in that place, who is here visiting, called Thursday to look at these mammoth apples. He says Alameda can't produce any such, either in size or flavor. He made this further statement, that the red-pine lands in the foothills and low ranges of mountains east and west of this valley are the best lands in the State for growing apples, Bartlett pears and other kinds of late hardy fruits. Mr. Gooch lived in Tehama county many years, and knows what he is talking about.

**JACK-RABBITS.**—It is telegraphed from Red Bluff that the supervisors have decided to give 15 cents per scalp on jack-rabbits, which are terribly destructive to gardens and vineyards in that neighborhood.

## Santa Barbara.

**PROSPECTS AND PRICES.**—In anticipation of early railroad connection with the rest of the world, Santa Barbara is enjoying a rise both in real estate and farm products. The *Independent* says Lima beans have gone up from 2 cents to 2½ cents, which means \$100 more a carload for the growers; while walnuts command 10 cents as against 8 cents given before the boom—a gain to the producers of \$400 per carload.

## Santa Clara.

**PRUNES.**—San Jose *Times*, Nov. 8: From all parts of our county we receive flattering reports in regard to the prune crop. It is by far the largest ever harvested, and the quality of the fruit is equal to that of former years. The drying seems this year to have been even more satisfactory than last, and the dried fruit will be placed upon the market in a more attractive condition.

## San Mateo.

**PEANUTS.**—*Times and Gazette*, Nov. 6: Jacob Fox, gardener for Mr. Squires, near Searsville, has just taken off (or rather out) a small crop of excellent peanuts, some of which, attached to the parent plant, may be seen in this office. Mr. Squires thinks his soil adapted to peanutting, and will try on a larger scale next year.

## Tulare.

**THE ASH IN ARIZONA.**—The *Phoenix Herald* thinks it strange that more ash is not planted as a substitute for the cottonwood as a shade tree. The ash thrives well in Phoenix, is graceful in form, besides giving a perfect shade, and every effort to introduce it in the valley has been crowned with success. Those which John Shriver planted four years ago have thriven wonderfully, and are now over eight inches thick, and a tree opposite the schoolhouse corner, planted ten years ago, is now larger and gives a denser shade than the cottonwoods near by, planted at the same time. Aside from its value as an ornament to the landscape, this variety of ash furnishes timber for wagon-makers' use fully equal in quality and value to the imported variety.

**EGYPTIAN CORN.**—*Register*, Nov. 5: Off of less than 16 acres, S. D. Ayers has harvested 610 sacks, having an average weight of 125 lbs., or 4765 pounds to the acre, or about 79½ bushels per acre. This corn was planted in a young orchard; the ground was in fine condition and was cultivated once. This goes to show that good farming pays in raising Egyptian corn, as well as anything else. At the usual price in this market, \$1.25 per cwt., Mr. Ayers' crop will bring about \$60 per acre, nearly twice what he paid for his land two years ago.

## Ventura.

**STEAM PLOWING.**—*Free Press*: Persons who went out to the Dixey Thompson ranch to see the trial of L. Barnard's traction engine in plowing, were unanimous in declaring it a success. The engine draws eight 10-inch plows and travels at a speed of two or three miles an hour, but the speed can be increased to six miles an hour, and the plows to 10-inch, plowing a space 100 inches wide. Horses seldom become frightened at the engine.

**DISASTROUS HILL-FIRE.**—A fire started by headers among the foot-hills near San Buenaventura, has destroyed thousands of acres of feed. Mr. Loyd has lost probably 100 head of cattle, and other stock has been overtaken and burned. Mr. Miller lost 15 or 20 tons of barley hay. The flames came so near town as to call out the fire department. It is certainly very risky, to say the least, to set a fire when the country is dry as a tinder box.

## Yolo.

**GRAPES.**—The *Democrat* says that grape-growers at and about Woodland have been unusually successful this season. The earlier showers were so light that no damage to speak of resulted; and nearly the entire grape and raisin crop is now gathered, and under shelter.

**HOG CHOLERA.**—Health Officer Strong, on visiting the Merritt ranch lately, found over 80 dead hogs, yet unburied, and complains bitterly of the neglect of people in disposing of these dead animals. From this we infer the hog cholera is still prevalent.

**FIG ORCHARD.**—*Democrat*, Oct. 23: Wm. Russell, four miles north of Winters, has an orchard of both black and white figs, covering an area of about 30 acres, which is very profitable. The figs, when grown, are unusually large and of a most delicious flavor. The culture of figs is becoming a leading industry in Yolo county, the soil being favorable to their growth and the climate to their preparation for market. The tree is remarkably prolific, yielding the third crop before the early rains, and our long dry summer facilitates the work of curing them, as in many cases they are allowed to fall from the tree and partially dry before being gathered

and sorted for market. Many persons in the vicinity of Winters are following the example of Mr. Russell and planting large fig orchards, this industry being one particularly remunerative.

## Yuba.

**ORANGES.—Appeal:** The orange crop of Marysville is going to fall short of the estimate made before the fruits appeared, and careful observers now say that not more than one-half the yield of last year will be made this year. Why, is hard to decide, as all trees are less affected with the scale-bug, and show a healthful state generally.

## NEVADA.

**FEED AT A PREMIUM.**—*Carson Index*: Two months ago hay was a drug and a nuisance in Mason valley. Now every old stack is worth money; every straw will have a value. Besides, the farmers will be able to work off their large stock of pumpkins, squashes and vegetables. The prospect of short feed on cattle ranges this winter is the cause of this appreciation of provender.

## WASHINGTON TERRITORY.
